**MANUFACTURES** According to the biennial Census of Manufactures published by the United States Department of Commerce in 1929, there were in the State, in 1927, 8312 manufacturing establishments. These employed 408,003 wage earners, whose wages for 1927 totaled \$570,308,502. Materials and supplies used in manufacture cost \$1,956,597,097. The manufactured products attained the combined value of \$3,417,450,248.

**EDUCATION** The chief educational changes of the year, as noted by State Commissioner of Education Moise, in the *Journal of the National Education Association* were the prolongation of the normal-school curriculum from 2 to 3 years, and of the music, commercial, and physical education curricula from 3 to 4 years. The creation of a State Board of Regents by legislative act was designed to provide a clearing house and general means of correlation for the educational activities. The school-age population of 1929 was estimated at 1,034,372. There were enrolled in the public schools of the State 770,879 pupils. Of these, 346,889 were in primary, 212,624 in grammar, and 107,765 in high-school grades. The current expenditure of 1929 for public-school education was \$70,501,448. The yearly salaries of teachers averaged \$2007.

**CHARITIES AND CORRECTIONS** The central authority for the care of dependents, defectives, and delinquents rested in 1929 in the Department of Institutions and Agencies, organized in 1918. Its duties included coordinating all branches of State welfare work, shaping general policies, and supervising the respective institutions. Its directing body was a Board of Control whose members were the Governor, ex officio, and 8 appointed non-salaried members. The State institutions, with

their resident populations of Dec 1, 1929, were: Graystone Park State Hospital (insane), 3711; Trenton State Hospital (mental), 2596; State School for the Feeble-Minded, Vineland, 1072; State Colony for Feeble-Minded Males, New Lisbon, 466; State Colony for Feeble-Minded Males, Woodbine, 395; North Jersey Training School (females), Totowa, 345; State Village for Epileptics, Skillman, 1025; Sanatorium for Tuberculous Diseases, Glen Gardner, 397; State Prison, Trenton, 1603; State Prison Farm, Leesburg, 215; New Jersey Reformatory (males), Rahway, 631; New Jersey Reformatory (males), Annandale, 216; New Jersey Reformatory (women), Clinton, 187; State Home for Boys (delinquent), Jamesburg, 650; State Home for Girls (delinquent), Trenton, 239; Home for Disabled Soldiers, Kearny, 85; Home for Disabled Soldiers, Sailors, and Marines, and their Wives and Widows, Vineland, 172. The Annandale reformatory was opened in 1929 to provide industrial and vocational training and social rehabilitation for minor offenders between the ages of 16 and 30 years. A prison-farm colony at Bordentown and a State Hospital for Mental Diseases at Hillsdale were under construction.

**LEGISLATION** The session of the Legislature of the State of New Jersey, 1929, began its 8th regular annual session and adjourned July 2. It opened the way for a social experiment by the passage of the measure designed to enable Newark and the Prudential Life Insurance Company to carry out their housing plans. This act gave cities power to condemn, at the expense of a private investor, unsafe and insanitary dwellings for the benefit of housing projects approved by the cities' governing bodies. A companion act permitted domestic insurance companies to invest not beyond 5 per cent of their resources in housing projects thus created. A number of statutory governmental bodies were brought into existence. One of these was a Board of Regents, charged with the duty to determine the needs of the State with regard to higher education. Another was a State Water Policy Commission. A Women's and Children's Bureau with a woman for its head was created as part of the State Department of Labor. The juvenile court system and the probation laws underwent revision. Primary elections were eliminated in municipalities having government by manager. Supervision of the safety of moving-picture houses, theatres, and grandstands was vested in the commissioner of labor, with regard to territory where no local building supervision existed. A series of measures for the regulation of banks and insurance companies was passed. The maximum legal interest on small loans was reduced to 1½ per cent a month, from 3 per cent. The Legislature took steps to cause the State legal forces to bring suits against other States in three matters. Of these, one was the under-water boundary between New Jersey and Delaware. The others concerned disputes with New York over New York's contemplated diversion of water from the Delaware River and over the system of free lightering in New York Harbor, which New Jersey wished to force railroads to abolish, for the advantage of its own harbor frontage. The State Water Policy Commission was abolished as a means to expel the commissioners, and a new Commission was created in its place.

The Wise Act regulated the use by public utilities of bridges taken over by the State Highway

Commission. In the bill, after its passage, was found by Senate minority leader Simpson a clause that in effect relieved such companies from payment for certain work done prior to the passage of the act. In order to avoid shifting this charge to taxpayers, Governor Larson called a special session, which met on August 12 and revised the Wise Act. Much effort was expended by the regular session in the continuation of the Legislature's efforts to bring out damaging political facts against Mayor Frank Hague of Jersey City, the State's Democratic stronghold. The vote cast in Jersey City in the election of the previous November was inquired into for evidences of fraud. The case was made the subject of contempt proceedings for failure to answer questions of a legislative committee. A law was enacted, bearing on his case, putting on those guilty of contempt a maximum penalty of 6 months in prison.

**POLITICAL AND OTHER EVENTS** A new Civil Service Commission was created, its five members being appointed by Governor Larson on May 1, the old commission having been abolished by Legislative act. A Women's and Children's Bureau of the State Department of Labor was entrusted with the charge of regulating labor relations among these groups. State Attorney-General Stevens studied the question of lighterage in New York Harbor and submitted to Governor Larson on September 10 a report presenting reasons for which New Jersey might determine to bring action before the Interstate Commerce Commission for the abolition of free lighterage as contrary to the Commission's regulations and practices. The report stated that about 11,000,000 tons of freight was lightered each year in New York Harbor, of which but 2,000,000 was moved from points in New Jersey to points within the State. The principle was laid down that "the commerce of New Jersey should not . . . have to contribute toward the cost of handling the traffic of competitors across the harbor." Governor Larson in accordance with this view directed the Attorney-General to institute a complaint on the part of the State.

New Jersey also brought suit in the United States Supreme Court to prevent the proposed diversion, within New York State, of water from the upper course of the Delaware River, for the municipal supply of New York City, and, separately, a suit to prevent pollution of the New Jersey shore front by pollution of the adjacent waters of the Atlantic Ocean with refuse dumped at sea by New York City. The Supreme Court admitted the complaints on May 20 and hearings were held on the pollution suit in November. Yet another interstate matter was brought before the Federal Supreme Court when New Jersey instituted a friendly action to determine the boundary between it and Delaware along the course of Delaware Bay. For many years Delaware had claimed jurisdiction of land under water as far as the low-water mark on the New Jersey shore, while New Jersey had claimed territorial right as far as mid-channel. Control of fishing and oyster industries of material value was involved.

Early in the year the State Public Utility Commission authorized and the Public Service Gas and Electric Company put into effect a new system of rates for gas. This system of rates placed a high charge on the initial quantity used monthly and diminishing charges on successive marginal amounts. A special interim commission created by the Legislature of 1925 to study re-

codification was reported on October 11 to have, for presentation to the session of 1930, a recommendation that about 1000 statutes found unconstitutional, repealed by inference, superseded or simply obsolete should be repealed.

Highway communication underwent several important developments. The State Highway Commission approved on October 15 plans for the completing links of the great highway to extend from the Holland Tunnel, at Jersey City, to Camden. These links included bridges across the Hackensack and Passaic rivers and a viaduct over the intervening meadows, the cost of the three features being estimated at \$19,000,000. A bridge on this highway, crossing the Raritan River just below New Brunswick, was almost complete at the end of the year. A private company took the preliminary steps toward building a bridge across Delaware Bay from Penn's Grove, New Jersey, to the approaches of Wilmington, Delaware. A highway bridge across the Delaware River between Tacony and Palmira, affording another approach to Philadelphia, was completed by a private company at a cost of about \$5,000,000 and was opened on August 14. At Newark the Metropolitan Airport was opened on February 17 as an air-mail port for New York City.

The long-protracted contest against Mayor Frank Hague of Jersey City, the State's Democratic stronghold, conducted by the Republican element in the Legislature culminated on May 14, when municipal elections in Jersey City were held. Hague and his fellow-candidates for the commissionership were opposed by a strong fusion ticket, but were all elected by an average vote of about 68,000 each, to 43,808 for the highest opposition candidate. The State Court of Errors and Appeals had previously, in April, put an end to the proceedings of the Legislative investigating committee to have Hague punished for contempt on the charge of his failure to answer some of its questions put to him as a witness.

It was announced on October 31 that the State, working since 1920, had virtually rid its territory of the gypsy moth. Progress was made at Princeton University on a \$3,000,000 history of the State, financed by a gift of Lloyd W. Smith of Madison.

**OFFICERS** Governor, Morgan F. Larson, Secretary of State, Joseph F. S. Fitzpatrick, Treasurer, Albert C. Middleton, Comptroller, John McCutcheon, Attorney-General, William A. Stevens; Commissioner of Education, Charles H. Elliott.

**JUDICIARY** Chancellor, Edwin Robert Walker, Supreme Court, William S. Gumme (Chief Justice), Samuel Kalisch, Frank S. Katzenbach, Jr., Thomas W. Trenchard, Charles W. Parker, Charles C. Black, James F. Minton, Luther A. Campbell, Frank T. Lloyd.

**NEW JERUSALEM**, CHURCH OF THE AN organization which also is known as the New Church, and popularly called Swedenborgism, because based upon the statement of Christianity set forth in the writings of Emanuel Swedenborg, Swedish scientist, philosopher, theologian, and seer (1688-1772). The two bodies that now compose it in the United States are the General Church of the New Jerusalem and the General Convention of the New Jerusalem, while in Great Britain the General Conference of the New Church corresponds to the General Convention

in the United States. The first New Church society in America was founded in Baltimore in 1792, and the General Convention of the New Jerusalem in the United States was held in 1817. In 1890 a considerable number of societies forming later the General Church of the New Jerusalem. The polity of the church is modified episcopacy, the worship in the church is generally liturgical, chants being extensively used. Missionary work is carried on in Denmark, Sweden, Germany, France, Switzerland, Latvia, Czechoslovakia, Austria, South Africa, India, Japan, British Guiana, and Dutch Guiana.

**THE GENERAL CHURCH OF THE NEW JERUSALEM.** This body was organized in 1897 under episcopal government with headquarters in Bryn Athyn, Pa., a new community where the church established the following institutions: A cathedral church of unusual architectural interests, built in the manner of the great cathedrals of the fourteenth century, the Academy of the New Church, which has a valuable museum and library and departments from kindergarten to junior college, and theological and normal schools, which had an enrollment of 297 in 1929.

The General Church differs from older bodies in the New Church mainly in its stricter attitude toward the theological writings of Swedenborg (considering them to be the Gospel or Word of the Lord at his Second Advent) and in the endeavor to establish parochial schools. It had an international membership in 1929 of 1950 with 3 bishops, 36 pastors, 4 ministers, and 24 societies, 15 of which were in the United States and Canada, 2 in England, and others in Sweden, Holland, Belgium, France, Natal, New South Wales, and Brazil. A native mission was carried on in South Africa, with headquarters at Alpha, Orange Free State, which reported 622 adult members (natives), 5 native pastors, and 6 native ministers. A cathedral of Bryn Athyn, Pa., is maintained. Among the periodicals published by the General Church are *New Church Life*, its official monthly magazine, *New Church Sermons*, *The Journal of Education*, and *The Bulletin*.

**THE GENERAL CONVENTION OF THE NEW JERUSALEM IN THE UNITED STATES OF AMERICA.** In 1929, the General Convention consisted of about 5750 communicant members, united into 84 societies, territorially organized as 12 associations and 7 independent societies. The ministerial membership was 110, and the amount expended for missions and benevolences for the year ending Apr. 30, 1929, was \$35,000. Educational institutions of the General Convention included a theological school in Cambridge, Mass., a junior college in Urbana, Ohio, and the Waltham School for Girls, Waltham, Mass. Periodicals included the *New-Church Messenger*, weekly, Brooklyn, N. Y., the *New-Church Review*, quarterly, Boston, Mass., the *New-Church League Journal*, monthly, Boston, Mass., *The Helper*, weekly, Philadelphia, Pa., and *Sunday Afternoons*, weekly, Boston, Mass. The Convention held its 1929 meeting at its church in Brooklyn, N. Y., June 15-18. The 1930 convention was to be held in Boston in June.

**NEW MEXICO. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 360,350. The estimated population on July 1, 1928, was 396,000. The capital is Santa Fe.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1929	130,000	84,000 *	\$7,434,000
	1928	117,000	88,000 *	8,580,000
Hay	1929	231,000	478,000 *	8,541,000
	1928	219,000	437,000 *	7,268,000
Dry Beans	1929	225,000	1,688,000	4,389,000
	1928	214,000	856,000	2,596,000
Corn	1929	209,000	4,180,000	7,720,000
	1928	199,000	3,482,000	3,099,000
Wheat	1929	305,000	5,742,000	5,495,000
	1928	186,000	2,054,000	2,201,000
Grain sorghum	1929	207,000	4,486,000	2,903,000
	1928	188,000	3,384,000	2,030,000

\* Bales \* Tons

**MINERAL PRODUCTION.** The copper production of the State in 1928 was in greater quantity than in a number of years previous. There were produced 92,777,233 pounds in recoverable ore content, as against 79,761,222 pounds in 1927. Gold production also rose, being for 1928, 31,705 fine ounces as against 26,098 for 1927, in value, \$655,400 for 1928 and \$339,500 for 1927. The production of silver attained the quantity of 709,414 fine ounces for 1928, 754,757 for 1927, and the value of \$467,657 for 1928 and \$428,016 for 1927. The zinc production of 1927 was of the quantity of 29,802 short tons and the value of \$3,814,592, that of 1926, 12,052 tons, or \$1,807,860. Coal mining in 1928 was on a somewhat smaller scale than in 1927. The quantity produced in 1928 was 2,711,851 short tons, in 1927, 2,935,539 tons were mined. The value of coal mined was \$8,636,000 for 1928, for 1927, \$9,179,000. The production of petroleum declined in 1928 to 959,000 barrels, from 1,226,000 for 1927, the value of petroleum produced was estimated for 1928 at \$1,200,000, for 1927 it was \$1,680,000. Natural gas was produced in minor quantity. The total value of the mineral products of the State was \$28,608,776 for 1927; for 1926, \$28,513,991.

The estimated metal output of 1929 was 34,200 ounces of gold, 1,090,000 ounces of silver, 22,000,000 pounds of lead, 100,000,000 pounds of copper, and 68,000,000 pounds of zinc. The estimated gross value of the metal produced was gold, \$77,000, silver, \$582,000, lead, \$1,397,000, copper, \$17,900,000, zinc, \$4,522,000, total, \$25,108,000.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 2964.23. There was no reported construction of additional line in 1929.

**MANUFACTURES.** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and dealing with the operations of 1927, there were in the State, in 1927, 200 manufacturing establishments. These employed 4653 wage earners, whose wages for the year totaled \$5,421,441. Materials and supplies used in production cost \$10,055,862. Manufactured products attained the combined value of \$20,182,672.

**EDUCATION.** The system of State examinations for graduation of pupils from the eighth grade and their passage to the ninth was given up, and control of this important promotion was restored to the county school superintendents. Apportionment of State funds to schools was raised to a basis of \$10.50 per capita, from \$8.50.

**CHARITIES AND CORRECTIONS.** The State Department of Public Welfare, governed by the

State Board of Public Welfare, consists of two bureaus, that of Public Health and that of Child Welfare. The former corresponds to boards or departments of health in other States and the latter, the only division of the State government engaging in a programme of social service, carries on work chiefly on behalf of children but not limited to them entirely. The State institutions for the care or custody of individuals are outside the control of the State Department of Public Welfare.

**POLITICAL AND OTHER EVENTS** The U S Department of Justice undertook in May to settle the boundary dispute of New Mexico with Texas, in a communication proposing conferences with the governors of the respective States. New Mexico, after enacting a tobacco tax, failed to put the taxing act into effect, the administration preferring to await the result of petitions for a referendum on the subject. A writ of mandamus was sought in the District Court of Santa Fe County to compel the collection of the tobacco tax. This writ was granted and the grant was confirmed on December 26 by the State Supreme Court. The Rio Grande Conservancy District, a body created under State authority for the construction of works of drainage, flood control, storage of water, and irrigation along the course of the Rio Grande, undertook in May to finance these works by the issue of \$8,700,000 of its bonds. The Federal Government participated in the flood-control plans in so far as they affected Indian lands. In the neighborhood of San Marcial, a flood of the Rio Puerco on August 13 drove out some 200 inhabitants and melted away many of the adobe dwellings. See **FLOODS**. In a cavern on the slope of Bysons Cap, near Mesquite were discovered fossils including what the director of the Los Angeles Museum described as the probable remnant of a human skull 25,000 years old.

**OFFICERS** Governor, R C Dillon, Lieutenant-Governor, Hugh B Woodward, Secretary of State, Mrs. E A Perrault, State Auditor, Victoriano Uribarri, Treasurer, Emerson Watts, Attorney-General, M A Otero, Superintendent of Public Instruction, Anastasio Montoya.

**JUDICIARY** Supreme Court Chief Justice, Howard L Bickley, Associate Justices, John C Watson, Frank W Parker, John F Simms, Charles C Catron.

**NEW SOUTH WALES.** One of the six original States of the Commonwealth of Australia, located in the southeast part of the continent, bounded on the north by Queensland, on the south by Victoria, on the east by the Pacific Ocean, and on the west by South Australia. Area, exclusive of the Federal Territory, 309,432 square miles, population, including aborigines, according to the census of 1921, 2,101,908, estimated, Mar 31, 1929, 2,457,127. The Federal Territory in 1929 had an area of 940 square miles and 8358 inhabitants. Sydney, the capital, had a population in 1921, of 905,047, including suburbs and shipping, estimated Jan 1, 1929, at 1,127,470. Other towns with their populations at the end of 1927 were Newcastle and suburbs, 102,550, Broken Hill, 23,430, Auburn, 18,530, Parramatta, 16,700, Granville, 17,530, Bankstown, 18,850, and Lithgow, 16,480. The movement of population in 1928 was Births, 54,791, deaths, 22,657; mar-

riages, 20,075. During the same year, the excess of immigration over emigration was 12,880. Education is controlled by the State and instruction is compulsory between the ages of 7 and 14. At the beginning of 1928, there were 3142 government schools, with 11,550 teachers, with 352,310 pupils enrolled, and an average attendance of 283,615. There were 719 private schools, of which 491 were Roman Catholic, with 2972 teachers and 69,488 students.

Wheat is the principal crop and the chief fruit crop is oranges. The area sown for wheat during the 1928-29 season was 4,076,600 acres and the total yield 49,182,600 bushels. Other grains and other citrus fruits, potatoes, tobacco, sugar cane, bananas, and apples are raised. The total area under cultivation in 1927 was 4,597,296 acres and the value of all crops was \$22,098,100.

The estimated production of wool in 1928-29 amounted to 482,100,000 pounds. Including the Federal Territory, the state on Jan 1, 1928, had 50,510,000 sheep, 2,848,654 cattle, 598,377 horses, and 301,819 swine. Mineral production in 1927-28 was as follows: Gold, £54,503, copper, 13,497, tin, 1231,843, coal, 18,263,729, all minerals, £15,337,154. In the same year there were 8032 factories employing 182,660 persons, which produced goods valued at £181,403,084. Preliminary figures for overseas commerce in 1928-29 were Imports, £63,503,493, exports, £49,291,112. For the year ending June 30, 1928, the state revenues were £41,108,972 and the expenditures, £45,203,968. The gross public debt on June 30, 1929, was \$1,342,425,000. Railway lines in operation in 1927-28 totaled 5826 miles. A deficit of £1,039,386 incurred by the state railways for the fiscal year ending June 30, 1929, led to a decision to reorganize the financial management along the lines recommended by British experts in 1924. There are seven private railways having a total extent of 112 miles (mainly colliery lines). In 1929 there were 14,000 miles of main highway in New South Wales. The sum of \$58,214,000 was spent on highway construction in the same year.

Executive power is vested in a governor assisted by a cabinet, and legislative power in a bicameral legislature, consisting of a legislative council and a legislative assembly. The legislative council, which must not consist of less than 21 members, is appointed for life by the Crown, and consisted of 96 members in 1929. There are 90 members in the Legislative Assembly. Governor in 1929, Admiral Sir Dudley R S De Chair, Premier and Colonial Treasurer, T R Bavin.

**HISTORY** Armed conflict between the police and striking coal miners on Dec 16 and 17, 1929, resulted in two deaths and injuries to many. An agreement as to wage reductions reached between the miners' leaders and the employers, was repudiated at a meeting of 4000 miners on December 6 and when the State announced its determination to keep a leading coal mine in operation with volunteer labor, the mine was attacked by nearly 8000 miners from the northern coal fields. See **AUSTRALIA**.

**NEW YORK. POPULATION** A census by the State was taken in 1925. This showed a population of 11,162,151, compared with 10,385,227 by the Federal census in 1920. The population of New York City increased from 5,620,048 in 1920 to 5,873,356 in 1925, in the Borough of Manhattan, it decreased from 2,284,103 in 1920 to 1,945,029 in 1925. All the other boroughs in-

creased their populations. The U. S. Census Bureau estimate for July 1, 1928, was New York City, 6,017,500, Borough of Bronx, 951,900, Borough of Brooklyn, 2,308,500, Borough of Manhattan, 1,752,000, Borough of Queens, 854,400, Borough of Richmond, 150,700. The estimated population of the State on July 1, 1928, was 11,550,000. The capital is Albany.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Hay	1929	4,697,000	6,738,000 *	\$81,898,000
	1928	4,665,000	6,513,000 *	78,316,000
Potatoes	1929	270,000	24,840,000	36,018,000
	1928	284,000	32,376,000	21,044,000
Corn	1929	676,000	21,024,000	21,655,000
	1928	650,000	22,130,000	21,879,000
Oats	1929	989,000	24,028,000	14,283,000
	1928	1,020,000	31,660,000	18,176,000
Apples	1929		16,520,000	23,954,000
	1928		21,900,000	24,090,000
Wheat	1929	287,000	4,584,000	5,685,000
	1928	316,000	4,702,000	6,422,000
Barley	1929	159,000	3,514,000	2,952,000
	1928	169,000	4,648,000	3,625,000
Ruckwheat	1929	198,000	3,168,000	3,168,000
	1928	192,000	3,475,000	3,128,000

\* Tons

**MINERAL PRODUCTION.** The mineral industry showing much the highest total value of yearly product, the production of pig iron, extracted almost entirely from ore originating in other States, attained for 1928 the total quantity of 2,369,814 long tons, as against 2,401,432 tons for 1927, the value of the product was \$39,928,960 for 1928 and \$40,803,579 for 1927. The allied industry of coke production attained for 1928 a total output of 3,802,657 short tons and for 1927 of 3,602,642 tons, in value, \$25,033,049 for 1928 and \$24,125,451 for 1927. The totals of the cement industry of the State were not available for 1928, but in 1917 were shipped from the factories 10,531,002 barrels, shipments were valued at \$16,380,000. Clay products were valued at \$25,374,276 for 1927 and at \$28,999,053 for 1926. The stone produced in the State, chiefly of the less costly grade, attained for 1927 the quantity of 10,651,610 short tons, exclusive of basalt, and for 1926, of 9,708,700 tons, the value of stone produced was \$15,830,959 for 1927 and \$13,713,620 for 1926. The output of sand and gravel for 1927 was of the value of \$12,157,612. Salt production rose to 2,085,320 short tons for 1928 from 1,964,080 for 1927, in value, to \$6,400,933, from \$6,121,461. The gypsum production of 1927 was 12,257,239 short tons, in value \$14,889,390, for 1926, 1,723,460 tons, or \$10,794,589. The value of ferro-alloys produced in 1927 was \$12,138,392, in 1926, \$13,045,398. The total value of the State's native mineral products was \$112,106,913 for 1927, for 1926, \$112,010,262.

**FINANCE.** State expenditures in the year ended June 30, 1928, as reported by the U. S. Department of Commerce, were for maintenance and operation of governmental departments, \$169,727,420 (of which \$71,550,099 was for local education); for interest on debt, \$14,200,688, for permanent improvements, \$52,830,044, total, \$236,758,152 (of which \$51,502,063 was for highways and waterways, \$24,763,275 being for maintenance and \$26,738,788 for construction). Interdepartmental payments accounted for \$225,758 of the year's total expenditure. Revenues were \$240,199,580. Of these, property and special

taxes formed 56.1 per cent, departments' earnings and remuneration for officers' services, 3.3, sale of licenses, 30.4 (including licenses for business privileges, automobiles, hunting and fishing, but not covering sales of gasoline, on which no tax had yet been placed). The State's funded debt on June 30, 1928, \$380,758,309, net of \$259,602,471 net of sinking funds, included \$209,498,000 for highways and waterways, of which \$151,848,000 was for the State Barge Canal. On a property valuation of \$22,958,837,107, State taxes of \$24,897,004 were levied in the year.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 8338.03. There were built, in 1929, 9.29 miles of second, 3.37 of third, and 3.36 of fourth or other track.

**MANUFACTURES.** According to the biennial Census of Manufactures published by the U. S. Department of Commerce in 1929, there were in the State, in 1927, 36,650 manufacturing establishments. These employed 1,072,284 wage earners, whose wages for the year 1927 totaled \$1,605,378,086. Materials and supplies used in manufacture cost \$4,804,172,874. The manufactured products attained the combined value of \$9,400,061,376.

**EDUCATION.** The effort was made to promote study of the curricula in the schools of the State by organized cooperation of superintendents, principals, and teachers. An increase of the amount of State aid rendered possible the advancement of a programme for the improvement of the rural schools. For the academic year 1927-28, the school-age population of the State was estimated at 3,472,435. There were enrolled in the public schools 2,058,710 pupils. Of these, 1,701,088 were in the elementary, and 357,628 in the high schools. Expenditures for public-school education in the year 1928 totaled \$324,405,895. Salaries of teachers average \$2194.

**CHARITIES AND CORRECTIONS.** The new designation, Department of Social Welfare, was given the former Department of Charities by a legislative act of 1929. This department continued to act as the central administrative body with regard to many of the State's institutional activities. It supervised almshouses and the care of Indians within the State. It exercised State authority over institutions and agencies for the care of children, dealt with many problems connected with hospitals and sanatoria, had power to inspect all charitable and correctional institutions supported in any part by the State, except those under the direct care of other departments, and itself administered a number of institutions. These were State Training School for Girls, Hudson, State Agricultural and Industrial School (delinquent boys), at Industry, Thomas Indian School, at Iroquois, State Hospital for the Treatment of Incipient Pulmonary Tuberculosis, Raybrook, State Reconstruction Home (indigent crippled children), West Haverstraw, State Women's Relief Corps Home, (for ex-soldiers, their wives, and widows), Oxford. A State Training School for Boys, at Oxford, was projected in 1929.

The Department of Correction had the charge and full management of the chief correctional institutions of the State. Its head was an appointed commissioner holding office during the term of the appointing governor. It conducted a parole system, which was in the hands of a board made up of the commissioner, an assistant com-

missioner and the wardens of the four State prisons. The institutions under this department were Auburn Prison, Auburn; Clinton Prison, Dannemora, Great Meadow Prison, Comstock, Sing Sing Prison, Ossining, Dannemora State Hospital, Dannemora, Matteawan State Hospital (criminal insane), Institution for Defective Delinquents, Napanoch. The inmates of these correctional institutions on June 30, 1928, numbered 10,084.

The Department of Mental Hygiene headed by an appointed commissioner serving for the term of the appointing governor, administered laws as to the care of the insane, mental defectives, and epileptics. It exercised control over the great system of State hospitals for the insane, containing on June 30, 1928, 48,532 inmates, and over separate institutions for mental defectives and for epileptics. The institutions under this department were State Hospitals at Binghamton, Brooklyn, Buffalo, Central Islip, Helmsburgh (near Gowanda), Windham, Poughkeepsie, Kingston Park, New York, Middletown, Rochester, Utica, and Willard, State Schools for defectives at Syracuse, Rome, Newark, and Letchworth Village (Thiells), Craig Colony (epileptics), Sonyea.

**LEGISLATION** The 152nd regular session of the State Legislature convened on January 2 and adjourned on March 28. Governor Roosevelt submitted to it the first executive budget that had been prepared fully under the incoming system requiring such action. His budget, as submitted, totaled \$256,418,774 required for the ensuing fiscal year. It included important proposed appropriations of lump sums to the aggregate of \$54,000,000, of which the detailed expenditure was not fully specified. The Republican majority in the Legislature accepted the principle of lump-sum appropriation on account of its superior practicability, but was adverse to entrusting to a Democratic Governor the discretion that the power to dispose of such sums, as to detail of expenditure, would demand. Accordingly, in its budget legislation it provided that the control of lump-sum appropriations throughout the year, during the interim of legislative sessions, should be vested in the hands jointly of the Governor and of the chairmen of the fiscal committees of the respective houses. The Governor resisted this course as violating the budget amendment to the State Constitution. In the end, however, appropriations to the total of some \$253,000,000 were enacted, covered in part by provisions for joint control of expenditure after the manner mentioned, the Governor making it his policy thereafter to contest the clauses for joint control in the courts and vetoing certain items to the purpose that they might be legally contested.

Proposals to change taxation took two main directions: the imposition of a sales tax on gasoline after the manner adopted by almost all the other States of the Union, and the reduction of the income tax, or alternatively, the elimination of direct property taxation. It was enacted that gasoline should pay, starting with May 1, a sales tax of 2 cents a gallon. The anticipated receipts from this source being greater than required for revenue, reduction in other directions was sought. The Governor and the New York City Democrats wanted to bring about a cut in the State income tax, while the up-State Republicans favored abolishing the direct property tax and

making some further distribution to the subdivisions. Eventually the direct State tax was abandoned, for the year, and exemptions from income-tax payment were raised by \$1000 for single individuals and by \$1500 for heads of families. The gasoline-tax law provided in the farmers' interest that gasoline used for the fueling of other than road motors should remain tax free.

The law on decedents' estates was radically amended by the Fearon Act. This abolished the wife's dower right to one-third interest in the husband's real estate but gave the surviving spouse the right to inherit a life interest of one-third of property both real and personal. It was rendered impossible for a husband to alienate possession of real estate from a surviving wife by his transfer, prior to death, of such realty to a corporation. The testator's power to leave property of any kind to charitable purposes was limited, where immediate heirs existed, to one-half of the estate. The Act was to become operative Sept. 1, 1930.

Comparatively little legislation was enacted affecting elections, representation, and political parties. It was made possible, indeed, for each party, if it chose, to make rules allowing a woman, as well as a man, representative in the State committee, from each Assembly district. The Democratic effort to enact a four-year term of governorship, the elections of governors falling in non-presidential years, failed, the Republican majority still wishing that they fall in presidential years, if the four-year term were adopted at all. A measure eliminating the party primary from New York City elections, supported by the Citizens' Union, was passed but was vetoed. The reapportionment of State Senate districts was enacted.

School legislation included an act fixing the minimum public school year at 180 days for any school to receive State aid. Salary schedules were provided for instructors in industrial departments of State normal schools. Boards of education in cities of at least 50,000 were authorized to borrow in anticipation of State aid to be received. The Jenks bill, to permit those counties that should so desire to employ the local law machinery for the enforcement of Federal Prohibition, was defeated. The sale of beverages containing wood alcohol was rendered a felony. The Baumes Commission, the Crime Commission of the State, recommended many measures, of which ten were passed, including a constitutional amendment proposal for the creation of inferior criminal courts in rural territory to perform functions taken from justices of the peace, and a statute to stop the running of limitation after indictment had been returned against a criminal, or information filed.

The workmen's-compensation law was enlarged by the inclusion of four diseases in the list of compensable occupational hardships. Those working in hospitals who were injured by radium or X-rays were admitted to compensation. Bills for the restraint of the legal abuse known as "ambulance chasing" failed of passage. Vaccination of school children was made compulsory in all cities of more than 50,000. The cropping of dogs' ears was forbidden. Hunting game with the bow and arrow was prohibited. The marriage law was amended to require the consent of both parents, or of guardians, and of a children's court judge for the issue of a marriage license for a

girl of less than 16 years. Group life insurance was redefined so as to render possible the issue of policies on the basis of trade unions' membership. The right of separate domicile was granted married women, with regard to voting and office-holding requirements. The State poor law was extensively revised.

Legislation especially affecting the City of New York included a multiple dwelling enactment, which permitted apartments 30 stories in height, modernized the requirements of safety and sanitation in design and construction, and legalized the kitchenette in non-housekeeping apartments. The Legislature finally terminated the last of the emergency measures governing rent and leases that had been enacted in the period of housing famine incident to the War. New York City was authorized to set up the Sanitation Department to perform street-cleaning, waste removal, and other like work previously scattered among other branches of its government. The share of counties in defraying the cost of eliminating crossings of railroads and highways at grade was reduced from 5 to 1 per cent, the State assuming the difference, this particularly affected New York City on account of the high cost of eliminations within the counties comprising it. The City's Board of Estimate was authorized to fix tolls for the future Triborough Bridge and Narrows Tunnel. A State reforestation measure calling for the early planting of 5,000,000 trees was adopted.

The law regarding owners of motor vehicles was subjected to an important alteration whereby the licensee was required to show financial responsibility for possible damages that the car might cause, up to \$10,000 for certain eventualities. This law, similar in effect to that of Massachusetts, had the tendency to compel the majority of motorists and car owners to obtain bonds.

**POLITICAL AND OTHER EVENTS** Five amendments to the State constitution were approved by the popular vote on November 5. They were as follows: giving preference in civil-service employment under the State to disabled war veterans, permitting legislation to provide for absentee voting by those in Veterans' Bureau hospitals, altering the local governments of Nassau and Westchester counties, authorizing the State to incur debt for fighting forest fires, transferring criminal jurisdiction from justices of the peace to local criminal courts. The city of New York reelected Mayor Walker and his fellow members of the Board of Estimate. It also ratified an act of the municipal Legislature increasing the salaries of patrollers and firemen to a minimum of \$3,000, from \$2,500. Mayor Walker defeated his chief opponent, the Republican candidate Fiorello H. LaGuardia, by 865,549 votes to 368,384, thus scoring a plurality of little less than 500,000. The Socialist candidate for Mayor, Norman Thomas, however, polled a vote exceptionally high for the Socialist ticket, it reached 174,931, and was interpreted as including a high proportion of votes antagonistic to both the major candidates, rather than partial to the Socialist candidate.

Roosevelt's struggle with the Legislature (see *Legislation*, above) was settled, with regard to the control of budgetary expenditure, in the State courts. Controller Tiemann brought action late in April to obtain a ruling as to whether he might pay out State moneys without

the approval of the Legislative censors that had been set up over expenditure of lump appropriations. The Appellate Division, third department, in a divided opinion, ruled on June 21 that the two financial chairmen of the Legislature must share the work of approving the itemization of such sums. The State Court of Appeals, however, on November 19 reversed the Appellate Division by unanimously denying authority to the two chairmen, on the ground that such authority would amount to usurpation of administrative functions, in contravention of the State Constitution. This left the Governor in sole control of the contested authority over appropriations. Another point in the Governor's contention with the Legislature, his demand that provision be made for a \$30,000,000 programme of State hospital construction, led to intimations after the end of the session that he would call a special session to deal with the hospital needs. This step was avoided by leaders' assurance that the needed appropriation would be advanced at the next succeeding session.

A Supreme Court decision of June 25 held the Multiple Dwelling Act of 1929 unconstitutional on the ground that the held lay in the scope of municipal, and not of State, power. The Court of Appeals reversed this ruling on August 9 by a divided opinion of 5 to 2 sustaining the act, which profoundly affected construction and housing, particularly in New York City. The State's title to Montauk Point State Park was upheld on February 16 by the Appellate Division, and other legal victories greatly advancing the State's policy with regard to the creation of a system of parks on Long Island, much opposed by private interests.

The Appellate Division, First Department, framed on February 26 a code of rules for the bar, forbidding "ambulance chasing" and allied practices in New York and Bronx counties. A Federal Statutory Court allowed on November 11 increases in telephone rates within the State, to the estimated total of about \$21,578,000 a year. The popular dissatisfaction in New York City with the appointment of individual receivers by the Federal courts led the six Federal judges of the southern district on January 10 to still the complaints of a bankruptcy ring by arranging to have the American Exchange Irving Trust Company act as receiver in all bankruptcies.

Frank H. Warder, State Superintendent of Banks, was involved in charges of receiving bribes from a banker. This banker, Francesco M. Ferrari, died on February 2, and shortly afterward it transpired that the City Trust Company, of New York City, of which he had been president, was involved in financial difficulties. Warder failed to take prompt steps at the time for the protection of depositors and came under suspicion. The company having suspended, its affairs were investigated. As a result of the investigation, which disclosed that illicit practices had gone on for a long time unchecked by the State authorities, Warder was placed on trial. On testimony of an employee who had acted as the go-between in carrying money to him from Ferrari, Warder was convicted on the specific count of having taken a \$10,000 bribe from Ferrari. He was sentenced on November 8 from 5 to 10 years in prison. Judge Francis X. Mancuso of the Court of General Sessions, who had been a director of the failed institution, was charged with improper performance of his duties to the

institution and was forced to resign from the bench.

Congestion in the State prisons and rebellion against the Baumes laws led in the course of the year to a number of serious prison mutinies. At Clinton Prison, Dannemora, some of the 1300 inmates set fire to buildings and lumber on June 22, seized and beat two guards and tried to break out. Guards killed three of the mutineers, wounded a score of others, and quelled the outbreak. Damage of \$200,000 was done by the fire. On July 28, at the Auburn Prison, convicts broke into the prison arsenal, seized riot guns, set several buildings on fire, shot and wounded four guards, and sought to storm the walls. Four gained their liberty, but the rest were eventually subdued by State troopers and machine guns, with the death of two convicts. Auburn was the scene on December 11 of a more desperate mutiny than that of July. A band of prisoners who had previously secured a small supply of pistols killed the head keeper, seized the warden as a hostage, wounded several guards, and declared that they would kill the warden unless allowed to go out. The way was opened to them, but before they could get out they were attacked by State troopers and subdued. Eight prisoners were killed in the fighting. See CRIME.

The State made progress with the building of a hospital near Brentwood in Suffolk County designed to accommodate 10,000 mental patients. With regard to a State system of old-age pensions, work preliminary to the Legislative consideration of the subject was done by an interim Legislative commission. The New York State Chamber of Commerce passed resolutions in November urging President Hoover to have the Army engineers study the feasibility of a ship canal from the Great Lakes to the ocean through New York State, thus favoring the idea of a New York Canal, as opposed to the St. Lawrence waterway project. Governor Roosevelt gave the State's approval to the treaty between the United States and Canada for the construction of works in the Niagara River to preserve the contour of Niagara Falls and to increase the supply of water for power purposes. A movement was started in the Finger Lakes region for the study of means to control artificially the level of these lakes. Planting under the State's project of reforestation of State lands was begun near Cortland on October 4.

In New York City, the most notable piece of municipal legislation was the passage of a municipal measure to reimpose rent limitation, which the State Legislature had terminated. This act was passed as an emergency measure, it prohibited summary dispossession proceedings affecting premises rented at less than \$15 a month for each room. Though sustained in a lower court and though popular with a great part of the inhabitants of the city, the law was declared unconstitutional by the Appellate Term of the Supreme Court on November 16, on the ground that the local assembly had no authority to interfere with contracts. In addition to the increase of pay for policemen and firemen, approved by referendum (see above), the municipal assembly voted increases in the salaries of all the members of the Board of Estimate. This action was taken in the closing days of the year, and was widely criticized as the change though applying to a succeeding administration actually affected none but the existing members of the

Board, who were all to remain in office, and who thus voted to raise their own salaries. The Municipal Assembly voted on March 11 to construct the projected Triborough Bridge, to connect Manhattan, Bronx, and Queens boroughs, and a vehicular tunnel under the Narrows, from Brooklyn to Staten Island, at an anticipated cost for the two projects of more than \$100,000,000.

The leader of Tammany Hall, George W. Olvany, resigned on March 15 for the reason of ill health. John F. Curry was elected on April 23 to succeed him. A Department of Sanitation was organized as part of the government of New York City, to take over from other departments the work of street cleaning and of disposal of refuse. The 26 municipal hospitals were placed on February 1 under the direction of a newly created Department of Hospitals. The city's policy in the treatment of drug addicts was affected by the report of a special committee, rendered early in February, unfavorable to the narcotic method, of which trial had been made.

A decision of the Interstate Commerce Commission, given on November 11, to the effect that terminal charges at New York need not be reported separately, favored New York, though it did not dispose of the efforts of New Jersey to abolish free lighterage in the port of New York. In another favorable decision the Commission on December 18 denied an increase in the differential freight rate sought by Baltimore. The city authorities of New York, after 40 years of effort to have the New York Central remove its surface tracks from the west side of Manhattan, concluded with the railroad an agreement by which the latter was to carry out a scheme of track elevation and tunneling, involving a great property development for the purpose of handling terminal freight. The cost to the railroad was estimated to be around \$110,000,000, that to the city \$50,000,000, and that to the State as contributor to grade-crossing elimination \$15,000,000.

The committee of the Regional Plan of New York and its surrounding district, an unofficial body financed by the Sage Foundation, submitted on May 27, after some 7 years of study, its complete scheme of recommended public developments, these were designed to cover the needs of the metropolitan district for orderly growth up to the year 1965, with particular reference to transportation, building development by areas, and park development. One tube of the subway tunnel under the East River, between Fulton Street in Manhattan and Cranberry Street in Brooklyn was holed through on May 15. Work on the actual span of the Hudson River Bridge, between the steel towers, began about midsummer.

A feature of the material growth of New York conspicuous during the year was the progress in construction of office buildings of unprecedented height. The Manhattan Company building on Wall Street, 925 feet high, was erected. The Hippodrome, at Sixth Avenue and Forty-third Street, was purchased for demolition by a company intending to erect an 83-story Hippodrome building rising to 1100 feet. The Waldorf-Astoria Hotel was demolished to make way for a 40-story building with a projected 1300-foot tower and dirigible anchorage. The Chrysler building, erected at Lexington Avenue and Forty-second Street, was somewhat over 800 feet high. A new Tammany Hall was built at Seventeenth Street

and Union Square East. The United States Supreme Court on April 8 invalidated a Federal court injunction whereby the city had been forbidden to interfere with the 7-cent fare sought by the Interborough Rapid Transit Company.

Western and central New York held during the summer a number of celebrations to commemorate the 150th anniversaries of events in General John Sullivan's campaign of 1779 against the Iroquois. In Westchester County the acquisition of lands by the county commissioners at alleged excessive cost was investigated and indictments against commissioners were found. The city of Cohoes was reported by State examiners in September to have exceeded its debt limit and to have defaulted on the service of certain of its debts. A plan to remove the tracks of the New York Central from the streets of Syracuse at a projected cost reported as \$30,000,000 was placed before the Interstate Commerce Commission.

OFFICERS Governor, Franklin D. Roosevelt; Lieutenant-Governor, Herbert H. Lehman, Secretary of State, Edward J. Flynn, Comptroller, Morris S. Tremaine, Attorney-General, Hamilton Ward, Commissioner of Education, Frank P. Graves.

JUDICIARY Court of Appeals Chief Judge, Benjamin N. Cardozo, Associate Judges, Outhbert W. Pound, Frederick E. Crane, William S. Andrews, Irving Lehman, Henry T. Kellogg, John F. O'Brien.

NEW YORK PORT AUTHORITY. See BRIDGES

NEW YORK UNIVERSITY. A nonsectarian institution for the higher education of men and women in New York City, chartered in 1831. It comprises the following divisions: At University Heights, a college of arts and pure science, college of engineering, Guggenheim School of Aeronautics. At Washington Square, the graduate school, school of law, school of commerce, accounts, and finance, Washington Square College, school of education, school of fine arts, college of fine arts, university extension division, and the Institute of Education. At the Wall Street division, the graduate school of business administration and courses in the school of commerce, accounts, and finance. The medical college was on East Twenty-sixth Street, and the dental college on East Twenty-third Street. The enrollment for the year 1928-29 in all divisions of the university, after deducting all duplications, was 37,151. The enrollment in the different units was as follows: University and pure science, 937, school of commerce, accounts, and finance, 486, college of engineering, 614, school of education, graduate and undergraduate divisions, 4984, school of commerce, accounts, and finance, including the Wall Street division, 8455, Washington Square College, 6962, graduate school of business administration, 735, school of retailing, 1046, college of fine arts, 1497, and college of dentistry, 376. In other divisions, the enrollment was as follows: University extension division, 3906, Institute of Education, 3067, public health (correspondence) courses, 265, life-insurance training courses, 144. The faculty of the university consisted of 1585 members of various ranks.

The productive funds for the year 1928-29 amounted to \$6,495,256, and the income was \$6,625,343. Gifts included \$1,000,000 from Mr.

and Mrs. Percy S. Straus to establish a fund to be known as the Edith A. and Percy S. Straus Fund; a gift of \$1,000,000 from George F. Baker to establish the George David Stewart Endowment for the Teaching of Surgery; the gift of \$700,000 from Mr. and Mrs. Frederick Brown for the purchase of the Greenwich Building at Washington Square; and \$200,000 in anonymous gifts for laboratory and library installations at Washington Square College. The libraries contained 337,479 volumes. Chancellor, Elmer Ellsworth Brown, Ph.D., LL.D.

NEW ZEALAND, zē'land, DOMINION OF. A self-governing British dominion in the southern Pacific Ocean, about 1200 miles east of Australia; consisting mainly of two islands, North and South islands, but comprising also Stewart Island and Chatham Island and a number of small islands. Capital, Wellington.

AREA AND POPULATION. The total area excluding the annexed islands is 103,568 square miles, distributed as follows: North Island, 44,131; South Island, 58,120, Stewart Island, 662, Chatham Island, 372, outlying islands, 284. According to the census of 1921, the population was 1,218,913. The population, June 30, 1928, was 1,389,076 for New Zealand proper, exclusive of Maoris (65,004); residents of Cook and other annexed islands, 14,314, and of Western Samoa (mandated territory), 42,949. On Dec. 31, 1929, the population of New Zealand alone was estimated at 1,418,582. The estimated population of the chief cities of New Zealand on Apr. 1, 1928, was as follows: Auckland, 206,810; Wellington, 130,120; Christchurch, 123,370; Dunedin, 84,060. From 1924 through 1928, births averaged 27,947 annually and deaths, 11,407, leaving an annual excess of births of 16,540.

EDUCATION. Education is compulsory between the ages of 7 and 14. In 1927 there were 257,576 pupils attending primary schools, 26,930 in secondary schools, 12,408 in technical schools, and 4934 in the following university colleges: Otago University, Dunedin; Canterbury University College, Christchurch; Auckland University College; and Victoria University College, Wellington.

PRODUCTION. Animal husbandry is the leading industry of New Zealand. Only about 3 per cent of the total area, or 1,968,000 acres, was under cultivation in 1927, while 16,680,000 acres were devoted to permanent meadow and improved pasture, 251,000 acres to trees, shrubs and bushes, and 13,000,000 acres to forests. The production in pounds of the chief animal products in 1927-28 was, creamery butter, 6,042,000; pork, bacon, and ham, 59,800,000; mutton and lamb (dressed), 437,515,000; beef and veal (dressed), 329,237,000; wool, 234,280,000. In the preceding year, the production of factory butter was 191,321,000 pounds and of cheese, 175,199,000 pounds. The meat industry was generally prosperous in 1928 and in 1929. In 1928 there were 27,134,000 sheep, 3,274,000 cattle, 589,000 swine, 307,000 horses, and 24,000 goats in the country.

Grain crops are relatively unimportant. The chief cereal crops, with the acreage and production in 1927-28, were as follows: Wheat, 261,000 acres, 9,541,000 bushels; barley, 21,000 acres, 862,000 bushels; oats, 88,000 acres, 3,853,000 bushels; corn, 10,000 acres, 483,000 bushels; potatoes, 22,000 acres, 4,532,000 bushels; peas and beans, 25,000 acres, 802,000 bushels; hay, 280,000 acres, 515,000 long tons. Wheat

production in 1928-29 was 8,400,000 bushels, barley, 781,000 bushels; oats, 4,226,000 bushels.

Although coal, gold, and silver are mined, the mining industry is relatively unimportant. Manufacturing consists mainly of the preparation of pastoral and dairy products for the market. The factory output for the year ending Mar. 31, 1928, totaled about £87,700,000 (\$428,000,000) and the value added in the process of manufacture was £32,400,000 (\$158,000,000). There were 5166 factories, employing 81,740 persons. The rapid development of electric power is checking coal production. The Government, up to 1929, had expended \$30,566,000 on its hydroelectric programme, of which the two principal projects were expected to be completed in 1930. The chief mine and factory products in 1928-27 were Coal, 2,367,000 long tons, flour, 128,699 tons, ale, 11,827,000 gallons, leather, 4,059,000 pounds, boots and shoes, 1,307,000 pairs, lumber, 305,675,000 feet, printing, publishing, and bookbinding, £4,628,000, clothing and hosiery, £2,897,000, motor vehicles, 11,897,000. There was some unemployment in the cities while farm laborers were in demand.

**COMMERCE.** The importance of a favorable balance of foreign trade to New Zealand's economy was demonstrated by the comparative prosperity which followed improvements in the trade balance in 1927 and 1928. In the latter year, exports increased to \$273,441,000, or 18 per cent more than in 1927, while the imports of \$218,439,000 were slightly higher than in 1927, but much lower than in 1925 and 1926. In 1929 exports decreased to \$270,100,000, while imports increased to \$239,249,752. According to figures of the U. S. Bureau of Commerce, exports to New Zealand in 1929 totaled \$39,461,000 and imports from New Zealand, \$20,863,000. The chief exports in 1928 were wool, \$81,169,000, butter, \$55,004,000, frozen meats, \$50,317,000, cheese, \$32,576,000, hides and skins, \$18,702,000. The leading imports were automobiles and chassis, \$13,165,000, apparel, \$11,312,000, mineral oils, \$12,397,000, cotton piece goods, \$9,358,000, electrical machinery and apparatus, \$8,577,000.

The United Kingdom took 72 per cent of the total exports in 1928, as compared with 77 per cent in 1927. Other leading customers were the United States, which took 7.6 per cent of total, and Australia, 6.1 per cent. Of the total imports, 47 per cent came from the United Kingdom, 18 per cent from the United States, and 7.8 per cent from Australia. The per capita figures were \$119 for imports and \$181 for exports.

**FINANCE.** The ordinary budget for the year ending Mar. 31, 1929, placed receipts at £23,868,000 and expenditures at £23,608,000. In the previous year, actual receipts totaled £25,124,000 and actual expenditures £24,945,000, leaving a surplus of £179,000 pounds, but the heavy public debt increased due to capital expenditures. The public debt on Mar. 31, 1929, stood at £1,223,419,000, or \$842 per capita. About £71,971,000 of the debt represented war expenditures and about £53,304,000 investments in railways. Chief items of expenditure in 1927-28 were: Debt service, £9,758,000, education, £3,102,000; pensions, £2,549,000, posts, telegraphs, and telephones, £2,297,000, national defense, £969,000, losses on isolated railway lines, £485,000, all other, £5,785,000.

**COMMUNICATIONS.** The state-owned railway lines in 1928 totaled 3180 miles and private

lines, 116 miles. The state lines carried 25,380,000 passengers, and 7,387,000 tons of freight, earning gross receipts of £7,344,000 (\$35,730,000) during the year ending Mar. 31, 1928. A deficit after interest charges of \$1,419,371 was reported for the year, as compared with a deficit of \$485,339 in the previous year. In 1928-29 the deficit reached \$1,107,000. The increasing deficit was due mainly to the increase in interest charges, the other items remaining approximately the same. A railway with a fertile fruit-growing area of 100,000 acres was reported to be nearing completion toward the end of 1929.

The merchant marine in 1927 comprised 565 vessels of 204,700 gross tons. In the same year, 634 vessels of 2,196,000 net registered tons entered and 633 vessels of 2,201,000 net registered tons cleared the ports of New Zealand. In 1928 there were 26,363 miles of telegraph wire and 490,642 miles of telephone wire, all government owned. The net revenue of the Post and Telegraph Department for the year ending Mar. 31, 1929, was £3,445,545 and the net profits for the year, £523,800.

**GOVERNMENT.** Executive power is vested in a Governor-General appointed by the Crown and legislative power in the Governor-General and a general assembly of two houses, namely, the Legislative Council of 41 members (September, 1927) appointed for seven years but to be elected after the expiration of the term of the members sitting in 1923, and the House of Representatives, consisting of 80 members, elected by the people for three years. The Governor-General in 1929 was Sir Charles Fergusson. In December, 1929, Lord Bledisloe (Charles Bathurst), a leading British agriculturalist, was appointed Governor-General to succeed Sir Charles Fergusson, whose term would expire in 1930. The cabinet appointed in December, 1928, was composed as follows: Prime Minister, Minister of Finance and External Affairs, Sir Joseph G. Ward, Land and Agriculture, G. W. Forbes, Public Works, E. A. Ransom, Justice and Defense, T. M. Wilford, Labor and Mines, W. A. Weitch, Railways and Customs, W. B. Taverner, Native Affairs and Cook Islands, Sir Apirana Ngata, Postmaster-General, J. B. Donald, Education, H. Atmore, Internal Affairs, P. A. de la Perrelle, Immigration, Marine, and Industries and Commerce, J. G. Cobbe, Health, A. J. Stallworthy, Attorney-General, T. K. Sidey.

**HISTORY.** The debate over the Ward Government's programme for seeming redistribution of land through heavier taxation of the larger holdings in the Commonwealth, serious rioting in that part of Samoa under the New Zealand mandate, and the earthquake of June 17 were the outstanding events in the history of New Zealand during 1929.

Land settlement was the cardinal point in the policy of the United party which, under the leadership of Sir Joseph Ward, came into power in December, 1928. The government was dependent for its existence upon the support of the Labor party, the distribution of seats being: United party, 27, Reform party (Opposition), 27, Labor, 19, other parties, 7. With Labor support the government was able to proceed with its programme, a feature of which was the proposal to borrow \$350,000,000 in the ensuing ten years for various development projects. Parliament, which convened in June, passed the Government's

Land Act, which appropriated £5,000,000 for bringing into cultivation some millions of acres of second-class lands and provided for a graduated supertax on lands of an unimproved value exceeding £12,500. It was estimated that the supertax would affect only 1750 of the 80,000 farmers in the Dominion and it was frankly proposed as a confiscatory measure to enable the parceling out of the land. Adequate defense, stimulation of agriculture, and commercial aviation, the development of roads and automobile transport as feeders to the main railway lines, financial aid to settlers on new lands, and the regulation of immigration from the mother country in relation to the economic condition of the country, were other points in Premier Ward's programme as outlined before Parliament on June 27.

The Ward government announced that its policy with regard to the unrest in Western Samoa would be one of patience, coupled with the determination not to treat with those Samoans who openly defied the mandate power's authority. In September, Premier Ward stated in Parliament that while the attitude of a section of the Samoans was preventing a satisfactory settlement of the difficulties, the government had reduced the number of elected Europeans on the Legislative Council of Western Samoa to two and had added two nominated Samoans. Following the killing of a white constable in rioting in Apia December 28, Premier Ward announced that his government would adopt a firmer attitude toward the native opponents of the island government, and a cruiser was dispatched to Apia to assist in establishing the government's authority.

The earthquake of June 17 was the most severe experienced in New Zealand since that of 1855. It caused the loss of fifteen lives and considerable damage to the towns of Westport, Greymouth, and Marlborough on the northern part of South Island. For changes in the land, see EARTHQUAKES. See also GREAT BRITAIN, under *History*.

**NIBLACK**, REAR ADMIRAL ALBERT PARKER. Retired officer in the U. S. Navy, died in Monte Carlo, Monaco, Aug. 20, 1929. He was born in Vincennes Ind., July 25, 1859, and was graduated in 1880 from the U. S. Naval Academy and in 1916 from the Naval War College. He was promoted through the grades to the rank of rear admiral (1918) and retired in 1923. His first post after graduation was at the Pacific Naval Station (1880-82), after which he surveyed and explored in Alaska (1884-88). He served in the Spanish-American War, participating in the Battle of Nipe Bay. He also took part in the suppression of the Filipino insurrection (1899-1901). He was in China in 1900 during the Boxer uprising and, at the outbreak of the World War, he was ordered to command the 1st Division, and later the 1st Squadron, battleship force, of the Atlantic Fleet. In November, 1917, he was put in command of the 2d Squadron of the patrol force and of United States Naval Forces based at Gibraltar. Until after the Armistice, he commanded the United States Naval Forces in the western Mediterranean. In 1919-20 he was director of naval intelligence, Navy Department, and in 1921 was vice admiral commanding the United States naval forces in European waters. After retirement in 1924, he was elected director of the International Hydrographic Bureau of Monaco, and in 1927 president for a term of

five years. During his long career, Admiral Niblack was naval attaché at Berlin, Rome, Vienna, Buenos Aires, and London. He was the recipient of many honors including the Distinguished Service Medal of the United States, the Royal Victorian Order of Great Britain (commander), and the order of Legion of Honor of France (commander).

**NICARAGUA**, nē'kă-ra'gwă. The largest of the Central American republics. It is bounded on the north by Honduras, on the east by the Caribbean Sea, on the south by Costa Rica, and on the west by the Pacific Ocean. Capital, Managua.

**AREA AND POPULATION.** The area is estimated at about 51,060 square miles, of which 4500 square miles are lake area. The coast line is 300 miles on the Atlantic and 200 miles on the Pacific. Population, according to the census of 1920, 638,118, or about 12 inhabitants to the square mile. The estimated population in 1927 was 650,000. About 80 per cent lived in the western part of the country and was chiefly of Spanish and Indian blood. The population of the east coast had a large Negro element from the West Indies. The proportion of pure white blood is about 10 per cent. The eastern and western sections differ greatly and there is very little communication between them, the journey by trail and river being difficult. Travelers going from one coast to the other usually go by way of Costa Rica or through the Panama Canal.

The population of the various cities in Nicaragua in 1926, as shown by a census made by their respective departments of sanitation, was reported to be as follows: Managua, the capital, 32,536; León, 23,565; Granada, 18,066; Masaya, 13,763; Chinandega, 10,307; Rivas, 4081; Matagalpa, 3142, and Corinto, 2307.

**EDUCATION.** Primary education covers a period of six years, following European rather than American lines. In the school year 1928-29, there were 402 government schools (392 primary, 3 secondary, 5 vocational, 2 normal), with an average attendance of 17,973, and 118 municipal and private schools, with an average attendance of 6921. The private schools were nearly all conducted by religious organizations. Higher education was provided by five professional faculties, unsalaried and receiving little governmental aid, three of law and two of medicine.

**PRODUCTION, ETC.** Nicaragua is essentially an agricultural country. As in the past, it must depend upon its agricultural products, seconded by timber and mineral wealth, for its widest future development. The principal agricultural products are bananas and other fruits, coffee, sugar, and coconuts. Other crops are corn, rice, and tobacco. Mahogany, cedar, dye woods, and gums are some of the valuable forest woods of the country. Coffee accounts for about one-half of the total value of exports and the size of the crop and prices received are the major factors which determine local economic conditions. For the year ended Nov. 30, 1928, about 39,800,000 pounds of coffee were exported from Corinto, 32 per cent going to France and 24 per cent, to the United States. In 1928-29 the crop was below average and the prices low, resulting in a temporary depression. The 1929-30 export crop was estimated at about 37,400,000 pounds. The coffee blight called *agente*, or "cock's eye" appeared in 1929 and assumed alarming proportions in higher altitudes. Sugar production in 1927-28 was estimated at about 14,000 short tons, as compared

with 11,250 in the previous year. Banana exports to the United States increased from 1,300,000 bunches in 1927 to 1,800,000 in 1928. Mining is comparatively unimportant, gold, silver, copper, and precious stones being the principal minerals exploited. There are a few sugar mills, distilleries, and small industries specializing in articles for local consumption.

**COMMERCE.** Exports in 1928 totaled \$11,693,000, representing a 30 per cent increase over the preceding year, while imports expanded in about the same ratio to \$13,350,000. The United States supplied two-thirds of the imports and purchased more than one-half of the exports. In 1927 exports totaled \$9,026,000 and imports \$10,208,000. The chief imports are cotton manufactures, iron and steel, machinery, wheat flour, and chemicals and drugs. Exports include coffee, bananas, sugar, hides and skins, mahogany, and gold and silver. The proportion of the chief exports to the total exportations of the republic in 1928, with figures for 1927 in parentheses, was as follows: Coffee, 68 per cent (45), bananas, 16 per cent (16), cabinet woods, 11 per cent (19), sugar, 4 per cent (5), and gold, 3 per cent (7).

**FINANCE.** In a message to the Nicaraguan Congress delivered Dec. 10, 1929, President Moncada announced that a surplus of more than \$2,400,000 was assured from the government's financial operations during 1929. The anticipated surplus did not include the profits of the National Bank or those of the Pacific Railroad. A part of the surplus was used to purchase the Comito wharf, which handled much of the country's foreign trade. President Moncada announced that, effective Dec. 31, 1929, New York bankers had relinquished all connection with the National Bank and with the railroad. In 1927 government receipts totaled 4,666,000 cordobas (one cordoba equalled \$1 at par) and expenditures 4,918,000 cordobas. Customs receipts in 1928 reached a new high level. In 1929 an agreement was reached between the municipalities and the government under which the cities agreed to give the government 30 per cent of their general revenues, including the 10 per cent they contributed to the Federal Health Department. In return, the cities were no longer to be required to submit their respective budgets to the government for approval.

The public debt on Mar. 31, 1928, was reported by the collector general of customs as \$23,526,067, of which \$17,278,809 consisted of debts and claims arising from the revolution and was subject to adjudication.

**COMMUNICATIONS.** In 1928 there were 147 miles of government-owned railway line and 19 miles of private line. For the year ending June 30, 1928, the railways carried 895,000 passengers and 114,000 metric tons of freight, with gross receipts of \$1,285,000. A new line 66 miles long from León to Sauce was under construction by the government in 1929. Late in 1929 the Nicaraguan government accepted the resignation of the American manager of the state railroads and assumed direct charge. The telegraph and telephone systems had 1802 and 1143 miles of wire, respectively. The number of steam vessels in foreign trade entering Nicaraguan ports in 1928 was 563 of 806,070 net registered tons.

**GOVERNMENT.** Executive power is vested in a president who acts through a responsible ministry, comprising departments of foreign affairs

and public instruction, finance, interior, justice, war and marine, and public works; legislative power is in a bicameral legislature consisting of a chamber of 40 deputies elected for four years by universal suffrage, and a senate of 13 members elected for six years. The constitution is modeled after that of the United States. President in 1929, José María Moncada, elected Nov. 4, 1928.

**HISTORY.** What promised to be a new era in Nicaraguan history commenced on Jan. 1, 1929, with the inauguration of President José María Moncada, the Liberal candidate who had been overwhelmingly elected at the American supervised election in 1928. Indicative of the improved relations between Liberals and Conservatives was the spectacle, unprecedented in Nicaragua, presented when the retiring Conservative President, Adolfo Díaz, rode in the same carriage with the Liberal President-elect on the way to the inauguration ceremony. As the year progressed, however, there were some indications of a resumption of the bitter animosities characteristic of Nicaraguan politics. In August, more than 20 influential members of Opposition parties were arrested by the Moncada government and some of them were deported. Among those charged with encouraging banditry and plotting against the government were Paulino Solórzano, former Director General of Communications, and several Conservative newspaper men, including Adolfo Ortega Díaz, a nephew of former President Adolfo Díaz. Leaders of the Conservative party denied that they had lent their support to the alleged conspiracy.

In general, however, the year was marked by the steady improvement in internal stability and the absence of serious trouble on the part of the United States Marines and the Guardia Nacional of the guerrilla bands which were active in the northwestern part of the country when President Moncada was inaugurated. On January 7, 38 officers and 1194 men of the U. S. Marine Corps were withdrawn from the country in order of the Navy Department in Washington leaving 231 officers and 3330 men on duty there. These, with the assistance of volunteers and the National Guard, undertook to wipe out the remaining rebels or outlaw bands as they were variously called. A number of casualties in clashes with the outlaws were reported from time to time. In June, Agustín Sandino, the leader of those opposing the Stimson Agreement of 1927, was forced to flee to Mexico, the important insurgent bands were broken up, and President Moncada, in opening the session of Congress on December 15 said that order had been restored. He admitted, however, that banditry "unworthy the name of revolution" still existed in remote sections. The marine forces were further reduced to a total of 2215 men and officers in September 1. In the meantime the Nicaraguan National Guard was being trained by American officers to take over the task of maintaining order upon the withdrawal of the remaining marines. Secretary of State Stimson announced in Washington on November 22 that while the American Government desired to withdraw the marines as rapidly as conditions permitted, both the Liberal and Conservative parties in Nicaragua had urged that the evacuation be postponed for the time being. During the year ending June 30, 1929, four marines were killed and nine received wounds from which three later died as a result of clashes with bandit forces. Manuel María Jiron, an insurgent leader

who raided the La Paz Mine in 1928 and held captive an American, George Marshall, until his death, was captured and executed by natives. While criticism of the American policy in Nicaragua continued in both the United States and Latin America, President Moncada repeatedly praised the conduct of the marines and upheld their presence in the country, declaring that he was confident the United States Government desired to and would withdraw its forces from Nicaragua as soon as peace was firmly established.

The Cabinet appointed by President Moncada following his inauguration was composed as follows: Minister of Foreign Relations, Cordero Reyes, Promotion, Benjamin Abaunza, Public Instruction, Dr. Leonardo Arguello, Interior, Dr. Bernardo Sotomayor, Finance, Antonio Berberena, Public Health, Dr. Roberto Gonzáles, Agriculture and Labor, Antonio Cabrera. Dr. Juan B. Sacasa, the former constitutional Vice President of Nicaragua, who led the revolution of 1926 and 1927 against the Diaz government which resulted in the intervention of the United States, was appointed Minister to Washington in April.

The prospect that the United States would construct another Atlantic-Pacific Canal, this time across Nicaragua, aroused considerable enthusiasm in that country and both Nicaragua and Costa Rica readily gave their consent to an investigation and survey of the proposed route by a battalion of U. S. Army Engineers. The survey was authorized by President Hoover in June in accordance with a resolution adopted by the Seventieth Congress. The right of the Nicaraguan government to use the revenues of the Pacific Railroad as it saw fit was upheld by the Secretary of State Stimson in July. New York bankers, who were in the majority on the board of directors of the state-owned road, had voted to appropriate \$2,000,000 of revenue for improvements, a course which President Moncada opposed.

The city of Managua was created a national district, similar to the District of Columbia in the United States, by Presidential decree on October 30, subject to the approval of Congress. Maladministration of the city by the Liberal administration was said to have caused the President's action, although he was of the same political party. The crying need for the development of the public-health service established by President Moncada was demonstrated by a campaign against hookworm and other intestinal parasites made in one section of the country. Of 2407 persons examined, 2308 were found to be suffering from intestinal diseases.

It was reported from Managua in November that President Moncada's proposal that the Central American republics send a single joint representative to Brazil, Chile, Colombia, Peru, and Uruguay, had been tentatively accepted by a majority of the countries of Central America. See HONDURAS, GUATEMALA, UNITED STATES, under *History*. Consult Floyd Cramer, *Our Neighbor, Nicaragua* (New York, 1929).

**NICHOLAS** (NIKOLAI NIKOLAEVITCH, ny-é-kó-lay' ny-é-kó-lay-é-vétsh), GRAND DUKE Russian general and second cousin of Emperor Nicholas II, died Jan. 6, 1929, in Cape Antibes, France. He was born in St. Petersburg, Nov. 6, 1856, and was graduated from Nikolaiev Military Academy, after which he became a member of the Russian

General Staff and aide-de-camp to the Czar. It was as an officer of the General Staff that he fought in the Russo-Turkish War (1877-78). During the Russo-Japanese War (1904-05), the Grand Duke was president of the Imperial Committee of Defence, which attempted to introduce reforms in the army. At the outbreak of the World War, he was appointed commander-in-chief of the Russian Army, a command which he held until superseded by the Czar in 1915. With the abdication of the Czar at the end of the War the Grand Duke found it necessary to go into exile and the last years of his life were spent in France. Many Russian monarchists considered him the rightful heir to the Russian throne.

**NICHOLS MEDAL.** See CHEMISTRY, INDUSTRIAL.

**NICKEL.** Continued expansion in the demand for nickel featured the year 1929. Production of the International Nickel Company, which alone produces 90 per cent of the world output, was 55,000 tons of the metal, compared with about 48,000 tons in 1928, according to the Canadian Department of the Interior. By the absorption of Mond Nickel, an English company, International Nickel became the only producer in the Sudbury district of Canada. However, the monopoly was not expected to last long as construction of a smelter was started at the Falconbridge Nickel mine by the so-called Lindsley interests. This group had purchased a refinery in Norway and, early in 1930, was to start putting about 2500 tons of nickel annually on the European market. Any possible increase in the demand for nickel as a steel alloy had been anticipated by the producers with the new plants under construction. International Nickel was completing a programme of mine equipment at its Frood property that cost about \$40,000,000. Conditions in New Caledonia, which produces most of the world's remaining 10 per cent, remained more or less static. The prices for nickel ingots remained at 35 cents per pound throughout the year.

**NIDAROS.** New name for Trondhjem. See NORWAY under *History*.

**NIGERIA, COLONY AND PROTECTORATE OF A** West African territory, formerly known as British Nigeria, divided into two groups known respectively as the Northern and Southern Provinces. The area is approximately 335,700 square miles and the population, according to an estimate in 1927, 18,765,690, of whom 10,232,832 were in the Northern Provinces (area, 258,000 square miles). There were 5200 Europeans in 1927. For administrative purposes the British portion of the mandated territory of Kamerun is attached to Nigeria. The seat of government is at Lagos. In 1927 in the Northern Provinces there were 84 government schools and 141 unassisted mission schools. The total average attendance in the government schools was 2566 and in the mission schools 2988. It was estimated that there were 31,587 Mohammedan schools, with 393,039 pupils. In the Southern Provinces in the same year there were 49 government schools with an average attendance of 6190, 225 unassisted schools with an enrollment of 44,814, 2519 unassisted schools with an enrollment of 127,066. The chief products are palm kernels, palm oil, cotton lint, rubber, peanuts, animal products, butter, ivory, cacao, kola nuts, coffee, drugs, and tobacco. The forests supply mahogany, which is exported. Iron, lead, and tin are worked by the natives, and gold, silver, lignite, monazite,

galena, and manganese ore are found. Nigeria is the sixth largest producer of tin in the world, the total exports in 1927 amounting to 10,926 tons. The imports in 1927 were valued at £15,664,637 and the exports at £16,340,957. The chief article of import was manufactured goods and the chief articles of export, palm oil and palm kernels. The total shipping which entered and cleared from the ports of Nigeria in 1927 was 3,367,312 tons, of which 1,904,514 tons was British. The revenue in 1927-28 was £6,304,663 and the expenditure £6,723,023, public debt, £23,559,209. Railways open for traffic in 1929 totaled 1625 miles. In the year ending Mar. 31, 1929, the railways carried 3,101,033 passengers and 958,414 tons of freight, earning net profits of £928,909 (\$4,514,789).

The administration is in the hands of a governor and an executive and legislative council. Governor in 1929, Sir G. Thomson.

Serious disturbances among the natives at Opobo and other points in southeastern Nigeria were reported to the British Colonial Office in December, 1929. Troops were sent to that point in the nick of time to save the trading station and the Europeans stationed there from a rioting mob, according to the report, which said the troops were forced to fire into the crowd. About 50 natives were killed before the disturbances ceased.

**NITROGEN COMPOUNDS.** See FERTILIZERS

**NOBEL PRIZES.** The Nobel Prizes for 1929 were awarded on November 12 to the following persons who, in accordance with the will of Alfred B. Nobel, the Swedish inventor and philanthropist, were considered to have made the greatest contributions towards the progress of the world and the welfare of mankind: Thomas Mann (literature); Dr. Arthur Harden and Prof. Hans von Euler-Chelpin (chemistry); Sir Frederick Gowland Hopkins and Prof. Christian Eijkman (medicine); and the Duc de Broglie (physics). The award in literature is made by the Swedish Academy, the awards in physics and chemistry by the Royal (Swedish) Academy of Sciences, and the award in medicine by the Caroline Institute (the faculty of medicine in Stockholm). Announcement also was made by the Royal Academy of Sciences of the award of the 1928 prize in physics to Prof. Owen Willans Richardson. The prizes were worth \$46,299 each.

Thomas Mann, the recipient of the prize in literature, was born in Lübeck, Germany, in 1875 and first achieved national popularity in Germany with the publication in 1901 of *Buddenbrooks*, a novel showing the social decline of a Lübeck senatorial family, into which he wove much of his own family history. His other works include *Tristan* (1903), *Der Tod in Venedig* (1913); *Tono Kröger* (1914), *Betrachtungen eines Unpolitischen* (1918), *Rede und Antwort*, (1922), *Der Zauberberg* (1924); and *Unordnung und Früher Leid* (1926). With the publication of *Der Zauberberg* (The Magic Mountain), one of his finest works, he attained the recognized position of dean of German novelists.

The Nobel chemistry award for 1929 was divided between Dr. Arthur Harden, head of the biochemistry department of the Leister Institute and professor of biochemistry in London University, and Prof. Hans von Euler-Chelpin, director of the Biochemical Institute, Stockholm, Sweden. Dr. Harden, who was born in Manchester, Eng-

land, in 1865 and was educated at the Universities of Manchester and Erlangen, has conducted most of his experimental work in the field of alcoholic fermentation. With Sir H. E. Roscoe, he is author of *A New View of the Origin of Dalton's Atomic Theory* and his other publications include *Alcoholic Fermentation* and *Inorganic Chemistry for Advanced Students*. Professor von Euler-Chelpin, the other recipient, was born in Augsburg, Germany, in 1873 and was educated at the Universities of Berlin, Göttingen, and Würzburg. His work, which also has been in the field of biochemistry, has dealt particularly with the chemistry of enzymes. In 1928 he was appointed director of the Biochemical Institute established, under the auspices of the Stockholm High School, through a grant of 25,000 crowns from the Rockefeller Foundation and an equal sum contributed by Swedish patrons.

The recipients of the 1929 Nobel prize in medicine were Prof. Christian Eijkman of the University of Utrecht, the Netherlands, and Sir Frederick Gowland Hopkins, professor of biochemistry in the University of Cambridge, England. Professor Eijkman was the first scientist to produce experimentally a disease of dietary origin, succeeding when director of the hygienic laboratory in Batavia, Dutch East Indies, in 1889 in producing polyneuritis in fowl by feeding them a diet consisting exclusively of polished rice. He had previously noted that this disease closely resembled the disease beriberi occurring in human beings. Lord Hopkins, who was born in London in 1861 and was educated at the University of London, has done considerable research since 1906 on the nature of the accessory substances known as vitamins, which are necessary for the growth, reproduction, and maintenance of animal life.

The Nobel Prize in physics for 1929 was awarded to the Duc de Broglie who was the pioneer in the development of that branch of physics known as wave mechanics, propounding the theory that matter consisted of a series of waves as well as of corpuscles. He was born in Paris in 1875 and was educated at the French Naval Academy, serving for a time as a naval officer. He rejoined the navy at the outbreak of the World War and served throughout the conflict in the cross of the Legion of Honor in 1917 for his invention of a wireless receiver permitting submerged submarines to communicate with the shore.

Prof. Owen Willans Richardson, who received the Nobel Prize in physics in 1928, was born in Dewsbury, Lancashire, England, and was educated at Trinity College, Hartford, Conn., and Princeton University. Since 1924 he has been engaged in research in physics at King's College, London. He is also a fellow of the Royal Society and is best known for his researches on the theory of electrons, his published works including *The Electron Theory of Matter* and *The Emission of Electricity from Hot Bodies*. From 1906 to 1914 he was professor of physics at Princeton University, where he conducted researches which led to the establishment of Richardson's law of thermionics, governing the motions of electrons emanating from hot bodies, and which was later instrumental in making possible the development of the radio.

**NORMAL SCHOOLS.** See EDUCATION IN THE UNITED STATES, UNIVERSITIES AND COLLEGES

**NORTH CAROLINA POPULATION.** According to the Fourteenth Census, the population of

the State on Jan. 1, 1920, was 2,559,123. The estimated population on July 1, 1928, was 2,938,000. The capital is Raleigh.

**AGRICULTURE** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Tobacco	1929	764,000	508,060,000	\$93,991,000
	1928	728,000	499,408,000	97,885,000
Cotton	1929	1,782,000	735,000	61,372,000
	1928	1,800,000	829,000	77,330,000
Corn	1929	2,269,000	48,568,000	48,568,000
	1928	2,305,000	42,642,000	43,921,000
Hay	1929	865,000	880,000	14,641,000
	1928	849,000	816,000	18,888,000
Potatoes	1929	74,000	8,130,000	9,756,000
	1928	95,000	10,545,000	8,854,000
Sweet potatoes	1929	78,000	9,126,000	8,218,000
	1928	80,000	7,840,000	6,664,000
Peanuts	1929	220,000	249,900,000	9,996,000
	1928	205,000	239,400,000	11,781,000
Wheat	1929	467,000	5,347,000	7,539,000
	1928	444,000	5,150,000	7,828,000
Oats	1929	258,000	6,192,000	4,644,000
	1928	191,000	4,202,000	3,278,000

\* Pounds    \* Bales    \* Tons

**MINERAL PRODUCTION** The stone production of 1927 exceeded the clay products of the State for that year in total value, and consequently took the lead in the mineral industries of the State. There were produced in 1927, 2,250,870 short tons of stone, exclusive of marble, and in 1926, 1,813,480 tons, the value of such stone produced in 1927 was \$4,913,177, in 1926, \$4,005,087. Clay products attained a value for 1927 of \$3,860,950, for 1926, of \$4,256,901. No other mineral product of the State had a total value of \$1,000,000 for 1927. In 1928, however, the production of copper increased to the quantity of 8,207,000 pounds, from 5,362,041 pounds for 1927, and thus attained a value in excess of \$1,000,000 for the year's product. The relatively large production of crude feldspar increased to 100,756 long tons for 1927, from 91,433 tons for 1926, in value, to \$612,214 for 1927 from \$602,020 for 1926. Coal and iron ore continued to be produced in minor amounts. The total value of the mineral products of the State was \$11,703,671 for 1927, for 1926, \$10,992,793.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 5222.86. There was no reported construction of additional line in 1929.

At the end of 1929 the total installation of hydro and steam plants in North Carolina amounted to 1,655,900 horse power or an increase of 20.6 per cent over the previous year. Of the total installation, 944,900 horse power was hydro and 711,000 was developed by steam. In hydro-electric power the increase in a year amounted to 16.4 per cent and in steam, 26.8 per cent. Approximately 57 per cent of the 1929 total installation was hydro and 43 per cent steam.

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and relating to the operations of 1927, there were in the State, in 1927, 2984 manufacturing establishments. These employed 204,590 wage earners, whose wages for the year totaled \$158,394,434. Materials and supplies used in production cost \$560,819,236. Manufactured products attained the combined value of \$1,154,046,612.

**EDUCATION** In deference to the recognized need for a minimum school year of 8 months, the

Legislature made an appropriation of \$1,250,000 for State aid to schools. For the academic year 1928-29 the population of school age was estimated at 1,013,900. There were enrolled in the public schools 855,882 pupils. Of these, 745,340 were in elementary and 110,533 in high schools. The current expenditures of the year for public-school education totaled \$26,580,686. The yearly salaries of teachers averaged \$796.

**CHARITIES AND CORRECTIONS** The State Board of Charities and Corrections as operating in 1929 consisted of 7 members, one by law a woman, all elected by the General Assembly upon recommendation of the Governor, for six-year terms. A Commissioner of Public Welfare acted as the executive officer of the Board. There were maintained divisions of child welfare, mental health, institutions, county organizations, school attendance, and work among Negroes. Institutional work in the State was largely on a county basis. Under the Board's supervision were the following institutions: State Hospital for the Insane, Raleigh; State Hospital for the Insane, Morgantown; State Hospital for the Colored Insane, Goldsboro; Caswell Training School, Kinston; State Prison, Raleigh; East Carolina Training School for Boys, Rocky Mount; Stonewall Jackson Training School for Boys, Concord; State Home and Industrial School for Girls, Samaicand; Morrison Training School for Delinquent Negro Boys, North Carolina Orthopedic Hospital, Gastonia.

**LEGISLATION** The regular biennial session of the State Legislature convened in January and sat for 70 days. The recommendations of Governor Gardner dealt chiefly with need for a system of workmen's compensation, for a ballot law, for reform of the tax system and for measures of public education. A comprehensive workmen's compensation act was passed. It provided \$6000 for dependents in case a workman should be accidentally killed at his employment. In cases of injury indemnity was fixed between the limits of \$7 and \$18 a week. A salaried commission of three members was created to administer the act. With regard to the ballot, a modification of the Australian ballot was adopted. Its form was such as to preserve the secrecy of a vote cast in the ordinary way, but the presence of persons at the polls to assist voters who might require it was allowed. These so-called ballot markers were designed ostensibly to aid illiterate voters unable to handle their own ballots understandingly. The objection was raised that the markers might in many precincts virtually keep a restraining eye on the party regularity of voters. In party primaries, as distinct from elections, no markers were to be allowed. With regard to fiscal matters no general plan of reform was adopted. The Legislature, however, increased the tax on gasoline to 5 cents a gallon, from 4 cents. It assigned to the several counties, for maintenance of county roads, \$3,000,000 of the proceeds of this tax. The special commission on taxation previously created reported to the Legislature that the general property tax was onerous, taking away over 28 per cent of the net income of farms, and the increase in the gasoline tax was in part designed to afford some alleviation of the direct levies on property. An effort to create a permanent administrative tax commission failed of passage. The special tax on chain stores enacted in 1927 having been declared unconstitutional, the Legislature passed

a new act, to tax such stores, to the estimated number of three or four hundred, \$50 for each store operated in excess of one. It was found not to be feasible to finance the aid needful to a proposed increase of the mandatory public-school minimum term to 8 months, from 6 months, but the yearly State aid to counties to enable them to maintain the six-month term was increased to \$2,000,000, and a special fund of \$1,250,000 a year was established for the aid of counties maintaining the eight-month term. The schools were required to teach pupils the harmful effects of alcohol and narcotics.

**POLITICAL AND OTHER EVENTS.** An outbreak of labor troubles in Southern textile mills, starting in the spring, became most severe and widespread in North Carolina. At Gastonia, about 1100 of the employees of the Loray tire-fabric yarn mills of the Manville-Jenckes Company, comprising half the working force, struck on April 2. They started a labor conflict that although but one of many, exceeded the rest in bitterness. The strike was called by the National Textile Workers' Union on account of the discharge of a number of the workers. After a mob had interfered with a sheriff's force protecting the plant, a National Guard force was sent to Gastonia on April 3 by Governor Gardner. A number of reputed Communist organizers gained control of the strikers, and demands were presented which according to one of the mill officials' reply amounted to a virtual request for the surrender of the plant. By April 7 there were estimated to be 4500 textile-mill workers on strike in the Piedmont region of the Carolinas. The United Textile Workers' Union, affiliated with the American Federation of Labor, declared through its president on April 17 that it would not participate in the movement at Gastonia, which it ascribed to Communist influence.

After a prolonged suspension of operations, matters at Gastonia entered a violent stage. While National Guard troops were still present, a mob opposed to the strike attacked the organizers' headquarters and wrecked their offices and a store run by relief workers. The organizers then set up headquarters outside the town, in a temporary camp. This camp was raided on the night of June 7 by L. Q. Aderholt, the town chief of police and a force of aides, not including militia, who had meanwhile been recalled. Persons in the tent camp fired shots and Aderholt received wounds, from which he died a day later. Fifty-nine strikers and organizers were arrested, charged with his murder or with assault with intent to kill. Radical groups in many parts of the country contributed for their defense. A special grand jury found murder indictments against 15 of the prisoners. They were brought to trial on August 26, before Judge M. V. Barnhill of the Superior Court of Mecklenburg County, to which the defense had obtained a change of venue. The prosecution contended that the organizers had constructively committed murder by utterances inciting to violence. The State reduced the number prosecuted on the murder charge to seven. These were found guilty of murder in the second degree on October 21. They were sentenced to from 5 to 20 years of imprisonment, Fred Irwin Beal, an organizer, and two of his aides received the heaviest sentences. The International Labor Defense, an organization that had supported the defendants, charged that a "class verdict" had been rendered,

through prejudice against the defendants' beliefs.

Other acts of violence took place in the course of the strikes elsewhere in the States. At Marion on October 2 a group of strikers encountered 8 deputy sheriffs guarding the gate of the Marion Manufacturing Company and 6 strikers were shot and killed. The deputy sheriffs were tried for murder before a jury imported from another county, and were acquitted on testimony that their opponents had fired first. Cases against those charged with having been among the rioting mob were dropped. There occurred also floggings and other attacks by mobs antagonistic to the strikers and a number of evictions from company houses.

**OFFICIALS.** Governor, O. Max Gardner; Lieutenant-Governor, R. T. Fountain, Secretary of State, J. A. Hattness, Treasurer, Nathan O'Berry; Auditor, Baxter Durham, Attorney-General, Dennis G. Brummitt, Superintendent of Public Instruction, A. T. Allen.

**JUDICIARY.** Supreme Court, Chief Justice, Walter P. Stacy, Associate Justices, W. J. Adams, Heriot Clarkson, George W. Connor, W. J. Brogden.

**NORTH CAROLINA, UNIVERSITY OF.** A State institution for the higher education of men in Chapel Hill, N. C., founded in 1795. The enrollment in the autumn of 1929 was 2024 regular students, with 3478 in extension courses. There were 1883 registered for the 1929 summer session. The faculty had 215 members. The productive funds of the institution amounted to \$2,232,575 and the annual income to \$1,293,797. The library contained more than 200,000 volumes and was housed in the new library building erected at a cost of \$625,000. The school of commerce also was installed in its new building, Bingham Hall. President, HARRY WOODBURN CHASE, Ph.D., LL.D.

**NORTH CENTRAL, formerly NORTHWESTERN, COLLEGE.** A coeducational institution of higher learning in Naperville, Ill., founded in 1861. In the autumn of 1929, there was an enrollment of 533 students, of whom 285 were men and 248, women. There were 41 members on the faculty. The productive funds of the college amounted to \$754,000 and the current income for the year was \$148,350. The library contained 20,000 volumes. In 1929 a new home for the president was purchased through the generosity of a friend of the college. Plans were prepared for the construction of a gymnasium and field house costing \$350,000. President, EDWARD EVERETT RAIL, Ph.D.

**NORTH DAKOTA POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 646,872. On July 1, 1925, it was 641,192 according to the census taken by the State. No estimate was made in 1928. The capital is Bismarck.

**AGRICULTURE.** The table on page 613 gives the acreage, production, and value of the principal crops in 1928 and 1929.

**MINERAL PRODUCTION.** Coal, the only important mineral product of the State, was actively mined in 1928. There were produced 1,649,930 short tons of coal, as against 1,527,939 tons in 1927. The coal product of 1928 had a total value of \$2,780,000, that of 1928, a value of \$2,604,000. Of the other mineral industries, the manufacture of clay products and the digging of sand and gravel alone each slightly exceeded \$100,000 in the value of its output for 1927. The total value

Crop	Year	Acreage	Prod Bu.	Value
Wheat	1929	9,918,000	93,896,000	\$ 91,008,000
	1928	10,810,000	155,358,000	125,928,000
Barley	1929	2,550,000	86,210,000	15,208,000
	1928	2,179,000	55,584,000	23,898,000
Hay	1929	2,671,000	2,486,000*	19,312,000
	1928	2,290,000	3,388,000*	20,905,000
Flaxseed	1929	1,463,000	8,676,000	19,784,000
	1928	1,148,000	8,384,000	16,771,000
Oats	1929	1,934,000	84,812,000	11,140,000
	1928	1,934,000	59,954,000	17,986,000
Rye	1929	985,000	8,415,000	6,896,000
	1928	1,298,000	14,278,000	10,851,000
Corn	1929	1,057,000	16,384,000	11,141,000
	1928	997,000	24,426,000	14,900,000
Potatoes	1929	145,000	6,690,000	7,308,000
	1928	141,000	14,805,000	4,442,000

\* Tons

of the mineral product of the State was \$2,869,663 for 1927, for 1926, \$2,804,837.

FINANCE State expenditures in the year ended June 30, 1928, as reported by the U S Department of Commerce, were for maintenance and operation of governmental departments, \$8,468,192 (of which \$1,427,149 was for local education), for public-service enterprises, largely the Mill and Elevator Association, for permanent improvements, \$3,115,730, total, \$17,543,404 (of which 3,657,707 was for highways, \$1,084,682 being for maintenance and \$2,373,025 for construction). Revenues were \$18,722,234. Of these, property and special taxes formed 24.1 per cent, earnings of departments and compensation paid the State for officers' services 9.7, sale of licenses, 17.9 (including gasoline taxation of \$1,387,696). The State's funded debt of June 30, 1928, contracted entirely for the Mill and Elevator Association, for State real-estate loans and for the Bank of North Dakota, was \$34,857,500 outstanding, or \$4,027,170 net of sinking funds. On a property valuation of \$99,550,739 were levied in the year State taxes of \$3,932,263.

TRANSPORTATION The total number of miles of railroad line under operation on Jan 1, 1929 was 5274.60. There were built, in 1929, 22.98 miles of additional second track.

MANUFACTURES According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and relating to the operations of 1927, there were in the State, in 1927, 307 manufacturing establishments. These employed 3260 wage earners, whose wages for the year totaled \$1,808,122. Materials and supplies used in manufacture cost \$34,271,002. Manufactured products attained the combined value of \$47,003,022.

EDUCATION For the central direction of rural schools there were established two full-time supervisors. A beginning was made with the modification of the curricula of the institutions for the training of public school teachers with the object of grouping in the initial year of their courses such subjects as were essential to those intending to take positions in the rural schools. The power of the State education associations or teachers' organizations was increased by provisions that were made for the creation of a representative body to transact these organizations' business.

CHARITIES AND CORRECTIONS A Board of Administration in 1929, held control over the State . . . . . eleemosynary institutions, as well as over the State University and eight other State schools of higher learning. The State institutions of care or custody were School

for the Deaf, Devil's Lake; School for the Blind, Bathgate; Tuberculosis Sanatorium, Dunketh; Institution for the Feeble-minded, Grafton, Hospital for the Insane, Jamestown; State Training School, Mandan, State Penitentiary, Bismarck.

LEGISLATION. The twenty-first Legislative Assembly of the State convened in regular biennial session in January and adjourned March 9. One of its chief enactments was that parallel with a measure passed about the same time by the Legislature of Montana, to promote the storage of grain on the farm, instead of its premature sale to elevators. The act was designed to render farm-stored grain of members of farmers' organizations acceptable as security for loans from Federal Intermediate Credit banks. The State tax on gasoline was increased to three cents, from two cents. A rebate to dealers, to the extent of 1 1/2 per cent of the tax, was provided, to serve as a collection fee. The appropriations of the session totaled \$10,752,690 for the ensuing two years. All divisions of the State were required to adopt the budget system in their finances. The State bank-guarantee law, which had been operating under increasing difficulties, was repealed. The Legislature approved for submission to popular vote two constitutional amendments increasing the terms, respectively, of Supreme Court and of District Court judges.

POLITICAL AND OTHER EVENTS Plans for agricultural relief made headway through the granting by the Federal Farm Board on September 18 of an initial loan to the North-Dakota-Montana Wheat Growers' Association. Governor George F. Shafer, who was inaugurated in January, adopted a conservative course and departed from the tendencies to State Socialism that had marked North Dakota in preceding years. In consequence of his attitude no further extension of the system of State enterprises was undertaken. The Attorney-General conducted a campaign for the prosecution of numerous evaders of the State tax on cigarettes. The State Industrial Commission assumed in December the functions of an active board of directors of the State Bank of North Dakota.

OFFICERS Governor, George F. Shafer, Lieutenant-Governor, John W. Carr, Secretary of State, Robert Byrne, Treasurer, Berta E. Baker, Auditor, John Steen, Attorney-General, James Morris; Superintendent of Public Instruction, Bertha R. Palmer.

JUDICIARY. Supreme Court Chief Justice, John Burke, Associate Justices, Luther E. Birdzell, A. M. Christianson, A. G. Burr, W. L. Nuesle.

NORTH DAKOTA, UNIVERSITY OF. A State institution of higher education at University Station, Grand Forks, N D, founded in 1883. The enrollment for the autumn of 1929 was 1769, of whom 1130 were men and 639 women. These were distributed as follows: Graduate, 49; liberal arts, 715; commerce, 144; education, 436; engineering, 181; law, 70; medicine, 57; and high school, 67. For the summer session of 1929, the total registration was 351, of whom 161 were men and 190 women. The faculty numbered 143. The productive funds totaled \$1,700,000 and the income for the year, exclusive of boarding department and trust funds, amounted to \$837,855, received from the following sources: Federal land funds, \$65,000; student fees and rent, \$71,400; other local income, \$10,000. State appropriation for maintenance, \$527,400; State appropriations for build-

ings and improvements, \$143,745, State appropriation for public service, \$20,310 The general university library contained 85,215 volumes. President, Thomas F. Kane, Ph D., LL.D.

**NORTHERN EPIRUS.** See GREECE, under *History*

**NORTHERN LAND** Although it was popularly spoken of as Lenin Land, Nicholas II Land has been officially renamed Northern Land by the Soviet government. Located in Lat 79°N and Long 103°E to the north of Cape Chelyuskin, it is separated from this northernmost extension of Asia by a strait of 32 nautical miles. It was discovered by the Russian Hydrographical Expedition to the Arctic, 1912-1915, and its east and north coasts were then mapped.

**NORTHERN TERRITORIES.** See GOLD COAST

**NORTHERN TERRITORY.** A territory belonging to the Commonwealth of Australia, situated in the central and northern part of the island continent, transferred to the Commonwealth, Jan 1, 1911, divided for administrative purposes into two territories, North Australia and Central Australia, on Mar 1, 1927. Area, 523,020 square miles, population, according to the census of 1921, exclusive of aborigines, 3867, estimated in 1929, 4024. The aborigines are estimated to number about 20,000. Principal town, Darwin, on the Harbor of Port Darwin. While the soil is capable of a varied production of crops of tropical and semi-tropical zones, agriculture has not been developed chiefly because the climate is unsuitable for Europeans. The value of all minerals produced in 1928 was £11,346. The imports in 1928-29 were £31,943, exports, £53,730. Revenue in 1926-27 totaled £122,062; expenditure, £431,512, the public debt, £3,564,445. Government Resident for North Australia, R. H. Weddell, for Central Australia, J. C. Cawood.

**NORTH POLE.** See POLAR RESEARCH

**NORTH SHORE FESTIVAL.** See MUSIC

**NORTHWESTERN UNIVERSITY.** A co-educational institution of higher learning in Evanston and Chicago, Ill., founded in 1851. It is composed of a college of liberal arts, a graduate school, and schools of engineering, commerce, journalism, music, education, and speech, in Evanston, and schools of law, medicine, dentistry, commerce, and journalism, in Chicago. For the autumn term of 1929, there was an enrollment of 11,836, of whom 6000 were registered in evening classes in Chicago. For the summer session of 1929, 2200 students were enrolled. The faculty numbered 682 members of the rank of instructor or above. The endowment as of June 30, 1929, was \$17,184,683, and the income from these funds for the fiscal year 1928-29 was \$862,936. In the various libraries of the university there were approximately 300,000 bound volumes and 175,000 pamphlets. President, Walter Dill Scott, Ph D., LL.D.

**NORTHWEST PROVINCES.** The Prairie Provinces of Canada. See CANADA

**NORTHWEST TERRITORIES.** The term applied to the large tract in Canada to the east of the Yukon Territory, stretching northward to the Arctic from the Prairie Provinces and eastward to the north of Hudson Bay and Hudson Strait, comprising the territories formerly known as Rupert's Land and the Northwestern Territory, excepting those portions which form part of the provinces of Manitoba, Saskatchewan, Alberta, and the Yukon Territory. Area, 1,308,082 square miles, population estimated at 12,000, in-

cluding 7100 Eskimos and 3800 Indians. They are under the administration of the Northwest mounted police, directed by a commissioner at Ottawa, aided by a deputy commissioner, and a council of five Commissioners in 1929, William Wallace Cory.

**NORWAY.** A constitutional monarchy of northwestern Europe, occupying the western and northern half of the Scandinavian Peninsula and separated from Sweden by the Kjölen Mountains, with an extreme length of 1110, and an extreme width of 250, miles, formerly united with Sweden, but separated, June 7, 1905. Capital, Oslo, reigning King in 1929, Haakon VII.

**AREA AND POPULATION.** The area is 125,017 square miles and the population according to the census of 1920, 2,649,775, of whom 1,864,371 lived in rural districts, estimated population in 1928, 2,810,592. The capital, Oslo, had a population of 258,483 on Dec 1, 1920, estimated in 1928, 253,472. Other large cities with their estimated populations in 1928: Bergen, 96,772, Trondheim, 55,218, Stavanger, 47,179. Before Jan. 1, 1925, the capital, Oslo, was called Christiania. During the years 1924 to 1928 the average annual number of births was 53,338 and of deaths 30,336, the excess of births being 23,002. Emigrants during the same period averaged 9109 annually, of whom 68 per cent went to the United States.

**EDUCATION.** Primary education is compulsory, the school age being from 6½ to 14 years in urban districts and 7 to 14 years in rural districts. During 1926-27 the number of pupils in elementary schools was 394,018 and in secondary schools, 23,447. There is only one university, that at Oslo, which had 3562 students in 1927.

**PRODUCTION, ETC.** About 75 per cent of the area of Norway is unproductive and forests are the principal resource of the remainder. In 1928 the area of arable land was 1,704,000 acres or 2.4 per cent of the total land area, there were 622,000 acres of permanent meadows, and 18,531,000 acres of forests. In 1928 there were 1,221,000 cattle, 1,654,000 sheep, 283,000 swine, 293,000 goats, and 182,000 horses. The area and production of the principal crops in the same year were as follows: Wheat, 25,000 acres and 676,000 bushels, rye, 23,000 and 612,000, barley, 150,000 and 5,600,000, oats, 240,000 and 11,608,000, potatoes, 123,000 and 34,608,000, hay, 1,040,000 acres and 2,081,000 metric tons, fodder beets, 1,506,000 metric tons. The year was a fairly satisfactory one for Norwegian farmers, there being larger yields of most crops and slightly higher prices. In 1929 grain crops were about average while the yield of fruits was poor. The fish catch in 1928 was valued at \$19,400,000 as against \$15,100,000 in 1927, in 1929 the value increased to about 80,000,000 crowns (\$21,344,000). In the latter year the canning industry was prosperous, exports of canned fish being valued at about 45,000,000 crowns. There has been a steady expansion of the Norwegian whaling industry. Production in the 1927-28 season totaled 801,500 barrels valued at \$18,100,000 as against 680,000 barrels valued at \$15,100,000 in the previous year.

In 1928 the output of leading mine and factory products was as follows: pyrites, 750,000 metric tons, iron ore, 500,000 metric tons, ferroalloys, 111,310 (exports only), aluminum, 19,000, zinc, 5500, chemical wood pulp, 275,000, silver (fine), 385,809 troy ounces. Silver ore, feldspar, titanium ores, pig iron, paper, margarine, and

beer are other products of the mines and factories. In 1929 the mining industry recorded the most favorable year since the World War.

Norway is one of the leading maritime nations of the world, with respect to merchant tonnage. On June 30, 1928, the merchant marine consisted of 1787 vessels of 100 tons or over with a capacity of 2,968,207 gross tons. Gross earnings of the merchant marine in 1928 totaled 396,500,000 crowns (one crown equaled \$0.2664), as against 422,700,000 crowns in 1927. There was a steady decrease in earnings of the merchant fleet after 1920. Shipbuilding plants were active in 1929 after several years of comparative inactivity. The national wealth in 1929 was estimated at 7,957,000,000 crowns and the national income for the year at 2,140,000,000 crowns, as compared with the estimates of 8,097,000,000 crowns and 2,252,435,000 crowns, for wealth and income, respectively, in 1927.

**COMMERCE.** While imports in 1928 were valued at \$271,427,000, or 7 per cent more than in 1927, the exports increased by only 2 per cent to \$179,435,000, leaving an adverse visible balance of trade of \$91,992,000. This heavy adverse balance is normal in Norwegian economy and is rectified by the earnings of the merchant marine, emigrant remittances, etc. In 1927 the United Kingdom took 29.3 per cent of the total Norwegian general exports and supplied 20.5 per cent of the imports. Germany took 12.6 per cent of the exports and furnished 20.2 per cent of the imports, while the share of the United States in Norway's trade was 10.7 and 14.7 per cent, respectively. The leading exports are fish and fish products, whale oil and fats, pulp-wood and wood products, newsprint and other paper, aluminum and other minerals, and hides and skins. Ships, iron and steel, coal, textile fabrics, foodstuffs, and various other finished manufactures are the chief imports. Both imports and exports continued to increase in 1929. Imports rose to \$283,556,000 and exports to \$200,032,000, leaving an unfavorable balance of \$83,524,000, according to preliminary figures.

**FINANCE.** The budget for the fiscal year ending June 30, 1929, estimated receipts and expenditures at 354,233,000 crowns. In the preceding year the actual receipts were 100,736,000 crowns, or about 3,600,000 more than the budget estimates, affording a surplus of 2,000,000 crowns which was used to reduce the national debt. Owing to a deficit in the operation of the state railways, expenditures in 1927-28 exceeded the estimates by about 6,000,000 crowns. The budget for 1929-30 was made to balance at 388,400,000 crowns. The national debt on June 30, 1928, was reported at 1,634,800,000 crowns as compared with 1,568,400,000 crowns a year earlier. There was a change in the net debt, however, as a result of conversion loan obtained in March, 1928, to fund the floating debt was practically intact on June 30. Of the total debt, 823,395,000 crowns was held internally. Actual budget operations for 1928-29 showed a small surplus of 211,000 crowns.

**COMMUNICATIONS.** On June 30, 1928, the length of railway lines in Norway totaled 2349 miles, of which 216 miles were government owned and operated. Due to heavy construction costs, steep grades making it impossible to haul heavy loads, and the sparse population, the state railways usually operate at a deficit. This was estimated at 2,187,000 crowns in the budget for 1928-29. In 1929-30, however, the income and operating expenses were expected to balance. In

1927-28 the railways carried 19,301,000 passengers and 9,014,000 metric tons of freight, the gross receipts amounting to 84,055,000 crowns (\$22,527,000). In 1927 the number of vessels engaged in foreign trade, including Norwegian ports totaled 9094 of 7,927,000 tons registered tons and those clearing totaled 8891 of 6,939,000 tons. The telegraph and telephone systems, the greater part of which are state owned, had 8387 and 512,162 miles of wire, respectively, in 1927.

**GOVERNMENT.** Executive power is vested in the King, who acts through a cabinet or council of state, and legislative power in the Parliament, or Storting, of 150 members, elected for three years by universal suffrage without distinction as to sex. As a result of the elections held in November, 1927, the following parties were elected for the period 1928-30: Labor party, 59, Conservatives and Moderate Liberals, 31, Liberals, 31, Agrarian party, 26, Communists, 3. King Haakon VII was born Aug. 3, 1872, and elected King Nov. 18, 1905, upon the secession of Norway from its union with Sweden. The members of the cabinet appointed Feb. 13, 1928, were as follows: Prime Minister and Foreign Affairs, J. L. Mowinkel, Education and Ecclesiastical Affairs, S. M. Haaland, Justice, H. M. Evjen, Agriculture, H. T. Amund, Public Works, O. M. Mjelde, Social Affairs, T. Vaeland, Finance, P. Lund, Defense, T. Andersen-Lyset, Commerce and Industry, L. Oftedal.

**HISTORY.** The agitation of Norwegian Nationalists against Danish influences, which found expression in the change of the name of the capital from Christiania to Oslo in 1925, provoked violent repercussions in 1929. Disregarding the protests of citizens of Trondheim, Parliament in June voted to change the name of that city to Nidaros, effective Jan. 1, 1930. The action provoked serious rioting in Trondheim and in Bergen, which the Nationalists proposed to rename Brygvik and there were demonstrations of sympathy with these protests in Oslo and other communities.

Another important event of the year was the wedding of Crown Prince Olaf of Norway and Princess Matha, daughter of Prince Carl and a niece of King Gustav of Sweden. The friendly relations existing between Sweden and Norway since their peaceful separation in 1905 was emphasized in the various events held in connection with the wedding. Later in the year a movement developed for the elimination of the neutral zone established between the two countries by the agreement under which they separated. It was contended that the proposal would further improve relations between the two nations.

A radical revision of the constitution was proposed in September by the Labor party, which held 59 of the 150 seats in the Storting. Changes advocated included the modification of the provision made for compensating owners of expropriated property, omission of the section providing for the adoption of *ex post facto* laws, abolition of the practice of issuing laws in the name and over the seal of the King, abolition of the King's suspensive veto and of his right to open and close the sessions of Parliament, revocation of the right of the courts to pass upon the constitutionality of laws, and abolition of conscription.

Steps toward the revision of the laws regulating the sale of liquor and wines were taken by the Department of Social Affairs, following criticism of the conduct of the Norwegian Wine

Monopoly, a semi-public institution controlling the sale of wine and other intoxicating beverages in the country.

On May 8 the Norwegian Parliament voted to annex the island of Jan Mayen in the Arctic Ocean, which had been used as a base of operations by Norwegian whalers for many years. The island lies between Svalbard (Spitzbergen) and Greenland.

**NORWEGIAN LITERATURE.** See SCANDINAVIAN LITERATURE.

**NOTRE DAME, UNIVERSITY OF.** A Roman Catholic institution for the higher education of men in Notre Dame, Ind., founded in 1842. The enrollment for the autumn term of 1929 was 3054, representing an increase of 63 over 1928-29. The summer session enrollment was 1132, an increase of 109 students. There were 170 faculty members, 26 of whom were new appointees. The library contained approximately 200,000 volumes. President, the Rev. Charles L. O'Donnell, C.S.C., Ph.D.

**NOURSE, EDWARD EVERETT.** American theologian and professor, died Apr. 30, 1929, in West Hartford, Conn. He was born in Bayfield, Wis., Dec. 24, 1863, and was graduated from Lake Forest University in 1888 and from Hartford Theological Seminary in 1891. In 1894-95 he studied at the University of Jena. He was ordained in the Presbyterian ministry in 1893. He was pastor of the Second Congregational Church in Berlin, Conn., from 1895 to 1898, when he went to Hartford Theological Seminary as an instructor, becoming professor of Biblical theology in 1905. From 1903 to 1916, Dr. Nourse also lectured at Mount Holyoke College. He contributed to the *New International Encyclopedia* and the *Encyclopedia of Religion and Ethics*. He was one of the editors of the *Standard Dictionary of the Bible* (1909) and of the *New Standard Dictionary of the Bible* (1926). He was the author of *The Epistles of Paul* (1911), republished as *Selected Epistles of Paul* (1915).

**NOVA SCOTIA,** *nō'va skō'shā*. One of the Maritime Provinces of Canada. Area, 21,428 square miles, population, according to the census of 1921, 523,837, estimated in 1929, 550,400. Capital, Halifax, with a population in 1921 of 53,372. Other large towns: Sydney, 22,545; Glace Bay, 17,007; Amherst, 9998; Dartmouth, 7899; New Glasgow, 8074; Sydney Mines, 8327; Truro, 7562; Yarmouth, 7093. In 1927 there were 11,054 births, 6360 deaths, and 3040 marriages. Education is free, compulsory, and undenominational. In 1927 there were nine universities and colleges, and 3113 elementary and secondary schools with 3305 teachers and 112,556 pupils. Nova Scotia is largely an agricultural and fruit-growing country. The chief product is apples, the output of which, in 1927 was about 900,000 barrels. The output of the chief minerals in 1926 was Coal, 7,071,876 long tons (6,000,000 tons in 1928 and 6,250,000 in 1929), pig iron, 284,906 tons, coke, 399,000 short tons, and small quantities of steel ingots, limestone, and dolomite. Nearly 20,000 men are employed in the fisheries, which, next to those of British Columbia, are the most extensive in Canada. The total market value of fish caught in 1929 was estimated at \$12,000,000 (\$11,570,387 in 1928). The province's first paper mill commenced operation in 1929. There are 12,000 square miles of forests. The imports for consumption in 1927 were valued at \$23,479,462, and the exports at \$53,226,985. There are 1451 miles of railway.

Executive power is vested in a lieutenant-governor appointed by the Dominion Government of Canada for five years, who acts through a responsible ministry or council and legislative power in a council of 21 members appointed for life by the Crown, and an assembly of 43 members. The province is represented in the Dominion Senate by 10 members and in the House of Commons by 16. Lieutenant-Governor in 1928, James C. Tory, Premier, Provincial Secretary, and Treasurer, E. N. Rhodes, Public Works and Mines, Col. G. S. Harrington, Attorney-General, W. L. Hall, Hon. J. P. C. Black, Natural Resources, J. F. Mahoney, Ministers without portfolios, Dr. B. A. Le Blanc, J. F. Fraser, Doctor W. N. Rehfuess, O. P. Goucher, J. Doull.

A plebiscite on the question of prohibition was held in the province on Oct. 31, 1929, in which 30,422 voted against and 20,862 for the continuance of the existing temperance act. Of the same 51,284 voters, 36,503 voted in favor of the sale of liquor under government control and 9082 against governmental control. At a plebiscite held in 1919, 80,000 voted in favor of prohibition and 23,000 against. See CANADA.

**NOVAYA ZEMLYA,** (*No'va Zem'bla*). An archipelago to the north of European Russia belonging to Soviet Russia. Under a decree issued June 30, 1924, a Soviet commissioner, with headquarters at Archangel, supervises the affairs of these islands, of which the most important are the north and south islands of Novaya Zemlya, Kolguev, and Waigatch.

**NOVEL.** See LITERATURE, ENGLISH AND AMERICAN, FRENCH LITERATURE, GERMAN LITERATURE, ITALIAN LITERATURE, SCANDINAVIAN LITERATURE, SPANISH-AMERICAN LITERATURE, SPANISH LITERATURE.

**NURSERY SCHOOLS.** See EDUCATION IN THE UNITED STATES.

**NUT CULTURE.** See HORTICULTURE.

**NUTRITION.** See FOOD AND NUTRITION.

**NYASALAND,** or *NYASSALAND, PROTECTORATE.* A British protectorate, formerly known as British Central Africa, situated on the southern and western shore of Lake Nyassa, extending northward to the Zambezi River. Area, 37,890 square miles, population on Dec. 14, 1927, 1829 Europeans, 982 Asiatics, and 1,304,123 natives. The chief towns are Blantyre and Zomba, the seat of the government. Education is in the hands of foreign missionary societies, under which there were in 1927, 2788 schools, with 154 European teachers, 166,022 pupils enrolled, and an average attendance of 112,883. Among the chief products are tobacco, coffee, cotton, tea, and livestock. In 1928 exports were valued at £876,000 and imports at £869,500. The chief articles of export are tobacco, cotton, fibres, corn, and tea, of import, manufactures of cotton, provisions, and raw materials. The British Empire supplied more than half of the imports. Revenue for 1926-27 was estimated at £348,320 and expenditures at £318,899. The public debt on Mar. 31, 1927, was £775,062. The administration is under a commander-in-chief, aided by an executive and legislative council, composed of nominated members. Governor and Commander-in-Chief in 1929, Sir C. C. Bowring.

**OATS.** The 1929 production of oats of 27 countries reporting to the International Institute of Agriculture, Rome, was placed at 3,260,206,000 bushels, which was 8 per cent below the yield of

1928 and slightly below the average of the 5-year period of 1923-27. The area devoted to the crop in these countries, 93,851,000 acres, was 1 3 per cent below the acreage of the preceding year and 2.7 per cent below that of the 5-year period. Production in 1929 of the leading oats-growing countries, not including the United States, was reported as follows: 481,106,000 bushels, France 396,755,000 bushels, Canada 297,787,000 bushels, Poland 174,991,000 bushels and England and Wales 101,920,000 bushels. In 1928 the Soviet Republics reported a yield of over 1,100,000,000 bushels, Argentina, the leading oats-producing country of South America, reported a yield of 65,172,000 bushels for the crop year 1928-29. The Canadian acreage as compared with that of 1928 was reduced 5 per cent, but the yield, largely due to drought, indicated a reduction of 38 per cent.

The oats crop of the United States in 1929 was estimated by the Department of Agriculture at 1,238,654,000 bushels, a decrease of about 200,000,000 bushels from the crop of 1928 and of 106,426,000 bushels from the average crop of the 5-year period 1923-27. The decrease was due partly to the smaller average yield of 30.8 bushels per acre compared with 34.5 bushels in 1928 and partly to a decrease of 1,517,000 acres below the area of the preceding year. The area harvested in 1929, 40,217,000 acres, was 2,599,000 acres below that of the 5-year average. The average farm price of oats Dec. 1, 1929, was 43.5 cents per bushel as against 40.9 cents the year before and on this basis the total farm value of the crop was \$538,445,000 in 1929 and \$589,048,000 in 1928. In production of oats the United States continued to stand first among the countries of the entire world.

Production of oats was reported by all States, the yields of the leading States being as follows: Iowa, 219,028,000 bushels, Minnesota, 153,738,000, Illinois, 141,783,000, Nebraska, 86,304,000, Wisconsin, 85,215,000, and South Dakota, 64,382,000. The average yield per acre ranged from 14 bushels in Florida to 45 bushels in Washington and the average farm price on Dec. 1, 1929, from 32 cents per bushel in North Dakota to 89 cents per bushel in Florida. The average yields per acre are usually highest in the extreme northwestern States and lowest in the extreme southwestern States.

During the calendar year 1929, the United States exported 6,008,727 bushels of oats valued at \$3,389,111, as compared with 10,421,056 bushels valued at \$6,217,414 in 1928. There also were exported 81,245,501 pounds of oatmeal (flaked and rolled oats) valued at \$4,220,140, as compared with 84,074,152 pounds valued at \$4,203,478 in 1928. The imports of oats during the year amounted to 111,796 bushels valued at \$43,420, as compared with 489,368 bushels valued at \$320,508 in 1928. The average cost of producing an acre of oats in 1928, as determined by the Department of Agriculture on the basis of 2621 reports from all parts of the country, was \$18.40, the range being from \$15.98 in the West North Central States to \$25.15 in the North Atlantic States. The average cost per bushel was 50 cents with a range from 44 cents in the East North Central and West North Central States to 70 cents in the South Atlantic States.

**OBERLIN COLLEGE.** A nonsectarian institution for the higher education of men and women in Oberlin, Ohio; founded in 1833. The registration for the first semester of 1929-30 was

1625, while that for the summer session of 1929 was 141. In 1929-30 the faculty had 262 members. The productive funds of the institution as of Aug. 31, 1929, amounted to \$17,026,532, and the income for the year was \$1,655,832. The library contained 311,500 bound, and 204,001 unbound, volumes. President, Ernest Hatch Wilkins, Ph.D., Litt. D., LL.D.

**OBITUARY RECORD OF THE YEAR.** See NECROLOGY.

**OBSERVATORIES.** See ASTRONOMY.

**OCEANIA.** Ōshū-an'ia, FRENCH ESTABLISHMENTS IN. A French colonial possession consisting of groups of small islands scattered throughout a wide area of the eastern Pacific. The total area of the Establishments is estimated at 1520 square miles, population in 1926, 35,862, of whom 29,644 were natives. The principal island is Tahiti, which contains the chief town, Papeete, with a population of 4601, of whom 2126 were French. The group of islands of which Tahiti forms a part is known as the Society Islands. The other groups are the Marquesas Islands, Tuamotu Island, Leeward Islands, the Gambier, Tubuai, and Rapa groups, and a number of outlying islands. Various tropical fruits are grown and exported. Pearls and mother-of-pearl are important products. For the island of Tahiti, imports in 1927 totaled 50,596,237 francs and exports 49,032,248 francs. The chief imports are tissues, wheat, flour, and metal work, and the chief exports, copra, mother-of-pearl, vanilla, coconuts, and phosphates. The local budget for 1927 balanced at 15,167,573 francs. The most important islands communicate by a New Zealand steamship service with San Francisco, New Zealand, and Australia. The administration is in the hands of a governor assisted by an administrative council. Governor in 1929, M. B. M. V. Siadon, appointed Jan. 13, 1928. See EXPLORATION.

**OCEANS.** See METEOROLOGY.

**OCHS,** SIGISMUND. A distinguished German choral conductor, died in Berlin, Feb. 6, 1929. He was born in Frankfurt-on-Main, Apr. 19, 1858. He received his musical education under Kiel and Urban at the Königl. Hochschule für Musik in Berlin, and profited greatly by his intercourse with Hans von Bulow. In 1882 he organized the Philharmonischer Chor, which soon became world-famous. Besides model performances of the works of classic and romantic composers, the organization gave the first performances of many important choral works of contemporary composers, such as Bruckner, Friel, Wolf, A. Mendelssohn, Tausman, Koessler, Fried, and others. The unfavorable conditions of the post-war period, brought about the dissolution in 1921 of this remarkable organization, part of which was absorbed by the chorus of the Staatliche Hochschule für Musik. Ochs himself then joined the faculty of this institution as professor of choral music and conductor of the chorus, which posts he filled with distinction until his death. To perpetuate the memory of this great leader, six months after his passing the original members of the famous choir were reassembled and reorganized under Otto Klemperer as conductor. Ochs wrote the text and music of an opera, *Im Namen des Gesetzes* (Hamburg, 1888), two operettas; male choruses; and songs. He is the author of *Der deutsche Gesangsverein* (4 vols., 1923), *Über die Art Musik zu hören* (1926); and an autobiography under the title, *Geschehenes, Gesehenes* (1922).

**O'CONNOR, THOMAS POWER** ("TAY PAY") Irish journalist and parliamentarian, died in London, Nov 18, 1929. He was born Oct 5, 1848, in Athlone, Ireland, and was educated at the College of the Immaculate Conception there and at Queen's College, Galway. He began his journalistic work as junior reporter on Saunders's *News-letter* in Dublin in 1867, moving in 1870 to London, where for seven or eight years he struggled as a freelance journalist. With the publication of *Lord Beaconsfield: A Biography*, in 1879, a frankly partisan attack on the Prime Minister Disraeli, he won public recognition. He became sub-editor of the *Daily Telegraph* and later was in the London office of the *New York Herald*. He founded and was first editor of the *Star* (1888-90), the *Sun*, the *Weekly Sun*, *M A P*, and *T P's Weekly*. He began to edit *T P's and Cassell's Weekly* in 1923. In 1880 he entered Parliament as an Irish Nationalist member for Galway, was returned in 1885 for Galway and Liverpool, and in 1886, and thereafter until his death, for Liverpool. Because of his many years of service, Mr. O'Connor was known as the "Father of the House of Commons." To his friends, he was "Tay Pay." In 1881 and again in 1906, he visited America for the purpose of furthering the Irish cause. He was made a Privy Councillor in 1924. Mr. O'Connor was the author of *Gladstone's House of Commons* (1885); *The Parnell Movement* (1886); *Some Old Love Stories*, *Napoleon*, *The Phantom Millions*, *The Story of the Great Finch Fraud* (1902). His *Memoirs of an Old Parliamentarian* (March, 1929) gave a vivid and dramatic picture of the eighties.

**O'HIGGINS, HARVEY J.** An American writer, died in Martinsville, N. J., Jan. 1, 1929. Born in London, Ont., Canada, Nov. 14, 1876, he attended the University of Toronto, 1893-97. After working on *The Toronto Star*, he joined the *New York Globe* in 1899. While with that paper, he wrote short stories and sketches of New York, and in 1905 published his first novel, *The Smoke Eaters*, a story of the New York Fire Department. His subsequent books, both fictional and analytical, were realistic in method and intended to explain the attitude of average Americans, he was particularly successful with his descriptions of Irish-Americans, notably in the short stories *Tammany Titles*, which was used as a campaign document during the World War, 1917-18, he was associate chairman of the committee on public information, Washington, D. C. Mr. O'Higgins's books include *Don-a-Dreams* (1906), *A Grand Army Man* (1908), *Old Clinkers* (1909), *The Beast and the Jungle*, with Judge Ben B. Lindsey (1910), *Under the Prophet in Utah*, with Frank J. Cannon (1911), *The Argyle Case*, with Harriet Ford (1912), *The Dummy*, with Harriet Ford (1913), *Polygamy* (1914), *Silent Sam* (1914), *Adventures of Detective Barney* (1915), *Mr. Lazarus*, with Harriet Ford (1916), *From the Life* (1919), *On the Hving Line*, with Harriet Ford (1919), *The Doughboy's Religion*, with Judge Ben B. Lindsey (1919), *The Secret Springs* (1920), *Some Distinguished Americans* (1922), *The American Mind in Action*, with Dr. Edward H. Recede (1924); *Julie Kane* (1924), and *Clara Barron* (1925).

**OHIO.** POPULATION. According to the Fourteenth Census, the population of the State on

Jan. 1, 1920, was 5,759,394. The estimated population on July 1, 1928, was 6,826,000. The capital is Columbus.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod. Bu.	Value
Oats	1929	8,518,000	128,407,000	\$100,517,000
	1928	8,646,000	138,725,000	103,911,000
Hay	1929	3,062,000	5,018,000 *	50,146,000
	1928	2,787,000	3,706,000 *	43,889,000
Wheat	1929	1,732,000	83,770,000	39,172,000
	1928	872,000	9,475,000	12,388,000
Oats	1929	1,686,000	49,320,000	22,422,000
	1928	2,413,000	89,281,000	37,498,000
Potatoes	1929	116,000	11,338,000	17,261,000
	1928	123,000	12,054,000	9,040,000
Tobacco	1929	51,800	39,782,000 *	7,041,000
	1928	40,500	82,198,000 *	7,084,000
Barley	1929	108,000	2,420,000	1,476,000
	1928	383,000	9,191,000	5,515,000
Sugar beets	1929	22,000	185,000 *	
	1928	88,000	266,000 *	1,897,000

\* Tons \* Pounds

**MINERAL PRODUCTION.** In the production of pig iron, an industry in which Ohio ranks next after Pennsylvania, activity grew in 1928. The blast furnaces of the State shipped in that year 9,266,936 long tons of pig iron, an increase of 8,184,006 tons for 1927, in value, \$1,184,000, for 1928 and \$150,125,790 for 1927. The State imports from without its borders the iron ore needed for this industry, but it produces other raw material, namely coal, and its derivative, coke. The coal production of Ohio fell slightly to 15,641,225 short tons for 1928, from 15,799,697 tons for 1927. The output of 1928 was valued at \$26,439,000, that of 1927, at \$30,376,000. The production of coke, on the other hand, rose for 1928, to 7,786,199 short tons, from 7,213,619 tons for 1927. The value of by-product oven coke produced was \$33,908,863 for 1928 and \$34,081,465 for 1927. Ohio maintained her lead over other States in the production of lime in 1928, the quantity produced rising for that year to 1,015,000 short tons (estimated), from 987,726 tons for 1927. Lime produced had an estimated value of \$8,982,000 for 1928 and a value of \$9,497,324 for 1927. The clay products of Ohio for 1927 had a total value of \$92,363,801, a decline from the \$97,873,102 of 1926. This decrease affected both the brick and tile and the pottery branch of the industry, and while common to almost all the States manufacturing clay products, was more conspicuous in Ohio as the leading producer. The petroleum production of Ohio was 7,030,000 barrels, in value \$14,500,000 (estimated) for 1928, for 1927, 7,593,000 barrels, valued at \$14,970,000. The output of natural gas rose to 51,381,000 M cubic feet for 1927, the latest reported year, from 47,363,000 M for 1926, in value to \$28,881,000 for 1927 from \$25,403,000 for 1926. There were produced in 1927, 15,631,240 short tons of stone, and in 1926, 13,103,140 tons, in value, \$16,789,636 for 1927 and \$13,763,207 for 1926. Gypsum production was 474,320 short tons for 1927 and 521,205 tons for 1926, the value of gypsum produced was \$5,041,879 for 1927 and \$5,797,221 for 1926. The shipments of Portland cement from producing factories increased to 9,364,338 barrels in quantity and \$14,028,183 in value for 1928, from 8,727,879 barrels, or \$14,242,901 for 1927. There is a heavy production of sand and gravel. The total value of the mineral product of the State, exclusive of pig iron, was \$226,731,200 for 1927, for 1926, \$253,883,995.

**FINANCE.** For the year ending Dec. 31, 1929, the State Treasurer reported receipts of \$88,333,100 and disbursements of \$82,837,457, leaving a surplus of \$5,495,643. The surplus, added to the balance of \$18,188,593 outstanding Dec. 31, 1928, increased the balance in the Treasury as of Dec. 31, 1929, to \$23,684,236. Receipts of the principal funds for 1929 were given as follows: general revenue, \$40,948,943; gasoline-tax excise, \$33,524,047; highway, \$10,049,934; World War compensation, \$3,421,496. Disbursements from the same funds were: general revenue, \$36,265,903; gasoline-tax excise, \$13,985,122; highway, \$24,715,375; World War compensation, \$2,975,000. The sum of \$4,270,278 was disbursed from the educational equalization fund, which had receipts of \$1792. The total public indebtedness of the State at the end of 1929 was \$7,501,665, of which all except \$1665 represented the outstanding World War Compensation Fund bonds issued Jan. 1, 1922, in the amount of \$25,000,000.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 8866.52. There were built, in 1929, 29.31 additional miles of first, 6.56 of second, 12.33 of third, and 2.36 of fourth or other track.

**MANUFACTURES.** At the biennial Census of Manufactures by the U. S. Department of Commerce in 1929, there were in the State, in 1927, 10,961 manufacturing establishments. These employed 444,447 wage earners, whose wages for 1927 totaled \$668,181,165. Materials and supplies used in manufacture cost \$2,877,126,245. The manufactured products attained the total value of \$5,230,323,268.

**EDUCATION.** As reported by State Director of Education Clifton in the *Journal of the National Education Association* some 500 one-room schools were eliminated in the course of a year by the operation of the State's newly established plan for strengthening weak school districts. The population of school age was estimated at 1,455,780. There were enrolled in the public schools of the State 1,249,612 pupils. Of these 36,441 were in kindergartens, 23,252 in classes for the exceptional, 855,867 in elementary grades, 86,245 in junior high schools, 62,207 in junior-senior high schools, 29,189 in senior high schools and 152,753 in four-year high schools. Expenditures for public-school education in 1928 were: current, \$103,201,730; total including outlays, \$168,353,903. The yearly average of teachers' salaries approximated \$1386.

**CHARITIES AND CORRECTIONS.** A great number of functions with regard to the dependents and delinquents of the State were exercised in 1929 by the Department of Public Welfare. This department, as reconstituted by the reorganization code of 1921, had at its head a single Director. It administered 21 State institutions, dealt with applications for incorporation of child-welfare agencies, supervised county homes, jails and reformatories, and child-care agencies, performed the placement and guardianship of dependent children, hospitalized child cripples, dealt with applications for pardons and paroles, maintained facilities for identification and investigation of criminals, carried on work for the prevention and cure of blindness, and conducted prison industries. The institutions under its direct care were: State hospitals (mental) at Athens, Cleveland, Columbus, Dayton, Lima, Longview, Massillon, and Toledo, the Ohio Hospital for Epileptics, Institution for the Feeble-minded, Columbus; Insti-

tution for the Feeble-minded, Orient, Ohio State Sanatorium, Ohio Soldiers' and Sailors' Home, Madison Home, Boys' Industrial School; Girls' Industrial School, Ohio Penitentiary, London Prison Farm, Ohio State Reformatory, Ohio Reformatory for Women; Bureau of Juvenile Research. The inmates of all State institutions averaged, for the calendar year 1928, 31,210 in number.

**LEGISLATION.** The State Legislature met in regular biennial session on January 7 and adjourned on April 16. Among its chief acts was the repeal of the Pence Utility law, which permitted utilities to collect, under bond, increases in rates in advance of final decision of the Utilities Commission on the validity of such increases. In order to reduce the delays that had afforded the reason for the Pence law there was created in the Utilities Commission a division of investigation. The time before new railroad rates might become effective was increased to 120 days, from 30 days. The Utilities Commission was empowered to make regulations for safety. Railroads were authorized to maintain parallel main tracks in excess of six. The State tax on gasoline was increased to four cents, from three cents. Provision was made for the erection of a new State office building by the imposition of a direct tax levy of two-tenths of a mill on the dollar. In order that cities might meet the expense of pensions for policemen and firemen, they received power to levy up to three mills on the dollar. Separate penalty was imposed on tax delinquencies. The excise tax on premiums of foreign insurance companies was diminished to 2 per cent, from 3.

State aid for weak school districts was appropriated to the extent of \$4,000,000 a year, and the amount taxable per capita of school children needful to the obtaining of such aid was raised to \$4000. The general county school equalization fund was made subject to a method assuring more widespread benefit among school districts. School boards were permitted to employ dentists for the care of the children's teeth. With regard to roads, 20 per cent of the proceeds of the added cent of gasoline tax were earmarked for the improvement of township roads. Assessment of abutting owners for construction of State highways was abolished, save in cases where such owners might of themselves assent. Of the proceeds of the extra cent on gasoline, after provision for township roads, 60 per cent was assigned to State and 10 per cent to county road improvement. Highway speed limits were raised to 45 miles an hour in open country and proportionately elsewhere.

In social legislation, the list of occupational diseases compensable under the workmen's-compensation law was somewhat increased, and the Industrial Commission was allowed to employ referees to accelerate the disposal of compensation claims. Firms engaged in salary hiving were subjected to the law regulating small loans. The session's appropriations approximated \$135,000,000 for the ensuing two years. State examination of State banks was required twice a year, instead of once. A habitual-criminal act was passed, requiring that third offenders should serve the maximum sentence for the crimes of their last convictions and that fourth offenders should serve for life. The old law relating the sale of investment securities which had failed to prevent the placement of certain issues notoriously calamitous to investors in the State, was replaced by a codification, the Hebert Act, designed chiefly to clarify

investment regulations. The act, furthermore, admitted without scrutiny the listed securities of the chief domestic exchanges and those of other recognized classes. In the case of the remainder it required assurance that the issuing company had earned above operating costs for a term of years and that its reality was not mortgaged above two-thirds of appraised value. Full and satisfactory history and prospectus of every such company was likewise required.

The election code was revised by the Herbert-Martin Act, making new provisions against fraud, providing permanent registration in cities of over 16,000 inhabitants combining the dates of State and presidential primaries, rendering it possible to obtain a recount on furnishing a small bond in any precinct, to be refunded if discovered error attained to 3 per cent of the vote, and allowing the use of voting machines in subdivisions of the State. Against Bert B. Buckley, State Treasurer, who had previously been convicted in a Federal court of trying to bribe a Federal Prohibition enforcer, but who had failed to resign his office, impeachment proceedings were started by the Legislature, hastening Buckley's resignation.

**POLITICAL AND OTHER EVENTS.** A basic change in the fiscal system of the State was brought about by the result of a State-wide referendum vote on November 5. This vote confirmed a resolution of the State General Assembly to amend the State Constitution so as to do away with the provision requiring that all direct taxation of property be at the same rate ad valorem for different sorts of property. In its stead was inserted a provision that no property might be directly taxed in excess of 1½ per cent of its value for State and local purposes, save by a majority vote in localities, in certain cases. The effect of this change was to render it possible to vary the tax rate, up to 1½ per cent, for different classes of property, and especially, as was expected, to make it more feasible to tax intangibles. The municipal elections yielded Democratic gains on the councils of several of the chief cities. In Cleveland the Republican majority among the councilmen was much reduced. At a special poll held on August 20, Cleveland had voted for the retention of government by city manager. Columbus voted on August 13 against proposals to ratify an ordinance setting the gas rate at 53 cents, to remove trees from Broad Street, and to extend local taxation by an amendment of the charter.

United States Senator Theodore E. Burton having died in office, Governor Cooper appointed Roscoe C. McCulloch of Canton, Republican and chairman of the State Utilities Commission to serve until March, 1931. The State Treasurer, Bert B. Buckley, was tried in a Federal court in January on a charge of conspiracy to bribe a Federal officer in activities connected with the protection of a Cincinnati brewery. He was convicted and was sentenced on March 13 to two years, six months, and one day in prison. In advance of a movement to impeach him, he had resigned his State office.

The Ohio statute permitting cities to condemn land in excess of the amount requisite to a public improvement, a typical excess-condemnation statute, was held invalid by the United States Circuit Court of Appeals in a decision rendered in October in a case affecting Cincinnati. A Federal Master Commissioner rendered on July 19 a report in the action of several Columbus National banks, recommending that the county treasurer

be enjoined from collecting taxes on the banks' stocks and holding levies of this sort, which produced about \$2,000,000 a year in the several taxation districts, invalid. Governor Cooper directed during the spring a campaign of prosecutions against betting at dog races.

On October 22, President Hoover at Cincinnati dedicated the completed deep waterway system of the Ohio River, a Federal improvement providing a 9-foot channel from Pittsburgh down to the junction with the Mississippi at Cairo, interspersed with some 50 locks and dams and costing about \$125,000,000. The building of a new State institution for the feeble-minded at Apple Creek started in August Governor Cooper undertook in September to hasten by conferences with rural county authorities the abandonment of the old-type one-room schoolhouses, of which there still remained about 4700 in the State.

In Cleveland the city government gained a point in its rate-making conflict with the East Ohio Gas Company, in a decision of the Cuyahoga County Court of Appeals sustaining the Miller Act, under which the utility company must obtain consent of the State Utilities Commission before it could cease its service. A grand jury in Cleveland started in January the investigation of charges of corruption against city officials and found indictments against three councilmen, of whom one pleaded guilty and another was convicted. On May 15 at the Cleveland Clinic occurred one of the year's great fatalities. A store of old X-ray films in a brick room near the furnace caught fire, spontaneously or from overheating due to a leaky steampipe, and deflagrated, flooding a part of the building with fumes produced by nitrocellulose, nitrobenzene, and other chemicals, and also many of those who rushed in to aid them, 124 lives were lost.

At Columbus the opening of a municipal airport and of service by the Transcontinental Air Transport, Inc., was marked by ceremonies starting July 7. The cost of the airport was stated to be \$900,000. A union bus station to accommodate the vehicles of 12 bus companies was projected, to be situated on East Town Street. The Mayor of Dover, Peter J. Groh, charged with violation of the Federal Prohibition law, was removed from office by Governor Cooper, but was later acquitted, the charges against him being dismissed in a Federal Court.

**OFFICERS.** Governor, Meyer Y. Cooper, Lieutenant-Governor, John T. Brown, Secretary of State, Clarence J. Brown, Treasurer, H. Ross Ake, Auditor, Joseph T. Tracy, Attorney-General, Gilbert Bettman, Director of Education, J. L. Clifton.

**JUDICIARY.** Supreme Court: Chief Justice, Carrington T. Marshall, Associate Justices, Reynolds R. Kinkaid, James E. Robinson, Thomas Jones, Edward S. Matthias, Robert H. Day, Florence E. Allen.

**OHIO RIVER CANALIZATION.** See CANALS.

**OHIO RIVER CELEBRATION.** See CELEBRATIONS.

**OHIO STATE UNIVERSITY.** A State institution for the higher education of men and women in Columbus, Ohio, founded in 1870. The enrollment for the autumn term of 1929 totaled 10,655, distributed as follows: Graduate school, 984; agriculture, 831; applied optics, 29; liberal arts, 2182; arts-education, 97; commerce and

administration, 1977; dentistry, 233; education, 1707; engineering, 1635; law, 307; medicine, 304; nursing, 74; pharmacy, 175; veterinary medicine, 120. There were, in addition, 3871 students registered in the summer quarter of 1929. The faculty numbered 958, an increase of 75 over 1928. The endowment amounted to \$1,163,033. The total income for the year was \$7,998,230, while the total expenditures were \$7,900,771. The university also had current assets amounting to \$5,718,163, and the buildings and equipment were valued at \$17,188,011. The library contained 350,000 volumes. President, George W. Rightmire, LL.D.

**OHIO NORTHERN UNIVERSITY.** An institution for the higher education of men and women in Ada, Ohio, founded in 1871 and under the direction of the Methodist Episcopal Church. It consists of the George Franklin and Sarah Catherine Getty College of Liberal Arts, the Warren G. Harding College of Law, the A. D. Juillard College of Music, colleges of education, engineering, and pharmacy, school of commerce, and departments of expression, fine arts, and physical education. In the autumn of 1929 there were 1173 students registered and in the summer school, 453. The faculty had 62 members. The productive funds of the institution amounted to \$450,114, and the income for the year was \$220,847. There were 15,000 volumes in the library. Acting president, Robert Williams, A.M., D.D.

**OHIO UNIVERSITY.** A State institution for the higher education of men and women in Athens, Ohio, founded in 1804. The student enrollment for the autumn term of 1929 was 2330, of whom 1180 (845 men and 335 women) were in the college of liberal arts and 1150 (351 men and 799 women) in the college of education. In the liberal arts college, the students were distributed as follows: Seniors, 155; juniors, 207; sophomores, 264; freshmen, 491; specials, 11; special music students, 44; graduate students, 8. The distribution in the college of education was as follows: Seniors, 141; juniors, 168; sophomores, 307; freshmen, 528; specials, 1; graduate students, 5. Of the registration of 1339 students in the 1929 summer session 355 were men and 984 women. The faculty numbered 224. The library contained 63,000 bound volumes. President, Elmer Burritt Bryan, LL.D., LL.D.

**OHIO WESLEYAN UNIVERSITY.** An institution for the higher education of men and women in Delaware, Ohio, under the control of the Methodist Episcopal Church, founded in 1844. For the autumn semester of 1929 the total enrollment was 1828, distributed as follows: Seniors, 248; juniors, 384; sophomores, 494; freshmen, 615; special students, 15; music, 18; art, 15; graduate students, 39. The faculty numbered 161. The productive endowment of the university amounted to \$3,100,000 and the income for the year 1928-29 to \$659,978. The library contained more than 123,000 volumes. President, Edmund D. Soper, D.D., LL.D.

**OIL.** See **CHEMISTRY, INDUSTRIAL, PETROLEUM OIL ENGINES.** See **INTERNAL-COMBUSTION ENGINES.**

**OKLAHOMA.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,028,283. The estimated population on July 1, 1928, was 2,426,000. The capital is Oklahoma City.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod. Bu.	Value
Cotton	1929	4,492,000	1,200,000	\$94,300,000
	1928	4,243,000	1,205,000	103,630,000
Corn	1929	8,020,000	48,320,000	88,173,000
	1928	8,050,000	70,150,000	47,702,000
Wheat	1929	4,236,000	44,478,000	44,038,000
	1928	4,413,000	59,576,000	59,576,000
Grain sorghum	1929	1,884,000	20,488,000	13,314,000
	1928	1,709,000	80,762,000	19,072,000
Hay	1929	1,224,000	1,364,000	15,656,000
	1928	1,055,000	1,335,000	14,027,000
Oats	1929	792,000	20,692,000	9,864,000
	1928	890,000	23,140,000	10,876,000
Potatoes	1929	44,000	3,294,000	4,282,000
	1928	68,000	5,038,000	3,778,000
Sweet potatoes	1929	15,000	990,000	1,138,000
	1928	20,000	1,780,000	1,691,000
* Bales    * Tons				

**MINERAL PRODUCTION.** Oklahoma was one of the States in which the production of petroleum was sharply reduced in 1928, to some extent through efforts to check wasteful exploitation. In consequence, the position of the State as a petroleum producer fell from first place among the States for 1927, to second place, Texas taking the first rank, as to quantity. Its estimated value of its petroleum product for the year, however, Oklahoma retained the lead in 1928, by virtue of an average price in excess of that for Texas. The quantity of petroleum produced in the State fell to 249,658,000 barrels for 1928, from 277,775,000 for 1927, the value fell to \$347,100,000, for 1928 (estimated), from \$397,200,000. Second in importance, the production of natural gas, for 1927 (the latest reported year), attained the quantity of 320,804,000 M cubic feet and the value of \$41,391,000, for 1926, of 286,421,000 M feet and \$42,140,000. These were manufactured from natural gas 616,300,000 gallons of gasoline in 1928 and 548,109,000 in 1927, in value, \$40,550,000 for 1928 (estimated) and \$20,114,000 for 1927. Despite heavy production of other fuels the State continued its production of coal, which attained 8,501,325 short tons for 1928, as against 3,818,054 tons, in value, \$10,305,000 for 1928 and \$11,570,000, for 1927. Zinc production fell to 180,252 short tons for 1928, from 206,611 for 1927, its value was \$21,990,774 for 1928 and \$26,446,208 for 1927. Lead mined attained 43,687 short tons for 1928, and 51,680 for 1927, in value, \$5,067,692 for 1928 and \$6,511,680 for 1927. Gypsum was produced in 1927 to the value of \$2,073,994, in 1928 to that of \$2,301,049. The value of the State's mineral product, duplications excepted, was \$524,591,732 for 1927, for 1926, \$569,518,693.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 6618.41. There were built, in 1929, 85.90 miles of first and 3.10 of second track.

**MANUFACTURES.** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and dealing with the operations of 1927, there were in the State in 1927, 1373 manufacturing establishments. These employed 27,932 wage earners, whose wages for the year totaled \$35,785,266. Materials and supplies used in production cost \$269,418,221. Manufactured products attained the combined value of \$371,718,409.

**EDUCATION.** The county certification of teachers was brought to an end, and in its place was established a system for the certification of teachers throughout the State by the single authority of

the State Board of Education. This change did away with the diversity of requirements that had been possible under the old system, under which over four hundred separate bodies had held power to issue certificates. The number of persons of school age in the State in the academic year 1927-28, stated as having been found by enumeration, was 746,379 between the ages of 6 and 21 years. There were enrolled in the public schools 682,259 pupils. Of these, 588,038 were in elementary and 94,221 in high-school grades. Salaries of teachers averaged, by the year, \$839 in the elementary and \$1131 in the high schools.

**CHARITIES AND CORRECTIONS** The central organization of the State dealing with institutionalized persons, as operating in 1929, was twofold. An elected Commissioner of Charities and Corrections, with a small yearly budget, performed duties of investigating public charities and corrections throughout the State and dealt with all institutions deriving their support from the State or one of its subdivisions in any part. A State Board of Public Affairs administered the chief of the State institutions. This board consisted of two appointive members. In addition to directing institutions this board had charge of building construction, not only for such institutions but for a number of the other State departments. The institutions under its control, with their populations (average or on specific dates in 1929), were State Penitentiary, McAlester, 2937; State Reformatory, Granite, 843; Central Oklahoma Hospital (insane), Norman, 1843; Eastern Oklahoma Hospital (insane), Vinita, 1593; Western Oklahoma Hospital (insane), at Supply, 860; State Training School (boys), Pauls Valley, 220; State Industrial School for Girls, Tecumseh, 234; Whitaker State Orphans' Home, Pryor, 271; West Oklahoma Home (orphans'), Helena, 216; Institute for the Feeble-minded, Enid, 630; State Training School for Negro Boys, Boley, 105; Deaf, Blind and Orphans' Home for Colored Children, Taft, 317; State Training School for Negro Girls, Taft, 35; A State School for the Blind, at Muskogee, and a State School for the Deaf, at Sulphur, were administered by the State board of Education.

**LEGISLATION** The regular biennial session of the State Legislature convened on January 8 and adjourned March 30. It devoted its attention to carrying out the majority group's purpose to oust Governor Henry S. Johnston, to the exclusion of progress in almost all other business. The same group that had unsuccessfully tried in 1927 to convene the Legislature of its members' own motion for impeachment purposes controlled the new Legislature. The anti-Johnston and anti-Klan Democrats formed a coalition with the chief part of the Republican minority and a committee of the Lower House was created on the opening day to investigate the conduct of the State's departments. The House of Representatives, following the report of this committee, voted impeachment on 10 charges, and presented the impeachment to the Senate on January 21. The Senate on the following day suspended the Governor by an overwhelming vote. The charges, which were of great variety, included illegal diversion of State funds to the State Banking Department and to the Issues Board, illegal employment of an under-cover man in the bureau of criminal investigation and a charge of general incompetence. The Senate sat as a court and on March 20 found against Johnston on the sole charge of general incompetence, thus automati-

cally removing him from office. This charge had to do chiefly with allegations that Johnston had submitted to undue influence on the part of his private secretary, Miss O. O. Hammonds, and that he had been swayed in his acts by astrological beliefs, a charge that he testified had no basis but a remark made in pleasantness to a group of newspaper men. Some officials who had supported the Governor were likewise impeached, one of them, Justice J. W. Clark of the State Supreme Court was subsequently acquitted. The State Legislature adjourned its session after the impeachment proceedings against the Governor had ended.

Governor Holloway, who had succeeded Johnston, called a special session, which convened on May 16 and adjourned on July 5. It enacted a number of measures of importance. One of these was a run-off primary act providing that in case neither of the leading candidates in a State primary should receive a full majority of the party vote a second primary should be held to choose between these two a fortnight later. As a means to rid the State of toll bridges an act was passed giving the State Highway Commission power to purchase toll bridges and, in case the owners would not sell, power to bring condemnation proceedings. Moneys of the State's highway construction and maintenance funds were made available for such purchases. Inter-State bridges as well as those within the State were made subject to purchase. An increase of salaries to elected State officials, carrying the pay of the Governor to \$12,500 a year and those of Supreme Court judges to \$9000, was voted. Institutional and departmental salaries finally approved totaled \$27,982. The Legislature voted in favor of popular ratification of constitutional amendments. Amendments were passed to put the State agricultural schools under a board of regents and to put the State university under regents' control.

**POLITICAL AND OTHER EVENTS** Governor Johnston having been impeached and convicted (see *Legislation*, above), he was automatically removed from office, and Lieutenant Governor William J. Holloway became Governor on March 20. He worked in harmony with the legislative majority in the ensuing special session. A commissioner appointed by the United States Supreme Court to locate the boundary between Oklahoma and Texas along the 100th meridian rendered on July 15 a report according disputed territory to Texas. Its expected effect was to transfer to Texas about 28,500 acres of land previously under Oklahoma's jurisdiction. The Court deferred giving its decree on the boundary suit of the two States, with a view to their arriving at a settlement out of court. Efforts were made in Oklahoma to acquire the territory from Texas. As Texas territory had never been part of the Federal public domain, and as the settlers in the disputed strip held their title through Federal grants, they ran risk of losing title if their land became part of Texas. Committees of the Legislatures of the two States conferred on the subject. The Texas committee apparently was not averse to a sale of Texas's claim, but expressed doubt of the Legislature's constitutional power to part with the State's territory.

A conflict of authority between the State Supreme Court and its Court of Criminal Appeals, arising out of the criminal prosecution of O. O. Owens, a Tulsa oil man, was submitted in August to the Federal Circuit Court of Appeals. The State law placing all cotton gins under the regulation of the State Corporation Commission was

declared invalid on July 30 by a Federal Court decision. Sentence of death was passed on a 17-year-old youth on October 19 in the Tulsa District Court, for robbery with firearms, in accordance with the severe State law permitting such sentence even though no murder had been committed.

The State Highway Commission initiated work in its task of doing away with toll bridges by starting in July with plans for a free highway bridge across the South Canadian River between Pritchard and Lexington. The effort at voluntary restriction of petroleum production in the State came to grief in the spring. Producers voted on May 9 to end the State-wide prohibition, which the State Corporation Commission had carried on, by consent, at the total of 650,000 barrels a day. The production thereafter rose until it approached 750,000 barrels. In August the producers of the Oklahoma City field agreed to a temporary shutdown necessitated by overproduction. A number of highly productive oil and natural-gas wells had been driven in the neighborhood of the city earlier in the year. A conduit to convey more water from Lake Overholser to Oklahoma City was finished in August, with a capacity of about 20,000,000 gallons a day.

OFFICERS Governor, Henry S. Johnston (impeached and removed), succeeded by W. J. Holloway; Lieutenant-Governor (later Governor), W. J. Holloway; Secretary of State, Graves Leeper; State Auditor, A. S. J. Shaw; Attorney-General, Ed. Dabney (resigned and was succeeded, September 23, by E. Berry King); State Treasurer, R. A. Sneed; Superintendent of Public Instruction, John S. Vaughan; State Examiner and Inspector, John Rogers.

JUDICIARY Supreme Court Justices Charles W. Mason, E. F. Lester, James B. Cullison, Charles Swindall, Robert A. Hefner, Albert C. Hunt, Thomas G. Andrews, J. W. Clark, Fletcher Riley.

**OKLAHOMA, UNIVERSITY OF** A State institution for the higher education of men and women in Norman, Okla., founded in 1890. The enrollment for the autumn of 1929 totaled 5112, of whom 3341 were men and 1771, women. These were distributed as follows: Graduate school, 230; arts and sciences, 2108; business, 603; education, 144; engineering, 910; fine arts, 380; law, 285; medicine, 224; nursing, 100; and pharmacy, 119. For the summer session of 1929, 2058 students were registered. There were 392 faculty members. The productive funds of the university amounted to \$3,200,000, and the income for 1929-30 was \$2,003,520. The library contained 110,000 volumes. President, William Bennett Bizzell, Ph.D., LL.D.

**OLCOTT, O'kot, EBEN ESKKINE** An American mining engineer and capitalist, died June 5, 1929, in New York City, where he was born Mar. 11, 1851, and was graduated in 1874 from the Columbia University School of Mines. He practiced as a mining and metallurgical engineer in the Western States, in Mexico, and in South America. He later became president of the Hudson River Day Line and of the Mary Powell Steamboat Company of New York, and organized and promoted the Hudson-Fulton celebration of 1909.

**OLD-AGE PENSIONS.** Just as workmen's compensation legislation and widows' pensions have swept the United States since the World War decade, there were unmistakable indications pointing to similar action for the guarantee of old-age security. The increase of longevity, the

rapid mechanization of the entire industrial civilization leading to technological unemployment, the growth of industrial mergers with the resulting increase in "white-collar" unemployment, the low birth rate making the support of the superannuated a greater burden on fewer children, all were contributing to keep the subject constantly before the public attention. The half-hearted attempts of philanthropic organizations to retain the problem of the dependent aged as a private charity have won few supporters. Social workers confidently expected that New York State, which has taken leadership among the States of the Union in the passage of welfare legislation, would write an old-age pension bill on its statute books. With such an entering wedge, it was difficult to see how the other States could fail to capitulate.

The legislative year 1929 saw the presentation of 50 old-age security bills before 27 State legislatures. In New York State alone, 10 bills were introduced. The results of these attempts were the following: The enactment of laws in the States of California, Minnesota, Wyoming, and Utah, increasing the total roll of States to 10. In several States, measures were defeated only by the closest margins. In such important States as Illinois, New Jersey, Texas, Washington, Nebraska, and Delaware, bills passed one House of the Legislature. In New York State, as a result of the act so vigorously waged by Governor Roosevelt and Attorney-General Lehman, the Legislature created a commission for the purpose of bringing in a report to the 1930 Legislature. The Maryland Legislature authorized a commission to study the State's poorhouses. The California bill passed the State Senate unanimously and met with but one dissenting vote in the Lower House.

According to the American Association for Old Age Security, California's law is the soundest measure yet adopted by an American State. The law is a mandatory one. The maximum pension is fixed at \$30 a month. Administration is to be handled by the county and city boards of supervisors, with a State bureau in the Department of Welfare created for the purpose of providing uniform and adequate supervision. The law further specifies that the State Department of Welfare "shall follow the policy of giving the aid provided for under the Act to each and every applicant in his own, or some other suitable home, in preference to placing him in an institution." The law requires that the applicant for pensions be 70 years of age, a citizen of the United States for 15 years and a resident of California for the same period. Applicants must not have children able to support them. Like Canadian schemes, the cost of the plan is to be shared equally between the State and the cities and counties. In Wyoming and Utah, the pensionable age is set at 65, while in Minnesota it is to be 70 years. In Minnesota and Wyoming, the maximum pension is \$30 a month; in Utah, it is limited to \$25. In these three States, as in California, the plan is on a county basis. It is to be noted that adoption is mandatory on the counties in Utah and Wyoming, as well as in California.

**PRESENT EXPERIENCES.** It may be well at this point to review the progress of old-age pension systems in this country. At the close of 1928, old-age-pension laws were in effect in six States, i.e., Colorado, Kentucky, Maryland, Montana, Nevada, and Wisconsin, and also in the territory of

Alaska. In all six States, the system was based upon optional acceptance by the county and the total costs (except in Wisconsin) were to be borne by the counties themselves. In Wisconsin, one-third of the cost of the plan was to be borne by the State. The Bureau of Labor Statistics in 1928 attempted to ascertain to what extent the counties of the six States in question were seeking to establish old-age-pension systems. It circularized the 351 counties of these six States and received reports from 262. It was ascertained that of these 262 counties only 52 reported the adoption of pension systems.

In Montana (law passed in 1923), 42 of the 56 counties in the State reported pension systems. In Colorado (law adopted 1927), one of the 63 counties had inaugurated a scheme. In Kentucky (law passed 1926), three of the 120 counties reported a pension scheme. In Maryland (law passed 1927), none of the 4 counties reported a system. In Nevada (law adopted 1925), two of the 17 counties reported systems. In Wisconsin (law adopted 1925), four of the 71 counties reported pension plans. In these 52 counties, there was a total of 1003 persons receiving pensions. The average pension per month was \$17.37 and ranged from \$10 a month in the one county of Colorado to \$19.20 per month in Wisconsin. The total cost per year in the five States granting pensions was \$208,624. Wisconsin's grants totaled \$66,185, while Colorado's grants totaled \$120 for one pensioner.

The experiences of Wisconsin may be detailed at greater length. Of the 295 persons on the county pension rolls in 1927, 178 were men and 117, women, 164 had lost husband or wife, 84 were married, 31 were single, 9 were separated from husband or wife, and seven were divorced. The ages of the pensioners ranged from 70 to 94 years, 75 per cent being between 70 and 80 years. Approximately 60 per cent were native-born Americans. The following statement shows the cause of dependency of the pensioners: old age, 159 persons, disease, 21, crippled, 18, deformity or loss of limbs, 17, partial disability, 10, total disability, 8, blindness, 2, deaf and dumb, 1, other, 21, not reported, 38.

NEW YORK. The New York Commission for Old Age Security, created by the New York Legislature as a result of a consistent agitation carried on before the people of the State by Governor Roosevelt and Lieutenant-Governor Lehman, began to hold hearings in September, 1929. Testimony before the Board was unanimous in approving the creation of some scheme for the purpose of providing for old-age dependents. The representative of the National Industrial Conference Board (a manufacturers' association) showed that a canvass of leading manufacturers of the State indicated a change of mind and that provision for old-age care was no longer being looked upon as socialistic or paternalistic. The experience of the philanthropic organizations was significant. The representative of one of the leading New York family-welfare societies declared that his association was expending approximately \$250,000 annually for the care of 450 to 500 aged persons. Over \$100,000 was being paid out in monthly allowances to old people in their own homes. On the other hand, the association showed that institutional care in its own Home for the aged averaged \$1100 a year per person. He went on to say that about 600 aged persons are now on the waiting lists of New York

homes for the aged and that apparently no places would be available for these in the near future.

The testimony of Abraham Epstein, secretary of the American Association for Old Age Security, and the leading American expert on the subject, placed the probable annual expense for a New York State old-age-pension system at about \$10,000,000. He estimated that there were approximately 35,000 persons in the State who would qualify under the old-age-pension law. Mr. Epstein went on record as believing that neither bank savings nor private insurance adequately can cope with the problem. He quoted figures to prove that workers' savings have actually decreased since pre-war days. He was critical of the value of industrial-insurance policies. He was authority for the statement that annually eight to nine times as many industrial insurance policies are permitted to lapse as are actually paid out in legitimate claims. The value of these lapsed policies amounts to 13 to 14 times as much as the sums paid out in claims. Mr. Epstein also pointed out that the inauguration of a pension scheme would go a long way in eliminating present restrictions against the employment of middle-aged persons.

It was generally agreed by authorities that the inauguration of private pension schemes by manufacturers had been one of the important factors in producing middle-aged unemployment. Other experts to testify before the commission were Dr. I. M. Rubinow, a social insurance expert, William F. O'Connell, Welfare Council of New York City, and Commissioner E. S. H. Winn, chairman of the British Columbia Workmen's Compensation Board. The commission adjourned its hearings in New York City and then moved to Buffalo for the purpose of taking testimony in the northern counties.

It was the plan of the commission to submit a report to be placed before the 1930 Legislature. The chairman of the commission was Senator Seabury C. Mastick, Dr. Luther Gulick was appointed executive secretary and placed in charge of the commission's research work.

EUROPEAN COUNTRIES. In Czechoslovakia, a number of amendments were made to the Social Insurance Act of 1924. All wage earners are to be compulsorily insured against sickness, invalidity, old age, and death. The waiting period for invalidity, old age, and death benefits has been reduced from 150 to 100 weeks, and the basic pension also has been raised. Widows' pensions have been improved to allow the grant of pensions to widows with two or more dependent children under 17 years.

In Finland, the 1928 Parliament passed a compulsory insurance bill for protection against old age and death for all citizens over 21 years. The scheme was to be a contributory one and provides for contributions from the insured persons, the State, and local authorities. The population is divided into five income classes and contributions are to vary with income. The pensionable age is 65 years. The fund is to be administered by the Ministry of Social Affairs.

Word came from Germany that the German Social Insurance System was undergoing constant expansion. During 1928 the income derived from the invalidity and old-age-insurance fund increased by 200,000,000 marks and reached a total of a little more than a billion marks. Some notion of the great growth of the German system may be obtained from the following figures. The income

contributions to the workers' invalidity and old-age-insurance funds in 1913 amounted to 290,000,000 marks, by 1928 these contributions had risen to 1,075,000,000 marks. During the same 15-year period, the total contributions to the various social-insurance funds in Germany increased from 1,312,700,000 to 3,865,000,000 marks.

The Labor Party in Great Britain, in one of its campaign pledges prior to the general election, promised the electorate that it would enforce amendments in the insurance old-age-pension law. Among the reforms that it advocated were the following: an increase of pensions for men and women employed in the coal-mining industry. This was due to the fact that there were approximately 135,000 persons still unemployed in the British coal mines. It also called for the reduction of the retirement age to 60 years from the existing 65-year minimum.

In Poland, the government presented a bill calling for the extension of insurance against invalidity, old age, and death to all Polish territory. It was expected that the new bill would cover from four to five million persons. It was expected that the worker's contribution would amount to 12 per cent of the wages received.

Further changes were incorporated in the now very liberal pension schemes on the Statute books of Russia. New amendments provided for the retirement at half-pay of all workers reaching the age of 60 who had been employed for at least 25 years. In dangerous occupations, e.g., mining, the age limit was fixed at 50 years, in the case of women, the retiring age was to be 55. In the beginning, the pension system was to apply only to workers in the mining, metal, textile, and transport industries.

By a decree issued March 22, 1929, Spain saw established a system of maternity insurance for those women workers who came under the operations of the Old Age Pension Insurance Act. The fund was to be made up of contributions from the insured women, an equal amount paid by employers, state subsidy, and contributions from the municipal authorities.

The Swiss Government took initial steps in 1929 to provide the country with a Federal pension scheme. While some of the cantons had been paying old-age pensions for a number of years, the country as a whole was without this type of protection. The bill to be presented to the Swiss Parliament called for a compulsory-insurance scheme against old age and death. The main provisions of the bill were as follows: Insurance against old age and death was to be compulsory for all persons between the ages of 19 and 65. The fund was to be built up from annual contributions from the insured persons, then employers, and from the cantons and the Federal Government. The pensionable age was to be 66 years. Orphans' pensions were to be payable up to the age of 18. The fund was to be administered by the Federal insurance administration, and the Government planned to set aside the proceeds of the taxes on tobacco and spirits for the building up of the fund.

British Columbia (Canada) reported that, during the twenty months of the administration of its Old-age Pensions Act, there had been filed 5063 applications for pensions and of these 3935 had been granted. More than 50 per cent of all the residents in the province over 70 years of age had applied for pensions. Administrative costs

were relatively low, amounting in 1928 to 1 55 per cent of the total pensions. See LABOR LEGISLATION.

#### OLD-TESTAMENT ARCHAEOLOGY. See ARCHAEOLOGY

**OMAN.** An independent Moslem state in southeastern Arabia, extending for about 1000 miles along the southern coast of the Gulf of Oman, guaranteed in its integrity by Great Britain and France. Area, about 82,000 square miles, population estimated at 500,000, chiefly Arabs, but with a considerable Negro element along the coast. The capital, Muscat, and the neighboring town of Matilah, have a combined population of about 20,000 made up almost entirely of Negroes and Baluchis Imports, which consist chiefly of rice, coffee, and cotton piece goods, and exports, which comprise dates, dried limes, pomegranates, and dried fish, are exchanged principally with India. In 1927-28 imports were valued at £370,659 and exports at £148,285. The reigning Sultan in 1929 was Seyyid Taimur bin Faisal, who succeeded his father Oct. 5, 1913. See ARABIA.

**ONTARIO.** The second province in size of the Dominion of Canada (after Quebec), situated between Quebec on the east and Manitoba on the west. Area, 407,262 square miles, population according to the census of 1921, 2,933,662, estimated in 1929, 3,271,300. The capital is Toronto, with a population in 1921 of 521,893, estimated in 1928, 569,890, excluding suburbs. Other large cities: Ottawa (capital of the Dominion), 121,000; Hamilton, 127,447; London, 66,132. In 1927-28 there were 7150 elementary schools and 431 secondary schools, attended by 725,085 pupils, and taught by 19,517 certified teachers.

Agriculture is the chief occupation of the province. The land under cultivation was estimated at 14,000,000 acres. The total estimated value of agricultural products in 1927 was \$506,604,000, including field crops, \$255,900,000, dairy products, \$103,185,000, farm animals, \$72,896,000, poultry and eggs, \$41,296,000, fruits and vegetables, \$18,344,000. In 1927 the gross agricultural wealth was estimated at \$2,281,678,000, including farm lands, \$808,124,000, buildings, \$491,330,000, implements and machinery, \$169,954,000, livestock, \$261,673,000, poultry, \$22,005,000, and animals on fur farms, \$1,988,000. Mineral production of the province in 1929 was estimated at \$110,000,000, or 10 per cent more than in 1928.

Ontario has 240,000 square miles of forest lands. In 1927 there were 9512 manufacturing establishments, with a capital of \$2,134,181,377, which employed 296,031 workers and produced goods to the value of \$1,758,005,575. In the same year there were about 11,000 miles of railway line. The Ontario Publicity Bureau estimated that 2,500,000 tourists, mostly from the United States, visited the province in 1929. Their expenditures were estimated at \$150,000,000 as compared with about \$103,000,000 in 1928.

The executive power is vested in a lieutenant-governor, appointed for five years, by the Governor-General of Canada, and a responsible ministry, legislative power is in a single chamber of 112 members, elected for four years. Women have the franchise and the right to election to the chamber. Ontario is represented in the Dominion Senate by 24 members and in the House of Commons by 82. Lieutenant-Governor in 1929, W. D. Ross, Prime Minister and President of the Council, G. H. Howard, Attorney-General, W. H. Price, Minister of Education, J. D. Monteth,

Secretary and Registrar, L. Goldie; Education, G. Howard Ferguson; Agriculture, J. S. Martin; Public Works, H. H. Henry; Lands and Forests, W. L. Kinney; Mines, Charles McCrea; Labor and Health, Dr. Forbes Godfrey. Ministers without Portfolio, R. J. Cooke, Edward A. Dunlop, and Frederick T. Syme.

Prohibition was the main issue in the election of Oct. 30, 1921, and the Conservative government's programme of government control and sale of liquor was overwhelmingly approved. The Progressives, who demanded honesty legislation, lost eight of their 11 seats in the provincial parliament, while the Liberals, who favored a plebiscite on the question whenever a demand for a change should become manifest, lost 18 of the 21 seats formerly held. The Conservatives increased their parliamentary representation from 77 to 99 members. They initiated government control and sale of liquor following their victory in the election of 1926. The members of the Ferguson Cabinet were all reelected. See CANADA.

**OREGON.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 783,389. The estimated population on July 1, 1928, was 902,000. The capital is Salem.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Wheat	1929	1,058,000	23,114,000	\$25,554,000
	1928	1,027,000	23,318,000	24,083,000
Hay	1929	1,166,000	2,217,000 *	11,381,000
	1928	1,140,000	2,323,000 *	26,446,000
Oats	1929	304,000	12,464,000	6,980,000
	1928	304,000	10,944,000	5,581,000
Apples	1929		4,000,000	4,400,000
	1928		7,600,000	6,940,000
Potatoes	1929	42,000	3,780,000	5,292,000
	1928	52,000	6,240,000	4,368,000
Hops	1929	17,000	18,445,000 *	2,213,000
	1928	17,000	17,000,000 *	3,400,000
Corn	1929	80,000	3,010,000	2,950,000
	1928	82,000	2,952,000	2,952,000
Barley	1929	116,000	4,292,000	3,105,000
	1928	105,000	3,675,000	2,646,000

\* Tons    \* Pounds

**MINERAL PRODUCTION.** Stone, sand, and gravel furnished not far from one-half of the total value of minerals produced in the State in 1927, as in immediately previous years. The stone production of 1927 was 1,863,830 short tons, as against 2,139,910 tons for 1926, in value it was \$1,051,631 for 1927 and \$2,152,512 for 1926. In metal mining the production of no metal attained important magnitude. That of gold, which led, was 10,931 fine ounces, or \$225,968, for 1928, and marked a decrease of 26 per cent from 14,676 ounces, or \$303,383, of 1927. The chief loss was in yield of placer gold. The combined silver, copper, and lead produced in the State in 1928 was \$70,478, of which copper contributed \$51,619. A small

quantity of platinum, in 1927, 25 ounces, in value \$2432, was produced. The yield of mercury in 1927 was 2082 flasks, with a value of \$242,761. The value of the clay products of 1927 totaled \$656,503. Coal mining is maintained on a minor scale. The total value of the mineral product of the State, duplications eliminated, was \$6,821,224 for 1927; for 1926, \$6,941,355.

The total value of gold, silver, copper, and lead produced from ore sold or treated in Oregon in 1929 was about \$529,000. There were increases in the output and value of all four metals, gold and copper showing the largest gains. Production came mostly from gold and copper operations in southwestern Oregon. The gold yield of 1929 was about 18,400 ounces, valued at about \$380,300. Its increase was partly due to the resumption of dredging by the Superior Leasing Co. in Baker County.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 3416.27. There were built, in 1929, 19.96 miles of additional first track.

**MANUFACTURES.** According to the Federal biennial Census of Manufactures published by the Department of Commerce in 1929 and dealing with operations of 1927, there were in the State, in 1927, 1779 manufacturing establishments. These employed 61,401 wage earners, whose wages for the year totaled \$75,716,972. Materials and supplies used in production cost \$187,771,163. Manufactured products attained the combined value of \$342,852,371.

**EDUCATION.** Through a conference of high-school principals there was established a scheme of uniform records, grading and high-school standards. The population of school age in 1929 was estimated at 256,885. There were enrolled in the public schools 199,516 pupils. Of these, 157,088 were in elementary and 42,428 in high-school grades. The expenditures for public-school education in 1926, the latest year for which figures had been assembled, totaled \$23,500,000. The monthly salaries of teachers in the academic year 1927-28 averaged \$170.25 for men and \$127.91 for women.

**CHARITIES AND CORRECTIONS.** The State Board of Control exercises the central authority over a system of State institutions for the care of certain of the sick, and the delinquent, the blind, the deaf, the feeble-minded, and the dependent veteran soldiers. The board, as created by statute of 1913, consists of the Governor, the Secretary of State, and the State Treasurer. It appoints executive heads from the several institutions and makes the institutions' purchases legally, though not strictly in practice, the Governor has sole direction of the State Penitentiary. The Board has visitatorial power over a number of State-aided institutions. The State institutions proper, under its own control in 1929, were Oregon State Hospital (mental), Salem; Eastern Oregon State Hospital (mental), Pendleton; State Institution for the Feeble-minded, Salem; Oregon State Industrial School (delinquent boys), Salem; and Oregon State Tuberculosis Hospital, Salem; State School for the Blind, and State School for the Deaf, Salem; State Industrial School for Girls, Salem; State Soldiers' Home, Roseburg; Oregon Employment Institution for the Blind, Portland.

**LEGISLATION.** The State Legislature held its regular biennial session convening in January. It enacted a new amendment of the prohibition law, designed to render the possession of liquor a misdemeanor punishable by a fine of not more

than \$500 for the first offense. By an error in drafting the measure was made to set the \$500 fine as a minimum, no maximum being fixed, and the law was in consequence contested later on the ground of unconstitutionality. An excise tax was placed on the net income of banks, including building and loan associations, in the proportion of 5 per cent of such income. No exception was made for income derived from tax-exempt securities. A Board of Higher Education was created to administer the University of Oregon, the State Agricultural College, and the three State normal schools, with a view to eliminating duplicate courses and departments and checking political rivalry among the institutions affected.

**POLITICAL AND OTHER EVENTS** An exceptionally slight rainfall in the spring and summer had untoward effects in some portions of the State. Oregon largely escaped the heavy loss from forest fires suffered in the neighboring State of Washington, but the lack of water greatly reduced the production of hydroelectric power at some stations. Plans for the finances of the Ochoco Irrigation District and certain other embarrassed irrigation or improvement districts were set under way.

The Giant's Pass and Van Winkle districts were reported as nearing completion. The movement to reorganize the affairs of such districts was in accordance with an act of the Legislature of 1927 giving the State Reclamation Commission authority to act. The need for the State to take title to depleted timber lands and hold them for the growth of future tree crops was urged by Secretary of the Interior Wilbur on a visit to Portland in July. The purchase of land for a Federal building in the downtown part of Portland was completed. A market for contracts for future delivery of grain, the Portland Grain Exchange, was opened at Portland on June 19.

**OFFICERS** (Governor, I. L. Patterson, Secretary of State, and State Auditor, Hal E. Hoss, Treasurer, Thomas B. Kay, Attorney-General, I. H. Van Winkle, Superintendent of Public Instruction, Charles A. Howard.

**JUDICIARY** Supreme Court Chief Justice, John L. Rand, Associate Justices, Thomas A. McBride, Henry J. Bean, George M. Brown, George Rossman, Harry H. Belt, O. P. Coshaw.

**OREGON, UNIVERSITY OF** A State institution of higher education in Eugene, Ore., founded in 1872. The enrollment for the autumn term of 1929 was 3223, distributed as follows: Undergraduates, 2791, graduates, 125, law school, 77, medical school, 230. Of the total, 1885 were men and 1338, women. In the summer session of 1929, the registration totaled 1504, of whom 369 were men and 1135 were women, of these, 1259 were undergraduate and 245, graduate students. The faculty for the autumn term numbered 213. The total income for the year Oct. 1, 1928, to Sept. 30, 1929, was \$2,001,915. The endowment for the year was \$166,467, with a productive income of \$8493. The main library contained 204,700 volumes and the medical-school library more than 11,000 volumes.

Gifts from various individuals included \$7874 to the medical-school library, \$6425 to the Doernbecher Hospital, and \$4353 to the medical school for research work. The Junior League of Portland donated \$4500 to the medical school, and the citizens of Eugene donated \$45,000 of a pledge of \$100,000, to be paid over a period of three years, to the Fine Arts Building Fund.

Mrs. Murray Warner presented gifts, totaling \$52,000 in value, to the Murray Warner Collection of Fine Arts, the estimated value of the entire collection being \$500,000. During the summer of 1929, work was begun on a \$200,000 central unit of the proposed \$500,000 Fine Arts Building, the construction cost being entirely financed by gifts from various individuals and organizations. The School of Sociology was made a department in the College of Literature, Science, and Arts, and the School of Applied Social Science was opened, making a total of nine professional schools. President, Arnold Bennett Hall, J. D., LL.D.

**OREGON STATE AGRICULTURAL COLLEGE.** A Federal and State institution for the higher education of men and women in Corvallis, Ore., founded in 1868, when the State designated Corvallis College as the recipient of the Federal land-grant funds and began to appropriate State funds, the institution was permanently designated as the State Agricultural College in 1870 and became wholly a State institution in 1885. Degrees are granted in 10 schools: Agriculture, chemical engineering, commerce, engineering and mechanic arts, forestry, home economics, military science, mines, pharmacy, and vocational education. The enrollment for the autumn term of 1929 was 3412, of whom 2276 were men and 1136, women. The summer session registration was 1380. There were 314 members on the teaching faculty in 1929-30. The income for the same period from the original land grant fund and other Federal funds from the State of Oregon (millage tax), student fees, etc., as well as from certain appropriations from Oregon counties for extension work, totaled \$2,158,993. This was apportioned as follows: Resident instruction, \$1,449,262; agricultural experiment station, \$335,565, extension service, \$374,166. There were 86,700 catalogued volumes in the library. During 1929 the institution received a gift of \$10,000 to be used for fellowships in forestry. By act of the 1929 State Legislature, the college, along with other State institutions of higher learning, was placed under a new State Board of Higher Education, composed of nine members appointed by the governor. President, William Jasper Kerr, D. Sc., LL.D.

**OSBORNE, THOMAS BURR** An American research chemist, died in New Haven, Conn., Jan. 29, 1929, where he was born Aug. 5, 1859. He was graduated from Yale in 1881 and, specializing in chemistry, received the Ph.D. degree in 1885. Working at the Connecticut Agricultural Experiment Station, he became a world authority on nutrition, particularly on the value of proteins. Dr. Osborne also carried on his research at the Carnegie Institution of Washington, D. C., and at Yale. At the university, he worked with Prof. Lafayette B. Mendel, and in 1926 they announced that, through selective breeding, diet, and environment, they had accelerated the growth of animals by one-third the normal rate. Among other American scientific societies, Dr. Osborne was elected to the National Academy of Science, was a fellow of the American Academy of Arts and Sciences, and president of the American Society of

Biological Chemists, 1910; he was also an honorary member of the London Chemical Society, an associate member of *La Société des Sciences Médicales et Naturelles de Bruxelles*, and a member of the Kaiserlich Deutsche Akademie der Naturforscher zu Halle. Yale conferred on him the Sc D degree in 1910, and he received the Paris Gold Medal in 1900, and the John Scott Medal in 1922. Dr Osborne was associate editor of the *Journal of Biological Chemistry*, and besides numerous papers on nutrition, he wrote: *Proteins of the Wheat Kernel* (1907), and *The Vegetable Proteins* (1909, rev ed, 1924).

**OTTER, GEN. SIR WILLIAM DILLON.** A retired officer of the Canadian Army, died in Toronto, May 6, 1929. He was born near Clinton, Ont., Dec 3, 1843, and was educated at Upper Canada College and at the Royal Military School of Toronto. He saw service in the raids made upon Canada by Fenians from the United States in 1866 and again in 1871. During 1883-89 he was commandant in the School of Infantry at Toronto. In the Northwest Rebellion of 1885 he commanded a column under General Middleton and was himself in command at the battle of Cut Knife Creek. In the South African War he was in command of the 2d Battalion of the Royal Canadian Regiment. He was commanding officer in the Western Ontario District in 1905-08, chief of the General Staff at headquarters in 1908-10, inspector general and chief military adviser to the Minister of Militia in 1910-12, and, from 1914 to 1919, director of internment operations. In 1920 he was retired with the rank of general. From 1883 to the year of his retirement, General Otter served in the permanent Militia of Canada, and for 22 years in the Queen's Own Rifles, the active Canadian Militia. He was knighted in 1913.

**OXYGEN.** See PHYSICS.

**PACIFIC RELATIONS, INSTITUTE OF.** An organization formed in Honolulu in 1925 to serve as an unofficial body in studying the conditions of the Pacific peoples with a view to the improvement of their mutual relations. It holds biennial conferences, promotes and coordinates research by other agencies, conducts research through its own secretariat, and endeavors to stimulate the mood of inquiry regarding Pacific problems on the part of the public generally. The support of the institute and of its various national councils is derived from contributions by individuals, organizations, and foundations. It is governed by a Pacific Council consisting of one representative from a recognized affiliated body of similar purposes in each country.

The main activities of the institute during 1929 were directed toward preparation for the third conference which was held in Kyoto, Japan, October 28 to November 9. Charles F. Loomis, the conference secretary, visited most of the constituent national councils, as a result of which there was closely coordinated work in all of the countries in tying up research work to the programme needs of the participants. Delegates to the conference numbered 183, representing, in the main, historians, economists, bankers, educators, labor leaders, and diplomats from Australia, New Zealand, Canada, Great Britain, China, Japan, the United States, and the Philippines. Observers also were present from the Netherlands, Java, Korea,

France, Mexico, Russia, the League of Nations, and the International Labor Office, making in all a total of 218 participants. Among the questions discussed at the round-tables were: Manchuria; China's extraterritoriality problem; food, population, and land utilization; diplomatic machinery in the Pacific for the settlement of international disputes and the maintenance of peace; press communications, cultural contacts; industrialization of the Orient with the related questions of trade and finance, Pacific dependencies. More than 100 certified data papers also were presented, and each of the national groups returned home with more or less well defined educational programmes for the furthering of the work of the institute among their peoples. The next conference was to be held in China in 1931.

The official periodical of the institute is *Pacific Affairs*, published in Honolulu. The chairman, Ray Lyman Wilbur, was succeeded on his appointment to President Hoover's cabinet, by Junnosuke Inouye of the Japanese council. Dr Inouye, however, resigned after a few weeks because of his own appointment as Minister of Finance and was succeeded by David Z. T. Yui, chairman of the Chinese council, who served as chairman throughout the Kyoto Conference. Officers elected at the conference were chairman, Jerome D. Greene of Lee, Higginson & Co., New York City; first vice chairman, Inazo Nitobe of Japan, second vice chairman, Newton Rowell of Toronto, Canada; treasurer, F. C. Atherton of Honolulu, chairman of the international research committee, Charles P. Howland of New York City, research secretary, John B. Condliffe, J. Merle Davis, the general secretary, resigned during the Kyoto conference but agreed to continue to serve until such time as a new secretary was appointed. Headquarters of the institute are in Honolulu and of the American Council at 129 East Fifty-second Street, New York City. Jerome D. Greene is also chairman of the council and Edward C. Carter, honorary secretary and treasurer.

**PAINTING.** When the year 1929 is compared with other years it becomes evident that never before had the recognition of modern art been so wide. The attitude of the public toward what was to it new and strange had gradually been developing and had reached a period of rather general tolerance if not approval. Such an exhibition as that at the Reinhardt Galleries in New York of portraits of women and children, in which old and modern masters were hung in one brotherhood, made a natural and pleasing impression. In the world of museums there was more zeal in collecting moderns. The establishment of a museum of modern art in New York was the culmination of a similar desire to meet the growing interest of the public. Incidentally, the removal of a number of pictures from the Luxembourg to the Louvre, though officially for reasons of space, was not without its significance for the honor of the impressionists.

This state of affairs had its result for the artist himself. It was easier for the original artist to get a showing. The academies were less exclusive, they even were inviting outsiders. There was little for the Independents to be independent about; their battle for equality was well won. An event

of interest to lovers of art which indicated a certain backsliding in this democratic spirit was the attempt to reintroduce a tariff on works of art. This, however, was not accomplished except in the case of rugs.

A number of discoveries were made during the year. A hitherto unnoticed painting in England was found to be a Holbein. Certain parts of the picture indicated a later period, but treatment with X-rays revealed underpainting which made the attribution unquestionable. A picture of Rubens of David fighting the bears was found in Berlin after having been lost since 1827. This picture was authenticated by Wilhelm von Bode and Ludwig Burchard. A painting of Christ supported by an angel, brought to light at Lovere and described in an ancient manuscript was found to be by Giorgione with some work by Titian. Other discoveries were a fresco of the Virgin and Child by Giotto found in the Franciscan Basilica in Assisi, a portrait of Rodrigo Vazquez by El Greco, found in Russia, a giant sarcophagus unearthed near the battle field of Metana not far from Rome, important frescoes of the fifth century in the catacombs of San Gennaro near Naples, and Romanesque frescoes in Spain, discovered by the College Art Association in their investigations there.

**NECROLOGY** The number of deaths of important artists and critics of art was exceptionally large. One of the most deeply regretted was Wilhelm von Bode, Director of the Department of Paintings of the Kaiser Friedrich Museum known in all countries as connoisseur and scholar. Other men of note in Europe were Charles Alexander, Hugo von Habermann, the most distinguished leader of art in Munich after von Stuck, Henry Tuke, R.A., painter, the Italians, Vincenzo Volpe and Francesco Paolo Michetti. In America, Robert Henri, leading American painter, John C. Huntington, marine painter, William Turner Dana, painter, Emil Fuchs, sculptor and painter, Birge Harrison, noted painter of landscape, Richard Lantry, painting, portrait painter, H. Irving Marlatt, portrait and landscape painter; and John Cotton Dana, Director of the Newark Museum and the Newark Public Library.

**BIBLIOGRAPHY** Among the significant publications of the year may be included the following three new works from the Pegasus Press: *North Italian Painting of the Cinquecento*, by Corrado Ricci, with Correggio as its hero, *Florentine Painting of the Trecento*, by Pietro Toesca, laying most stress on Giotto, *Neapolitan Painting of the Seicento*, by Arnaldo de Rinaldis; *Fra Angelico*, by Wilhelm Hausenstein, a spiritual appreciation translated from the German, *Agnolo Bronzino*, by Arthur McComb, the first book written in English on this painter, two German books on Leonardo, one by Edmund von Hildebrandt, the other, *Leonardo-Zeichnungen*, by Anny E. Popp, entirely on his drawings, *The Drawings of G. B. Tiepolo* by Detlev von Hadeln, *The Italian Renaissance*, by Elie Faure, a brilliant piece of aesthetics, *Giorgione*, by Sir Martin Conway, an appreciation of his art as a landscapist, *Titian*, by Emil Waldmann, two other books by the same author, *Englische Malerei*, a history of English painting, and *Manet* (another book on Manet was an intimate biography by Antoinette Proust; the important *Corot*, by Julius Meier-Graefe; *The Life of Sir Peter-Paul Rubens*, by Anthony Bertram, a good and exact biography free from psychoanalysis; a work treating a neglected pupil of this master;

*Largillière*, by Georges Pascal; *Painting in Islam*, by Sir Thomas W. Arnold, a much needed survey. See ART EXHIBITIONS, ART MUSEUMS; and ART SALES.

**PALEONTOLOGY.** See GEOLOGY.  
**PALESTINE.** A territory comprising that part of historic Palestine which lies to the west of Trans-Jordan and between Syria on the north and Egypt; formerly a vilayet of the Turkish province of Syria. Captured by the British during the World War, it has been administered since Sept. 29, 1923, by Great Britain under a mandate of the League of Nations. The mandate confirmed the Balfour Declaration of Nov. 2, 1917, in which the British government pledged its aid in establishing in Palestine "a national home for the Jewish people."

**AREA AND POPULATION.** The area of Palestine under British mandate is about 10,000 square miles. The population, according to the census of Oct. 23, 1922, was 757,182, of whom there were 590,890 Moslems, 83,794 Jews, 73,024 Christians, 7028 Druses, 163 Samaritans, 285 Bahais, and the remainder Sikhs, Hindus, and Metawilehs. On June 30, 1929, according to official statistics, there were 816,064 inhabitants, or 21,500 more than on the same date in 1928. Of the total, there were 572,433 Moslems, 154,330 Jews, and 89,225 Christians. Capital, Jerusalem, with a population in 1922 of 62,078. Other large towns, with their populations in 1922, are Jaffa, 47,709; Haifa, 24,634; Gaza, 17,480; Hebron, 16,577; Nablus, 15,947.

The Jewish settlements are grouped in the four districts of Judea, Samaria, and upper and lower Galilee. The total population of Jews permanently settled in Palestine had risen since the World War from 55,000 to nearly 154,000, or about 18 per cent of the total population. In 1927 there were 2713 Jewish immigrants and 5071 Jewish emigrants. In the same year the movement of population was as follows: Births, 39,193; deaths, 21,806. See JEWS.

**EDUCATION.** Schools in Palestine in 1928 consisted of the following: 315 government schools, with 20,079 students, most of whom were Moslems; 191 schools controlled by the Zionist Organization, with 17,688 students, 84 schools controlled by other Jewish organizations, with 8803 students, 192 Christian schools with 15,782 students, and 53 private Moslem schools, with 4500 pupils. Most of the non-government schools receive a grant-in-aid from the Department of Education. There is also a Hebrew University on Mount Scopus, Jerusalem, opened April 1, 1925.

**PRODUCTION.** Palestine is primarily an agricultural land, the production of the principal crops in 1927 being as follows: Wheat, 99,406 tons, barley, 44,524 tons, durra, 37,441 tons, olives, 1866 tons, olive oil, 3737 tons, and lentils, 3155 tons. Drought and locusts depressed agriculture in 1928. The orange crop, which is the principal export item, totaled 2,214,000 cases in 1926-27 and further acreage was being devoted to orange cultivation. Approximately 1,000,000 timber, fruit, and shade trees were planted in 1927 and the government has received 800,000 dunums (dunum equals 0.227 acre) of a total area of 1,200,000 dunums of natural forest land as state forest. In 1927 there were 242,625 sheep, 385,762 goats, and 22,569 camels.

Rock salt, gypsum, and sulphur are found in the country and in the Dead Sea, the exploitation of

which was authorized under a concession granted a British company in 1929, are vast quantities of potash, salt, carnallite, and bromide.

**COMMERCE** The foreign trade of Palestine has been characterized since the World War by a large excess of imports, due principally to expenditures in that country by Jews abroad who are interested in the creation of a Jewish national home. In 1928 imports totaled \$35,000,000 and exports \$9,000,000, as against imports of \$31,339,416 and exports of \$9,251,400 in 1927. Flour, cement, sugar, wood and timber, cotton fabrics, motor cars, rice, kerosene, and unrefined olive oil are the principal imports, laundry soap, oranges, watermelons, wine, sesame, hides and skins, raw wool, and almonds, the principal exports. In 1928 exports to the United Kingdom totaled 11,308,024 and imports from that country, 1,683,711; exports to the United States, \$280,000, imports from that country, \$1,506,000. Egypt and Syria were the chief sources of origin of imports in 1927 and ranked after the United Kingdom as the principal purchasers of Palestinian exports.

**FINANCE** Both receipts and expenditures considerably exceeded the budget estimates in 1928. The receipts had been estimated at \$11,289,464 and the expenditures at \$11,876,260. According to the report of the British government to the Permanent Mandates Commission of the League, actual income for the year amounted to \$12,900,000 and actual expenditures to \$16,900,000, of which \$3,240,000 was applied to Palestine's share of the pre-war Ottoman debt.

**COMMUNICATIONS** The railways, which are government-owned, had a total length of 774 miles in 1928. There were also 403 miles of surfaced roads, which carried a heavy motor traffic. Vessels entering the ports of the country in 1927 included 697 steamers of 1,570,542 tons and 1919 sailing vessels of 35,171 tons, while vessels clearing totaled 699 steamers of 1,550,922 tons and 1901 sailing vessels of 35,997 tons.

**GOVERNMENT** Under the constitution adopted on Sept. 1, 1922, executive power is vested in a High Commissioner and an executive council, and legislative power in a body of 22 members besides the High Commissioner, consisting of 10 official and 12 unofficial members. The latter are elected and there must be not less than two Christian and two Jewish members. This legislative council had not yet been elected in 1929 because of the absence of many Arabs from political affairs. The Jewish population is represented by an unofficial elected National Committee in its dealings with the administration. The British government and the Palestine administration recognize the World Zionist Organization which in Palestine is represented by the Palestine Zionist Executive, as the agency of the Jewish people in all matters pertaining to the upbuilding of the Jewish national home. High Commissioner, in 1929, Lieut.-Col. Sir John Robert Chancellor, appointed July 6, 1928, Chief Secretary, H. C. Luke.

**HISTORY** A long-smouldering dispute between Arabs and Jews over the specific question of rights to the Wailing Wall in Jerusalem and the general question of Jewish and British policy in Palestine flamed into fierce disorders in August which spread from Jerusalem throughout the country. More than 200 were killed and 300 injured before order was restored by British troops. Probably the most important result of the disorders was the development of sentiment in Great Britain and elsewhere adverse to the Zionist pro-

gramme of eventual political dominance in Palestine and a demand for the thorough reexamination of the whole question of British policy in that country. In a joint letter published on December 20, David Lloyd George, the Earl of Balfour, and General Jan Christian Smuts urged the appointment of a government commission to investigate the workings of the Palestine mandate on the ground that while the Balfour pledge of support to the establishment of a Jewish national home was "unequivocal," in order to fulfill it "a considerable readjustment of the administrative machine might be desirable." All three statesmen were members of the war cabinet which authorized the Balfour Declaration.

The crux of the difficulty in Palestine lay in the various interpretations given to the phrase "Jewish national home" as employed in the Balfour Declaration. The Zionists for the most part contended that it meant that Palestine was to become a Jewish state in a political sense, with the Jews in control of the government. Among the Arabs, a minority of the Jews, the Palestine Christians, and a section of public opinion in Great Britain, the phrase was understood to mean that the Jews might establish in Palestine a cultural centre for the preservation and development of Jewish ideals and religious principles.

Fears of the Arab majority that they were to be displaced as a result of the steady infiltration of Jews and extensive purchases of Arab lands were further aroused by the organization in England in February, 1929, of a Seventh Dominion League. The League's aim was to promote the project for a Jewish national home in Palestine by stimulating immigration of Jews into that country, seeking the establishment by the Palestine government of a special Colonization Department for Jews, securing the admission of more Jews to administrative posts in the Government, and conciliating the Arabs so that they would "welcome and profit by the advent of Western civilization." A Jewish High Commissioner for Palestine and unrestricted Jewish colonization of both Palestine and Trans-Jordan was demanded by the Zionist Revisionist party. The Jewish threat to Arab predominance became still more potent with the formation of an enlarged Jewish agency, enlisting both Zionist and non-Zionist Jews in the task of colonizing Jewish settlers in Palestine, at the Zionist Biennial Congress held at Zurich early in August.

The Palestine Arab Congress, representing both the Arab and Christian populations of Palestine, forecast coming events in a memorandum submitted to the League of Nations. Pointing out that the Zionist policy had resulted in a strong Arab Nationalist movement, the memorandum warned that "serious trouble is hidden under a thin layer of sham peace like fire under ashes." A parliamentary government which would give the Arabs a voice in proportion to their numbers was demanded.

The disturbances at the Wailing Wall, a spot sacred to both Jews and Moslems, began on August 3 but were held in check by the police until August 23, when Moslems returning from services at the Mosque of Omar and the Jews engaged in violent fighting. Nine Jews and three Arabs were killed, according to reports, and more than 100 wounded. Disorders spread throughout the country, with the Arabs in general taking the offensive but in places meeting stubborn opposition from the Jews. Martial law was proclaimed, a

*Associated Press Photo*

THE WAILING WALL AT JERUSALEM

press censorship imposed, and British troops were rushed to the scene by airplane from Egypt and by ship from Malta. Seventy Jews, including 12 alleged American citizens, were killed at Hebron on August 25, 20 more were killed and many wounded at Safed, and the looting and burning of Jewish homes and property was reported from numerous localities. Arab feeling in Trans-Jordan and Syria became aroused and British troops were stationed along the border to prevent a threatened invasion by armed bands intent upon aiding the Palestinian coreligionists. In New York, London, and other cities, Jews held mass demonstrations of protest against the alleged negligence of the British authorities. By September 1, however, the British troops had the situation in hand, the press censorship was lifted, martial law was ended, and the task of punishing the guilty was commenced by the civil courts.

The British Foreign Minister, Arthur Henderson, reported to the League of Nations on September 6 that official reports showed that up to August 31, 109 Jews, 83 Moslems, and 4 Christians had been killed and 183 Jews, 122 Moslems, and 10 Christians wounded. He announced that a British commission of inquiry under Sir Walter Shaw had been appointed. This inquiry was limited "to the immediate emergency" and excluded considerations of major policy, which Mr. Henderson indicated would be taken under advisement later.

The British commission went to Palestine in October and continued its hearings into the causes of the disorders until December 26, when it returned to London to draft a final report. The period during which its investigations in Palestine were under way was marked by an intensification of the antagonism between Arabs and Jews. An All-Arab Congress, attended by 800 Arabs representing Palestine, Trans-Jordan, Syria, Iraq, and Egypt, met in Jerusalem on October 27 to formulate a policy with respect to the situation in Palestine. Demanding the repeal of the Balfour Declaration, the delegates voted to demand the suspension of Jewish immigration, to withhold land from sale to Jews, to support an anti-Jewish boycott which had been instituted by many Arab communities in Palestine, and to ask the withdrawal of the new Wailing Wall regulations promulgated by the government. It was also decided to urge the Arab population not to pay taxes until they were accorded suitable representation in the administration of the affairs of the country, to inform the Commission of Inquiry that there could be no peace until the Balfour Declaration had been abrogated, and to telegraph the British Colonial Office of their lack of confidence in the High Commissioner, who was charged with a pro-Jewish policy. Another evidence of the state of tension was the attempt made by an Arab youth to assassinate Norman Bentwich, Attorney-General of Palestine, and a British Jew and Zionist. A number of Arabs were sentenced to death and others to long terms of imprisonment by the civil courts conducting the trials of those accused of taking part in or inciting the riots. Collective punishment was inflicted upon a number of Arab villages.

The situation in Palestine was still acute at the close of the year, but there was hope that more effective measures for settling the complicated problems involved would be forthcoming in 1930. In November the Permanent Commission on Mandates of the League of Nations secured the

consent of the Council to meet in March to prepare recommendations with regard to the situation in Palestine. The commission also agreed to the request of the British government that it appoint a special committee to attempt the solution of the Wailing Wall dispute. See GREAT BRITAIN, under *History*, and JEWIS, under John Haynes Holmes, *Palestine Today and Tomorrow: A Gentle's Survey of Zionism* (New York, 1929). See ARCHAEOLOGY, JEWIS, under *Zionism*.

**PALLEN**, jă'pĕn, CONDĕ BENOIST. An American Roman Catholic editor and author, died May 26, 1929, in New York City. He was born in St. Louis, Mo., Dec. 5, 1858, and was graduated from Georgetown University in 1880 and from St. Louis University, with the Ph.D. degree, in 1885. He was editor of *Church Progress* and the *Catholic World* 1887-97, and was Catholic revision editor of the NEW INTERNATIONAL ENCYCLOPEDIA and other reference works. From 1904 to 1920, Dr. Pallen was managing editor of the *Catholic Encyclopedia* and president of the Encyclopedia Press, Inc., publishers of that work, from 1912 to 1920. After 1885 he was widely known as a lecturer on literary subjects, and a writer on literary and philosophical subjects for Catholic publications. He was editor of the Universal Knowledge Foundation and in 1924 became president of the Associated Arts Corporation. He wrote *The Philosophy of Literature* (1897), *Epochs of Literature* (1898), *What is Liberalism?* (1899), *New Rubairat* (poems, 1899), *The Feast of Thalarchus* (dramatic poem, 1901), *The Death of Sir Lancelot and Other Poems* (1902), *The Meaning of the Idylls of the King* (1904), *Collected Poems* (1915), *Education of Boys* (1916), *Crucible Island* (1919), *A Man to Man* (1927).

**PANAMA**. A republic of Central America, lying between Costa Rica and Colombia, constituting an independent state after November, 1903, formerly a department of Colombia. Capital, Panama.

**AREA AND POPULATION.** Panama has an extreme length of 480 miles, and its width varies from 37 to 110 miles. The area is estimated at 32,380 square miles excluding the Canal Zone, population, according to the census of 1923, 442,522. A national census was scheduled for 1930. The natives are a mixed race, combining Spanish, Indian, and Negro blood. The larger cities are Panama, the capital, 59,458; Colon, 31,203. For the five-year period 1924-28, the average annual number of births was 11,862 and of deaths, 6537, the excess of births being 5325.

**EDUCATION.** Primary instruction is free and compulsory for all children from 7 to 15 years of age. There were about 45,000 children of school age in 1928 and 79,626, or 84 per cent, were attending school. The number of students enrolled in the National Institute in 1926 was 1573.

**PRODUCTION.** Although the soil of Panama is very rich, only a small part of it is properly cultivated. The principal agricultural products are bananas, cacao, coconuts, coffee, rubber, sugar, tobacco, and castorilla. Mahogany and other woods are produced. Cattle raising is successfully carried on. Banana shipments in 1928 totaled 4,446,000 bunches, as against 4,623,000 bunches in 1927. The banana blight reduced production in the Bocas del Toro district from 5,160,000 bunches in 1919 to 1,134,000 in 1928, but production in the Canal Zone has been increasing and new planta-

tions in Chiriqui Province started producing in 1929. Coffee production in 1928 totaled about 1,800,000 pounds, as compared with 1,700,000 pounds in 1927. Cacao is replacing bananas as the chief crop, exports to the United States in 1928 amounting to 5,913,000 pounds, as against 4,287,000 pounds in 1927. Mining and manufacturing are relatively unimportant. Small quantities of manganese and gold are produced. Manufacturing is confined largely to articles for local consumption.

**COMMERCE.** In 1928 imports totaled \$16,331,000 (exclusive of shipments to the Canal Zone), or about 10 per cent more than in 1927, when imports were valued at \$14,710,000. The value of exports amounted to less than one-quarter that of the imports, the total for 1928 reaching \$4,113,000, as compared with \$3,910,000 in the previous year. The trade balance is more even than appears from the reports, which do not take into account sales to tourists, the undervaluation of exports, and numerous shipments into the Canal Zone.

Bananas constituted more than 65 per cent of the reported exports, with cacao, coconuts, ivory nuts, cattle hides, cabinet woods, and mother-of-pearl shells as other leading items. The United States supplied 67.2 per cent of the total imports and took 90 per cent of the domestic exports in 1927. In 1928 the United States furnished 68 per cent of the imports, Great Britain 10 per cent, and Germany 6 per cent. Preliminary returns for 1929 placed the total imports at \$18,400,000, or \$2,069,000 more than in 1928. Of the total, \$12,360,000 represented imports from the United States.

**FINANCE.** For the fiscal year ending June 30, 1928, revenues totaled 7,781,842 balboas (\$7,781,842) and expenditures 10,650,000 balboas (one balboa equals \$1). The excess of expenditures was due to the inclusion in the total figure of 1,014,742 balboas spent on the construction of the Chiriqui Railway, 855,034 for roads, and 549,237 on the account of the previous fiscal year. The expenditures of the departments amounted to 7,186,981 balboas. Panama operates on a biennial budget. The new budget for 1929-31, which became effective July 1, 1929, was formulated in accordance with recommendations of a commission of American financial experts employed to aid in the reorganization of the national finances as authorized by Congress. The budget balanced the revenues and expenditures for 1929-30 at 17,031,907 balboas. Expenditures were distributed as follows: Department of Government and Justice, 3,768,943; Foreign Relations, 572,000; Treasury, 1,588,264; Public Instruction, 3,327,937; Agriculture and Public Works, 1,428,588; service of the public debt, 4,126,174; for charity, 2,220,000. The latter item was to be paid for from proceeds of the national lottery. The annuity from the United States amounts to \$500,000.

The public debt in September, 1929, totaled 18,686,000 balboas, as compared with 13,491,000 on Oct. 1, 1927, of which 16,293,000 balboas was external and 2,393,000 internal.

**COMMUNICATIONS.** Railways in Panama, including the Canal Zone, totaled about 295 miles in 1928, of which the Panama Railroad (154 miles) was the principal unit. In 1927-28 this line carried 517,000 passengers and 344,000 tons of freight, the gross receipts totaling \$6,298,000. The merchant marine in 1928 consisted of 31 vessels of 100 tons or more with a total gross ton-

nage of 72,242 tons. Air-mail service between Panama and the United States was inaugurated on Feb. 6, 1929.

**GOVERNMENT.** The constitution of Feb. 13, 1904, which was amended in 1918 and again in 1928, vests legislative power in the Chamber of Deputies of 46 members elected for four years, which meets biennially on September 1, and executive power in the President elected by direct vote for four years and ineligible for reelection. President in 1929, Florencio Harmodio Arosemena, who assumed office Oct. 1, 1928.

**HISTORY.** Negotiations for a new treaty between the United States and Panama to replace both the treaty of 1903, under which the Panama Canal Zone was ceded, and the unratified treaty signed in 1926, were commenced in the fall of 1929 at the request of Panama. The treaty signed in 1926, which was intended to supplant the 1903 pact and to settle points of difference between the two countries with respect to the status and administration of the Panama Canal, was declared unjust by the Panamanian government and remained unratified by the Congresses of both countries.

Steps toward the peaceful settlement of boundary disputes with both Costa Rica and Colombia were taken during the year. Enrique Fonseca Zufiga, the newly appointed Costa Rican Minister to Panama, voiced the hope that the two countries would soon be able to adjust their difficulties which resulted in hostilities in 1921. The Panamanian members of a joint Panama-Colombia boundary commission were appointed by President Arosemena in November. An aerial survey of the unexplored boundary region was made in 1928. Roy Taskoe Davis, former United States Minister to Costa Rica, was appointed Minister to Panama in 1929, succeeding Dr. John G. South. See PANAMA CANAL and PANAMA CANAL ZONE.

**PANAMA CANAL.** The total number of commercial vessels transiting the Panama Canal during the calendar year ended December 31, 1929, aggregated 6430, and the total tolls collected was \$27,592,715.84. Tolls collected during the calendar year 1929 exceeded the previous high mark for a year's tolls collection (fiscal year 1929) with \$27,127,376.91) by \$465,338.93. The number of commercial transits in the calendar year 1929, while exceeding the number of vessels passing through during the calendar year 1928, and the fiscal year 1929, fell short by 26 of the record of 6456 established during the fiscal year 1928. In addition to the high record for tolls collected, new high figures for tons of cargo and ship tonnage

	Totals for month	
	Transits	Tolls
January	603	\$2,502,815.12
February	522	2,211,961.20
March	536	2,343,865.55
April	540	2,281,087.27
May	524	2,296,546.57
June	503	2,127,805.97
July	587	2,259,582.37
August	541	2,327,437.86
September	523	2,201,789.40
October	564	2,485,897.71
November	525	2,244,895.94
December	522	2,309,030.88
Totals, calendar year, 1929	6,430	\$27,592,715.84
Totals, calendar year, 1928	6,334	\$26,875,962.41
Totals, calendar year, 1927	6,085	\$26,231,022.94
Totals, fiscal year, 1929	6,413	\$27,127,376.91

were likely to be established during the year, the exact figures not being available at the end of the year.

The daily average number of commercial transits during the year was 17 62, as compared with 17 31 for the calendar year 1928 and daily average

States, British, German, Norwegian, Japanese, Dutch, Swedish, French, Colombian, Danish.

The accompanying tabulation shows the total commercial traffic through the Canal during the calendar year 1929, segregated according to nationality of vessels.

# COMMERCIAL TRAFFIC THROUGH THE PANAMA CANAL DURING 1929

age tolls collection amounted to \$75,596 48, as compared with \$72,065 46 for the year 1928.

In the following tabulation, the number of commercial transits and the amount of tolls collected are shown for the calendar year 1929, with comparative totals for the calendar years 1928 and 1927, and the fiscal year ended June 30, 1929.

The number of commercial transits for 1929 (6430), while exceeding the number of ships passing through during the calendar year 1928 and the fiscal year 1929, fell short by 26 of the record established during the fiscal year 1928.

The accompanying tabulation shows the number of transits, tonnage, tolls collected, and tons of cargo carried during the 1929 calendar year, as compared with the corresponding totals for the previous record years, and increases or decreases.

## PANAMA CANAL TRANSITS, TONNAGE AND TOLLS FOR 1929

	Calendar year 1929	Previous high record	Year	Increase or decrease
Number of transits	6,430	6,456	Fiscal year, 1928	- 26
Tonnage				
Panama Canal net	30,353,189	29,837,794	Fiscal year, 1929	+ 515,395
United States net	23,138,682	22,864,796	Fiscal year, 1928	+ 274,886
Registered gross	38,061,989	37,484,792	Fiscal year, 1929	+ 597,197
Registered net	23,241,639	22,900,317	Fiscal year, 1929	+ 341,322
Tolls	\$37,592,715 84	\$27,127,376 91	Fiscal year, 1929	+ \$405,338 93
Tons of cargo	31,450,493	30,663,006	Fiscal year, 1929	+ 787,487

Vessels of 24 nationalities made up the commercial traffic through the Panama Canal during the calendar year 1929. Forty-four and five-tenths per cent of the total commercial transits were vessels of the United States, 25 9 per cent were British, and the remaining were distributed among 22 nationalities. In the order of number of transits, the 10 leading nationalities were United

**PANAMA CANAL ZONE** The strip of land 5 miles wide on each side of the Panama Canal ceded to the United States by Panama in the treaty of Nov 18, 1903. Area, 554 square miles, of which 163½ are taken up by Gatun Lake, civil population in June, 1929, 30,300 of whom 7689 were Americans. Including military and naval forces the total population was 39,137, as compared with 37,512 in June, 1928. The treaty of 1903 gave the United States control over sanitation and quarantine in the cities and harbors of Panama and Colon, although they remained within the jurisdiction of Panama. The status of the Canal Zone is that of a military reservation under the Governor of the Panama Canal, appointed by the President of the United States. Governor in 1929, Col H. Burgess, U.S.A. See PANAMA CANAL.

**PAN-AMERICANISM** Throughout the year the Pan American Union devoted much of its efforts toward making effective the resolutions of the Sixth International Conference of American States, held in Havana, Cuba, in January, 1928. The most important accomplishments in this direction were as follows:

(1) The conferences on conciliation and arbit-

tration, trade marks, highways, and customs procedure and port formalities were held.

(2) The time and place of meeting were fixed for the Inter-American Conference of Rectors, Deans, and Educators, the Inter-American Conference on Agriculture, Forestry, and Animal Industry, and the Second Pan-American Congress of Journalists.

(3) The union formulated a project of organization of the Inter-American Institute of Intellectual Cooperation.

As a result of the Havana meeting the Pan American Union was made, for the first time, the depository of the instruments of ratification of most of the conventions signed at the Sixth International Conference. These instruments were properly catalogued and filed, and the necessary notices of the receipt of ratification sent to all the signatory states.

Among the Pan-American events of outstanding importance during the year were the following:

**THE INTERNATIONAL CONFERENCE OF AMERICAN STATES ON CONCILIATION AND ARBITRATION.** This meeting was held pursuant to a resolution adopted by the Sixth International Conference of American States. The delegates assembled at the Pan American Union on Dec 10, 1928, and remained in session until Jan 5, 1929. All the countries members of the Pan American Union were represented, with the exception of Argentina. As a result of the deliberations, two important instruments were signed. A general treaty of arbitration, together with a protocol of progressive arbitration and a general convention of international conciliation. The republics of America thus again assumed a position of leadership in the great movement for the pacific settlement of international disputes.

**BOLIVIAN AND PARAGUAYAN PROTOCOL.** Coincident with the assembling of the International Conference of American States on Conciliation and Arbitration, difficulties arose between Bolivia and Paraguay relative to their jurisdiction over the Gran Chaco, and the conference immediately tendered its good offices, appointing a special commission to conduct the negotiations. A protocol was signed by the representatives of Bolivia and Paraguay at Washington, providing for the establishment of a commission of inquiry and conciliation consisting of two representatives from each of the countries party to the dispute, and one each from Mexico, Colombia, Uruguay, Cuba, and the United States, which met at the Pan American Union on March 13. See **ARBITRATION**, also **BOLIVIA** and **PARAGUAY**.

**THE PAN AMERICAN TRADE MARK CONVENTION.** This group assembled at the union on February 11, pursuant to the resolution adopted by the Sixth International Conference of American States, and continued in session until February 20. This subject was considered at the Havana meeting, when it was deemed essential to submit the matter to a conference of specialists. The conference finally adopted a general inter-American convention for trade mark and commercial protection and a protocol of the inter-American registration of trade marks.

**CONFERENCE OF DIRECTORS OF THE PAN AMERICAN SANITARY BUREAU.** The Pan American Sanitary Bureau which met in Lima, Peru, in October, 1927, adopted a resolution providing for the assembling in Washington of the directors of the Pan American Sanitary Bureau. The directors met at the union on May 27 and continued in session

until June 8. There was every reason to expect that as a result of this meeting the scope of action and sphere of usefulness of the bureau would be considerably extended.

**COLUMBUS MEMORIAL LIGHTHOUSE ARCHITECTURAL COMPETITION.** During the year the first stage of the architectural competition for the Columbus Memorial Lighthouse was initiated and was carried to successful conclusion with the announcement of the findings of the international jury of award, rendered at Madrid on April 20. The permanent committee of the governing board then undertook the formulation of the conditions governing the second and final stage of the competition, which would be limited to the authors of the ten designs placed first in the preliminary competition.

**THE SECOND PAN AMERICAN CONGRESS OF HIGHWAYS.** This conference convened in Rio de Janeiro, Brazil, August 16-28. Representatives were in attendance from 19 of the republics of the American continent, and definite conclusions were reached relative to the technical, administrative, and financial aspects of highway construction.

**PAN AMERICAN COMMISSION ON CUSTOMS PROCEDURE AND PORT FORMALITIES.** For the purpose of considering the simplification and standardization of customs procedure and port formalities in the countries of the American continent, the Pan American Union convened the Pan American Commission on Customs Procedure and Port Formalities which met at the union November 18-26. The decisions reached by the commission covered such important matters as: Simplification in the variety of bases upon which customs duties are levied; consolidation of customs charges; central authority to decide customs controversies; confiscation of merchandise for false customs declarations made with intent to defraud; entrance and clearance fees; anchorage moorage, dockage, and wharfage; improvement of ports and harbors.

**INTER AMERICAN COMMISSION OF WOMEN.** As its first subject of investigation and study, the Inter American Commission of Women, appointed by the Pan American Union, took up the question of the nationality of women and of their children. According to Miss Doris Stevens, representative of the United States upon, and chairman of the Commission, it was empowered to study the status of women in the 21 republics of the Western Hemisphere. According to a statement made by Miss Stevens:

It seems the part of wisdom to begin with the question of their nationality, since the nationality of women is one of the questions before the World Conference on the Codification of International Law which has been called by the League of Nations to meet at The Hague in 1929. Both member and non member States will take part. The whole civilized world will be represented. Women are eager for an opportunity to correct some of the existing evils. There is no uniformity in laws on nationality. A woman may find herself possessed of several nationalities or of none. In some countries of our Western Hemisphere, a married woman takes the nationality of her husband in all cases. Sometimes, as in the Dominican Republic and Costa Rica, she loses nationality on marrying a foreigner, provided that her husband's country gives her his nationality. In some countries, as in Ecuador, she loses her nationality on marrying a foreigner only if she goes to her husband's country to live and if that country gives her his nationality. Also in Ecuador, and elsewhere, after having lost her nationality by marriage with a foreigner, a woman may resume it upon dissolution of the marriage, if she so desires. Sometimes, as in Costa Rica, when a woman loses her nationality by such marriage with a foreigner, she can only regain it by coming back into her own country as a foreigner herself, and being naturalized.

In some countries the law works both ways. A native woman who marries a foreigner takes his nationality, a foreign woman who marries a native man takes his nationality. This is true in Haiti, for instance. On the other hand, there are countries in which the law works only one way. Again, as in Guatemala, a woman is given an option as to her nationality. She may keep her own or take her husband's, as she prefers, if she makes a definite statement to this effect in the marriage agreement.

In other countries, the naturalization law is different for men and for women. In Ecuador, for instance, the naturalization of a man carries with it the naturalization of his wife and children, but the naturalization of a married woman, on the other hand does not carry with it the naturalization of her husband and children.

In some cases, most illogical and lamentable of all, a woman has no nationality. An Englishwoman, for example, married to an Argentine ceases to enjoy English nationality according to British law, but does not become Argentine by Argentine law. There is no remedy whatever for such a condition. In practice, however, Argentina gives the woman her passport and diplomatic facilities, but she is beyond the pale of nationality cast off by her own country and not accepted by her husband's.

In the United States, a woman retains her nationality upon marriage with a foreigner only when he is himself eligible for United States citizenship. In other words, a woman may lose her nationality upon marriage, a man never does.

Again, in the United States, a woman who marries a foreigner and lives two years in her husband's country is presumed to have lost her nationality, and to maintain it must overcome this presumption. A man under the same circumstances is never presumed to have lost his nationality. If a woman from the United States marries a foreigner and lives with him five years anywhere outside her own country, according to United States law she is again presumed to have lost her nationality.

In some countries—the United States among them—when a child is born abroad, the country will give nationality to the child only if the father has that nationality. The country gives the mother's nationality to the child in such cases only when the child is illegitimate.

The work of the Inter American Commission of Women will be of assistance in drafting a uniform proposal for the civilized world. Not women alone, but all governments are frankly in a quandary under the present system. The amount of hardship entailed is almost unbelievable, and has led the League of Nations to place this vexed question of nationality prominently on the agenda of The Hague Conference on International Law.

**PAN AMERICAN UNION.** An international organization maintained by the 21 American republics for the development among them of good understanding, friendly intercourse, commerce, and peace. It is controlled by a governing board composed of the Secretary of State of the United States and the diplomatic representatives in Washington of the other republics, and is administered by a director-general and assistant director chosen by this board.

During the year a number of important Pan-American conferences were held. See **PAN-AMERICANISM**. The union also followed its usual custom of furnishing illustrated material and programmes of study for stimulating the study of Latin-American history and culture in the schools of the United States. Among its publications in use in schools, colleges, and universities of the United States and in various other lands are *Seeing South America*, *Ports and Harbors of South America*, *Seeing the Latin Republics of North America*, and *Viajando Por Los Estados Unidos*. In addition the union publishes every month the *Bulletin* in Spanish, Portuguese, and English.

Statistical matter compiled by the union related to inter-American commerce and included a general survey of the trade of each of the republics of Latin America. The counselor's office continued to stimulate the interest of women's clubs and other civic and literary organizations in the study of the history, civilization, and prob-

lems of the countries of Latin America. For this purpose the union considerably enlarged its loan service of books, including vocal and instrumental selections by Latin-American composers. The counselor's office also had charge of the concerts of Latin-American music which were broadcast over a nation-wide network of stations and thus made available to millions.

The practical service performed by the Pan American Union was greatly strengthened by the publication in Spanish and Portuguese of four special series, dealing with agriculture, education, public health and social welfare, and finance, industry and commerce. During the year the title of the division of education was changed to the division of intellectual cooperation in order to correspond more closely to the larger aspects of its work. Under its auspices 21 Argentine educators and professional men visited the United States in January and February, 1929, the trip having been made possible by the efforts of the Argentine-American Cultural Institute, the Institute of International Education of New York, and financial assistance from the Carnegie Endowment for International Peace. The Pan American Sanitary Bureau placed at the disposal of the republics of the continent the result of the sanitary progress of the year. It issues the *Pan American Sanitary Bulletin*, a monthly. The director of the Pan American Union in 1929 was Dr. L. S. Rowe, assistant director, Dr. Esteban Gil Borges. Headquarters are in the Pan American Union Building, Washington.

**PANIC OF 1929.** FINANCIAL. See **BANKS AND BANKING**, **BUSINESS REVIEW**, **FINANCIAL REVUE**.

**PAN-PACIFIC UNION.** An organization founded in 1907 to "secure and collate accurate information concerning the material resources of Pacific lands, to study the ideas and opinions that mold public opinion among the peoples of the several Pacific races, and to bring men together who can understandingly discuss these ideas and opinions in a spirit of fairness, that they may point out a true course of justice in dealing with them internationally." The union is in no way the agency of any Pacific government but has the goodwill of all its honorary heads are the presidents, premiers, or governor-generals of Pacific lands—the United States, Australia, New Zealand, China, Netherlands East Indies, Canada, Japan, Siam, Mexico, Peru, Chile, Indo-China. It is supported in part by government and private appropriations and subscriptions, chambers of commerce, boards of education, scientific societies, and other organizations being affiliated and working with it. Its central office is in Honolulu, because of the location of the Hawaiian Islands at the ocean's crossroads. Its management is under an international board of trustees.

Among the important conferences which the Pan-Pacific Union has called since 1920 are the Pan-Pacific scientific educational, press, commercial, food conservation, and fisheries conferences. Most of these bodies in 1929 were autonomous, calling and financing their own conferences. The most important meeting of 1929 was that of the Pan-Pacific surgical conference which was held in Honolulu in August and at which a constitution for permanent organization of this body was drawn up. It was to be followed by a Pan-Pacific medical conference to be held in Honolulu in 1933 in cooperation with the Far Eastern Tropical Medical Association, the Pan-American

Medical Association, and the Australasian branches of the British Medical Association. The second Pan-Pacific women's conference was scheduled to meet in Honolulu in 1930 for the purpose of perfecting an autonomous organization, the second Pan-Pacific food conservation conference will be held in 1931; and the following year the second Pan-Pacific commercial and the Pan-Pacific ethical and cultural conferences were to be held. The official periodical of the society is the *Mid-Pacific Magazine*, an illustrated monthly. It also publishes the *Bulletin of the Pan Pacific Union*. The president in 1929 was Wallace R. Farrington, former Governor of Hawaii, the director was Alexander Hume Ford. The executive offices are in Honolulu, T. H.

**PAPER AND PULP.** The statistical estimate of the American Paper and Pulp Association, covering the year 1929, indicated increased production of both wood pulp and paper in the United States. Pulp production for 1929 was stated at over 4,630,000 tons, as compared with 4,510,800 tons in 1928, with an increase in the production of all grades but soda pulp.

#### UNITED STATES WOOD PULP PRODUCTION, 1929

[Tons of 2000 pounds]

Mechanically ground wood pulp . . .	1,640,000	
Sulphite . . .	1,635,000	
Unbleached . . .	865,000	
Bleached . . .	770,000	
Sulphate . . .	880,000	
Unbleached (kraft) . . .	836,000	
Bleached . . .	44,000	
Soda . . .	475,000	
Total . . .	4,630,000

Total . . .	4,510,800	4,318,403	

\* Combined in order to avoid disclosing quantities reported by individual establishments.

Following the biennial Census of Manufactures in 1927, the U. S. Bureau of the Census, in co-operation with the Forest Service of the Department of Agriculture, made available statistics of pulp-wood consumption and wood-pulp production for 1928. The accompanying tables give wood-pulp production by quantity and process and by States.

#### UNITED STATES PAPER PRODUCTION IN 1929

[Tons of 2000 pounds]

Newsprint . . .	1,390,000
Book paper, uncoated . . .	1,440,000
Cover paper . . .	28,500
Writing paper . . .	595,000
Wrapping paper . . .	1,641,000
Board paper . . .	4,500,000
Tissue paper . . .	375,000
Building paper . . .	498,000
All other grades . . .	526,500
Total . . .	10,984,000

The paper production in the United States also increased during 1929, being estimated by the American Paper and Pulp Association at 10,984,000 tons, as compared with 10,403,338 tons in 1928. Of the 1929 total, the largest individual item of production was board paper, 4,500,000 tons. Wrapping paper followed with 1,641,000 tons, book paper, uncoated, 1,440,000 tons, and newsprint paper, 1,390,000 tons.

According to the aforementioned report of the Bureau of the Census, the production of paper and paper boards by class, kind, and quantity was as follows in 1927 and 1928.

#### PRODUCTION OF PAPER BY KIND AND QUANTITY

[Tons of 2000 pounds]			
	Kind		
	1928	1927	
Newsprint, standard . . .	1,415,450	1,518,929	
Hanging paper . . .	96,390	112,658	
Catalogue . . .	138,660	183,338	
Book paper, uncoated . . .	1,334,826	1,269,821	
Cover paper . . .	27,043	26,343	
Writing paper . . .	550,472	508,808	
Wrapping paper, sulphite . . .	351,786	290,724	
Wrapping paper, kraft . . .	873,578	637,295	
Boards . . .			
Container boards . . .	1,984,697	2,100,150	
Folding boxboards . . .	947,613	796,216	
Set-up boxboards . . .	620,809	444,228	
Building boards . . .	84,456	71,235	
Binders' boards . . .	78,889	51,610	
Cardboard . . .	102,602	49,244	
Leather board . . .	18,911	24,195	
Press board . . .	7,775	6,938	
Other . . .	219,676	239,792	
Tissue paper . . .	368,174	316,070	
Absorbent paper . . .	74,768	63,766	
Building paper . . .	562,865	625,589	
Other papers including wrapping paper other than sulphite and kraft . . .	564,448	677,631	
Total . . .	10,403,338	10,002,070	

There was an increase during 1929 both in quantity and value of imports of paper base stocks, which were valued at \$118,132,740 as compared with \$112,295,501 in 1928. They included the following: Pulp woods (rough, peeled, and resawed), 1,350,722 cords valued at \$14,598,949; mechanically ground wood pulp, 244,162 tons valued at \$6,245,776; unbleached sulphite wood pulp, 701,456 tons valued at \$35,328,982; bleached sulphite wood pulp, 334,235 tons valued at \$25,338,003; unbleached sulphate wood pulp, 384,005 tons valued at \$20,518,676; bleached sulphate wood pulp, 15,364 tons valued at \$1,139,820; other pulp,

6050 tons valued at \$514,139; rags for paper stock, 445,496,028 pounds valued at \$9,341,795; waste bagging and paper, 141,615,462 pounds valued at \$1,657,562; and old rope and all other paper stock, 131,084,841 pounds valued at \$3,448,438. The largest imports of sulphite wood pulp, 397,351 tons valued at \$21,929,707, and of unbleached sulphate wood pulp (kraft), 224,371 tons valued at \$11,327,331, were from Sweden, while Canada ranked second with 378,034 tons of sulphite wood pulp valued at \$23,609,440 and 110,366 tons of unbleached sulphate wood pulp (kraft) valued at \$6,792,782.

Paper and paper manufactures imported in 1929 were valued at \$163,184,327 as compared with \$166,406,552 in 1928. The principal item, as usual, was standard newsprint, which amounted to 4,845,401,341 pounds valued at \$144,492,736, as compared with 4,314,332,865 pounds valued at \$139,432,918 in 1928. Of this amount Canada supplied 4,389,174,594 pounds valued at \$132,282,041, Newfoundland and Labrador, 263,829,009 pounds valued at \$7,433,636, and Sweden, 101,438,043 pounds valued at \$2,576,079. Next in value were cigarette, book and cover papers, which totaled 11,687,109 pounds valued at \$3,021,984. Tissue and copying papers amounted to 5,008,881 pounds valued at \$2,667,680, surface-coated papers to 2,452,236 pounds valued at \$1,046,201, and pulpboards in rolls to 58,724,555 pounds valued at \$1,271,740.

Exports of paper and paper manufactures in 1929 were valued at \$37,379,685, exceeding the 1928 exports in value by \$6,446,554. The principal items were newsprint paper, 37,391,882 pounds valued at \$1,346,018, and book paper, not coated, 37,817,028 pounds valued at \$2,651,325. The largest exports of newsprint, 14,979,796 pounds, were to South America, while the Philippine Islands came second with 9,166,502 pounds. The largest exports of book paper, 12,198,178 pounds, were to Canada. Other important items were Wrapping paper, 43,882,689 pounds valued at \$2,957,204, paper board and strawboard, 47,315,391 pounds valued at \$2,096,798; box board, 53,458,595 pounds valued at \$1,014,535, surface-coated paper, 17,317,750 pounds valued at \$1,576,916, tissue and crepe paper, 4,798,279 pounds valued at \$1,061,250, paper bags, 12,061,231 pounds valued at \$1,010,522, boxes and cartons, 28,120,494 pounds valued at \$1,891,939, vulcanized fibre sheets, strips, rods, and tubes, 6,116,832 pounds valued at \$1,487,714, fiber insulating lath or board, 30,324,245 square feet valued at \$1,028,312, and wall board of paper or pulp, 68,049,488 square feet the value of which was \$2,220,879.

In Canada, the year 1929 was a trying one for the newsprint industry which had not fully recovered from the effects of the crisis through which it passed in 1928. This crisis arose from an over-expansion of the industry which resulted in an installed capacity for production from 20 to 25 per cent in excess of any possible market requirements. The first step which the provincial governments of Quebec and Ontario took to curb the ensuing price-cutting among manufacturers was to check the building of new mills, the second step was to cooperate with the newsprint industry so that a reasonable return could be obtained. As a result of conferences an agreement was reached for the restriction of the output to 80 per cent of the capacity of the mills—or rather to the capacity of the market to absorb the output

—and the pooling of orders for equitable distribution among the mills.

In spite of these measures, however, the production of newsprint in 1929 was greater than in any previous year, amounting to 2,728,827 tons as compared with 2,381,102 tons in 1928; but an increase in exports of almost 15 per cent over the total for 1928 helped to absorb this production. Of the 2,510,634 tons of newsprint exported in 1929, 2,173,087 tons were shipped to the United States, . . . to the Newsprint Institute conducted . . . auspices of the Canadian Pulp and Paper Association. Prices, however, remained inadequate, and in December the three largest Canadian paper manufacturers other than the Canadian International Company, namely the Abitibi Company, Canadian Paper & Paper Co. and Price Brothers, announced for 1930 a price for newsprint of \$60 a ton which was an increase of \$5 over the 1929 price with a drawback of \$5 for the first six months of the year in the case of a three years' contract. The International Paper Company at this time had not announced its price for the year 1930, and it was a question as to its policy. The United States publishers, the principal customers, stated that they would not yield to higher prices without a struggle, and at the end of the year the matter was far from settled.

The Canadian book and writing paper mills produced an increased tonnage during 1929 but reported that they could have manufactured a still greater volume had the demand justified it, the total output amounted to only 67,408 tons, as compared with the 100,000-ton capacity of these mills. Especially detrimental to this industry was the tariff change which became effective in March, 1928, permitting an 80 per cent drawback on importations of book paper on behalf of certain Canadian magazine publishers. As a result of this measure imports of book paper had increased from 1,070,171 pounds in 1927, the year before the tariff change, to 5,689,720 pounds for the 11 months up to the end of November, 1929.

The Pulp and Paper Institute of Canada, devoted to the training of students in chemistry and technology directly applicable to the paper and pulp industry, was opened at McGill University, Montreal, on Jan. 25, 1929, the occasion of the sixteenth annual meeting of the Canadian Pulp and Paper Association. This institute representing an investment of \$500,000, accommodates the university's department of industrial and cellulose chemistry, the pulp and paper division of the Forest Products Laboratories (owned by the Canadian Government), and the headquarters of the Canadian Pulp and Paper Association.

In the United States the Lawrence College Institute of Appleton, Wis., organized by about 90 percent of the paper manufacturers of Wisconsin was opened in September. These manufacturers subscribed a fund of \$300,000, augmented by over \$30,000 for library and fellowship purposes, and guaranteed an annual minimum income of \$50,000.

**PAPUA**, pā'pū-a. A territory of the Australian Commonwealth, comprising the southeastern part of the island of New Guinea and all the groups of small islands between 8° and 12° S latitude and 141° and 155° E longitude, formerly known as British New Guinea, transferred to the Australian government Sept. 1, 1906. Area, 90,540 square miles of which about 87,786

are on the Island of New Guinea. On June 30, 1928, the population was as follows. Europeans, 1428, Papuans (estimated), 275,000 Port Moresby is the capital and a port of entry Other ports of entry are Samarai, Daru, and Kulaindau.

A large proportion of the natives are civilized, and many of them are taught in schools maintained by the five Christian missionary bodies in the territory On June 30, 1928, there were 61,370 acres of plantations The chief crops are coconuts (49,244 acres), rubber (8212 acres), and sisal hemp (3000 acres) The forests contain valuable timber, and the mineral resources, which are considerable, include gold, copper, osmiridium, lead, zinc, tin, and iron The only minerals exported have been gold, copper, and osmiridium Indications of petroleum have been found over an area of 1000 square miles, and borings were being continued in 1929 under the auspices of the Australian government The chief imports are foodstuffs, tobacco, drapery, and hardware, the chief exports are copra, gold, hemp, pearls, and rubber The exports in 1928 were valued at £350,363 and the imports at £403,501 There is a considerable trade between Australia and Papua, steamship communication being regularly maintained, 226,948 tons entered and cleared in 1927 The local revenue in 1928 was £107,052 and the expenditure, £158,964 The Australian government grants an annual subsidy of £50,000 The territory is administered by a lieutenant-governor appointed by the Governor-General of Australia, and an executive and a legislative council, both consisting of official or nominated members Lieutenant-governor and chief judicial officer in 1929, Sir J. H. P. Murray

**PARAGUAY**, pâr'a-gwâ. An inland republic of South America, bounded on the west and south by Argentina, on the east by Argentina and Brazil, and on the north by Brazil and Bolivia Capital, Asunción

**AREA AND POPULATION** The estimated area of Paraguay proper, which lies between the Paraguay and Alto Paraná rivers, is estimated to be 61,647 square miles, in addition, Paraguay lays claim to a tract of 100,000 square miles between the Paraguay and Pilcomayo rivers known as the Chaco, the ownership of which was disputed by Bolivia Population at the census of 1899, 555,571, estimated in 1928, 798,969, excluding about 30,000 Indians in the Chaco

In Paraguay proper the people are of mixed blood, namely, Guaraní, Indian, Spanish, and Negro, the first mentioned predominating Immigration is small, there being but 400 new arrivals in 1928 The largest cities with their populations, estimated in 1926, are Asunción, the capital, 113,684, Villa Rica, 26,000, Concepción, 11,000, Luque, 13,000, Carapezú 12,000

**EDUCATION** Education is free and nominally compulsory In 1928 there were 96,483 pupils in public primary schools and 5021 in private schools There were also three high schools, with 1000 students, seven normal schools with 534 students, and a university with 404 students in 1927

**PRODUCTION** Most of Paraguay is tillable, although only about 494,000 acres were under cultivation in 1926 Corn, oranges, and manioc covered the greater part of this area, and cotton, tobacco, and yerba maté, the remainder Tobacco production totaled 21,988,000 pounds in 1927-28 Yerba maté, a strong native tea, is the chief forest

product The production of cotton increased to 5,078,000 pounds in 1926-27 Another industry for which Paraguay is especially fitted is stock raising According to the livestock census of 1926, there were 3,270,000 cattle, 209,901 horses, 195,192 sheep, and 45,483 hogs Three meat-packing plants in 1926 slaughtered 115,707 cattle

Paraguay is rich in forest products, nearly two-thirds of its area being covered with hard and soft woods and quebracho trees Large quantities of logs and sawn timber are exported, mostly to Argentina and Uruguay The quebracho is highly prized for its tannin and is also used for railway ties In 1928 exports of quebracho extract amounted to 127,504,000 pounds, most of which went to the United States and Germany Iron, manganese, copper, and other minerals are said to be abundant, but there is practically no mining The principal manufacturing industries are meat packing and the production of animal by-products, quebracho extract, beverages, shoes, and flour

**COMMERCE** Both exports and imports increased in 1928, the exports to \$15,327,000 from \$13,754,000 in 1927, and imports to \$13,802,000 from \$11,535,000 in 1927 About 44 per cent of the exports were animal products, 36 per cent forest products, and 19 per cent agricultural products Argentina took more than three-fourths of the exports, largely for reshipment to the United States, Germany, and Great Britain, a large part of the imports from Argentina, amounting to 38.5 per cent of the total, originated in other countries The United States and the United Kingdom supplied 16 and 11.4 per cent, respectively, of the total imports The leading import items were cotton cloth, wheat, flour, grains, iron and steel, vehicles, machinery, mineral oils, meat and dairy products, animals, linen cloth, sugar and colonial produce, etc

**FINANCE** Revenues and expenditures during the fiscal year 1927-28 totaled 283,299,000 paper pesos (\$6,403,000) and 293,616,000 paper pesos (\$6,836,000), respectively (one paper peso equalled \$0.0226) Customs revenues, which constitute the most important source of revenue, totaled 178,768,000 pesos in 1927-28, as compared with 149,440,000 in the previous fiscal year The expenditures included extraordinary items amounting to 45,670,000 pesos The budget for 1928-29 calculated both revenues and expenditures at 253,478,000 pesos On Nov. 30, 1928, the external debt stood at 4,536,000 gold pesos and the internal floating debt at 15,000 gold pesos and 4,380,000 paper pesos Figures for the internal funded debt were not available The total national debt on July 31, 1928, was reported as 6,503,898 gold pesos and 27,267,179 paper pesos

**COMMUNICATIONS** Lack of adequate transportation and communication facilities is a major reason for the comparatively slow economic development of Paraguay In 1926 there were only 517 miles of railroad, 2223 miles of telegraph wire, and 138 miles of telephone wire, with 413 instruments There are few good navigable rivers the boundaries of the country and therefore accessible only to the outlying regions Road construction around the capital made considerable progress in 1928 and in 1929 a 300,000,000 peso contract for the construction of an additional highway was let to an American firm Work on the new port at Asunción was begun by an American company in 1928, and in the same year an air-mail and pas-

senger service between Asunción and Buenos Aires was inaugurated and a new telephone system in Asunción completed.

**GOVERNMENT** Executive power is vested in a President elected for four years, who acts through a ministry of five members, and legislative power in a congress of two houses, a senate of 20 members and a house of representatives of 40 members elected directly by the people. President in 1929, Dr. José P. Guggiarri, who assumed office Aug. 15, 1928, for a four-year term.

**HISTORY** The outstanding issue in Paraguay during 1929 was the dispute with Bolivia over the ownership of the Chaco, which led to an armed clash between frontier guards in 1928. For details of the unsuccessful efforts to settle the major boundary dispute and to restore the *status quo* as it existed prior to the clashes at Fort Vanguardia and Fort Bouquignon, see BOLIVIA, under *History*, for territory under dispute, see above, under *Area and Population*, also see URUGUAY under *History*.

In Paraguay, as in Bolivia, the Chaco dispute was complicated by partisan struggles in the national congress. President Guggiarri, who had been attacked by the Opposition for his conciliatory attitude, on September 12 proclaimed a state of siege throughout the country and was reported to have followed this with the deportation of a number of Opposition deputies and newspapermen. The President justified his action by stating that drastic measures were required to check Communist activities. The state of martial law, originally proclaimed for a 90-day period, was extended for an additional three months on Dec. 13, 1929, by the Council of State. The Liberal party, which had controlled the government since 1922, was encouraged to adopt this means of stifling the Opposition as a result of elections earlier in the year which had strengthened its hold on both the Senate and the House of Representatives.

The intensity of the partisanship rampant in congress was illustrated in connection with the ratification on October 20 of a boundary treaty with Brazil, whereby Brazil recognized Paraguay's title to territory on the west bank of the Paraguay River constituting part of the Chaco territory claimed by Bolivia. Although the treaty apparently strengthened Paraguay's hand in dealing with Bolivia, party politics outweighed this aspect of the situation and the treaty was forced through the Chamber of Deputies only after three weeks of debate, including 15 days of consecutive sessions. The Senate ratified it on February 19. Ratification of the treaty was regarded as a victory for President Guggiarri over his political enemies.

The Chamber of Deputies ratified the Kellogg-Briand Pact in November after the Senate had given its approval in August.

**PARAHYDROGEN.** See CHEMISTRY, INDUSTRIAL.

**PARASITES.** See VETERINARY MEDICINE.

**PARDEE DAM.** See DAMS.

**PARK COLLEGE.** A nonsectarian institution for the higher education of men and women in Parkville, Mo., founded in 1875. The enrollment for 1929-30 totaled 515, distributed as follows: Seniors, 61, juniors, 95, sophomores, 115, freshmen, 237, and specials, 7. The faculty numbered 38, of which number three instructors were added during the year. The endowment funds amounted to \$1,687,500, from which the income was \$87,000. Tuition and fees amounted to \$92,000 and dona-

tions to \$25,000, \$20,900 was yielded from other sources. The library contained 38,500 volumes. A plan of honors work was adopted in 1927, to which about 10 per cent of each senior class is admitted. The departments represented include biology, chemistry, education, English, modern foreign languages, physics, sociology, classics, mathematics, and history. President, Frederick W. Hawley, D.D., LL.D.

**PARKER, EDWIN B.** An American lawyer, died Oct. 30, 1929, in Washington, D. C. He was born in Shelby Co., Mo., Sept. 7, 1868, was a student at Central College in Fayette, Mo., and received the law degree from the University of Texas in 1889. He was in the traffic department of the Missouri, Kansas & Texas Railway from 1899 to 1893, after which he began the practice of law in Houston, Tex., with the firm, Bakol, Botts, Baker & Lovett, later becoming a partner. During the World War, he assisted in organizing at Washington the War Industries Board and was Priorities Commissioner on the resignation of Judge Lovett. After the Armistice, Mr. Parker was chairman of the United States Liquidation Commission. In 1923 he became umpire of the Mixed Claims Commissions of the United States and Germany, and after 1926 also sole commissioner of the Tripartite Claims Commission of the United States, Austria, and Hungary. He was awarded the Distinguished Service Medal of the United States and honorary medals from Italy, Belgium, and Poland. He also was made an officer of the French Legion of Honor.

**PARKS, NATIONAL.** The . . . . . cent of the year in the maintenance . . . . . parks of the United States was the adoption by the Congress of a definite policy directing the acquisition of private holdings within the boundaries of the parks and authorizing the employment of the power of condemnation, if necessary, in order to accomplish this purpose. A fund of \$3,000,000 was authorized to carry out this plan, of which \$250,000 in cash was actually appropriated, these funds to be matched by equal amounts of private contributions. A fund of the parks immediately agreed to match as much of the funds as might be necessary to acquire the magnificent stands of sugar and yellow pine on private lands in Yosemite National Park, which were in imminent danger of destruction. Through this policy it was hoped to restore the integrity of the park system which was being threatened through the inability of the service to control private-land activities that not only increased the forest-fire hazard and threatened wild life protection but permitted the operation of various commercial activities wholly at variance with national-park policy.

The development of the educational possibilities of the parks progressed along broad lines, the most important single activity being the appointment by the Secretary of the Interior of an advisory board, headed by Dr. John C. Merriam, president of the Carnegie Institution of Washington, to assist the director of the National Park Service on matters pertinent to educational policy and developments in national parks. The advisory board recommended the establishment of an educational division in the headquarters office of the National Park Service to coordinate the various educational phases of the work, and an item covering the initial year's expenses of such a division was included in the estimates of appropriations needed for the 1931 fiscal year. The greatest museum activity was in Yellowstone

National Park where, under a grant of \$118,000 secured from the Laura Spelman Rockefeller Memorial by the Museum Association, a definite policy of museum expansion was in progress. The museum of hydrothermal phenomena, begun at Old Faithful in 1928, was completed and put into operation, a smaller branch museum at Norris Geyser Basin was under construction. A third museum was to be located at Madison Junction, near the site of the camp fire of the Washburn Expedition of 1870, at which

Yellowstone was discussed and the national-park idea first advanced. Museum service also was provided at Lassen Volcanic National Park in northern California through the gift by B. F. Loomis of a complete museum, on 40 acres of land, containing exhibits relating to the volcanic history of Lassen Peak.

The area of the national parks was increased during 1929 from 11,846 to 12,118 square miles and the area of the national monuments from 372.3 to 372.8 square miles. The establishment of the Grand Teton National Park in Wyoming by act of Congress approved Feb. 26, 1929, added the twenty-first park to the system and ended a thirty-one-year effort to give this outstanding area park status. The Arches National Monument in southern Utah also was established, increasing the number of national monuments administered by the National Park Service to 33. In this area there are extraordinary examples of the work of wind erosion in the form of gigantic arches, natural bridges, window openings, balanced rocks, and other unique wind-worn formations. The area of Yellowstone National Park was enlarged by 78 square miles through boundary revisions to the north and east, Lassen Volcanic Park was enlarged by the addition of 39 square miles, and the area of Lafayette National Park on Mount Desert Island, Me., was enlarged to 16 square miles and its name changed to Acadia.

Considerable work was made on the projects to acquire the national parks in the East. In the case of the Great Smoky Mountains project in Tennessee and North Carolina, funds amounting to \$4,500,000 were available toward purchasing the lands needed for park purposes, and title to more than half the area of the total minimum acreage of 427,000 acres specified by Congress had been acquired. The Mammoth Cave National Park Association reported that lands and money totaling about \$1,100,000 had been subscribed thus far for the Kentucky project, and more than half the amount needed to acquire the minimum of 327,000 acres for the Shenandoah (Va.) Park project had been acquired.

Under the direction of the fire-control expert appointed in 1928, detailed surveys of the fire hazards in a number of parks were made, and comprehensive plans were worked out for the prevention and suppression of forest fires in these areas. So effective were the control methods employed that fires originating within national parks were held down to a minimum, despite the fact that fire hazards were increased by the abnormally dry conditions. The serious Half Moon fire in August, which menaced Glacier National Park, originated on privately-owned lands 10 miles outside the park. The fire spread into both the Blackfoot and Flathead National Forests and on August 20, under a high southwest wind, entered the park near the administration headquarters at Belton, jumping the river on a half-mile front

and running 10 miles between 2 p.m. and midnight. In all, 50,000 acres of park forest were destroyed, 10,000 acres of which were old burns upon which reproduction had been started.

The most serious insect infestations during the year occurred in Crater Lake and Glacier National Parks. In the former an especially severe attack by the mountain pine beetle required prompt successive measures, while surveys made by representatives of the bureaus of Plant Industry and Entomology in Glacier, Acadia, and Mount Ranier National Parks showed a serious condition of white-pine blister rust. Several studies of the wild-animal situation in the national parks were inaugurated through the cooperation of interested organizations and individuals, the largest donations for this purpose being received from George Wright and Thomas Cochran. The first step also was taken in coordinating fish-culture work, a specialist being detailed, through a cooperative arrangement effected between the Department of Commerce and the Department of the Interior, to supervise fish-culture operations in the national parks and monuments.

The total appropriations to the National Park Service for the fiscal year 1929 were \$4,754,015,

with additional authority to enter into contractual obligations for road work up to \$4,000,000. Cash donations to the national parks during the year amounted to \$16,255, while revenues derived from the operation of the parks amounted to \$840,272, an increase of \$41,017 over the 1928 revenue and the highest yet received despite the drastic cut made in automobile license fees several years ago. During the 1929 season, 2,680,507 persons visited the national parks and 567,667 persons, the national monuments, making a total of 3,248,204 visitors, an increase of 726,076 over 1928, previously the record year for travel. Increased winter use of the national parks was reported, 12 of these areas and several of the national monuments of the Southwest being accessible to travel throughout the year. The tables on page 640 from the report of the Director of the National Park Service, by giving the number of visitors to each park and monument, indicate the trend of the tourist traffic for the fiscal year 1929.

The eleventh National Park Conference was held in Yellowstone National Park, Wyoming, Sept. 18-27, 1929. Special attention was devoted to road and trail problems, educational activities, landscape protection, fire control, patented land problems, and matters of public contact. The director of the National Park Service in 1929 was Horace M. Albright who was appointed to succeed Stephen T. Mather, director of the service since 1917, who resigned on account of ill health.

**PARRINGTON, VERNON LOUIS.** An American professor and author, died suddenly in London, June 17, 1929. He was born Aug. 3, 1871, in Aurora, Ill., was graduated in 1893 from Harvard University, and received a master's degree from the College of Emporia in 1895. He also studied at the British Museum and the Bibliothèque Nationale in 1903-04. He was instructor in English and French at the College of Emporia in 1893-97, going then to the University of Oklahoma, where he was professor of English from 1898 to 1908. He became assistant professor of English at the University of Washington in 1908, and professor after 1912. With *Main Currents in American Thought* (1927), Professor Parrington won the Pulitzer history prize for 1927.

The same year, he wrote *Sinclair Lewis—Our Own Idols*. He contributed to the *Cambridge History of American Literature* (vol. 1) the essay, "The Puritan Divines" (1917). He wrote for various reference books and periodicals, including *The Nation*, *Herald-Tribune Books*, and the *Saturday Review of Literature*. In 1926 he was editor of *The Connecticut Wits*.

**PEACE AND PEACE MOVEMENTS.** Of the Congresses organized by the International Peace Bureau in recent years, the Athens Peace Congress, October 6-12, was considered the most successful. There were representatives from most of the west European countries, although Italy was absent. With the exception of Albania, the Balkan countries all were represented. Turkey was present. Four Americans, and nine from Great Britain attended. One of the consequences of the Peace Congress at Warsaw was the attendance of

the Polish delegates at Athens. No small part of the success of the gathering was due to the fact that it was the first Peace Congress to be organized in the Balkans. The Greek organizing committee spared no efforts, without being ostentatious, in the provision of facilities. The several commissions did their work and the full sessions of the Conference were held in the Parliament buildings. There was a special meeting in the University of Athens. The youth of Athenian youth at the foot of the Acropolis heard the message of peace made a memorable scene. The final session of the Conference was held in the open theatre of Delphi. Here, where 2000 years ago the ancients discussed the possibilities of a federation of Greek City States, the Conference issued a resolution commending a United States of Europe to the modern world.

The British Memoranda on Minorities, and the National Council on the Kellogg Pact and the Freedom of the Seas, proved serviceable contributions to the proceedings. The Greek Prime Minister made a short speech at one of the morning sessions. On the informal side of the Conference the contacts of west Europeans and Americans with representative Balkan and the friendly intercourse of Balkan delegates among themselves were of import. The resolution of the Conference to which most practical importance can be attached was the one unanimously adopted by the Balkan delegates in favor of a Balkan Federation and the undertaking to organize an annual Balkan conference with this object in view. This resolution was supported in full conference by short speeches from the Balkan representatives and by a favorable declaration from the representatives of Turkey. It involved the assistance for its fulfillment, not only of the international Peace Bureau, but of the Federation of League of Nations Societies, the Interparliamentary Bureau, the League for Intellectual Cooperation and such other societies as may be interested in the economic and political consolidation of the Balkans.

President Hoover's Armistice Day speech was not an official pronouncement of American foreign policy, but it was the broadest declaration of his own objectives that had yet come from the White House. The distinction was important, because the views of the Senate—which shares the treaty-making power—were clearly at variance with some of the major policies advocated by the President. Mr. Hoover permitted few digressions from his central theme, "preparedness for peace." He declared that "peace is not a static thing," but as dynamic as the conduct of war itself. "The pledge to renounce contained in the peace pact must be supplemented by machinery for the settlement of international disputes. To this end, he asserted, we need to strengthen our own provisions for it. Specifically, he said, we must strengthen our State Department, 'the great aim of our government dedicated to the organization of peace.'" Further, he said, we must "extend our treaties with other countries providing methods for reference of controversies to conference, to inquiry, or to arbitration." We must support the World Court "under proper reservations" in order to insure judicial determination of legal controversies and we must aid in defining the rules of conduct of nations through an authoritative system of international law.

An effort was made to establish at The Johns Hopkins University a School of International Relations in memory of the late Walter Hines Page,

one time Ambassador to Great Britain. The idea, which originated with Owen D Young, is that such a school would serve in the first place as a clearing house for all the research and inquiry in this field which are being conducted or are likely to be conducted in the United States and that such a school would cooperate with similar institutions abroad, so that there would be available a real comprehensive body of fact that might serve as a corrective to the current supply of prejudices and notions. Fairly large sums were collected toward the initial endowment of \$1,000,000 which the trustees of the university originally set as their goal.

The Executive Committee of the World Conference for International Peace Through Religion met in Frankfurt, Germany, August 19-23, with 61 members present. The chairman of the meeting was Dr Shailer Mathews, Dean of the Department of Religion, University of Chicago. There were present outstanding men and women from among the Roman Catholic, Protestant, and Eastern Orthodox churches, and from Jews, Confucians, Moslems, Hindus, Buddhists, Bahis, and Shintos. Dr Tomomatsu was present as the representative of the Japanese Committee, which embraces all the religions of Japan, with Dr Joshi as the representative of the All-India Committee in which every religion and cult in India had a place. The Conference clarified the purpose and completed the organization begun at Geneva last year.

The most important decision taken was the establishment of four international Commissions as follows: Commission No 1 What are the influences in the world that make for war? Commission No 2 The spiritual resources of mankind with which these influences can be met. Commission No 3 Survey of the efforts made by adherents of the different religions to further international and international understanding and peace. Commission No 4 To suggest methods by which these resources may be set in motion, coordinated and directed to bear upon the causes of war.

It was agreed that the Conference should be held in 1931, and that the place, together with the exact date, should be left to the business committee which was elected at this conference and to which was committed the responsibility of carrying out the details in preparation for the conference. The conference probably would be held somewhere in the East or the Near East. The change in the name from Universal Religious Peace Conference to the present title was unanimously agreed upon.

THE CHURCHES AND PEACE SINCE 1908 The Federal Council of the Churches of Christ in America, through its Commission on International Justice and Goodwill, had been steadily carrying forward a peace educational programme. On Jan 4, 1929, the secretary of the commission took to Washington two trunks full of memorials in support of the Peace Pact of Paris, signed by over 180,000 persons. These memorials were presented to President Coolidge, Secretary Kellogg, and Senator Borah, and then those from each State were distributed among the other Senators.

Those who signed the petition declared their belief as follows:

First—That war should be renounced and never again be resorted to by civilized nations as the means for settling disputes, enforcing national claims, or seeking national objectives.

Second—That war should be made a crime by specific provision of international law.

Third—That the settlement of every threatening dispute, whatever its nature, should never be sought, except by peaceful means.

Fourth—That even regarding disputes which the nations involved may not be ready to submit to arbitration or judicial settlement, they should nevertheless pledge themselves not to resort to war.

Fifth—That solemn engagements pledging the good faith of the nations in these vital matters are essential to the development of the spirit of mutual confidence which must precede a general movement for thoroughgoing disarmament.

Practically every one of the 48 States was represented in this nation-wide movement of the churches in support of the multilateral anti-war treaty. New York State, with 27,793 petitioners, headed the list. Pennsylvania was next in order with 19,712. Ohio followed with 15,399, and Illinois with 11,427.

While at the White House, Bishop Mc Dowell (Methodist) transmitted to President Coolidge a copy of the Declaration of Policy of the Federal Council's Commission on International Justice and Goodwill, which had been adopted at the Quadrennial Meeting in Rochester. The Declaration of Policy affirmed that—

The acceptance of the Pact by the nations as an imperative obligation to seek the solution of their controversies by peaceful methods exclusively will depend in large measure on the acceptance of that obligation in actual practice by the United States itself. Believing that any material increase of the United States Navy at this time would tend to nullify the influence of this Pact in creating a spirit of mutual confidence among nations, the Federal Council in this statement of policy urged "that no authorization be given for any such increase."

At the same time, the Federal Council expressed "its support of the President in his request that the time-limitation provisions of the naval construction bill now before the Senate be eliminated."

Other statements in the Federal Council's Declaration of Policy had to do with "Peaceful Settlement of International Disputes," "Security and Disarmament," "Relations with the Orient," "Relations with Latin America" and "Christian International Relations."

Regarding the peaceful settlement of international disputes, the Federal Council said:

The great nations are entering upon an era of intense industrial and economic development and inevitable competition. Conflicting interests will be aroused. That these may not result in war, as hitherto has often been the case, the nations need to develop with all possible speed the agencies and procedures essential to the peaceful settlement of these disputes on the basis of justice and goodwill. We believe, moreover, that international law should be rapidly developed, and made explicit and binding by general treaties as promptly as possible, and that whenever controversies between nations come within the scope of already established law, the United States and all the nations should accept the affirmative jurisdiction of the appropriate tribunals. We believe that these procedures are fundamentally important to the largest success of the Pact.

In the opinion of the Federal Council the official announcement by President Hoover on July 24 that the Briand-Kellogg Peace Pact had become effective as between the 51 nations which had thus far accepted its obligations is an event of major significance in world history. His leadership received the heartiest support from church bodies throughout the country. The Federal Council, through its Commission on International Justice and Goodwill, promptly expressed enthusiastic approval of the President's program and committed the Council to all possible steps in edu-

eating its constituency concerning the necessity for international agreement to prevent competition in naval building.

A battle royal between militarists and peace advocates seemed likely to take place during the near future. Those who supported the constructive policies for peace and desired to see the spirit and intent of the Pact were being urged to be alert to the psychological battle that will be waged and be prepared to give practical support.

The strategic issues around which the struggle will centre will be

1 American membership in the Permanent Court of International Justice through the acceptance of the Root Formula

2 Ratification by the United States of the Pan-American arbitration Treaty, including its obligatory features

3 Practical measures for really reducing military and naval competition

4 Efforts in Congress to support the Peace Pact by a declaration of United States policy regarding an embargo on exportations of arms to nations resorting to war in violation of their pledges under the Pact

To aid this general situation, the Commission on International Justice and Goodwill prepared material for Armistice Sunday and for study conferences during the winter.

A sensational attack on the Council was made by Captain Dudley W. Knox, head of the Historical Section of the Navy Department, in an article in the *United States Naval Institute Proceedings*. Captain Knox, charged the Federal Council of Churches, with responsibility for having defeated the Big Navy Bill in 1928 and then went on to say that "a considerable part" of its funds came from an endowment "made in 1926 by Sir Henry Lunn, a wealthy Englishman." On the basis of this allegation, the captain tried to show that the whole peace programme of the American churches in general and of the Federal Council in particular was the result of insidious "British propaganda."

Dr. C. S. MacFarland, General Secretary, flatly denied that the Council had ever received a single dollar from any foreign source whatever. The reply made in behalf of the Federal Council to the article by Captain Knox was in part as follows:

At the same time when President Hoover has just been calling in his Memorial Day address for the fullest acceptance of the Kellogg Pact and the consequent reduction of naval armaments by all nations, Captain Knox bursts into print with an attack upon the Federal Council of Churches for its efforts in behalf of these very objectives.

The first thing to be said concerning Captain Knox's statement, as reported in the *United States Naval Institute Proceedings*, is that it is absolutely false in its main facts. The intent I have had responsibility for the financial affairs of the Federal Council for over eighteen years and during that time not one dollar has ever come from Sir Henry Lunn or from any fund created by him or from any British source or from any organization with any foreign membership.

Attention should be called to the fact that the chairman of the Federal Council's Commission on International Justice and Goodwill during all this programme for which it is under fire from Captain Knox was the Honorable George Wickersham, to whom President Hoover has lately entrusted a most important governmental mission. The vice chairman of the Federal Council's Commission was the late Right Reverend Charles H. Brent, whose recent death was mourned by the entire nation.

Captain Knox's accusation that British propaganda has subtly affected the Federal Council of Churches is not only groundless but so calculated to stir up suspicion and ill will toward a friendly country as to merit the condemnation of all public spirited citizens. I deeply regret the injury that has been done to the Navy Department itself by this unfortunate episode. I still more deeply regret the serious embarrassment brought upon

President Hoover in being confronted with such an outburst immediately after his Memorial Day address, urging reduction of naval armament, and immediately after the recent statement of the Secretary of State, calling attention to the serious responsibility for world peace resting upon the American people.

It would be well for Captain Knox to study carefully the President's message before he characterizes as unpatriotic all the officers, sailors and persons who have been working along the President's appeal.

The Roman Catholic Association for International Peace held its third annual meeting April 2d and 3d, at the Catholic University in Washington, D. C. It was attended by leading scholars and interested clergymen and laymen from all parts of the country. Various reports were made and papers read. Miss Elizabeth B. Sweeney, Miss Anna Dill Gamble, Michael Francis Doyle, and Rev. Gregory Feige, respectively, made reports on the work of the Catholic Council for International Relations, London; the Catholic Union for International Peace (Switzerland); the Catholic Circle de Geneva (Switzerland), and the German Catholic Union for Peace (Germany). At the subsequent meetings the more important papers read and discussed were the "Popes and Peace," by Dr. D. L. Maynard Gray; "The Newer Attitude on Peace," by Dr. W. M. T. Gamble, "American Cooperation with the League of Nations in its 9th Year," by Michael Francis Doyle, "The World Economic Conference," by the Rev. Thomas F. Divine, S.J., "Security and Disarmament," by Rev. Joseph F. Thurning, S.J., "The Briand-Kellogg Pact and World Peace," by David L. Walsh, United States Senator from Massachusetts.

Other reports were made by William Franklin Sands. It was arranged that the addresses and reports be printed for distribution, and special attention be given the various colleges and schools to enable them to properly pursue the studies on international relations.

What women of the six great powers could do to strengthen the determination of their respective governments to build international peace-making machinery was the main topic for discussion at the fifth annual Conference on the Cause and Cure of War in Washington from January 14 to 17. Three widely known and representative women from Europe and one from the Orient conferred with fifty representatives from each of ten leading national organizations who for four years in the United States had been studying the causes and cures of war. There was a sharp discussion into the causes for hesitation and delay on the part of governments with respect to disarmament and building support for the Kellogg Pact.

The visitors were Miss Kathleen D. Courtney of England, honorary secretary of the British Women's Peace Crusade, Frau Dorothee von Velsen, president of the German League for Equal Citizenship for Women, Madame Marie Louise Puesch of France, vice president of the International Federation of University Women, and Mrs. Tsune Gauntlett of Japan, one of the leaders in organizing the Japanese women's petition for peace. With Miss Ruth Morgan, vice president of the National League of Women Voters, representing the United States, the group participated in a forum on peace.

In announcing the date for the meeting, Mrs. Carrie Chapman Catt, chairman of the National Committee on the Cause and Cure of War, said

It is apparent that there would be no more war if the six great powers with their vast armies, navies and resources should agree to have peace. For this reason

women from these nations have been invited to consult with American women upon the next steps which must be taken and upon the existing gaps in the international peace program. Together we shall make an effort to discover how the women of these countries can unitedly aid in the building of such international machinery as will prevent war and establish peace. This is the natural outcome of our four preceding conferences which have been conducted with the object of giving definite information on war and peace to our ten cooperating organizations and upon which their 12,000,000 members could build their programs on international relations.

The officers of the national committee in addition to Mrs. Catt were Miss Ruth Morgan, Miss Henrietta Roclofs, Mrs. Edgerton Parsons, and Miss Josephine Schann of New York City and Miss Ben Hooper of Oshkosh, Wis.

The ten organizations which cooperated in carrying on the committee and the conferences were American Association of University Women, Council of Women for Home Missions, Federation of Woman's Boards of Foreign Missions of North America, General Federation of Women's Clubs, National Board of Young Women's Christian Association, National Council of Jewish Women, National Federation of Business and Professional Women's Clubs, National League of Women Voters, National Woman's Christian Temperance Union, National Women's Trade Union League.

A gift of \$55,000 was presented to the Idaho University by Salmon O. Levinson for the establishment of a Borah Outlawry of War Foundation. Mr. Levinson conceived the idea of the Foundation when he saw Senator Borah on the floor of the Senate for the Pact of Paris. Idaho was Senator Borah's home State and the net income of the gift to the university was to be used to maintain a lectureship for the promotion of the cause of war outlawry. The gift was an act of friendship between the two men who have fought for the outlawry cause. For Mr. Levinson was the originator of the plan which forms the basis of the Kellogg-Briand Pact and Senator Borah was among the most vigorous and influential champions of the Pact in the United States Senate.

The World Peace Foundation issued in the United States the French *L'Annuaire de la Société des Nations 1929* or *Yearbook of the League of Nations for 1929* which is not only an encyclopedia of information on the League but a very complete and useful "Who's Who" of statesmen and diplomats of various countries.

The American Peace Society moved its offices to 20 Jackson Place, Washington, D. C. For the first time in its history there was sufficient room for its large and growing library. An effort was to be made to secure adequate headquarters in Washington. At the annual meeting on May 4, William Fortune was reelected president and Arthur D. Call, secretary. During the year the society published *Centennial History*, by Edson L. Whitney, a comprehensive review of its work during the century of its existence. In addition it contains an account of many other activities in the field of International Peace. The Society also published a leaflet entitled *The Contract of the Nations*, setting forth its present policy.

The Peace Patriots, 114 E. 31st St., New York, is an organization designed to show that opposition to war is not incompatible with love of country. Its work consists in obtaining newspaper publicity for this idea, and in arousing sentiment in favor of such measures as the proposed Naval Conference. On Independence Day a broadside

was issued calling attention to the fundamental importance of the idea underlying the organization.

**PEACHES.** See HORTICULTURE, BOTANY, under *Plant Disease*.

**PEAKE, ARTHUR SAMUEL.** English Christian theologian, died Aug. 10, 1929, in Manchester, England. He was born in Leek, Staffordshire, Nov. 24, 1865, and was educated at St. John's College, Oxford, where he won honors. During 1890-97 he was a fellow of Meiton College, and in 1890-92, a lecturer in Mansfield College, Oxford. From 1895 to 1912, he lectured at Lanchashire Independent College, from 1904 to 1912, at the United Methodist College of Manchester. After 1892 he was a tutor in Hartley Primitive Methodist College of Manchester, and after 1904, Rylands professor of Biblical Exegesis in Victoria University. Mr. PEAKE began to edit the *Holborn Review* in 1919, he also wrote and edited a vast number of books on Biblical subjects. Among the late ones are *A Commentary on the Bible*, edited (1919), the British ed., 5 vols., *The Outline of Christianity* (with Dr. R. G. Parsons, 1926); *Recent Developments in Old Testament Criticism* (1928), *Paul the Apostle—His Personality and Achievement* (1928).

**PEARS.** See HORTICULTURE.

**PENANG, pé-nang.** One of the Straits Settlements.

**PENDER, SIR JOHN DENISON DENISON.** A British electrical engineer and head of submarine cable enterprises, died in London, Mar. 6, 1929. He was born Oct. 10, 1855, the son of Sir John Pender, a pioneer in submarine telegraphy, and in 1869 went to Eton College. He became associated in 1878 with the Eastern Telegraph Company, the first of the British cable group, and for 45 years was connected with this and associated companies. In the merger of cable and wireless companies in July, 1928, he had a leading part. At the time of his death, he was chairman of the Eastern and Associated Cable Companies. After the South African War, he was created Knight Commander of St. Michael and St. George for his cable service. In the World War he again served the British government, both in maintaining the British cable communications and in cutting off those of the enemy. For this he was made in 1920 a Knight of the Grand Cross of the Order of the British Empire.

**PENNSYLVANIA.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 8,720,017. The estimated population on July 1, 1928, was 9,854,000. The capital is Harrisburg.

**AGRICULTURE.** The table on page 645 gives the acreage, production, and value of the principal crops in 1928 and 1929.

**MINERAL PRODUCTION.** The State furnished 10.11 per cent of the mineral products of the Union for 1927, as compared with 19.18 per cent for 1926, and maintained its position as the leader in mineral industry. This reckoning, moreover, did not take into account the State's output of pig iron, in which likewise it held the lead. The total value of the mineral product of the State, with duplications and pig iron eliminated, was \$936,693,474 for 1927, for 1926, \$1,055,766,077. The fall in the total for 1927 was due to a decline in coal mining incident to labor conflicts in the bituminous coal industry. In spite of the end of the contest over the miners' wages, the production of coal declined yet more, both in the anthracite

Crop	Year	Acreage	Prod Bu	Value
Hay	1929	2,886,000	4,298,000	\$56,248,000
	1928	2,999,000	4,656,000	58,174,000
Corn	1929	1,809,000	46,470,000	48,470,000
	1928	1,258,000	50,937,000	46,584,000
Potatoes	1929	234,000	25,746,000	41,184,000
	1928	246,000	31,980,000	20,787,000
Wheat	1929	1,119,000	20,138,000	24,371,000
	1928	1,108,000	17,171,000	22,148,000
Oats	1929	1,014,000	29,918,000	17,050,000
	1928	1,067,000	34,678,000	18,379,000
Apples	1929	5,875,000		9,258,000
	1928	5,460,000		9,729,000
Tobacco	1929	38,700	47,601,000	8,521,000
	1928	37,000	49,580,000	6,941,000
Buckwheat	1929	199,000	3,883,000	1,383,000
	1928	195,000	3,802,000	1,384,000
Rye	1929	124,000	1,984,000	2,103,000
	1928	103,000	1,596,000	1,708,000

\* Tons    \* Pounds

and in the bituminous field in 1928. The anthracite production was 76,734,000 short tons for 1928, as against 80,095,564 for 1927; in value, \$400,374,000 for 1928 and \$420,941,726 for 1927. The case of the bituminous mines was similar; production fell to 131,202,163 short tons for 1928, from 132,064,039 tons for 1927; in value, the production of 1928, \$249,895,000, was below the \$272,714,000 of 1927. The output of coke for 1928 was not far from that for 1927, there were produced in 1928 13,475,349 short tons of by-product coke, valued at \$51,132,406, and 3,179,000 short tons of beehive coke. Their combined value was approximately that of the 11,061,084 short tons of by-product and 5,716,207 of beehive produced in 1927, which were valued at \$67,170,075. See COAL, COKE.

The smelting of pig iron increased, to the quantity of 12,289,455 long tons for 1928, from 11,145,334 tons for 1927, and to the value of \$216,425,084 for 1928, from \$212,179,275 for 1927. In the production of ferro-alloys Pennsylvania furnished about half the output of 1927, supplying 334,032 long tons, of the value of \$32,137,339. Outside of the coal and iron group the foremost mineral industry was that of cement, of which the production fell moderately for 1928, in which year were shipped 41,161,019 barrels, as against 42,909,513 in 1927, the value of shipments was \$62,572,588 for 1928 and \$66,711,069 for 1927. Clay products attained the value of \$50,909,106 for 1927 and \$55,041,270 for 1928. The yield of natural gas, 105,709,500 M cubic feet, for 1927, was little changed from the 107,089,000 M cubic feet of 1926, its value for 1927 was \$49,135,000 and for 1926, \$50,040,000. The production of petroleum, though no longer one of the chief mineral industries, rose to 9,876,000 barrels for 1928, from 9,526,000 barrels for 1927, which in turn marked an increase over 1926, value of petroleum produced was \$32,900,000 (estimated) for 1928 and \$29,150,000 for 1927. The yield of stone, chiefly of the commoner grades, attained a value of \$18,999,592 for 1927 and \$19,157,336 for 1926. This did not include the production of slate, in value \$1,786,355 for 1928 and \$4,769,432 for 1927. The yield of lime was estimated for 1928 at 800,000 short tons or \$6,000,000, for 1927 it was 813,571 tons or \$6,105,241.

FINANCE. State expenditures in the year ended May 31, 1928, as reported by the U S Department of Commerce, were for maintenance and operation of governmental departments, \$93,583,350 (of which \$26,484,843 was for local education), for conducting public-service enterprises, \$94,647; for interest on debt, \$4,247,403, for im-

provements, \$24,064,819; total, \$121,990,219 (of which \$38,468,779 was for highways, \$20,477,095 being for maintenance and \$17,991,684 for construction). Interdepartmental payments accounted for \$822,924 of the year's total expenditure. Revenues were \$147,010,597. Of these, special property and special taxes, although no general property tax was levied, furnished 40.9 per cent, earnings of departments and compensation paid the State for officers' services, 6.8, sale of licenses, 40.6 (including gasoline taxation of \$15,811,923). The State's funded debt of May 31, 1928, \$93,586,920 outstanding or \$87,995,726 net of sinking funds, included \$93,221,000 of highway debt.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan 1, 1920, was 11,208.35. There were built, in 1929, 10.26 miles of first and 11.29 of second track.

MANUFACTURES. According to the biennial Census of Manufactures published by the United States Department of Commerce in 1929, there were in the State, in 1927, 17,314 establishments establishments. These employed 1,111,111 workers, whose wages for 1927 totaled \$1,315,993,319. Materials and supplies used in manufacture cost \$3,728,061,776. The manufactured products attained the combined value of \$6,715,563,455.

EDUCATION. As a result of the work of research committees, one of county and the other of district superintendents, there was established a system of local supervision for the improvement of instruction. The Journal of the National Education Association reported the creation of the Lloyd Miffin Home, an institution for the care of teachers. A Continuing Contract statute was enacted. For the academic year 1928-29 the population of school age was estimated at 1,995,100. There were enrolled in that year, in the public schools of the State, 1,897,128 pupils. Of these, 1,513,867 were in the elementary and 383,261 in the high schools. The expenditures of the year 1927-28 for public-school education totaled \$243,572,111. Salaries of teachers averaged \$1413 for that year.

CHARITIES AND CORRECTIONS. The State Department of Welfare, the central body dealing with institutional activities and the State's relations to dependents, has as its head a Secretary of Welfare. Its bureau of children is highly developed, administering a mothers'-assistance fund in co-operation with county authorities; the bureau of assistance is charged with dispensing State funds among institutions not owned outright by the State, and supervising almshouses and many other institutions, the bureau of mental health supervises institutions, State and other, for the care of the mentally affected, the bureau of restoration has charge of State penal and reformatory institutions and supervises county prisons. State institutions were, in 1929, nine State mental hospitals with an aggregate capacity of about 11,000 patients; four State schools for mental defectives, capacity about 3800, three sanatoria for the tubercular, capacity about 2000, 10 general State hospitals for the sick and injured, many of them situated in the coal regions, two schools for the deaf, capacity about 150, Pennsylvania Soldiers' and Sailors' Home, Erie, capacity 600, Soldiers' Orphans' Industrial School, at Scotland, Pa., capacity 269, Pennsylvania Training School for Delinquent Children, Morgantown, capacity 514, State Industrial Home for Women (delinquents), Muncy, capacity 124; Pennsylvania Industrial

Reformatory (male delinquents, 15 to 25), Huntingdon, capacity 804; State penitentiaries at Philadelphia, Pittsburgh, and Rockview, capacity 3350, State Colony for Epileptics, Selinsgrove.

**LEGISLATION** The regular biennial session of the State Legislature convened on January 1 and adjourned on August 18. It passed appropriations in excess of \$200,000,000 for the ensuing two years, compelling Governor Fisher to reject part of the proposed expenditure in order to keep the finances of the State within the approximate \$186,000,000 of existing surplus and estimated revenue. There was created by statute a State Department of Revenue. The Davis-Harris Act was passed, to authorize subdivisions of the State to employ voting machines in elections, on condition that voting-machine referenda be held previously, on the proposition to employ them. A code for the regulation of motor traffic and vehicles was enacted. It required among other things that every owner must submit his car for State inspection within 30 days after notice of appointed time to be fixed by the Governor. By the Mansfield Act 10 industrial farms were to be substituted for the existing system of county work-houses. The State was for this purpose to be divided into 10 districts, Philadelphia and Pittsburgh each forming one and the rest being composed of eight counties apiece.

Two measures prompted by the unpopular acts of the Coal and Iron Police in the course of the late coal strike in western Pennsylvania were passed, of these one, the Musmanno bill, restricting the powers of the companies' private police to the property of their employers, was vetoed by Governor Fisher, the second measure, identical with the first in other restrictions, but not containing the territorial restriction, was signed. The State tax on gasoline was increased to 4 cents, from 3 cents a gallon. In the field of penal law, the Salus Act was passed, providing life sentences for fourth offenders in felony cases. The act resembled in part the Baumes Law of New York, but required that the fourth felony should have been committed within five years after the third and gave trial judges simple permission to impose the life sentence, without rendering this course compulsory, allowing moreover that the defendant might appeal from his sentence to the higher courts.

The Legislature proposed an amendment of the clause requiring otherwise, to have paid State and county taxes within two years, in order to be entitled to vote. A charter prepared by the Metropolitan District Commission for a consolidation of the communities of Allegheny County into a single greater city of Pittsburgh was passed. It was provided that these communities should vote on the question of consolidation at the ensuing primary election. By act the purchasing functions of the government of Philadelphia were concentrated in a Director of Supplies and Purchases. Maternity hospitals in third-class cities were subjected to licensing and to supervision by the Welfare Department. The killing of game with the bow and arrow was rendered lawful in open season.

**POLITICAL AND OTHER EVENTS** The plan to create a greater Pittsburgh by including the whole of Allegheny County in a single municipality was put to a referendum vote in all the communities of the county on June 25 and was defeated. The county included 122 municipalities,

and its area of some 725 square miles would have made it almost the most extensive city in the world. Pittsburgh itself voted overwhelmingly in favor of the extension, but McKeesport, Duquesne, and Clairton voted against it by clear majorities. A majority of two to one was required under the law to bind a community in favor of the plan. Of 66 boroughs, 34 gave the necessary favorable vote, and 32 did not. Of townships, 15 gave the necessary affirmative vote, and 38 did not. The vote for the whole county was light, and gave a total of 87,807 in favor and 40,973 against. The Metropolitan Commission, at the proposal, sought a resubmission at a general election, but the Court of Common Pleas ruled that a new enabling act of the Legislature would be prerequisite to a new referendum. The county commissioners sought a determination of the point by the State Supreme Court, with a view to holding a referendum in November of 1930.

In Philadelphia a proposal that the city should issue bonds to the total of \$55,000,000 for a number of improvements, including the Ridge Avenue and Eighth Street subway connection, replacement of the Market Street Elevated tracks under the Schuylkill River and sewage improvements, was approved by referendum vote on September 17. A Philadelphia Criminal Justice Association was organized in April to promote the suppression of crime in the city. The city Civil Service Commission directed in August that 100 police, discharged in 1928 for various derelictions, be restored to duty. The city government brought action for the purchase by condemnation of underlying properties of the Philadelphia Rapid Transit Company at an estimated valuation of about \$139,000,000.

There were created for Philadelphia a City Planning Commission and a new Zoning Commission. The city negotiated with the United States Shipping Board for the purchase of Hog Island, to be used as the site of an airport. The Pennsylvania Railroad carried out a relocation of trackage in the vicinity of the Broad Street Station, creating a street named the Pennsylvania Boulevard, on which the railroad erected a 22-story building. The Curtis Institute of Music and the Grand Opera Company joined forces for the production of opera on a superior scale.

The life sentence on fourth offenders in felony cases was first imposed in October. Preliminary work was done on a project for a \$30,000,000 power dam on the Susquehanna River at Sale Harbor, to be built by the Pennsylvania Water and Power Company. The construction of a 75-foot commemorative tower and beacon on Bowman's Hill, at the site of Washington's crossing of the Delaware, was undertaken.

**OFFICERS** Governor, John S. Fisher, Lieutenant-Governor, Arthur H. James, Secretary of the Commonwealth, Robert R. Lewis, Treasurer, Edward Martin, Auditor-General, Charles A. Waters, Attorney-General, Cyrus E. Woods, Superintendent of Public Instruction, John A. H. Keith.

**JUDICIARY** Supreme Court Chief Justice, Robert W. Mischniker, Judges, Robert S. Frazer, Emory A. Walling; Alexander Simpson, Jr., John W. Kephart, Sylvester B. Sadler, William I. Schaffer.

**PENNSYLVANIA, UNIVERSITY OF** A non-sectarian institution of higher education in Philadelphia, primarily for men but with certain

courses open for women; founded in 1740. It is composed of the college of arts and sciences, the Towne Scientific School (engineering and chemistry), the Moore School of Electrical Engineering, the Wharton School of Finance and Commerce, the school of fine arts (architecture, fine arts, music), the school of education, the graduate school, and the professional schools of medicine, graduate medicine, law, dentistry, veterinary medicine, hygiene, and public health. The 1929 autumn enrollment was 15,216, including all schools and departments. Of those enrolled, 8,420 were candidates for degrees, 3,148 were candidates for certificates, and 3,648 were partial students and auditors. The enrollment for the 1929 summer sessions was 2063. The faculty numbered 1,500. The productive funds amounted to \$17,268,318, and the income for the year was \$904,113.

Among the various gifts and subscriptions received were the following: \$1,750,000 contributed by the trustees of the university, \$750,000 of this amount to be used for endowing professorships, \$350,000 from Martin Maloney for the establishment of the Martin Maloney Memorial Clinic, a bequest under the will of Mary E. Chesnut of \$141,000 for the John H. Chesnut Dormitory, a bequest of \$100,000 from the estate of Dr. Milton Bixler Hartzell for the establishment of the Milton Bixler Hartzell professorship fund, contribution of \$210,000 from an anonymous donor toward the cancer research fund of the graduate school of medicine, \$800,000 from Eldridge R. Johnson for the Eldridge R. Johnson Foundation for Research in Medical Physics, gift of \$125,000 from Fred M. Kirby for the establishment of the Fred M. Kirby Medical Research Fund, gift of \$75,000 from Daniel J. McCarthy for the establishment of the Daniel J. McCarthy Research Fund, \$51,000 from Sarah A. F. Zimmermann for the establishment of the Charles Harrison Frazier Foundation of Neurological Surgery, gift of \$25,000 from Eldridge R. Johnson for the university museum, and the gift by Cyrus H. K. Curtis of the sequentennial organ. New additions to the university's buildings during the year included the Irvine Auditorium, the Martin Maloney Clinic Building, three new dormitories (Chesnut Ward, and Warwick), new wing of the university museum, and nurses' home annex of the university hospital. The library contained 693,421 bound volumes and 75,000 pamphlets. Provost, Josiah H. Pemmman, Ph.D., Litt.D., LL.D., LL.D.

**PENNSYLVANIA ACADEMY** See ART EXHIBITIONS.

**PENNSYLVANIA MUSEUM OF FINE ARTS** See ART MUSEUMS.

**PENNSYLVANIA STATE COLLEGE** A nonsectarian State institution for the higher education of men and women at State College, Pa., founded in 1885. On Sept. 29, 1929, the undergraduate enrollment totaled 4186, distributed as follows: Agriculture, 684, chemistry and physics, 413, engineering, 1116, education, 680, liberal arts, 920, mineral industries, 180, special, 57, graduate school, 130. There were 3182 students registered in the 1929 summer session. The faculty numbered 568, including the home economics extension staff. The productive funds of the college amounted to \$517,000 and the income for operation for the year to \$4,443,000. The library contained 116,052 volumes. In 1927 work was started on a four-year building programme

estimated to cost \$4,250,000. The buildings started and completed during 1929 included: Mineral industries, \$450,000, liberal arts, \$175,000; Grange Dormitory for Women, \$250,000, power plant and distributing system, \$750,000, home economics, 17,000 engineering unit, \$350,000, chemistry unit, \$253,000, biological unit, \$180,000, men's dormitory, \$225,000, gymnasium, \$505,000; infirmary, \$114,000, and students' union, 750,000. Additional buildings to the value of \$100,000 were completed in 1928. President, Ralph D. Hetzel, LL.D.

**PENNOLOGY.** See CRIME.

**PENSIONS.** See OLD-AGE PENSIONS, UNITED STATES, under Pensions.

**PERAK, pa'rahk.** The most northern of the Federated Malay States. See FEDERATED MALAY STATES.

**PERKIN, WILLIAM HENRY.** A distinguished English chemist, died Sept. 17, 1929, in Oxford. He was born June 17, 1836, in Sudbury, Middlesex, the son of Sir William Henry Perkin, a chemist and founder of the coal-tar industry, and was educated at the City of London School, the Royal College of Science at South Kensington, and at the universities of Wurzburg and Munich. During 1883-86 he was privatdozent at Munich, where he was under Prof. Adolf Baeyer and for one year worked in Baeyer's private research laboratory. In Munich, he began his research on the building up of closed carbon chains, so important to the study of organic chemistry, for which he received special recognition when he was awarded the Longstaff Medal of the Chemical Society (1900) and the Davy Medal of the Royal Society (1904). From 1887 to 1892 he was professor of chemistry at Heriot-Watt College, Edinburgh, and from 1892 to 1912, at Victoria University. In 1912 he was appointed to the Waynflete professorship of chemistry at the University of Oxford, a post which he filled until his death, during which time the study of chemistry developed rapidly there. After 1916, for several years, he directed research for the firm, British Dyes, Limited, and later was appointed a member of the board of directors. He was elected a fellow of the Royal Society in 1890, and in 1926 received the Royal Medal, the highest honor of the Society. In 1904-05, and again during 1908-10, he served on the council of the Royal Society. He was president of the Chemical Society in 1913-15, and he also held membership in a number of foreign societies and academies. With Dr. Kipping, he wrote books on practical chemistry, and on organic and inorganic chemistry, and with Dr. Leach, an introduction to chemistry. He contributed to the *Journal of the Chemical Society* papers dealing with alkaloids, camphor, and natural coloring matters.

**PERKIN MEDAL.** See CHEMISTRY, INDUSTRIAL.

**PERMANENT COURT OF INTERNATIONAL JUSTICE.** See ARBITRATION, INTERNATIONAL, LEAGUE OF NATIONS, WORLD COURT.

**PERSIA.** A monarchy of southwestern Asia, extending north from the Persian Gulf and the Gulf of Oman to the Caspian Sea. Capital, Teheran, reigning Shah in 1929, Riza Khan Pahlavi.

**AREA AND POPULATION.** The area has been variously estimated at from 628,000 to 635,135 square miles, the population at from 8,000,000 to 10,000,000, about 3,000,000 of whom are nomads. Turks, Kurds, Leks, and Araks predominate.

among the nomads. The number of Europeans has been placed at 1200. The population of Teheran is about 240,000. Other important cities with their estimated populations are Tabriz, 200,000, Isfahan, 80,000, Meshed, 70,000, and Keiman, Shiraz, and Kermanshah, 45,000 each. The great mass of the people are Moslems of the Shiite sect.

**EDUCATION** In 1928 there were approximately 140,000 students in the various coeducational schools in Persia, divided as follows: 50,304 in 575 "official schools," 41,810 in 382 private schools, 6586 in 65 foreign schools, 36,073 in 1826 "Maktab" schools, and 6188 in 300 religious schools. The foreign schools are mostly maintained by missionary bodies. There is a training school for teachers and 100 students are sent abroad annually to study at government expense. About 90 per cent of the population is illiterate.

**PRODUCTION** Agriculture and stock raising are the chief occupations of the country, with mining and manufacturing largely confined to the production of petroleum and rugs. The chief crops, with the estimated production in pounds for 1928, were cotton, 45,000,000, tobacco, 27,375,000, tea, 120,000, wool, 15,000,000, rice, 590,000,000, wheat, 42,000,000, almonds, 13,000,000, dates, 12,000,000, apricots, 9,000,000, raisins, 9,000,000, pines, 3,000,000, opium, 2,000,000, and hemp, 2,000,000. The silk industry is being encouraged by the government. Petroleum production is largely controlled by the Anglo-Persian Oil Company, which has a concession covering the whole of the country except the five northern provinces. In 1928 the company's output was 42,080,000 barrels, as against 39,688,000 in 1927 and 35,842,000 in 1926. Other minerals are iron, coal, copper, lead, manganese, and borax. Exports of wool rugs in 1928 were valued at about \$17,000,000, of which half went to the United States.

**COMMERCE** For the fiscal year ending Mar. 21, 1928, imports amounted to \$79,128,000, or 3 per cent more than in the previous year, while exports totaled \$103,920,000, 4 per cent less than in 1926-27. Of the exports, more than half (\$58,767,000) represented shipments of petroleum and its products. Other exports showed a 3 per cent increase for the year. Besides petroleum, the chief exports in 1927-28 were wool rugs, \$15,098,000, fruits and nuts, \$4,734,000, rice, \$4,008,000, opium, \$4,240,000, and raw cotton, \$4,611,000. Imports were principally textile fabrics, sugar, tea, iron and steel, machinery, bullion and coin, and vehicles and vessels. The United Kingdom, Russia, and India ordinarily supply about three-fourths of Persia's total imports and in 1927-28 their respective shares of the total exports were 29.4, 18.8, and 12.5 per cent. The United States in the same year supplied 3.2 per cent of the imports and purchased 7.6 per cent of the exports. Rugs constituted about nine-tenths of the shipments to America. Manufactures represented 64.7 per cent of the imports and 17 per cent of the exports in 1927-28, the respective proportions of other classes of commodities being as follows: foodstuffs and beverages, 22.5 and 9.6 per cent; raw materials, 8.3 and 7.3 per cent; live animals, 0.3 and 0.3 per cent; precious metals and jewelry, 4.2 and 0.1 per cent.

**FINANCE** In contrast with the considerable surpluses usually estimated to result from budget operations, the estimates for the fiscal year ending Mar. 31, 1930, placed receipts at 301,124,000 kran and expenditures at 349,453,000 kran (one kran exchanged in 1928 for \$0.0980). To cover

this deficit, a bill to establish a government tobacco monopoly was introduced in January, 1929. The budget for 1928-29 estimated receipts at 275,857,000 kran and expenditures at 276,828,000. In 1926-27, the last year for which available, actual receipts amounted to 241,215,000 kran and actual expenditures to 241,215,000 kran. The budget figures do not include royalties received by the government from the Anglo-Persian Oil Company, which are deposited in London as a treasury reserve fund. For 1927-28 the royalties amounted to £1,488,390 (\$7,243,000), as compared with £1,390,000 in the previous year. The funded debt on Mar. 20, 1928, amounted to £1,638,000 (\$7,971,000), as against £1,608,000 (\$8,117,000), on June 20, 1927. On the same dates the floating debt stood at \$707,000 and \$770,000, respectively.

**COMMUNICATIONS** In 1928 there were about 230 miles of railway line in operation in Persia, the principal unit of which was the Tabriz-Julfa line. The new Trans-Persian line, to extend from Bandar Shahpur on the Persian Gulf to Bandar Shahr on the Caspian Sea, via Teheran and Hamadan, was completed on the south from the gulf to Dizful, a distance of 156 miles, at the end of 1928, and on the north from the Caspian Sea to Sari, a distance of about 65 miles. A new highway between Dizful and Khuiyannahad, forming part of a highway connecting the Persian Gulf with Teheran, was completed in 1928. There is a regular air service between Teheran, Resht on the Caspian Sea, Kaser Shirin on the Iraq frontier, and Bushahre on the Persian Gulf.

In 1927-28, 14,478 vessels of 6,925,000 net registered tons entered Persian Gulf ports and 14,043 vessels of 6,891,000 tons cleared. On the Caspian Sea, entrances at Persian ports totaled 2338 vessels of 476,000 tons and clearances, 2264 vessels of 467,000 tons. In anticipation of the completion of the Trans-Persian railway, the terminal port of Bandar Shahpur on the Persian Gulf was being improved. In 1927 there were 8178 miles of telegraph line and 2895 miles of telephone wire.

**GOVERNMENT** Executive power is vested in the Shah, an absolute ruler down to 1906, when he consented to a constitutional form of government with a parliament or *Majlis*. The actual running of the government is in the hands of a cabinet, Prime Minister, Mehdi Quli Kahn Hedayat, appointed March, 1920. The reigning Shah, Riza Khan Pahlavi, was publicly proclaimed Dec. 16, 1925, and crowned, Apr. 25, 1926.

**HISTORY** As in Afghanistan and Turkey, the Persian Government's programme of modernization along Western lines continued to meet with resistance from the more conservative elements in the population. Early in 1920 the parliament, or *Majlis*, forbade anyone except religious leaders and theological students to wear turbans and decreed that all Persians must wear clothes of European cut and a new type of head dress called *Pahlavi*. For the first time Jews were admitted to equal status with Persians in business, education, and the army, but they were still prohibited from becoming government officials. Dissatisfaction with these and other innovations were held chiefly responsible for a revolt which broke out in southern Persia in May among the Kashgahs and spread to the Bakhtiari. While his troops crushed the revolt, Riza Khan had Prince Firuz, Minister of Finance, the latter's father, Prince Farman Farma, and his brother, the Governor of Shiraz, arrested and imprisoned, allegedly for complicity in the

southern revolt. The disorder in Afghanistan forced the government to patrol the border against Afghan raids and another source of internal difficulty appeared with the return to Persian Kurdistan of the Kurdish chief, Semitko, who was forced to flee to Turkey three years earlier. The government was reported to have postponed the enactment of important legislation pending the settlement of the civil strife in Afghanistan, which stimulated the resistance in Persia to the Shah's modernization programme.

In the province of Khorassan on May 1 and 2 earthquake shocks were reported to have destroyed 88 villages, killed over 300 people, and injured more than 1000. A dispute of some years standing between Iraq and Persia was settled in 1929 by a provisional accord providing for the resumption of full diplomatic relations and for the granting of reciprocal most-favored-nation treatment. See EARTHQUAKES, PETROLEUM, and IRAQ, under *History*.

**PERSIAN ARCHEOLOGY.** See ARCHEOLOGY.

**PERSIAN LITERATURE.** See PHILOLOGY, MODERN.

**PERSONAL RESEARCH FOUNDATION.** See PSYCHOLOGY, under *Social Psychology*.

**PERU**, pe-rō' A republic on the Pacific coast of South America, bounded on the north by Ecuador and Colombia, on the east by Brazil and Bolivia, and on the south by Bolivia and Chile. Capital, Lima.

**AREA AND POPULATION.** The area of Peru is about 521,500 square miles, excluding the Province of Tacna (537,042 including Tacna) acquired in 1929 by the boundary settlement with Chile. See below, under *History*. The population in 1927, exclusive of Tacna, was estimated at 6,075,000, as compared with 2,689,000 at the last census in 1876. The above figures do not include an indeterminate number of uncivilized Indians. The capital, Lima, according to the official census of Dec. 17, 1921, had 176,467 inhabitants. The estimated population of the principal cities in 1928 was as follows: Lima, with suburbs, 315,000; Callao, 80,000; Arequipa, 60,000; Cusco, 40,000; Chiclayo, 35,000; Trujillo, 30,000; Ica, Ayacucho, Huancayo, and Chunchu, 20,000 each. The annual average number of births for the years 1922 to 1927 was 111,574 and of deaths, 50,734. The government encourages immigration of qualified agriculturists and others. In 1927-28 it opened 3,246,325 acres to settlers.

**EDUCATION.** Primary instruction is free and compulsory. In 1928 there were 3461 public primary schools with 6012 teachers and 272,490 pupils, and 30 public secondary schools with 583 teachers and 8646 pupils. There were also six normal schools with 60 teachers and 628 pupils, and 12 trade schools with 43 teachers and 551 students. Higher education is provided at the central university in Lima, known as the University of San Marcos, with an enrollment of 1418 in 1928, as well as in a few other universities and colleges and in several technical schools. Under a decree of July 31, 1929, the \$6,000,000 received from Chile in connection with the settlement of the Tacna-Arica dispute was to be used for the capital of a national savings bank, 50 per cent of the profits of which will be devoted to the erection of school buildings.

**PRODUCTION, ETC.** Fully 80 per cent of Peru's estimated population of 6,000,000 is dependent either directly or indirectly upon agriculture. Of

nearly 5,000,000 acres under cultivation in 1927, approximately 80 per cent was irrigated. Other irrigation projects under construction by the government were expected to add about 400,000 acres to the cultivable area. The most productive part of the country is the coastal zone, a narrow strip of land extending from the Pacific Ocean to the foothills of the Andes, and except where traversed by short rivers descending from the mountains it is typical desert country. The valleys formed by these rivers are the source of more than 90 per cent of all the cotton and sugar (the principal money crops) grown in the country. Other crops are cacao, coffee, rice, wheat, tobacco, corn, olives, grapes, and rubber.

Production of raw cotton in 1928 was 130,641 metric tons, a decrease of 4572 tons from 1927. Sugar production in the 1927-28 season totaled 375,000 metric tons, as compared with a record yield of 376,065 tons in 1926-27. Production of other crops in 1927 was: Wheat, 3,149,000 bushels, rough rice, 2,621,000 bushels, sugar-cane, 3,305,000 metric tons, raw sugar, 375,000 metric tons, ginned cotton, 120,025,000 pounds. Stock raising is an important industry, the livestock in the country in 1927 being estimated at 1,360,000 cattle, 12,700,000 sheep, 600,000 swine, 1,580,000 alpacas, 1,060,000 goats, and 400,000 horses and mules. The wool clip rose to a peak of 5629 metric tons in 1928, or 613 tons more than in 1927, while wool exports were valued at \$4,403,000, as against \$3,043,000 in 1927.

Mining enterprises in Peru are largely controlled by foreign capital. In 1927 the total value of the mineral output was \$94,200,000, as compared with \$84,000,000 in 1926. The value of the chief mineral products in 1927 was as follows: Silver, \$10,300,000; copper, \$13,600,000; petroleum, \$57,600,000. In 1928 the silver output totaled \$12,571,000 and the copper production, \$17,014,000. The petroleum output was 11,667,000 barrels. Other minerals mined are gold, lead, zinc, coal, and vanadium.

**COMMERCE.** Peru further improved its normal large favorable balance of trade in 1928 when the exports increased by 7 per cent to \$125,400,000, and imports decreased by 3 per cent to \$70,000,000. The figures in 1927 were \$72,378,000 for imports and \$116,608,000 for exports. Increased shipments of oil and oil products, lead concentrates, copper, wool, and hides contributed to the export increase while imports of iron and steel, electrical machinery, and agricultural implements decreased markedly. The chief exports in 1928 were petroleum and derivatives, \$45,258,000; cotton, \$22,879,000; sugar, \$13,544,000; copper bars, with gold and silver, \$21,702,000. Leading imports were foodstuffs, \$14,082,000; cotton manufactures, \$6,574,000; wheat, \$4,675,000; rice \$2,523,000; iron and steel pipes and tubes, \$2,009,000. The United States supplied 41.06 per cent of the total imports in 1928, the United Kingdom 15.76 per cent, and Germany 10.46 per cent. The United States also was Peru's leading customer, taking 28.47 per cent of the total value of the exports, while the United Kingdom followed with 23.99 per cent, Argentina with 10.10 per cent, and Germany with 9.16 per cent. In 1929 both exports to and imports from the United States showed further advances, the larger imports being due largely to the inauguration of large construction projects and the greater exports to increased copper shipments and higher prices secured for this metal.

**FINANCE.** The budget for 1929 balanced revenues and expenditures at £P12,584,000 (\$50,336,000, converted at \$4, the average rate for January, 1929), the largest total in the history of the country. The sources of anticipated revenue were: Direct taxes, £P1,358,256, indirect taxes, £P7,022,447; monopolies and exploitations, £P2,080,201; state-controlled products, £P729,991. The 1930 budget approved by Congress on Dec 30, 1929, totaled £P14,098,719 (about \$56,000,000), an increase of about £P90,000 over the original budget bill.

According to the President's message delivered at the opening session of Congress on Oct 12, 1929, there was a surplus of £P136,944 in 1928. Actual revenues and expenditures for 1928 totaled £P12,198,108 and £12,061,164, respectively, as compared with budget estimates of £P11,113,651. Customs collections and internal taxes showed large increases. Among the financial reforms of 1929 were the creation by Presidential decree on July 31 of a national savings bank with a capital of \$6,000,000, the sum received from Chile in part settlement of the Tacna-Arica dispute; the establishment of a central mortgage bank and an intermediate agricultural credit bank, and the creation of a controller's office to supervise government expenditures. The public debt as of June 30, 1929, was estimated at £22,846,276, of which £18,312,620 represented the external debt and £4,533,656 the internal debt. The annual service of the debt amounted to £1,804,699, a little less than 13 per cent of the national income.

**COMMUNICATIONS.** The total length of railways in operation in 1927 was 2725 miles, of which 1732 miles were state owned and 993 miles privately owned. In the same year all lines carried 6,073,000 passengers and 2,390,000 metric tons of freight. The gross receipts in 1926 totaled \$12,859,000. There was a considerable expansion of commercial air transportation in 1928, an air-mail and passenger service between Peru and the United States being inaugurated in September and other lines being established along the Peruvian coast and between La Merced and Iquitos. In 1927 there were 12,023 miles of telegraph wire and 39,919 miles of telephone wire. The merchant marine in 1928 consisted of 42 vessels of 100 tons or more, carrying 100 gross tons of mail and traffic. The capacity of vessels entering Peruvian ports in 1927 totaled 15,974,000 net registered tons.

**GOVERNMENT.** Executive power is vested in a President elected for five years and eligible for reelection indefinitely under a constitutional change adopted in 1927; and legislative power in the Congress consisting of a Senate with 35 members and a House of Representatives with 110 members. The President acts through a cabinet of seven members, appointed and removed at his pleasure. President in 1929, Augusto B. Leguía, who was reelected August 5, 1929, for the term 1930 to 1935.

**HISTORY.** With the exception of the settlement of the difficult Tacna-Arica dispute with Chile and the reelection on August 5 of President Augusto B. Leguía for his fourth five-year term, Peru passed a comparatively uneventful year in 1929. For details of the Tacna-Arica settlement, see CHILE and BOLIVIA, under *History*, and ARBITRATION, INTERNATIONAL.

Nominated by the two largest political par-

ties in the country, the Democratic Reform party and the Constitutionalists, President Leguía was reelected virtually without opposition. He first became President of Peru in 1908, serving until 1914 and regaining power again in 1919 by a spectacular *coup d'état*, which was later legalized by Congress. He was reelected again in 1924. President Leguía on May 7 appointed a new cabinet, which continued in office when the President entered upon his new term on October 12. Members of the cabinet were: Minister of Interior and President of the Cabinet, Benjamin Huaman de los Heros; Foreign Affairs, Pedro José Rada y Gamio; Justice, L. Matías León; War, General José Luis Salmon; Navy and Marine, Admiral Augusto Loayza; Finance, Manuel G. Macías; Public Works, Alfredo Mendiola. The Ministers of Finance and of Foreign Affairs were members of the Democratic Reform party.

Some evidence of the President's policy with President Leguía's long rule was seen in the announcement on July 26 that a senator, a deputy, and four alleged accomplices had been arrested on charges of conspiracy against the government. On June 22 the President issued a decree prohibiting the teaching of doctrines opposed to the state (Roman Catholic) religion in official or private institutions and providing that textbooks used for moral and religious education must be approved by the Ministry of Education. The falling off in government revenues during 1929 gave the cabinet considerable concern and President Leguía proposed a bill imposing a 10 per cent tax on the salaries of all public officials, which was passed by Congress on November 19.

In its external relations, Peru gained in prestige during the year by the Tacna-Arica settlement and by its election as a member of the Council of the League of Nations on September 9. Bolivia remained unreconciled to the Tacna-Arica Treaty, which had apparently blocked her hope of an outlet to the Pacific, but for the time being was fully occupied with her boundary negotiations with Paraguay. The problem of fixing the boundary between Peru and Ecuador appeared nearer peaceful solution following a visit paid Foreign Minister Rada y Gamio in the Peruvian Capital by the Ecuadorian Minister of Foreign Affairs, Dr. Gonzalo Zaldumbide. The two committees were bound by the protocol of June 21, 1924, to submit the boundary dispute to arbitration by the President of the United States, in case they are unable to arrive at a solution by direct negotiation. An element of complication was introduced into the boundary discussions with Ecuador by the announcement of the discovery of petroleum in the region under dispute.

Part of this region was included in a concession obtained from the Peruvian government in 1923 by Bertram T. Lee, an American citizen. The concession was canceled by presidential decree on Aug. 3, 1929, on the ground that Mr. Lee had not lived up to his contract to construct a railway from Iquitos on the upper Amazon to Paita and Pucallpa on the Pacific Coast. In December, following the intervention of the United States State Department, the Peruvian government agreed to arbitrate the concession dispute in accordance with provisions in the concession contract. The assistance afforded Mr. Lee by the United States government aroused considerable criticism in the press of Argentina and several other Latin-American countries.

Peru celebrated the 108th anniversary of her

independence on July 28, 1929. In connection with the celebration the government conferred on President Hoover and Secretary of State Stimson, of the United States, decorations of the Order of the Sun, See ECUADOR, and ARBITRATION, INTERNATIONAL.

**PETROLEUM.** According to preliminary figures compiled by the U. S. Bureau of Mines, from companies that operated gathering lines, 1,005,598 barrels of crude petroleum were transported from producing properties in the United States during 1929. The final figure of actual production (oil brought to the surface), which would include revisions to the monthly data, crude oil consumed on the leases, and the net change in producers' stocks, might amount to 1,000,000, 000 barrels. This represented a new record for total production and was 104,500,000 barrels, or 12 per cent above the 1928 output.

According to preliminary data, the world's production of crude petroleum in 1929 amounted to 1,488,604,000 barrels, an increase over 1928 of 12 per cent. Of this total the United States produced 67.6 per cent as compared with 68.0 per cent in 1928 and 71.4 per cent in 1927.

The production of crude petroleum in the United States increased more or less steadily up to August, the peak month. The total output in August amounted to 92,288,000 barrels, or very close to a daily average of 3,000,000 barrels. Production decreased steadily during the last four months of the year, but this came coincident with a steadily decreasing demand and stocks accumulated in all months except November. A factor in the increased output during the summer months was a price increase inaugurated in the Mid-Continent in May. Stocks of all oils increased 67,600,000 barrels in 1929, of which over 18,000,000 barrels was in refined products. November was the only month of the year 1929 to show a decrease in stocks of all oils. This decrease amounted to 3,010,000 barrels, and resulted mainly from a drastic curtailment at Santa Fe Springs and a surprisingly small decrease in gasoline consumption.

Texas, for the second successive year, was the leading producing State, with an output of 298,441,000 barrels. California was comparatively close to the top, with a production of 292,037,000 barrels. Oklahoma dropped from second to third place, although its output of 253,704,000 barrels represented a small increase over 1928. These three States accounted for 84 per cent of the total output as compared with 82 per cent in 1928. The major portion of the new production in Texas came from west Texas, Gray County (Panhandle), the Bruner field in Goshute County, and from extensive and deeper wells in the Gulf coast fields.

The most important factors in the increased output of California were the rapid development of the various deep sands at Santa Fe Springs and the new production secured at Elwood. Despite the discovery of a number of new pools in the Greater Seminole area and the extension of some of the older ones, the output of the Greater Seminole area showed comparatively little change in 1929. The major portion of the new production of the State was developed at the Oklahoma City field, which produced nearly 9,000,000 barrels in 1929 as compared with practically nothing in 1928. The output of the Appalachian district was higher, while that of the Central States, with the exception of Michigan, showed a decrease.

Imports of crude petroleum into the United States from foreign countries during 1929 amounted to 78,915,000 barrels, or about 850,000 barrels under the 1928 figure. Over 50,000,000 barrels of these imports came from Venezuela and nearly 13,000,000 barrels, each, from Mexico and Colombia. Exports of crude oil increased from 18,866,000 barrels in 1928 to 20,374,000 barrels in 1929, or 39 per cent.

Stocks of crude petroleum (exclusive of producers' stocks) east of California increased from 368,353,000 barrels on hand January 1 to 381,391,000 barrels on December 31, an increase of about 13,000,000 barrels. This increase was less than the 1928 increase, but in California the situation was quite different with about 36,000,000 barrels added to crude and fuel stocks compared with 2,000,000 barrels accumulated in 1928.

**REFINED PRODUCTS.** Runs to stills of crude petroleum, both domestic and foreign, in 1929, amounted to 987,708,000 barrels, an increase over 1928 of 8 per cent. All of this increase was recorded in domestic crude runs, in fact, the use of foreign crude at refineries declined by slightly over 2,000,000 barrels in 1929.

The percentage recovery of gasoline continued its upward trend and amounted to 41 per cent in 1929, as compared with 41 per cent in 1928.

**SUPPLY AND DEMAND OF ALL OILS IN 1929**  
[Including wax, coke, and asphalt in thousands of barrels of 42 United States gallons]

<b>Day's supply *</b>	<b>226</b>	<b>223</b>
<b>Bunker oil (included above in domestic demand)</b>	<b>52,308</b>	<b>51,226</b>

\* 1928 figures are final and include producers' stock except for California.

\* From Bureau of Foreign and Domestic Commerce. Reports include shipments to Alaska, Hawaii, and Porto Rico.

\* Includes fuel oil and producers' stocks (1929 only).

\* Grand total stocks all oils divided by daily average total demand.

This and the increased quantity of crude oil processed was reflected in a 15 per cent gain in output which, for the year, totaled 434,241,000 barrels. The indicated domestic demand for gasoline amounted to 371,852,000 barrels, an increase over 1928 of 13 per cent. Gasoline exports increased 16 per cent, imports more than doubled and amounted to 8,868,000 barrels. Stocks of gasoline accumulated rapidly early in the year, particularly in January, reached a peak of 48,205,000 barrels on March 31, was at its low point of 33,222,000 on September 30, and increased to a total of 43,115,000 barrels on the last of the year, this being over 10,000,000 barrels above the total on the first of the year.

The statistics of both kerosene and lubricants of 1929 were practically unchanged from 1928. The production of gas oil and fuel oil increased, due to the greater crude throughput, but the demand east of California increased sufficiently to result in a decline in stocks of 500,000 barrels. Wax production was unchanged, but demand, both from domestic and foreign sources, decreased and stocks increased materially.

**NATURAL GASOLINE.** According to the monthly (preliminary) figures, the output of natural gasoline in 1929 was 2,195,400,000 gallons as compared with 1,777,700,000 gallons in 1928, a gain of 23 per cent. The major portion of the increase was recorded in the California fields, particularly at Santa Fe Springs, although the Greater Seminole area recorded a somewhat surprising increase of nearly 100,000,000 gallons. Stocks at the plants were practically unchanged,

#### PRODUCTION OF CRUDE PETROLEUM IN 1929 BY STATES

[Petroleum transported from producing properties  
Thousands of barrels of 42 United States gallons]

Final figures will include petroleum consumed on the leases and produced but not transported from producing properties, which items for 1929 may amount to 2,000,000 barrels.

[Thousands of barrels of 42 United States gallons]

	1929	1928*
Imports	78,915	79,767
From Venezuela	50,637	46,977
From Mexico	12,661	17,584
From Colombia	12,620	11,815
From other countries	2,995	1,368
Exports	26,374	18,966
Domestic oil		
To Canada	22,250	15,471
To other countries	4,117	3,510
Shipments	7	4
Foreign oil		
California crude oil*	7,851	5,682

\* From Bureau of Foreign and Domestic Commerce.

\* Final figures.

\* Included in total exports of domestic crude.

#### WELLS DRILLED FOR OIL AND GAS IN THE UNITED STATES IN 1929\*

	1929*	1928*
Oil	15,772	12,526
Gas	2,870	2,757
Dry	7,914	7,076
Total	26,756	22,351

\* For States east of California, from *Oil and Gas Journal*; for California, from the *American Petroleum Institute*.

\* Final figures.

**WORLD'S PRODUCTION OF CRUDE PETROLEUM.** The world's production of crude petroleum during 1929 was estimated by E. B. Swanson, Division of Petroleum Economics, U. S. Bureau of Mines, at 1,488,604,000 barrels, an increase over 1928 of 163,870,000 barrels, or 12.4 per cent. Production outside of the United States reached a total of 482,604,000 barrels, or 59,344,000 barrels more than in 1928. United States production was estimated at 1,006,000,000 barrels, an increase of 104,526,000 barrels. The rate of increase in domestic production did not quite equal that of the foreign oil-producing countries, consequently, the ratio of the United States production to the world total dropped from 64 per cent in 1928 to 67.6 per cent in 1929. Venezuela and Russia maintained their respective positions as the second and third largest producing countries, while Persia, with a production of slightly more

than 6,000,000 metric tons, moved into fourth place, with a slight margin over Mexico. Trinidad advanced into tenth place, ahead of Argentina and British India, while among the smaller producing countries, Russian Sakhalin and Canada reached, for the first time, an annual production of more than a million barrels.

The three principal shipping fields in Venezuela, Lagunillas, La Rosa-Ambrosio, and Mene Grande, showed an increase of approximately 32,000,000 barrels over 1928, accounting for virtually all of the increased production of the country. Production in Russia increased by approximately 15,000,000 barrels. Persia and Rumania continued to increase crude-oil production at the rate noted for the two preceding years, while Mexico again showed a decrease. Production of heavy crude in Mexico declined throughout the year, while light-oil production increased primarily as the result of new developments at Tonala, Isthmus of Tehuantepec.

The following table shows the output of the various oil-producing countries as reported officially to the Bureau of Mines for 1927 and 1928 and the estimated production of these countries for 1929. These estimates were based upon data obtained through the cooperation of consular officers in various countries, various companies engaged in foreign production and official reports.

WORLD CRUDE-OIL PRODUCTION, 1927-1929\*  
[Figures in thousands of barrels]

Country	1929 <sup>b</sup>		1928		1927

\* Compiled by E. B. Swanson, Acting Chief Economist, Division of Petroleum Economics.

<sup>b</sup> 1929 figures subject to slight revision. Figures for previous years are final.

<sup>c</sup> Production for year ended September 30, 1928. Calendar year 1928 production estimated at 87,800,000 barrels.

See UNITED STATES, under *Oil Cases*, also GEOLOGY, and CHEMISTRY, INDUSTRIAL for other studies and developments in petroleum occurrence and technology.

#### PETROLOGY. See GEOLOGY

**PETZOLDT**, pět'sólt, JOSEPH A German Positivist philosopher, died Aug. 4, 1929. He was born in Altenburg and educated at the universities of Jena, Munich, Geneva, Leipzig, and Göttingen. After teaching in the Berlin Gymnasiums, he became in 1904 privatdocent in the Berlin-Charlottenburg School of Technology. His works include *Mazma*, *Mnima*, and *Oekonomie* (1891),

*Einführung in die Philosophie der reinen Erfahrung* (1900-04); *Das Weltproblem* (1906).

**PEZET**, pā-thät', FEDERICO ALFONSO A Peruvian diplomat, died in San Remo, Italy, Dec. 17, 1929. He was born in London in 1859, and was educated in England and at the Military Academy in Lima, Peru. In the Peruvian-Chilean War he was wounded and taken prisoner. He was Spanish editor of the *Panama Star and Herald* during 1884-86. Entering the diplomatic service of Peru in 1886, he went first to Panama as consul, and later to Liverpool, London, and New York. From 1904 to 1909, he was chargé d'affaires and consul-general in Panama in 1909 and Minister-Plenipotentiary to Panama, and during 1909-12 special Envoy-Extraordinary to Central America and Panama. He was Minister to the United States in 1912, and in 1919 returned as the first Ambassador from Peru to the United States, serving until 1923. He contributed to American and European periodicals, and his books include *Peru: Its Commerce and Resources* (1893), *The Question of the Pacific* (1901), *What the Panama Canal Means to Peru* (1911).

ing to the census of 1918, 10,314,310. An estimate of the population in 1928 placed it at 11,921,600, or a density of 104.2 per square mile. The population of Manila was 285,306 in 1918, estimated at 336,500 in 1926. Other cities, with the population in 1918, were Cebu, 65,502, Legaspi, 52,756; Iloilo, 49,114. From 1923 to 1927 the average annual birth rate per 1000 inhabitants was 32.8 and the death rate 18.1. From 1924 to 1928 an average of 11,008 immigrants entered yearly, as against 998 emigrants, the excess of immigrants being 10,019 annually.

At the census of 1918 the race distribution was as follows: Brown, 9,380,826; yellow, 50,826; white, 12,399; Negro, 7623; half-breed, 34,663.

**EDUCATION** The total enrollment in the public schools in 1928 was 1,111,509, and in private schools 84,813, out of a total estimated population of school age of 3,135,044. In the University of the Philippines there were 5138 students with collegiate standing and 1040 students in the subcollegiate grade. In September, 1928, there were 5946 primary schools with 17,190 teachers and 1276 intermediate schools with 6749 teachers, as compared with 5998 primary schools with 17,411 teachers and 1243 intermediate schools with 6429 teachers in September, 1927.

**PRODUCTION** Agriculture is the basic industry, there being 10,000,000 acres of land under cultivation in 1927 in addition to 13,100,000 acres of grass and open land and some 46,500,000 acres of forests. It was estimated in 1928 that there were 34,580,000 acres of idle land suitable for cultivation. The chief crops, with the area planted and the production in 1928, are as follows: rough rice, 4,481,000 acres and 106,332,000 bushels; corn, 1,284,000 acres and 15,639,000 bushels; manila hemp, 1,188,000 acres and 393,285,000 pounds; tobacco, 190,000 acres and 101,389,000 pounds; coconuts, 1,273,000 acres and 1,906,804,000 coconuts; coffee, 3000 acres and 2,720,000 pounds; cacao, 4000 acres and 2,586,000 pounds; sugar 586,000 acres and 1,477,100,000 pounds. Other products are rubber, tea, pineapples, citrus fruits, quinine, and camphor.

In 1929 all agricultural crops except copra reached new high levels of production although prices were somewhat lower. Sugar production was the largest on record, the centrifugal output being estimated at 700,000 metric tons and the production of muscovado at 74,000 tons. Production of abaca, or manila hemp, reached 1,590,000 bales, or 203,000 more than in 1928, copra production amounted to about 483,500 metric tons, 90,000 less than in 1928, coconut oil production was estimated at 186,000 tons, and tobacco production amounted to 45,000 tons. Livestock in the country in 1927 included 1,220,000 cattle, 1,950,000 carabaos, 10,300,000 swine, 410,000 sheep, 1,415,000 goats, and 325,000 horses and mules.

Lumbering was active in 1929, the total cut reaching 754,000,000 board feet, or 23 per cent more than in 1928. New investments in the industry were estimated at 3,000,000 pesos (1 peso equals \$0.50), and 18 new sawmills started operation during the year. Although some coal, gold, iron ore, and other mineral deposits exist in the islands, gold is the only mineral mined on a commercial scale. The gold output in 1928 totaled 107,000 troy ounces. The chief manufactured products, with the output in 1928, are cigarettes, 5,110,000,000; cigars, 332,000,000; copra,

1,168,000,000 pounds; coconut oil, 321,000,000 pounds, split rattan, 7,075,000,000 pounds.

**COMMERCE** Despite low prices received for exports, the balance of trade in 1929 was favorable by \$17,276,568. Imports totaled \$147,150,275, or \$12,493,377 more than in 1928, while exports amounted to \$164,446,843, an increase of \$9,302,297 over 1928. The United States increased its share of Philippine imports, supplying 63.4 per cent of the total, as against 62 per cent in 1928, while Japan furnished 7.9 per cent, China, 4.8 per cent, Great Britain, 3.5 per cent, and Germany, 3.1 per cent. The United States likewise purchased 76 per cent of Philippine exports in 1929, as against 75 per cent in 1928. Other customers were Japan, which took 4.4 per cent of the exports, Great Britain, 4.1 per cent, Spain, 3.5 per cent, Germany, 2.1 per cent, and China, 1.9 per cent. Exports of sugar in 1929 totaled about 694,000 metric tons valued at 108,000,000 pesos, of manila hemp, 1,722,000 bales estimated at 57,960,000 pesos, of coconut products, 95,000,000 pesos, of tobacco, about 20,000 metric tons, of lumber, 100,000,000 board feet valued at 7,000,000 pesos, of which about 46,000,000 board feet went to the United States.

Textile products, automobiles and parts, machinery, iron and steel, electrical apparatus, fertilizer, foodstuffs, and chemicals were leading imports. Due to heavy building and the construction of port projects at Cebu and Iloilo and of three irrigation projects, the iron and steel imports were unusually large, being valued at 24,500,000 pesos. In general, business was satisfactory during 1929, although conditions were spotty and profits in the principal lines were smaller than in 1928. The prosperous conditions of 1928 continued until the middle of July, when falling export prices led to a depression which lasted the remainder of the year.

**FINANCE** Actual revenues in the calendar year 1928 totaled 85,214,508 pesos, as compared with the budget estimate of 79,161,060 pesos and with actual receipts of 77,728,114 pesos in 1927. Actual expenditures, amounting to 79,626,806 pesos, also exceeded the budget estimate of 74,572,495 pesos and the actual expenditures in 1927 of 74,346,267 pesos. The total budget surplus for 1928 amounted to 41,179,267 pesos, as compared with 35,591,566 pesos in 1927. Other items to be deducted reduced the net unappropriated cash surplus to 13,179,267 pesos. Figures for 1928 showed an increase of 27 per cent in income-tax collections, of 5 per cent in internal revenue collections. The net bonded indebtedness at the end of 1928 was 175,237,000 pesos, for which there were accumulated sinking funds of more than 43,000,000 pesos (1 peso equals \$0.50).

**COMMUNICATIONS** Manila is the chief port of the islands and handles the bulk of the shipping engaged in foreign trade. In 1928 a total of 1146 vessels of 4,325,243 net registered tons entered Philippine ports, of which 3,587,806 tons entered at Manila. In the same year 1134 vessels of 4,282,443 net registered tons cleared the ports of the islands. In addition 1792 vessels of 89,780 net registered tons were engaged in the coastwise trade. Extensive port developments were under way at Cebu and Iloilo in 1929.

In 1927 there were 791 miles of railway line in the Philippines, which carried 9,908,000 passengers and 1,893,000 tons of freight, earning gross receipts of \$6,426,000. The railroads on the is-

land of Luzon are operated by the Manila Railroad company, in which the government has a substantial investment. In 1928 this company had a net income of 3,041,000 pesos, or nearly 38 per cent more than the average net income for the five year ending Dec 31, 1927. In 1927 there were 17,541 miles of telegraph wire and 38,340 miles of telephone wire.

GOVERNMENT Executive power is in the hands of a governor-general appointed by the President of the United States, by and with the advice and consent of the Senate, and in six departmental secretaries, all of whom are Filipinos, with the exception of the vice governor (appointed in the same manner as the governor-general), who acts as secretary of public instruction. Legislative power is in a senate of 24 members and a house of representatives of 93 members, all of whom are elected by popular vote, with the exception of nine representatives and two senators appointed by the President to represent certain provinces. The senate, composed of the governor-general as president, the presidents of both branches of the Legislature, and the departmental secretaries, constitutes the link between the administrative and legislative departments. Governor-general in 1925, Dwight Filley Davis, who succeeded Henry L. Stimson in March, 1929.

HISTORY OF The importance in the history of the Philippines during 1929 was the marked trend of sentiment in the United States Congress toward granting the islands independence in the near future. Economic factors were primarily responsible for this change of heart on the part of many American legislators, although the usual sentiment in favor of granting immediate independence on moral and political grounds appeared strengthened.

The question of Philippine independence came before Congress in connection with the Hawley tariff debate, and particularly the proposal to increase the effective duty on sugar from 176 cents to 240 cents a pound. This measure, which was sponsored by the beet-sugar industry in the United States, was subsequently defeated, but not before the debate on the question had brought before both the Senate and the House the whole question of American policy in the Philippines. One of the arguments advanced against the proposed increase in the duty on sugar was that no matter what the height of the duty might be, beet-sugar cultivation in the United States would be handicapped by the competition of the Philippines, Porto Rico, Hawaii, and other insular territories, whose cane sugar entered the United States free of duty. Late in 1928 a resolution to limit sugar importations from the Philippines to 500,000 tons annually was introduced into the House, but was rejected by the Ways and Means Committee, after Henry L. Stimson and others had opposed the measure.

Blocked by strong Congressional sentiment against imposing a duty on Philippine products as long as the islands were a possession of the United States, the American beet-sugar, vegetable-oil, and other affected interests threw their support to the movement for Philippine independence, which would, of course, result in the application of the protective tariff to the products of the islands. On the other hand, disinterested advocates of Philippine independence feared that an increased sugar duty would lead American capital to invest heavily in the Philippine sugar

industry as long as the product was admitted free to the American market and that an additional obstacle to ultimate independence would be set up. These developments explain the introduction in the Senate by Senator King of Utah and Senator Broussard of Louisiana on October 9 and 10, respectively, of amendments to the Hawley tariff measure providing for immediate independence for the Philippines. Both senators represented sugar-producing States. The Broussard resolution, which proposed that the United States call an international conference to guarantee the independence of the islands and included a declaration that "the Government of the United States proposes to grant independence to the Philippines in the immediate future," was voted down by a vote of 63 to 19. The Senate also rejected Senator Broussard's proposal that a duty be imposed upon Philippine products brought into the United States. Senator King's proposed amendment was likewise defeated by a considerable majority. The vote, however, was not considered a test vote on the question of independence, as many senators objected to linking the question with the tariff bill. It was believed, however, that majority sentiment in the Senate was at the time adverse to immediate independence.

The agitation for independence continued to gain momentum during the remainder of the year. Several incidents in the House indicated the trend of sentiment in favor of freeing the islands. On December 13, Camilo Osias, one of the two resident commissioners of the Philippines in the United States, was enthusiastically applauded when he made an impassioned appeal for complete independence. In December a new independence mission sailed from the Philippines for the United States. It was composed of Senate President Quezon, Speaker Roxas, Senator Sumulong, and Representative Pedro Gil, the last two being minority leaders. At the same time American and foreign business men in the islands evinced growing alarm at the prospect that the islands would be separated from the United States in the near future.

The growth of anti-Filipino sentiment in California, which resulted late in the year in a number of attacks upon Filipinos, appeared likely to further the independence movement in both the United States and the Philippines. It was pointed out that the bad feeling engendered by the influx of large numbers of Filipinos into the California labor market might be avoided by the application of quota restrictions to immigrants from the islands, such as might logically be enforced once the Philippines were declared independent.

In March, 1929, Governor-General Stimson became Secretary of State in President Hoover's cabinet and Dwight F. Davis, former Secretary of War, was appointed to succeed him in Manila. Governor-General Davis continued Mr. Stimson's conciliatory course with the Philippine legislature. See United States, under *History*. Consult *The Philippine Islands*, by W. Cameron Forbes, former governor-general (Boston, 1928).

**PHILLIMORE**, WALTER GEORGE FRANK, FIRST BARON An English international and ecclesiastical jurist, died Mar. 13, 1929, in London. He was born in London, Nov. 21, 1845, and was educated at Westminster and at Christ Church and All Souls College, Oxford. He was called

to the bar by the Middle Temple (1868) and rose very rapidly in his profession, handling at first chiefly ecclesiastical cases. In 1883 a patent of precedence was conferred on Lord Phillimore, a distinction given to few. He was appointed in 1897 a judge of the Queen's Bench Division of the High Court of Justice, where he served until 1913, when he was appointed Lord Justice of Appeal. In 1916 he retired from the bench, but soon after became a member of the judicial committee of the Privy Council, where his exposition of the Hindu and Mohammedan laws was treated with respect throughout India. After the World War, Lord Phillimore was appointed chairman of the committee for the distribution of the Naval Prize Bounty. He advocated the principle of international arbitration and was chairman of the committee appointed in 1917 to produce the draft statutes of a League of Nations. During 1905-08 he was president of the International Law Association. He was raised to the peerage in 1918, with the title Baron Phillimore of Shipplake, and in 1928 was created Knight of the Grand Cross of the British Empire.

**PHILLIPS UNIVERSITY.** A coeducational institution of higher learning at University Station, Enid, Okla., founded in 1907. The enrollment for 1928-29 in all departments was 872. The faculty numbered 39. The productive endowment amounted to \$548,830. The library contained 18,120 volumes, exclusive of public documents. President, Isaac Newton McCash, D.D., LL.D.

**PHILOLOGY,** CLASSICAL. The best way to gain a fair conception of the more important contributions to classical philology is to examine lists of articles and books, or abstracts of them, or both, given in certain periodicals—*American Historical Review*, *The American Journal of Philology*, *Antiquity*, *The Classical Journal*, *The Classical Quarterly*, *The Classical Review*, *The Classical Weekly*, *Historical Outlook*, *History*, *Athenæum* (published at Pavia, Italy), *Bulletin Bibliographique et Pédagogique du Musée Belge* (a companion to *Le Musée Belge*, *Revue de Philologie Classique*), *Philologische Wochenschrift*, *Monon*, and *Revue de Philologie*. The reviews, too, in these periodicals are very helpful. Especially valuable is *Bibliotheca Philologica Classica*, *Heftblatt zum Jahresbericht über die Fortschritte der Klassischen Altertumswissenschaft*, whose aim is to cover all publications, both articles and books (except such as are definitely pedagogical in character), in the whole field of classical philology. No attempt is made, however, to indicate the relative importance of items listed. A very valuable feature of this work is the "Namenverzeichnis," which gives in alphabetical order the names of the scholars whose articles or books are named in the body of the work, with references back to the numbered items which describe articles or books.

*The Year's Work in Classical Studies*, published in England, lists material that appears between July 1 and June 30, under such captions as "Greek Literature," "Latin Literature," "Greek History," "Roman History," "Greek and Roman Religion," "Ancient Philosophy," "Greek Archaeology and Excavation," "Italian Archaeology and Excavation," "Papyri," and "Roman Britain."

The Association Guillaume Budé, in Paris, published, under the editorship of J. Marouveau, *L'Année Philologique, Bibliographie Critique et*

*Analytique De L'Antiquité Gréco-Latine, Première Année, 1927*. This gives the "Bibliographie des Années 1924-1926." The material is grouped into 11 divisions or chapters, in each division the arrangement is alphabetical. There is an "Index des Noms D'Auteurs," pp. 353-370. This volume continues a work which the Association had previously published: *Des Années de Bibliographie Classique: Bibliographie Critique et Analytique de l'Antiquité Gréco-Latine pour la Période 1914-1924. Première Partie, Auteurs et Textes* (1927), and *Deuxième Partie, Matériaux et Disciplines* (1928). (See YEAR BOOK for 1927 and for 1928). This bibliography is of the first importance to classical scholars.

To *The Loeb Classical Library* (see YEAR BOOK, 1911-1928) additions were made, on the Greek side, of versions of Athenæus, *Deipnosophistas* (the third of seven volumes, covering Books vi-vii), C. B. Gulick, *Isocrates* (the second of three volumes), G. Norlin, *Philo* (the first two of 10 volumes), F. H. Colson and G. H. Whitaker, *Strabo, Geography* (the sixth of eight volumes), H. L. Jones, *Theophrastus, The Characters*, J. M. Edmonds, and *Herodes, Cereida* and the Greek Choliambic Poets (except Callimachus and Babrius), A. D. Knox (in one volume). On the Latin side, there was added a translation of Cicero, *Letters to his Friends* (the third and last volume), W. G. Williams (this volume includes Cicero's letters to his brother Quintus). On *The Loeb Classical Library*, see *The Classical Weekly*, vol. xxii, pp. 145-146, 153-155, 161-168.

The great *Lexicon Plautinum*, by G. Lodge, was advanced by the publication of vol. ii, part v, pp. 385-480. This part contains the articles "Prodigus" to "Quidem." Fourteen hundred pages of this monumental work have appeared, it is gratifying to know that the manuscript of the remaining 384 pages is ready. This work is the most extensive undertaking that any American classical scholar has thus far, single-handed, essayed and accomplished.

In *The American Journal of Philology*, I, appeared "Hörsatz and the Poet of Austin Dodson," H. C. Lapscomb, "The Text Tradition of Petronius—Preliminary Paper," E. T. Sage, "Lucilius's *Crua Rustica*," L. R. Shero, "Plural Verbs with Neuter Plural Subjects in Homer," J. A. Scott, "St. Augustine's 'City of God': Its Plan and Development," R. J. DeFeo and M. J. Keeler, "Aristotle, *Rhetoric* 3.16, 1417<sup>b</sup> 16-20," I. Cooper, XΘAMAAIIΘAKII, F. P. Johnson (a discussion of Homer, *Odyssey* 9.21-27, especially 9.25. Mr. Johnson interprets the Greek adjective which forms part of the title of his paper as meaning "low." He also argues vigorously against Doipfeld's theory that the Homeric *Itaca* is to be identified with the island of Leucas), "The Structure of Vergil's *Georgics*," D. L. Drew, "Papyrus Fragments of Extant Greek Literature," C. W. Keyes, "Notes on the *Agrocola* of Tacitus," H. C. Nutting, "Notes on Hofmann's *Latentische Syntax und Stilistik*," E. B. Leese (a long list of additions and corrections of the fifth edition of a very important work on grammar, prepared by J. H. Schmalz), "Literary Instruction in the *Theogonide*," E. L. Highberger, and "Oriental Elements in Petronius," M. Hadas.

From *Classical Philology*, xxiv, may be mentioned "Lachares and Demetrius Poliorcetes," W. S. Ferguson, "The Comedy of Errors," H. W.

Prescott (an argument that "the theory of error <is> a determining element in the structure of comedy"), "On the Ambiguity of Catullus XLV 8-9 (=17-18)," J. B. Stearns, "The Ithaca Problem Again," A. Shewan (the author attacks, vigorously, views concerning the identification of Homer's Ithaca propounded by Professor A. D. Fraser, in *Classical Philology*, vol. xxiv, and *The Classical Weekly*, vol. xxii), "The Singrenus Edition of Petronius of 1523," E. T. Sage, "The Repair of Roads in Spain Under the Roman Empire," C. E. Van Sickle, "The Text Tradition and Authorship of the *Lex Poenonia*," B. L. Ullman, "Octavian's Propaganda and Antony's *De Sua Eboritate*," K. Scott, "Taboo and its Survival in Roman Life," E. E. Burris, "The Origin and Meaning of Latin at," H. F. Rebert, "An Interpretation of Catullus XXXVI," H. Comfort, "Greek and Roman Law in the *Trinummus* of Plautus," W. M. Green, "The Chronology of the Years 435-431 B.C.," H. M. Hubbell (the paper deals with Greek history in the years named), "The Athenian Calendar and the Argive Alliance," T. Geerlings, "Rabbinic Parallels to *Scriptores Historiae Augustae*," M. Hadass, "The Chron of Sophocles," L. D. Peterkin, "The Quotations from Homer, Polyannos I Proem 4-12," G. M. Bolling, "Ithacan Origins," A. Shewan (an argument that Ithaca is of "great importance for the prehistory of Western Greece", the author regards ancient Ithaca as a stopping place for a maritime people—the Minonians—trading between Crete and the Far West by way of Italy and Sicily), "Notes on the Constitutional Inscription from Cyrene," J. A. O. Laurén, "The Logic and Language of the *Hippias Major*," G. M. A. Grube, "Some Notes on the *Agriicola* of Tacitus," Mignonette Spulman, "On Apuleius' *Metamorphoses* 1 14-17," B. E. Peery.

In *The Classical Journal*, xxi, xiv, appeared "Some Glimpes of Roman Britain," Katharine Allen, "Petrus," A. R. Bellinger, "Martial Looks at His World," J. W. Spelling, Jr., "Cicero's Debut as a Prosecutor," F. H. Cowles, "On Inland Transportation and Communication in Antiquity," W. L. Westermann, "The Terentian Comedies of a Tenth-Century Nun," Cornelia C. Coulter (the nun is Hrotsvitha), "The Character of Hannibal," H. V. Canter, "The Roman and his Religion," E. E. Burris, "Teachers of the Classics and Education in the United States—The Past, The Future," C. Knapp, "Vergil's Descriptive Art," Louisa V. Walker, "Some Aspects of Ancient Scientific Thought," A. H. Weston, "Ancient Reading," G. L. Hendrickson (a restatement of a point often made by scholars, that the ancient Greeks and Romans read with their ears, not with their eyes, that is, that works were usually read to them by secretaries or amanuenses, and that, even when they read themselves, they read aloud).

*The Classical Weekly*, xxi, xxi, contained the following articles: "Popular Superstitions in Petronius and Italian Superstitions of To-day," A. Rini, "The Mince of Sacred Things at Rome," E. E. Burris, "Light from Arabia on Classical Things," C. J. Kramer, Jr. (a presentation of the light thrown on classical things by passages in C. M. D. . . . , *Travels in Arabia Deserta*), "Life of Tibullus as Reflected in his Elegies," E. E. Burris, "On Direct and Indirect Discourse," E. Adelaide Hahn, "The Loeb Classical Library," C. Knapp,

"Vergil, Aeneid 7 8-9," Mary E. Campbell, "Melanchthon A German Humanist," A. P. Wagener, "Humor in Homer and in Vergil," J. W. Hewitt, "Catullus 4—Was Catullus's Phasellus a Racing-Yacht," G. D. Kellogg, "Samuel Butler and Homer Once More," A. Shewan, "Clouds, Rainbows, Weather Galls, Comets, and Earthquakes as Weather Prophets in Greek and Roman Writers," E. S. McCartney, "The Classical Element in Smollett, Rodenick Random," C. Knapp, "Tendencies in the History of Ancient Religion," E. Ricca, "The Blonde Aeneas Vergil, Aeneid 1 592," M. B. Ogle, "Private and Public Benefactions in Athenian Litigation," W. P. Clark, "Historia Romana Roman Storehouses," D. B. Kaufman, "Honor in Present Day Quotation," C. J. Kneiser, Jr.

In *Transactions and Proceedings of the American Philological Association*, lvi, which contains the papers read before the association at its meeting of December, 1928, the following articles appeared: "Voices Fluvius, Modulatio, and Plasma in Latin Phonology," M. H. Liddell, "A Discussion of Some Passages in the Prologue to the *Georgics* (<of Vergil>), Gertrude Hirst, "The Felicity of *Infelix* in Vergil's *Aeneid*," H. F. Rebert, "Hymns and Sequences of the Saturn Use, an Approach to the Study of Medieval Hymnology," Ruth E. Messenger, "Alexander at the Caspian Gates," A. R. Anderson, "Phalerum and the Phaleric Wall," J. Day, "The Discovery of the Wonder Child," M. B. Ogle, "The Names of the Jews of Ancient Rome," H. J. Leon, "A Deed of Sale at Olynthus," D. M. Robinson, "The Homeric Gloss A Study in Word-Sense," M. Parry.

From the *Philological Quarterly*, viii, we may mention "Elision in the Latin Dactylic Hexameter," R. B. Steele, "Zeugma in Vergil's *Aeneid* and in English," E. S. McCartney, "The Homeric Repetitions Again," A. Shewan, "Excursions in Greek and Roman Histories," H. V. Canter, "Roman Allusions in Rabbinic Literature," M. Hadass.

In England the more accessible repositories of the results of classical study are *The Year's Work in Classical Studies* (see the second paragraph of this article), *The Classical Quarterly*, and *The Classical Review*. The articles in *The Classical Review* are very numerous, and are in consequence very short. From *The Classical Quarterly*, xxi, we mention the following: "Nugae Epigraphicae," M. N. Tod (a discussion of several Greek inscriptions), "Notes on Demetrius, *De Elocutione*," J. D. Denniston, "The Hymn to Hermes," T. L. Agar, "Some Eonian Phrases in the *Aeneid*," C. M. Bouia, "Ictus and Accent," E. A. Sonnenschein, "Demetrius, *De Elocutione*," J. F. Lockwood, "The *Argonautica* of Valerius Flaccus," R. Syme, "Plato and Allegorical Interpretation," J. Tate, "Notes on *Prometheus Vincitur* (<of Aeschylus>), G. Thomson.

Mention has been made in various issues of the YEAR BOOK of the special attention that for some years past has been paid in the United States to the study of Medieval Latin, medieval life, etc. The Medieval Academy of America has published three important works (besides four volumes of its quarterly journal entitled *Speculum*). These works are L. Cooper, *A Concordance of Bothius*, P. F. Jones, *A Concordance of the Historia Reclusiana of Bede*, and a magnificent work, E. K. Rand, *A Survey of the Manuscripts of Tours* (vol. 1 contains the text, vol. 2, splendid plates).

lish language over the world. It is an immense and implacable effort for intellectual colonization that threatens us." To which François Poncet, Under-Secretary for Beaux Arts, replied that his government was determined "to defend the independence of French thought." And the third bit of evidence is supplied by Spain, whose dictionaries have been the most conservative and reactionary of all. An Associated Press dispatch from Madrid, dated December 29, stated that "a campaign is under way to have the Academy of the Spanish Language incorporate in its dictionary a large number of American words, as well as new terms of the sciences and arts, to enable the Castilian language to serve modern necessities."

Such was the condition in the world of speech at the end of 1929. What the outcome of the struggle for leadership will be no one could foresee, but there was no doubt that English had won a great tactical victory. Whether it could consolidate its forces so as to dominate the field was another question. However, one was enabled to predict, in view of the conditions that obtained on all sides, that all minor dialects and dialects would tend quickly to die. Hence, scholars should avail themselves of every opportunity of studying them, for, with the rapid progress of events, there is no telling when many will be classed as dead.

GENERAL. Among the general works of interest to the student of philology were the following: L. A. Waddell, *The Makers of Civilization in Race and History* (London), a comprehensive account of the early history of civilization; T. S. Foster, *The Travels and Settlements of Early Man* (N. Y.), a study of the origins of human progress; G. Renard, *Life and Work in Prehistoric Times* (N. Y.), a new volume in the History of Civilization Series, translated from the French; E. Bevan, *Sabyls and Seers* (Cambridge, Mass.), an investigation into ancient religion; G. Kohler, *A History of Costume* (N. Y.), a new edition by Emma von Sichert, and translated by A. K. Dallas, of an authoritative work tracing the history of costume from Egypt, Ethiopia, Syria, Phoenicia, Greece, etc. down to modern times; E. F. Schollett, *The Whirligig of Taste* (N. Y.), a new volume in the Hogarth Lectures, sketching the history of literary taste; K. Clark, *The Gothic Revival* (N. Y.), a study in the history of taste in general; A. Selwyn-Brown, *The Physician Throughout the Ages* (N. Y.), a second volume in the history of medicine; and C. J. S. Thompson, *The Mystery and Art of the Apothecary* (Phila.), tracing the history of the use of drugs from Babylonia, Assyria, and Egypt down through the centuries.

Passing now to Africa and the Near East, a very important inventory of recent extraordinary discoveries was V. G. Childe's, *The Most Ancient East* (N. Y.), in which especially the predynastic phase of Egyptian culture known as the Badarian, which was discovered in 1924, is depicted with rare skill, such as it was lived prior to 3000 B. C. Other works dealing with Egypt include J. Baikie, *A History of Egypt* (2 vols., N. Y.), covering the earliest times to the end of the eighteenth dynasty; H. H. Nelson and U. Roessler, *Medinet Habu, 1923-28* (Chicago), an account of the excavations and architectural surveys of the temple of Amenhotep III in Egypt; J. Capart, *Documents pour servir à l'étude de l'art égyptien* (N. Y.), containing a series of

illustrations; G. R. Tabouis, *The Private Life of Tutankhamen* (N. Y.), an account of life, religion, and politics at the court of the Egyptian King; and P. G. P. Theban, *The Transit of Egypt* (N. Y.), a survey of Egypt's history, from the beginnings to the present day, with special attention to modern times. C. von Hoffman, *Jungle Gods* (N. Y.), edited by E. Lohrke, provides an interesting investigation into the complicated and secret system of tabus, magic formulas, symbols, rites, etc., of the African native, whether of jungle or plain.

Among numerous other works on Central, South, and West Africa may be noted Dorothy Fairbridge, *The Pilgrim's Way in South Africa* (Oxford), a descriptive account; A. London, *A Very Naked People* (N. Y.), a translation from the French of the author's account of his travels through French Sudan and the Congo; Rev. A. T. Bryant, *Olden Times in Zululand and Natal* (N. Y.), containing the interesting political history of the Eastern-Nguni clans; S. J. ... *The Green Wall of Mystery* (West ...), relating the author's adventures in the hinterland of West Africa; and *Eastern Africa Today* (London), a detailed descriptive account edited by F. S. Joelson.

Islam was likewise coming into its own as the following titles indicate: H. Lammens, *Islam Beliefs and Institutions* (N. Y.), translated from the French by Sir E. D. Ross; F. W. Hasluck, *Christianity and Islam Under the Sultans* (2 vols., N. Y.), a history dealing with the interactions between Christianity and Islam in Asia Minor and the European provinces of the former Turkish Empire; Sir T. W. Arnold and Prof. A. G. H. ... *The Islamic Book* (N. Y.), a study of its art and history from the seventh to the eighteenth centuries; Abn Bakr Ibn Tufail, *The History of Hamy Ibn Luqman* (N. Y.), a revised edition of this medieval philosophical romance, translated from the Arabic by S. Ockley; and S. M. Zwemer, *Across the World of Islam* (N. Y.), being studies in aspects of the Mohammedan faith Turkey and its history and literature are studied in F. Downey, *The Grande Turke Suleyman The Magnificent, Sultan of the Ottomans* (N. Y.), a biography of the great leader of the sixteenth century; and *The Wiles of Women* (N. Y.), a collection of tales translated from the Turkish by J. A. Decourdemanche.

Turning now to the Far East, first may be noted R. J. Casey, *Four Faces of Siva* (Indianapolis), in which is presented all the available archeological information regarding the ancient Khmers, that mysterious vanished race that built the majestic temples, walls, and cities of Angkor in French Indo-China. Works of interest relating to Japan and China include the following: E. A. Lombard, *An Outline History of Japanese Drama* (Boston); *The Year Book of Japanese Art*, by the Committee of Japan on Intellectual Cooperation; K. Yamata, *The Shoji* (N. Y.), being sketches in Japanese life; *The Pillow Book of Sei Shonagon* (Boston), an account of the court life of old Japan translated from the Japanese by A. Waley; E. V. Gatenby, *The Cloud Men of Yamato* (N. Y.), an outline of mysticism in Japanese literature; H. and Alice Foght, *Unfathomed Japan* (N. Y.), a sketch of the country, its people and their customs; *Imagery in Jade* (N. Y.), translations from classical and modern Chinese poetry made by A. Christy; *China's Mother of Gardens* (Boston); E. T. Williams, *China Yesterday and*

*Today* (N. Y.), the fourth revised edition of this authoritative work; H. B. Morse, *The Chronicles of the East India Company Trading to China, 1635-1834* (Cambridge, Mass.), a Harvard University publication, containing much valuable data. A. F. Legendre, *Modern Chinese Civilization* (N. Y.), a valuable study translated from the French, K. S. Latourette, *A History of Christian Missions in China* (N. Y.), a comprehensive history from earliest times to 1926; *Tu Fu The Autobiography of a Chinese Poet* (Boston), arranged from his poems and translated by Florence Ayscough, including a historical year record, biographical index, etc., and *Tu Fu Wanderer and Minstrel Under Moons of Cathay* (Portland, Me.), containing translations of poems by Edna W. Underwood and Chi Hwang Chu.

With regard to mysterious Tibet an event of importance was the opening in New York of the Roerich Museum Building which contains objects and paintings brought from that country. N. Roerich's *Atlas Himalaya* (N. Y.) consists mainly of a travel diary of journeys through India, Tibet, Chinese Turkestan, and Siberia. *Tibet's Great Yogi Milarepa* (Oxford), edited by W. Y. Evans-Wentz, is described as a biography from the Tibetan, being the Jetsun-Kahhum or Biographical History of Jetsun-Milarepa, according to the last Lama Kazi Dawa-Sandup's English rendering. Two other works of interest are Sir C. Bell, *The People of Tibet* (N. Y.), a new volume by the author of *Tibet Past and Present*, and D. MacDonald, *The Land of the Lama* (Phila.), an account of the manners and customs of the people of Tibet.

Intriguing India again called forth a number of impressive volumes of which the most characteristic are S. V. Venkateswara, *Indian Culture Through the Ages* (N. Y.), of which the first volume treats of education and the civilization of culture, S. V. Karandikar, *Hindu Marriage* (Bombay), a systematic study of Hindu marriage outside the Gotra; A. W. Ryder, *The Bhagavad-Gita* (Chicago), a good metrical translation into English, Mrs. Rhys Davids, *Stories of the Buddha* (N. Y.), containing selections from the Jataka, J. B. Prynne, *History of Buddhism* (N. Y.), in which the author studies Buddhism in India, Ceylon, Burma, Siam, Korea, China, and Japan, but omits that of Tibet, Nepal, and Mongolia because of its confusion with non-Buddhist elements in those countries, *Hispadesa* (N. Y.), a translation of the most celebrated Sanskrit collection of fables and stories, made by F. Johnson; *The Lights of Canopus* (N. Y.), containing 36 reproductions in color from the paintings in a manuscript of Indian fables, belonging to the greatest period of Mughal art, with a preface by L. Binyon and descriptions of the fables and their illustrations by J. V. S. Halkinson, D. G. Mukerji, *Devotional Passages from the Hindu Bible* (N. Y.), being a series of selections from the Upanishads; J. E. Abbott, *Dasopant Digambar* (Summit, N. J.), being a translation of the *Dasopant Charitra* *Romantic Tales from the Punjab* (vol. 1, Oxford), collected and edited by Rev. C. Swynnerton in a new edition, W. J. Hatch, *The Land Pirates of India* (Phila.), a history of the Kuraver caste in South India, the origin of whose perverted ethics is lost in myth, *The Madras States Directory, 1928* (Cochin), a reference work devoted to the five Madras States of Cochin, Travancore, Pudukkottai, Sandur, and Banganapalle; P. C. Ray,

*Life and Times of C. R. Das* (N. Y.), a biography of the distinguished lawyer who later became a devoted disciple of Gandhi; D. W. King, *Living East* (N. Y.), an account of travels in India and Afghanistan; Mildred W. Pinkham, *A Bungalow in India* (N. Y.), stories of life in India; Mrs. A. Parker, *Children of the Light in India* (N. Y.), brief biographies of some Indian Christians; E. Wood, *An Englishman Defends Mother India* (Madras), J. T. Sunderland, *India in Bondage* (N. Y.), recommended by Gandhi and Tagore as the most important book on India; G. S. Dutt, *A Woman of India* (London), the life of Saroj Nalini, founder of the Women's Institute Movement in India; Rabindranath Tagore, *Letters to a Friend* (N. Y.), edited, with two introductory essays, by C. F. Andrews, and J. Krishnamurti, *Life in Freedom* (N. Y.), consisting of nine short addresses.

The India Society of America, Inc., directed by H. G. Govil, inaugurated, on Dec. 7, 1929, its first year for an India centre with a dinner at 11 A. M. The speakers were H. A. Jules-Bois, Dr. A. K. Coomaraswamy, Upton Close, Theodore Dreiser, Willy Pogany, Dr. J. T. Sunderland, and the presiding officer, J. L. Gerg. The International School of Vedic and Allied Research began in October, 1929, the publication of the *Journal*, the leading article of which is entitled "India and the West," by C. R. Lannan, distinguished Professor of Sanskrit at Harvard.

Persian history and literature are studied in R. W. Rogers, *A History of Ancient Persia* (N. Y.), a very scholarly work covering the period from the earliest times to the death of Alexander the Great, E. G. Browne, *A Literary History of Persia* (4 vols., Cambridge, Eng.), a new edition of this standard work extending from the earliest times to 1924, R. Levy, *A Baghdad Chronicle* (ib.), a social history of Bagdad under the Abbasid Caliphate, *Stories from Sadi's Bostan and Gulistan* (N. Y.), a collection of Persian tales translated and revised by R. Levy; and N. M. Penzei, *Sir John Chardin's Travels in Persia* (London), a reprint of a book first published in 1720 and now included among the classics of travel and exploration. A Mahdesian continues his excellent work on Armenia through the columns of his well-known review, *New Armenia*, published in New York. Another indication that that city is fast becoming the centre of world cultures may be seen in the activity of this group of cultural enthusiasts with whom the writer of these lines has had the pleasure of cooperating.

Before devoting our attention to the different languages of Europe, it seems advisable to list here some general works of interest to philology and allied researches. Thus, R. Byron's *The Byzantine Achievement: An Historical Perspective A.D. 330-1453* (N. Y.) contains a study of how the Byzantine civilization was formed and of its value to both ancient and modern times. *Life in the Middle Ages* (Cambridge, Eng.) consists of the second and third volumes of this new four-volume edition of a work made up of selections, translated and annotated by G. G. Coulton, from characteristic mediæval authors. Other works of a similar general character are E. M. Hulme, *The Middle Ages* (N. Y.), a textbook, S. Sitwell, *The Gothic North* (Boston), a study of mediæval life, art, and thought, C. Foligno, *Latin Thought During the Middle Ages* (Oxford), a historical study translated from the Italian, G. C. Sellery and A. C. Krey, *The Founding of*

*Western Civilization* (N. Y.), an interpretation of mediæval life and thought with regard to its influence on the modern world; E. K. Rand, *A Survey of the Manuscripts of Tours* (2 vols., Cambridge, Mass.), of which the first volume contains the text and the second, plates reproducing specimen pages from the manuscripts, Otto, Bishop of Freising, *The Two Otices* (N. Y.), a chronicle of universal history down to 1146 A.D., translated, with an introduction and notes, by C. C. Mierow, *Illarum Versus et Ludi* (N. Y.), the text of these mediæval Latin poems reedited, with a critical introduction, by J. B. Fuller, A. Dickson, *Valentine and Orson* (N. Y.), a study in late mediæval romance, Lynn Thorndike, *Science and Thought in the Fifteenth Century* (N. Y.), studies in the history of medicine and surgery, natural and mathematical science, philosophy and politics, J. W. Thompson, editor, *The Civilization of the Renaissance* (Chicago), a symposium composed of J. W. Thompson's "Exploration and Discovery During the Renaissance," F. Schevill's "The Society of the Italian Renaissance," G. Sarton's "Science in the Renaissance," and G. Rowley's "The Art of the Renaissance," R. B. Mowat, *A History of European Diplomacy, 1451-1789* (N. Y.), a study on how wars have been made, concluded, or prevented by diplomacy; and M. Brion, *Attala: The Scourge of God* (N. Y.), a biography translated from the French.

The International Institute of Intellectual Co-operation of the League of Nations constituted during the year an International Committee of Experts in Linguistic Bibliography, the purpose of which is to coordinate the reviews of linguistic bibliography, general and special, from its origin up to the present day. The chairman of the committee was A. Meillet, the celebrated philologist of the University of Paris, and its membership included M. Bartoli, editor of the *Archivio glottologico italiano*, J. Haust, *Atlas linguistique de la Belgique*, J. Jud, *Atlas linguistique de la Suisse*, S. Puccini, *Dacoromania*, Salverda de Grave, *Neophilologus*, A. Terracher, *Revue de linguistique romane*, M. Grammont, *Revue des langues romanes*, R. Menéndez Pidal, *Revista de Filología española*, J. Leite de Vasconcellos, *Revista lusitana*, M. Roques, *Romania*; J. L. Gerig, *Romanic Review*, and A. Hilka, *Zeitschrift für Romanische Philologie*. Authors were also requested to submit brief summaries of all books, articles, etc., they had published.

In an address delivered before the Special Libraries Association of Boston on December 17, 1928, Prof. J. Geddes, Jr., of Boston University, made an interesting and valuable review of English, French, Italian, Spanish, Portuguese, German, and Esperanto dictionaries during the past century or more. Professor Geddes advocates above all a uniform system of key symbols for English dictionaries, pointing out that readers fail to read any special key alphabet because they are confused by the more than 600 such systems already in use among lexicographers. The alphabet of the International Phonetic Association he finds to be better adapted to the sounds of French than those of English, owing to the diphthongal character of our English vowels. This uniform phonetic alphabet which the conference of phoneticians failed to agree upon in Copenhagen in 1925 was, as Professor Geddes intimated, the primary problem of the future. The recent attempt (Feb. 2, 1929) in the same direction made by Prof. H. H. Bender,

of Princeton University, with the coöperation of nearly 100 scholars, resulted in the simplification of some forty different languages in Europe, Asia, and the Philippine Islands.

ENGLISH. In a paper read before the Modern Language Association of America on Dec. 30, 1929, Prof. M. A. Hanley, of the University of Wisconsin, stated that the average American knows about 60,000 words, or four times as many as the world's greatest employer of words, Shakespeare, but the difference is that the great poet knew his words intimately, whereas the average American "merely recognizes them as distant acquaintances. He may not be able to spell them or even use them in a sentence, but they convey meaning to him." This is indeed "a great many more words than the average person is generally given credit for," but, as Professor Hanley adds, such a knowledge is not especially significant, for "it is a mistaken notion to assume that the number of words that a man uses is a gauge to his intelligence." Sir William Craigie of the University of Chicago, who is compiling a Dictionary of American English, declared at the same meeting that since the early sixteenth century 400,000 words have been added to the American vocabulary.

The unusual popularity of Chaucer was an enigma of which it was difficult to find a satisfactory explanation. Scholarly interest in the poet, which has continued unabated for many years, cannot possibly have exerted any profound influence on the public, but, however that may be, "wise-cracking" New York soon was to welcome to its midst at least three new editions of *The Canterbury Tales*. First, that of the Modern Library consisting of the text of W. W. Skeat with an introduction by Louis Untermeyer, next, that of Covici-Friede in a two-volume folio edition containing in parallel columns, both the original text and a translation into modern English verse by William Van Wyck, and, finally, a modern English version prepared for Longmans, Green & Co. by F. E. Hill, to be published early in 1930. In addition, there was E. F. Shannon, *Chaucer and the Roman Poets* (Cambridge, Mass.), which discusses the English poet's indebtedness to Ovid and other poets of classical antiquity.

Works of a general character include L. Spence, *The Mysteries of Britain* (Phila.), a description of the secret traditions of ancient Britain, John G. Elliot and Marg. M. Elliott, *Life and Work of the People of England* (2 vols. N. Y.), which contains a pictorial record, from contemporary sources, of the fourteenth and seventeenth centuries, O. Marti, *Economic Causes of the Reformation* (N. Y.), recounting the struggle for the overthrow of the economic sway of the English clergy beginning in the twelfth century; E. Legouis and L. Cazamian, *History of English Literature* (N. Y.), a revised edition in one volume, S. Halkett and J. Laing, *Dictionary of Anonymous and Pseudonymous English Literature* (Edinburgh), of which the present volume (v, Q-S) had been revised and enlarged by D. J. Kennedy, W. A. Smith, and A. F. Johnson, H. Wolfe, *Notes on English Verse Satire* (N. Y.), containing the history of satire in English verse from Chaucer to the present day, *English Literature Series* (N. Y.), a six-volume anthology of English literature, edited by J. D. McCallum, of which the volumes published deal with "The Beginnings to 1500" (vol. 1) selected by the editor, "The Renaissance" (vol. 11), by R. W.

Bolwell, and "The Eighteenth Century" (vol. iv), by J P Bickensederfer; *Poetry of the English Renaissance, 1509-1660* (N Y.), an anthology edited by J W Hebel and H H Hudson, *Loving Mad Tom* (London), a collection of bedlamite verses of the sixteenth and seventeenth centuries edited by J Lindsay, and A H. Thorndike, *English Comedy* (N Y.), a history

Studies of the language and literature of special periods include G P Krapp and A G Kennedy, *The Anglo-Saxon Reader* (N Y.), containing also a grammar and glossary, L C Wimberville, *Folklore in the English and Scottish Ballads* (Chicago), Charlotte Dacre, *Zofloya, The Moor* (London), a reprint of a historical romance of the fifteenth century, first published in 1806, Edmund Spenser, *The Faerie Queene* (N Y.), the text of the second book, edited with notes and comments, by G R Potter and J. Clime, G B Harrison, *England in Shakespeare's Day* (N Y.), as revealed by the poet's contemporaries, E I Phipps, *Shakespeare's Haunts Near Stratford* (Oxford), a historical and descriptive account, *Shakespeare and His Fellow Dramatists* (2 vols, N Y.), a selection of Elizabethan plays, edited by E H C Oliphant, Sir D B Baiton, *Shakespeare and the Law* (Boston), the poet's knowledge of law and the legal profession as revealed by his plays, G F Brady, *Short Studies in Shakespeare* (N Y.), a presentation of certain problems of literary or psychological interest in the poet's works, A Thaler, *Shakespeare's Soliloquies* (Cambridge, Mass.), discussing not only the poet's eloquence of the "unsaid," but also the "unhappy happy ending" of some of his plays, his indebtedness to Milton and other contemporaries, E Nungever, *A Dictionary of Actors* (New Haven, Conn.), containing biographical notes of actors and other persons associated with the public presentation of plays in England before 1642, and *British Plays from the Restoration to 1820* (Boston), with introductions and bibliographies by the editor, M J Moses

A few special studies and monographs may now be noted. Otelia Cromwell, *Thomas Heywood* (New Haven, Conn.), a study in the Elizabethan drama of everyday life, Celeste Turner, *Anthony Munday* (Berkeley, Calif.), a biographical and critical study of an Elizabethan man of letters, *The Poems of Sir Walter Raleigh* (Boston), collected and edited by Agnes M C Latham, E Muir, *John Knox* (N Y.), a biography of the Calvinist leader; F S Boas, *Morlowe and His Circle* (Oxford), a biographical survey, Kathleen E Hantwell, *Lucretius and Milton* (Cambridge, Mass.), a study of the influence of a Christian author upon Milton, A Ponsonby, *Samuel Pepys* (N Y.), a biography, *The Pepys Ballads* (2 vols, Cambridge, Mass.), edited by H E Rollins, to be completed in six volumes, *Further Correspondence of Samuel Pepys* (N Y.), edited by J R Tanner from family papers in the possession of J Pepys Cockerell, and A S Borgman, *Thomas Shadwell: His Life and Comedies* (N Y.), a biographical and critical study

The great eighteenth-century lexicographer, Samuel Johnson, and his biographer, James Boswell, were the subjects of universal discussion by both philologists and laymen. In fact, the *Private Papers of James Boswell from Malahide Castle* (N Y.), which was being edited from the Isham collection by G Scott and of which six volumes appeared during the year,

were pronounced as one of the most outstanding of literary discoveries of the age. When completed the collection will comprise 16 or 18 volumes in a limited edition. Other works devoted to this most interesting pair of scholars include C Hollis, *Dr Johnson* (N Y.), a biography, H Salpeter, *Dr Johnson and Mr Boswell* (N Y.), F A Pottle, *The Literary Career of James Boswell, Esq* (Oxford), a collection of bibliographical materials, and A S Collins, *Authorship in the Days of Johnson* (N Y.), a study of the relations between author, patron, publisher, and public from 1726 to 1780

London is the subject of the following interesting studies: C Pendrill, *Wanderings in Medieval London* (N Y.), illustrated from old prints, H Prince, *Half Hours in Old London* (N Y.), being historical and descriptive sketches, W H Irving, *John Gay's London* (Cambridge, Mass.), a study illustrated from the poetry of the time, C J S Thompson, *The Quacks of Old London* (Phila.), G Smith and F Bengel, *The Oldest London Bookshop* (London), established in 1728 in Bond Street, and A St J Adcock, *Famous Houses and Literary Shrines of London* (N Y.), a new and revised edition

Of interest to bibliographers are G F Barwick, *The Reading Room of the British Museum* (London), the story of its development and activities, M A Shaeffer, *Some Forerunners of the Acropolis in England, 1476-1622* (Phila.), a study in the "journalism" of Oliver Cromwell (Cambridge, Mass.), representing the first attempt to bring together in complete form material relating to the Great Protector

In the *New England Quarterly* (Oct 1928), S F Batchelder reveals the debt owed by American speech to the sea. Such expressions as "first-rate" and "second-rate," derived from "the five rates of sizes of ships of war," "blubbers," "carry on," "skylark," "on deck"—the latter now used in baseball—and a host of others are shown to be of marine origin. In a like manner, it may be added, the automobile, aviation, moving pictures—viz., "parking," "close-up," etc.—have introduced a vocabulary into current speech that would be incomprehensible to a person of the "gay nineties" could he be revived

G L Apperson, *English Proverbs and Proverbial Phrases* (N Y.) is a historical dictionary extending from the twelfth century to our own time. Other works are *What Does Your Name Mean* (Boston), a brief list of 2000 American family names and their meaning, edited by L T DeCelles, *Pitman's Technical Dictionary of Engineering and Industrial Science* (vol. 1, N Y.), compiled in seven languages by E Slater, G Roberts, *The Heart of Words* (N Y.), a manual of religious terms for writers of sermons, A Pope, *An Introduction to the Language of Drawing and Painting* (vol. 1, Cambridge, Mass.), containing painter's terms, *Report of the Committee on Terminology* (Boston), issued by the Federal Council on Art Education, H G Brady, *Transportation Glossary* (N Y.) . . . . .

terms and phrases in air, highway, ocean transportation, and in post traffic, H W and F G Fowler, *The Concise Oxford Dictionary of Current English* (N Y.), a revised and enlarged edition, M A Pink, *Dictionary of Current Idioms* (N Y.), a manual of grammatical idioms and usage, H R Croeland, *The Psychological Methods of Word-Association and Reac-*

tion-Time as Tests of Deception (Eugene, Oregon), an account of some experiments.

GERMAN The inauguration of the Deutsches Haus at Columbia University indicated a revival of interest in things German. The Federation of German-American Societies began a campaign for a national centre of German culture to be created at Washington, D. C. H. G. Wendt, "American Bibliography of Germanic Language and Literature" appeared in *The Germanic Review* (N. Y., 1929, pp. 92-102). Other works are H. S. King, *Echoes of the American Revolution in German Literature* (Berkeley, Calif.), A. Goldschmidt, *German Illumination* (2 vols., N. Y.), dealing with the Carolingian and Ottoman miniatures, F. C. Herbert and L. Hirsch, *A New German-English Dictionary for General Use* (N. Y.), including colloquial vocabularies of both languages and a study of German pronunciation, B. Q. Morgan, *German Frequency Word Book* (N. Y.), and E. F. Hauch, *German Idiom Last* (N. Y.).

In Scandinavia may be mentioned *Denmark's Best Stories* (N. Y.), edited by Hanna A. Larsen for the American Scandinavian Foundation, and *Studies and Records* (vol. iv, Northfield, Minn.), studies in the history of Norwegian immigration to America, issued by the Norwegian-American Historical Association.

CELTO-COURSES in Celtic given by Prof. J. Dunn, of the Catholic University, figured for the first time in the summer session of the Linguistic Institute at Yale University in July. The School of Irish Studies of Fordham University issued an announcement entitled *Irish Culture* (N. Y.), edited by J. C., E. J. K. and J. E. T. Works deserving mention include H. C. Lawlor, *Ulster Its Archaeology and Antiquities* (Belfast), beginning with the arrival of man in Ireland, A. De Blacum, *Gaelic Literature Surveyed* (N. Y.), a historical study, M. O. Fitzgerald, *The Mystery of the Haunted Wing and Other Stories* (Boston), a collection of five stories from Irish folklore, P. O'Donnell, *Adiugolce*, a tale of Ireland, A. E. Malone, *The Irish Drama* (N. Y.), from 1896 to the present, T. Macaulay, *Donn Byrne Bard of Aimagh* (N. Y.), a biographical and critical study, C. F. Howell, *An Irish Ramble* (N. Y.), containing interesting legends and fairy tales, and Rev. J. H. Cotter, *Tipperary* (N. Y.), the history of an Irish town.

The American Iona Society received from the city of Inverness for its headquarters a donation of a building and 24 acres of land. Contributions to the study of Scottish Gaelic include N. MacNeill, *The Literature of the Highlanders* (Stirling), a study of the race, J. J. MacGillivray, *poetry*, and music edited, with a new chapter, by J. M. Campbell, J. M. McPherson, *Primitive Beliefs in the Northeast of Scotland* (N. Y.), a survey of the local folklore during the past three centuries, and R. Scott, *Scotland Through American Eyes* (Philadelphia), a study of various phases of Scotch life.

A worthy contribution to the study of early Welsh is A. Grinstead, *The Historia Regum Britanniae of Geoffrey of Monmouth* (N. Y.), containing the first Latin texts taken direct from the earliest manuscripts, with a literal translation of the Welsh manuscript No. LXI of Jesus College, Oxford, by the late Canon R. E. Jones.

SLAVIC A few of the more important titles of works dealing with this field include M. E. Durham, *Some Tribal Origins, Laws and Customs*

*of the Balkans* (N. Y.), a study of survivals of primitive life in the Balkan states, Benito Mussolini, *John Huss* (N. Y.), a biography of the Czech religious reformer, translated from the Italian, C. A. Manning, *An Anthology of Czechoslovak Poetry* (N. Y.), containing selections from the best translations in English, E. Dostal and J. Simu, *Baroque Architecture of Prague* (N. Y.), with a preface by L. Einstein, J. Kozisek, *A Forest Story* (N. Y.), an animal story translated from the Czechoslovak, *Poems by Jan Kochanowski* (Berkeley, Calif.), selections from the work of a sixteenth-century Polish poet in translation, with an introduction, G. Vernadsky, *A History of Russia* (New Haven, Conn.), from the earliest times to the present, J. Kuntz, *Russian Literature and the Jew* (N. Y.), a sociological study, *Russian Schools and Universities in the World War* (New Haven, Conn.), A. Pushkin, *The Captain's Daughter* (N. Y.), translated from the Russian, and Julia D. Adams, *Vaino A Boy of New Finland* (N. Y.), Finnish-Russian folklore and history told for young readers.

ROMANCE The most complete and detailed bibliography of "Romance Linguistics in 1927" published in any language is that of Pauline Taylor, which appeared in the *Romance Review* (N. Y., 1929, pp. 85-102, 189-201, 285-297). P. R. Roland-Marcel's "The Bibliothèque Nationale of France," which appeared in the same *Review* (pp. 111-121), sketches the history of the world's greatest library from the fifteenth century to the present day. P. Van Tieghem's "Influences et Simultanésités en Histoire Littéraire" (*Romance Review*, 20, 1929, pp. 137-140) continues the discussion of the methods of literary research in which several European and American scholars have taken part. Finally, mention should be made of H. D. Learned's "The Cause of the Breaking of Vulgar Latin Open E and O," which likewise appeared in the *Romance Review* (pp. 331-9).

Among the publications issued by the Modern Foreign Language Study are M. A. Buchanan and E. D. MacLhee, *An Annotated Bibliography of Modern Language Methodology* (Toronto), C. A. Wheeler, *Enrollment in the Foreign Languages in Secondary Schools and Colleges in the United States* (N. Y.), and A. Coleman, *The Teaching of Modern Languages in the United States* (N. Y.). Mention may also be made of G. O. Russell, *The Lovel Its Physiological Mechanism as Shown by X-Ray* (Columbus, Ohio); H. Baulig, *Exercices Cartographiques* (Strasbourg), L. Periet, *La Titulature Impériale d'Hadrien* (Paris), and *Volkstum und Kultur der Romanen* (Hamburg), a new periodical published by the University of Hamburg, also is to be noted.

FRENCH H. Brémond, *A Literary History of Religious Thought in France* (N. Y.) deals, in the first volume, with devout humanism. H. F. Muller's *The Chronology of Vulgar Latin* (Heidelberg) attempts to prove that the development of Vulgar Latin into Old French took place very rapidly in the ninth century, thereby upsetting all previous theories which held that the process was a long and slow one. This revolutionary theory will no doubt be subjected by scholars to most careful scrutiny. The "Essai de Sociologie Linguistique," contributed by L. Jordan, of the University of Munich, to the *Romance Review* (pp. 305-325) establishes the

methodology of the new science of semantics or semasiology, i.e., the history of meanings of words.

Contributions to the study of Old French include W. Foerster and Marg Rosler, *Sankt Alcaeus, Altfranzösische Legendendichtung des 11. Jahrhunderts* (Halle), K. Grass, *Adamspiel, Das Anglonormannische Mysterium des 12. Jahrhunderts* (3d ed., Halle), E. Brugger, *The Illuminated Tree in Two Arthurian Romances* (N. Y.), which incidentally explains the origin of the Christmas tree, *Tristan in Brittany* (N. Y.), a translation, with an introduction by G. Saintsbury, of a twelfth-century romance written by Thomas, the Anglo-Norman, E. M. Grimes, *The Lays of Desre, Graelent and Melion* (N. Y.), an edition of the texts with an introduction, *Sir Lancelot of the Lake* (N. Y.), a translation of a French prose romance of the thirteenth century, Helen E. Manning, *La Vie de Saint-Thibaut* (N. Y.), an edition of a French poem of the thirteenth century; Andrew Lang, *Aucassin et Nicolette* (N. Y.), a reprint of a translation which originally appeared in 1887, E. Walberg, *Deux Versions Inédites de la Légende de l'Anté-Christ* (Lund), editions of poems of the thirteenth century, and K. Berovic, *The Crusades* (N. Y.), a colorful, but unsympathetic account of the great movements that dominated Europe from the end of the eleventh to the middle of the thirteenth century.

The later Middle Ages are represented by Eileen Power, *The Goodman of Paris* (N. Y.), a first translation into English of a treatise on moral and domestic economy written about 1393, A. France, *Joan of Arc* (2 vols., N. Y.), a new edition in English of a celebrated work, H. Belloc, *Joan of Arc* (Boston), a brief biography, C. P. H. Nason, *Jeanne d'Arc* (Boston), a lecture; P. Champion, *Louis XI* (N. Y.), an authoritative and very interesting biography of the great French King of the fifteenth century, D. B. Wyndham Lewis, *King Spider. A Life of Louis XI of France* (N. Y.), and O. Cartellieri, *The Court of Burgundy* (N. Y.), a history of the Dukes and the cultural life of their court.

Studies in the French Renaissance include J. L. Geng Antoine Arlier and the Renaissance at Nîmes (N. Y.), D. Muirrasu, *La Poésie Néolatine et la Renaissance des Lettres Antiques en France (1500-1549)* (Paris), a study of Neo-Latin poetry, *The Compendium Universitatis Parisiensis of Robert Goulet* (Phila.), an annotated translation of this interesting account of the University of Paris; *The Last Will and Testament of the Late Nicolas Jenson* (Chicago), a first translation into English of the will of this fifteenth-century printer by Justice Pierce Butler of the Supreme Court, S. Putnam, *François Rabelais* (N. Y.) and A. J. Nock and C. R. Wilson, *François Rabelais The Man and His Work* (N. Y.), . . . and critical studies, A. France, *Rabelais* (N. Y.), lectures of the great author given in South America in 1900, translated by Ernest Boyd, *All The Extant Works of François Rabelais* (3 vols., N. Y.), a translation with critical text, variant readings, variorum notes and drawings attributed to Rabelais, by Samuel Putnam, H. Bordeaux, *Saint Francis de Sales* (N. Y.), a biography translated from the French, Frances H. Titchener, *L'École Auvergnate, Etude sur la Renaissance méridionale dans le Cantal* (Paris), *The Diary of Montaigne's Journey to Italy in 1580 and 1581* (N. Y.), a

new translation by E. J. Trechmann; *The Essays of Michael Lord of Montaigne* (N. Y.), a new edition of the Florent translation with an introduction by D. MacCarthy; C. H. Hartmann, *The Magnificent Montmorency* (N. Y.), a biography of Henri, Duc de Montmorency, 1595-1632, and H. Lavedan, *The Heroic Life of St. Vincent de Paul* (N. Y.), a . . . shepherd boy in the time of Henri . . .

V. Tornius, *Salons* (N. Y.), translated by Agnes Platt and Lillian Wonderley, provides pictures of society through five centuries, A. Tilley, *The Decline of the Age of Louis XIV., or French Literature, 1687-1715* (N. Y.) is an excellent survey of the literature and thoughts of France during the period of transition.

Finally, a few useful studies and texts should be mentioned, H. Fie, *La Grammaire des Fautes* (Paris), E. Mackel, *Die Kulturströmungen der Letzten Drei Jahrhunderte im Spiegel der Französischen Kunst* (Leipzig), Marg E. Hudson, *The Justaposition of Accents at the Rime in French Versification* (Phila.), M. H. Larmoyer, *French Homonyms and Synonyms* (N. Y.), F. D. Cheydeur, *French Idiom List* (N. Y.), and Hugo's *Pocket Dictionary* (Phila.), containing both French-English and English-French sections. See also FRENCH LITERATURE.

ITALIAN Studies dealing with the medieval and Renaissance periods of Italian literature include Helen F. Dunbar, *Symbolism in Medieval Thought and its Consummation in the Divine Comedy* (New Haven, Conn.), a historical and critical study, K. Vossler, *Medieval Culture* (N. Y.), an introduction to Dante and his times, translated by W. C. Lawton, E. Janni, *In Piccoletta Barchetta* (Milan), an introduction to Dante, F. Schevill, *The First Century of Italian Humanism* (N. Y.), Alice Curtayne, *Saint Catherine of Siena* (N. Y.), a biography, E. H. Wilkins, *Modern Discussions of Petrarch's Prose Letters* (Chicago), *The Decameron of Giovanni Boccaccio* (N. Y.), a new edition of the translation by J. M. Rigg, together with the essay on Boccaccio by J. A. Symonds, G. Myrick, *The Filostrato of Giovanni Boccaccio* (Phila.), the first complete English edition of Boccaccio's own love story, based on an Old French version of the story of Troy, G. Lipparini, *Giovanni Boccaccio* (Florence), D. Loth, *Loenzo The Magnificent* (N. Y.), a biography of the great Florentine, Katharine Gilson, *The Goldsmith of Florence* (N. Y.), a book about great craftsmen of the Middle Ages, P. Villari, *Life and Times of Niccolò Machiavelli* (N. Y.), a new edition; O. Ferrara, *The Private Correspondence of N. Machiavelli* (Baltimore), lectures by the Ambassador of Cuba, P. Toesca, *Florentine Painting of the Trecento* (N. Y.); Y. Yashiro, *Sandro Botticelli and the Florentine Renaissance* (N. Y.), a revised popular edition of a work first published in 1925 by the Medici Society, C. Ricci, *North Italian Painting of the Cinquecento* (N. Y.), A. De Rinaldis, *Neapolitan Painting of the Seicento* (N. Y.), S. G. Wiener, *Venetian Houses and Details* (N. Y.), Rose S. Nichols, *Italian Pleasure Gardens* (N. Y.), an important work; W. E. Greenwood, *The Villa Madama Rome*, a monograph on a famous villa of the Italian Renaissance, and Klabund, *The Incredible Borgias* (N. Y.), translated from the German.

Works by the two great philosophers of Italy are B. Croce, *The History of Italy, 1870-1915* (Oxford); and G. Gentile, *Studia Viviana*

(Florence), discussing the influence of Vico, the eighteenth-century philosopher.

The Italian Historical Society of America added several titles to its rapidly growing series of valuable publications (N Y) The Permanent Italian Book Exhibition, Inc. a non-commercial organization, held branch exhibitions in Paterson, N J, Cleveland, Philadelphia, and San Francisco.

PORTUGUESE AND PROVENÇAL. *Biblos*, official organ of the University of Coimbra, added several valuable publications to its series of *beshefte*. J Dunn's *Grammars of the Portuguese Language* (Washington, D C) is one of the best yet to appear.

The leading contributions in Provençal are J Andrieu and R Lavand, *Nouvelle Anthologie des Troubadours* (Paris), and F Mistral, *Gedukht* (Halle), edited by K Voretzsch.

SPANISH Contributions to bibliography include Clara L Penney, *Last of Works Printed Before 1601 in the Library of the Hispanic Society of America* (N Y), *Spain and Spanish America in the Libraries of the University of California* (vol 1, Berkeley), an extensive . . . and A D Savage, *Manuscripts in the . . . of the Hispanic Society of America* (N Y), a study of three manuscripts of the thirteenth to fifteenth centuries.

Other works of interest are E A Peers, *Ramon Lull* (N Y), a biography of the Mallorcan mystic, G T Southup, *El Cuento de Tristan de Leonis* (Chicago), *Clavijo's Embassy to Tamerlane, 1405-06* (N Y), translated from the Spanish by G Le Strange, Eliz D Trapiar, *Catalogue of Paintings (16th-18th Centuries)* (N Y), in the collection of the Hispanic Society, *Fourteenth Century Painting in the Kingdom of Aragon Beyond the Sea* (N Y), another publication of the Hispanic Society, Helen M Fox, *Patio Gardens* (N Y), a descriptive account, C M Villiers-Stuart, *Spanish Gardens, Their History, Types and Features* (N Y), and *Spanish Idiom List* (N Y), compiled by the Macmillan Company.

On Spanish America we have B Moses, *Spain Overseas* (N Y), published by the Hispanic Society, A H Verrill, *Great Conquerors of South and Central America* (N Y), M Brion, *Bartholome de Las Casas* (N Y), a translation from the French of a biography of the sixteenth century priest known as the "Father of the Indians", and *Some Spanish American Poets* (N Y), translated by Alice Stone Blackwell.

On Catalan we have A Par, *Catalan e Guelfa* (Barcelona). See also SPANISH-AMERICAN LITERATURES, SPANISH LITERATURE.

PHONETICS. A useful manual for teachers is *First Principles of Speech Training* (N Y), by Eliz Avery, Jane O Doirey, and Vera A Sickels. The *S P E Tract No. XXVII* (Oxford) contains recommendations for pronouncing doubtful words. O Jespersen, *An International Language* (N Y) reveals plans and specifications for a new artificial language.

**PHILOSOPHY.** For a number of years, Professors Whitehead and Dewey have occupied the centre of the stage in American philosophy, and it would be hard to overestimate the influence they have exerted, not only, of course, upon disciples, but, in a gradual and insidious way, upon philosophers in general. Recently an attempt has been made to discover a basic similarity in the doctrines of these two leaders, but a closer in-

spection of their works discloses, what indeed they widely different backgrounds and interests would have foretold, that their disagreements are far more significant than any chance and doubtful coincidence. In the year under consideration they fortunately resolved the matter themselves by publishing, each of them, a fairly definite statement of their positions.

Professor Dewey's book *The Quest for Certainty* (the Gifford Lectures, 1929) is an account of man's search for truth and peace in the face of the conflicts and the ceaseless change of his environment. Surrounded by mysteries, powerless to control the instrumentalities which alone could accomplish their desires, our ancestors had recourse to supernatural powers, whom they coerced or supplicated, as the case might be, as the only means of escaping from doubt and peril and so of attaining the certainty they craved. But having invented this other world as a refuge from the cruelty of actualities, men became slaves to their own imaginations and powerless by virtue of prejudice and inveterate habit. This primitive solution proved abortive and was abandoned.

A more sophisticated refuge from these same evils is the philosophical flight to the rational and the ideal, but it is equally futile. "The sense of incompetency and the sloth born of desire for irresponsibility have combined to create an overwhelming longing for the ideal and rational as an antecedent possession of actuality, and consequently something upon which we can fall back for emotional support in times of trouble." The philosophy of the past, Professor Dewey seems to say, not only did nothing to solve the urgent problems of humanity, but actually hindered progress by withdrawing men from actualities to the barren comfort of the rational and the ideal, to a world of Platonic Ideas or a water-tight system of dialectic. And it is philosophy which has prevented an agreement since the seventeenth century between science and religion. Professor Dewey is particularly bitter against the Idealists, who are chiefly concerned, he thinks, to identify the real and the ideal, while explaining that in a sense, they are different. Philosophy has always pretended to universal knowledge, which, however, is forever impossible since the business of knowledge is merely the "transformation of disturbed and unsettled situations into others more controlled and more . . ." And thus, it would seem, is the . . . of philosophy. "The business of thought is not to conform to, or reproduce the characters already possessed by objects but to judge them as potentialities of what they become through an indicated action." The philosopher must give up his fabulous claim to understand or dictate the nature of reality or the good, and following experimental science with a humble heart, become the intermediary to the lay public, and the physician of his times. For only through control of the means to happiness can the old peril and doubt be banished. It is obvious that this restoration of philosophy condemns the "great tradition" and the most important movements alive today.

In star-clear opposition to this philosophical skepticism is the rationalistic mood which prevails in Professor Whitehead's book, *Process and Reality*. While Professor Dewey is content with the time-honored, if not classical, arguments, that knowledge, since it is an evolutionary product, is not capable of metaphysics and in history has shown its incapacity, the English philos-

opher goes much deeper into history, science, and the nature of man, adducing the profound necessity of a synthesis and analysis of the whole spread of nature. This ultimate inquiry is presupposed in science, it is demanded in religion and practical life. Philosophy has given permanence and progressive adequacy to religion. By its meditation, it has prevented historical tragedies due to concrete and accidental divergences of cult. Through the centuries, it has hobbled with science, with a general accrual of mutual benefit, for neither the one nor the other could persist in narrow empiricism. In the beginning, Greek mathematics raised up philosophy to the dignity of broad abstractions, from which it greatly profited. Later, however, the same influence was pernicious for "the primary method of mathematics is deduction, the primary method of philosophy—descriptive generalization."

Professor Whitehead's conception of the proper method of philosophy is in fact very close to that of Professor Husserl. Both writers maintain that philosophy is a search for ultimate necessities in immediate experience, that deduction is relatively unimportant, that insight and subsequent description is the procedure, and that the discovery of contradictions is shallow and by no means a final disproof of any system. Such agreements, of which there are many others besides, are particularly gratifying since there has been no influence on either side.

Professor Whitehead admits, of course, that the great systems have failed in many cases to attain definitive truth, yet each of them, he insists, has analyzed the abstract, has defined alternatives, thus advancing knowledge immeasurably. "A new idea introduces a new alternative, and we are not less indebted to a thinker when we adopt the alternative which he discarded. Philosophy never reverts to its old position after the shock of a great philosopher." The first chapter of *Process and Reality* contains the finest defense of speculative philosophy which has appeared in a long time.

"One aim of philosophy," says Professor Whitehead, "is to challenge the half-truths constituting the scientific first principles. The systematization of knowledge cannot be conducted in water-tight compartments. All general truths condition each other, and the limits of their application cannot be adequately defined apart from their correlation by yet wider generalities." To attain this breadth of generality made necessary by the multiple and provincial character of the special sciences, Professor Whitehead finds it expedient to give up the principle of excluded middle, just as Hegel sacrificed (in a sense) the law of contradiction, and he finds it necessary to invent a new language adequate to the elusive abstractions, the broad unspoken necessities embedded in the structure of immediate experience. Needless to say, this new language has frightened and confused his readers. Yet he has invented or rather, continually invents, a medium of great power and beauty, uniquely adequate to his majestic abstractions and overriding discernments, and often the mathematician in the course of his higher definiteness becomes a poet.

Professor Whitehead has not only defined the philosophical method but, and this is somewhat unusual in modern writers, carried it out in great detail and breadth. By the time he reaches the last chapter, he has "taken up the truth" of various sciences, and of many systems, such as that

of Aristotle, Spinoza and Bergson, into a philosophical structure, which, however, by virtue of a presiding unity, is free from any taint of eclecticism.

In Professor Lewis's book, *Mind and the World Order*, we find Professor Whitehead's insistence that "truth, like knowledge in general, is about experience, and not about something strangely beyond the ken of man—" yet in his doctrine that "a true philosophical interpretation must follow the clues of the practical reasons for our predication," his rejection of rationalism (in the usual sense), his espousal of empiricism and the "pragmatic *a priori*," Professor Lewis approaches much closer to the views of Professor Dewey. In considering other modern philosophies, such as New Realism, Critical Realism, and the Sense data system of Broad, he finds that the most basic distinction has not been made. The important question is not whether the presented penny is subjective or objective, this distinction being irrelevant to givenness as such. The awareness of the size or color of the penny is not *sensing* but *interpretation*. It is interpretation of givenness through a concept selected by the mind *a priori*, and givenness is without character until so interpreted. The great dichotomy of the universe separates the given, the characterless, the ineffable, from the concept, the character. Here we seem to be close to Plato, Aristotle, and Kant. It is an illusion. The concept is not an archetype in heaven but a psychological or behavior pattern in the mind, which, Professor Lewis assumes in a long subtle argument, need not have an *identical* element in two minds in order for these two minds to communicate. He attempts very skillfully to answer the objections to Nominalism and is, of course, far from Plato's idealism. Professor Lewis is, also, despite occasional appearances to the contrary, quite at variance with Kant. The *a priori* he holds is not coercive, quite the contrary in fact. In this realm, as opposed to that of the given, we are free. The *a priori* cannot determine reality, as Kant thought, but only select and interpret. Indeed, the writer is almost ready to agree with Professor Dewey "that to suppose that we must appeal to a synthetic activity of an independent thought to give the quality meaning in and for knowledge is like supposing that by thinking in our heads we can convert a pile of bricks into a building." No, the *a priori* cannot even assume the orderliness of experience. "Did the sage of Königsburg never have dreams?", inquires Professor Lewis.

For the rest, his logical and epistemological arguments and decisions are, many of them, bold and subtle, as for example his conclusion that all propositions are universal and all logical systems circular. The book is one of great importance.

J. S. Haldane's book, *The Sciences and Philosophy* (Gifford Lectures, University of Glasgow 1927-1928), like *Process and Reality*, also undertakes a defense of metaphysics. It is evident, he thinks that "not only the sciences taken together, but also the individual sciences, present to us problems which, as mere sciences, they are unable to solve. The task of philosophy is to grasp these problems firmly, and endeavor to reach some solution of them. This is what philosophy has always been striving to do, and what, on the practical side, religions have likewise been striving after." The special sciences lead necessarily to

philosophy and religion, and the implications of natural process in biology, psychology, etc., are toward teleology, immortality. Some time ago, Professor Eddington advanced somewhat similar conclusions from entropy, "randomness," and the new parade of relativity. Now an eminent physiologist makes his transit toward the stars and the higher generalities. For it appears to him that the more knowledge accumulates, the more the self-sufficiency of mechanical science collapses.

To refute the claims of mechanism, he accumulates data old and new, particularly from the field of physiology and biology. To ask nature to reveal the mechanisms of life—the mechanisms of respiration, secretion, circulation, vision, growth, or heredity, is to commit the fallacy of many questions. There are no such mechanisms. The organic factor of "cooperation" constitutes, in short, a chasm over which mechanism, with propriety, can never pass. This opposition to mechanism does not, however, render him any more favorable to vitalism. "Vital force" explains too much and too little. It is a mysterious spook which appears when it is called for but also when it is not wanted. Neither mechanism nor vitalism then, but a frank recognition that biology and psychology are independent sciences with laws which cannot be reduced to the physical and the chemical. In developing his metaphysics on the basis of biological science, Professor Haldane, lites upon many important and unexpected notions, among which his advocacy of Kant's subjectivity of space and time and the consequent peculiar theory of self are among the most interesting.

Another original and illuminating book published this year, *Poetry and Mathematics*, by Scott Buchanan, purports to find an important structural similarity, in the face of the flaunting disparity, between the language of mathematics and poetry. It is first shown that proportions are the historically prior, and perhaps the most inherent form of mathematics, then that poetry is largely made up of metaphors, allegories, and other figures of speech, and finally that these figures of speech, when amplified and articulated, take the form of proportions. The argument develops ingenious variations on this principle theme. Professor Buchanan's preoccupation with structure, illustrates a new interest which has been developing in philosophy ever since the publication of Mr. Wittgenstein's book, *Tractatus Logico-Philosophicus*.

Among the other important philosophical publications of the year was an entertaining volume on Plato by F. J. E. Woodbridge, also two Fest-schriften made their appearance celebrating the seventieth birthday of two of the greatest philosophers of the day—Edmund Husserl and John Dewey. The work honoring Professor Husserl, which constitutes a volume in the *Jahrbuch für Philosophie und Phänomenologische Forschung*, is a very important series of studies in various problems of phenomenology and illustrates, in an illuminating way, the wide and various application of that method. Though some of the contributions are devoted to the analysis of concepts in formal or "apophantic" logic, others, such as Edith Stein's, Husserl's *Phänomenologie und die Philosophie des Thomas von Aquino* and Hedwig Conrad-Martius's *Farben*, and Fritz Kaufmann's *Die Bedeutung der künstlerische Stimmung*, go far beyond, investigating comagously, realms, much too complex, it would seem, for formal analysis.

The *Essays in Honor of John Dewey* volume contains articles on a variety of subjects, among which Professor Parkhurst's *Cult of Chronology*, and Dr. Hooke's paper on a similar subject, and Professor McKeon's masterly analysis of the purpose and nature of medieval science, are perhaps the most significant.

Professor McKeon also has gratified many readers by a set of translations, *Selections from Medieval Philosophers from Augustine to Albert the Great*, in which he has scrupulously avoided the "gems," and gone, in fact, directly to the heart of the great philosophical problems of the Middle Ages, some of which have never been rendered in English before. Another new translation of great importance is that of Hegel's *Science of Logic*. W. H. Johnston and L. G. Struthers have rendered the whole logic into English for the first time.

The twenty-ninth annual meeting of the American Philosophical Association was held at Columbia University Dec. 30-31, 1929. The first session was devoted to the philosophy of John Dewey, the speakers being F. J. E. Woodbridge, W. E. Hocking, and C. I. Lewis. The other sessions were devoted to logic, theory of science, and theory of essences. Morris R. Cohen gave the presidential address on "Technique in Philosophy."

**BIBLIOGRAPHY.** In 1929 a number of important books in the field of philosophy appeared, the more notable of which are as follows: Montgomerly Belgion, *Our Present Philosophy of Life*; Henry Evelyn Bliss, *The Organization of Knowledge and the System of the Sciences*; Franz Brentano, *Ueber die Zukunft der Philosophie und Vom Dasein Gottes*; Scott Buchanan, *Poetry and Mathematics*; Ernst Cassirer, *Die Philosophie der Symbolischen Formen*, vol. III; John Dewey, *Characters and Events and The Quest for Certainty, Essays in Honor of John Dewey*; Daniel Esserliet, *Philosophes et Savants Français du XVI<sup>e</sup> Siècle*, vol. IV; Federico Enriquez, *Historic Development of Logic*; Étienne Gilson, *The Philosophy of St. Thomas Aquinas*, II (Green (trans.)), *From the Physical to the Social Sciences* by Jacques Rueff, J. S. Haldane, *The Sciences and Philosophy*; Nicolai Hartmann, *Die Philosophie des Deutschen Idealismus, II Teil*; Hegel, Edmund Husserl, *Logik, Jahrbuch für Philosophie und Phänomenologische Forschung, Festschrift Edmund Husserl gewidmet*; W. H. Johnson and L. G. Struthers, *Hegel's Science of Logic* (trans.); Cassius Jackson Keyser, *The Pastures of Wonder, The Realm of Mathematics and the Realm of Science*; John Laird, *The Idea of Value*; C. I. Lewis, *Mind and the World Order*; William McDougall, *Modern Materialism and Emergent Evolution*; Richard McKeon, *Medieval Philosophers from Augustine to Albert the Great* (trans.); D. W. Prall, *Aesthetic Judgment*; Leon Roth, *Spinoza*; T. V. Smith, *The Philosophical Way of Life*; W. Olf Stapledon, *A Modern Theory of Ethics*; Paul Tillich (ed.), *Protestantismus Als Kritik und Gestaltung*; Clement C. J. Webb, *Paul's Philosophy of Religion*; A. N. Whitehead, *The Aim of Education and Other Essays, The Function of Reason, and Process and Reality*.

**PHONETICS.** See PHONOLOGY, MODERN.

**PHOSPHATE ROCK.** The most important source of phosphate rock is northern Algeria where Algeria, Egypt, Morocco, and Tunis, with large deposits and low production costs, produce about 50 per cent of the world's supply.

This affects the American industry which in 1928 contributed to the world's total supply about 33 per cent, or a decline from 42 per cent in 1923. Florida is responsible for about 82 per cent of the total phosphate rock mined in the United States and Tennessee for about 17 per cent, the remaining 1 per cent being the output of western States. In 1928 the American production totaled 3,501,406 long tons valued at \$12,443,179 which was the largest since 1920 when 4,103,982 tons valued at \$25,079,572 were mined. Of this output from 25 to 29 per cent is exported, the exports for 1928 amounting to 898,764 long tons valued at \$4,453,101 and those for 1929 to 1,142,746 tons valued at \$5,386,919. In 1928 the imports for consumption were the greatest in 10 years, amounting to 45,812 long tons valued at \$431,238. The imports in 1929 were slightly less, though during the year phosphate from Africa was sold on the Atlantic seaboard at less than the Florida product. See FERTILIZERS.

**PHOTOGRAPHY.** The principal development of practical interest in photography was the marked increase in the use of sound motion pictures for entertainment purposes. Further research on photographic methods of recording sound resulted in a pronounced improvement in the quality of the sound reproduction. Practically every producer was making sound pictures in one form or another and there was little reason to believe that such pictures would ever be supplanted in favor of the "silent" picture (*Trans Soc M. P. Eng.* 13, 1929, p. 66). More realism was added to sound pictures by an extensive use of color; several complete feature "talkies" in color were exhibited. Only two-color subtractive processes were used commercially, however, but they do not give exact natural-color reproduction.

Besides their utilization in the theatre, sound pictures found application in conjunction with medicine, law, and education. To foster some of this work, an international institute was formed under authority of the League of Nations. The first issue of a monthly publication of that institute, *International Review of Educational Cinematography*, appeared in July, 1929.

Photographic records also were made of the speed of the world's fastest seaplanes, sections of the Antarctic were photographed and mapped, as well as difficultly accessible regions of archaeological and mineral interest, and excellent pictures were obtained from high altitudes and over great expanses of country.

**APPLICATIONS OF PHOTOGRAPHY.** Referring to the progress made in all branches of the graphic arts, W. Gamble in his "Editorial Review" for 1930 (*Penrose's Annual*, 32, 1930, p. 1) stated that, "In no direction is this progress more marked than in the processes of reproduction which bring the camera directly into the service of the printing press." Although the modern tendency in newspaper and magazine publication is for more speed, a high standard for half-tone work has always been upheld. This applied particularly to the quality of telegraphically and radio-transmitted pictures, although televised illustrations were still in the experimental stage.

Further improvements were noted in photo-composing machines but none had been placed on a production basis. A promising development was the so-called "talking typesetter" which joins up the photo-composing machine with sound recording apparatus (*National Lithographer*, 36,

Aug. 1929, p. 33). A shortened method of making half-tone plates directly in the camera was worked out which consists in using a special screen in front of a chromium-faced metal plate bearing a silver emulsion coating. This plate is treated by the Pantone process (mercury amalgam-chromium planograph) and becomes the actual printing plate, thus avoiding a great many of the usual operations connected with the normal half-tone process.

Two new three-color cameras were marketed for the preparation of evenly exposed negatives for color photogravure. Few cameras of the many developed during the last half-century have been entirely satisfactory for such work.

In the comparatively short period of two years, the sound motion picture had displaced the silent picture, for during 1929 less than 10 per cent of the feature pictures produced were exclusively of the latter type. Nearly one-third of the theatres of the United States were equipped to handle sound films by the end of 1929. Production programmes were much slower in getting under way in Europe where the first showing of sound films was being made in August. Although the quality of sound reproduction had been improved consistently, it still was poorer than the best radio reception (*J. Soc. Mot. Pict. Eng.* 14, 1930, p. 220). One result of this new form of entertainment was the elimination of the symphony orchestra from the theatre programme.

Extensive research programmes on studio and theatre acoustics were under way. Novel methods of silencing cameras and arc lights were worked out and accurate sound synchronism of picture and sound was obtained with a recording station nearly a thousand miles from the scene of action.

A marked increase in interest on the part of certain producers was noted early in the year in the use of motion pictures in natural color. By the end of the year, several complete features had been produced and many others were under way. Three processes were being used and others were under consideration (*Exhib. Herald-World*, 96, July 6, 1929, p. 70, *ibid.*, 98, Jan. 4, 1930, p. 26).

Much attention was being given to the subject of enlarged projected pictures on film wider than 35 mm., which had been the standard since the early days of the industry. Three widths of film were being experimented with although only one, of 70-mm. width, had actually been placed on the market (*Exhib. Herald-World*, 96, Sept. 1, Sept. 28, 1929, p. 19). The advantages claimed for the wider films were (1) more realistic projection of news events, scenes, and musical comedies, since a screen filling the entire proscenium arch could be used, (2) a better proportioned picture, for the sound record along one side of the 35-mm. film had reduced the picture area to nearly square proportions; (3) a wider and longer sound record area. Other methods of securing wider pictures were suggested, one of which would use 35-mm. film, and record the picture lengthwise instead of across the film. Wider film had several obvious limitations and its promoters were proceeding cautiously.

Research on methods of securing stereoscopic motion pictures as well as televised pictures was being continued but no commercially practicable processes made their appearance.

Several comprehensive libraries of motion-picture "textbooks" were in preparation, one

# EXAMPLES OF WIDE MOTION-PICTURE FILMS

firm having completed more than 60 films covering subjects in geography, health, civics, and general science. Courses related to motion-picture technology were initiated successfully by the University of Southern California in conjunction with the Academy of Motion Picture Arts and Sciences, and other universities had plans under consideration. Fitting ceremonies were held in Palo Alto by Stanford University commemorating the fiftieth anniversary of Muybridge's unique experiment of motion analysis of the race horse, one of the forerunners of the invention of the motion picture.

Sound films were finding adaptation to educational, civil, industrial, and medical purposes. Several sound motion pictures were shown as well as a larger number of silent pictures at the fall convention of the American College of Surgeons held in Chicago, one of the former group showing a new obstetrical technique of a well-known surgeon (*Exhib. Herald-World*, 97, Oct. 26, 1929, p. 26). A criminal's confession recorded in a sound picture was accepted as evidence by a Philadelphia court (*Exhib. Herald-World*, 97, Dec. 7, 1929, p. 32). Sound films were made in the laboratories of several of the world's leading scientists, particularly Sir Ernest Rutherford, Sir William Bragg, and Dr. Irving Langmuir. Portable equipment for projection of sound pictures on 35-mm. film was beginning to be available.

A few of the many uses of the motion picture for general recording included measurement of the velocity of water currents, study of the movement of electric discharges, rate of corrosion of rifle barrels and narrow-bore tubes, duration and brightness of flash powders, and examination of gaseous explosions.

Several amateur films made during the year won commendatory recognition from professional circles as well as meritorious awards in the amateur field. The enthusiasm of the cine-amateur continued unabated as shown by the additional cameras, projectors, and accessories that were added to the market, a general increase in the number of cinema societies, an extension of film libraries until over two score were in existence, and the introduction of several types of phonographic turntable devices synchronized with the projector which made home sound "movies" possible (*Movie Makers*, 4, 1929, p. 785).

The Kodachrome process of amateur color cinematography announced in 1928, found considerable favor during 1929 as additional equipment was made available for its use and the number of processing stations was increased in various parts of the world where the film could be developed. Another amateur process called *Vita-color* was also available. This is an additive process that uses a rotating multicolor sector wheel before the camera lens and the projector lens (*Movie Makers*, 3, 1928, p. 771).

Several very pleasing color prints were exhibited at the Buffalo meeting of the Professional Photographers of America by White of Detroit, who, as well as Allison of New York, was producing some of the finest color photographs in America.

A serious disaster in a Cleveland Hospital Clinic in May, 1929, caused by noxious gases given off by burning X-ray films stimulated the roentgenologist to use films coated on cellulose acetate (slow-burning stock) in preference to the more rapidly combustible cellulose nitrate and to ob-

serve greater precautions in the storage of existing films ("The Disaster at the Cleveland Hospital Clinic," *Proceedings of a Board of the Chemical Warfare Service*, U. S. Government Printing Office, Washington, D. C., 1929). Further attempts with limited success were described to make X-ray motion pictures by photographing a fluorescent screen, using specially sensitive film and a camera with a large sector opening and a lens aperture  $f/1.4$  (*Photo Ind.*, 27, 1929, p. 627).

RECORD TAKEN IN TIMING WORLD'S AIRPLANE SPEED FLIGHT, CALSHOT, ENGLAND, SEPTEMBER, 1929.

Note plane passing upper boundary of inner circle.

Aerial photography found extensive use in 1929. New cameras and equipment were made available as well as more highly sensitive panchromatic film. The highest altitude photograph (39,150 feet, calculated photographically) and the longest distance photograph (227 miles) were made by Captain Stevens, U. S. Air Service (*Photo Era*, 63, 1929, p. 333). Both of these photographs were made possible by the use of panchromatic film sensitized to infra-red radiation.

Successful flashlight photographs also were made at night over the U. S. Capitol by Captain

Stevens. The negatives were developed by a rapid process in the plane, dropped to the ground, and a short time later dispatched by telephoto to eight distant cities (*Photo Era*, 62, 1929, p. 272).

Of particular interest was the employment of motion-picture cameras for timing the speed of the seaplanes in the Schneider Cup races at Calshot, England in September, when the record was attained at 555.8 miles per hour (average) on a straight course (See page 669). Many valuable photographs of the Antarctic plateaus and mountains were made by the photographic section of Rear Admiral Byrd's expedition during the year, culminating in the successful polar flight on November 28 and 29. Colonel Lindbergh demonstrated the value of the camera and the airplane as an effective method, for locating new archeological sites in difficultly accessible sections of Central America.

**PHYSICAL MEASUREMENTS** The Proceedings of the Seventh International Congress of Photography (London, 1928) were published during 1929 thus making available details of the many papers presented at this convention. Among the papers which excited considerable interest was the report of the committee on the standard unit of intensity as was indicated by a number of controversial papers which appeared subsequently on this subject. Eder, for example, proposed the use of filtered magnesium light or a pure carbon arc as a satisfactory practical standard for sensitometer work (*Z. physikal. Chem.* 111, 1929, p. 321). Increasing interest was evidenced in methods of sensitometric measurement, particularly by motion-picture laboratories studying sound-on-film problems. The construction of a standardized set of curves was described for rapid determination of various constants of photographic materials (*JOSA and RSI*, 17, 1928, p. 463).

Improvements in photometer and microphotometer design were noted, one commercial instrument having a measurement range of 0.1 to 500 lux, extended by wedges to 5000 and 50,000 lux (*Kinotechnik*, 11, 1929, p. 161). Photoelectric cells were incorporated in certain photometers for automatic measurement of light transmission, one device for measuring the exposure time and grade of paper for printing negatives utilized a selenium cell for measurement of densities (*Projection Eng.* 1, December, 1929, p. 24). A color analyzer which plots a continuous spectro-photometric curve was described which possesses certain advantages over the usual colorimeter (*JOSA and RSI*, 18, 1929, p. 96).

Other physical measuring devices in the design of which improvements were made were actinometers for calculating light intensity, density meters for determining light transmission, apparatus for testing shutter speeds of camera shutters, and an instrument for calculating depth of focus. Useful data on binocular and monocular vision were collected which have an important bearing on the brightness sensitivity of the human eye as related to problems of tone reproduction (*JOSA and RSI*, 18, 1929, p. 29).

**MANUFACTURE OF SENSITIZED MATERIALS** Of outstanding interest in the field of manufacture was the increasing use of panchromatic film, particularly in connection with motion-picture, natural-color, aerial, and commercial photography. The quality and speed of panchromatic emulsions were improved by several manufac-

turers. A portrait panchromatic film was made available for the portrait photographer. For making sound-on-film records, two new negative materials were supplied, one for variable density recording and the other for variable area recording.

A positive motion-picture film was placed on the market for sound-on-film prints in a variety of tinted supports, the dyes for which had been chosen so that they transmitted light capable of exciting uniformly the photoelectric cell. Fluctuations in sound volume level noted when passing from one tint to another on older tinted films were thus avoided (*Trans. Soc. M. P. Eng.*, 13, 1929, p. 199). A serious fire in one of the film processing laboratories demonstrated the importance of duplicating valuable negatives and further improvements in methods of making duplicate negatives were under investigation.

The patent literature contained many references to improvements in acetate film-base manufacture indicating the extensive study that was being given this important subject. Films coated on acetate support were available for X-ray, motion picture, amateur cine, and to a limited degree, for commercial photography. About the usual number of patents appeared disclosing various methods for prevention of film troubles such as static electricity markings, halation, fog, abrasion, etc.

A positive film on a white translucent support was announced for portrait work giving results resembling a photograph on ivory or a rich carbon print (*Studio Light*, 21, July 1929, p. 1). Encouraging efforts were noted on the part of manufacturers in conjunction with national and governmental organizations to standardize on sizes of films, plates, and papers.

A tri-pack color-roll film was placed on the English market. A considerable expansion program was in progress in Soviet Russia relative to the manufacture of photographic sensitive material and equipment (*Soviet Photo Almanac*, 1928, pp. 63 and 85).

**NEW APPARATUS** Wider aperture lenses were fitted to many of the less expensive cameras making possible amateur photography under adverse conditions. An aerial camera was made for and tested by the U. S. A. Air Corps at Wright Field, Dayton, Ohio. This camera is entirely automatically operated, electrically heated, and was designed to photograph wide-spread ground areas from high altitudes (*Science Supplement*, 70, Sept. 13, 1929, p. xiv). A new German aerial camera for map-survey work was also described, capable of photographing an area of 225 miles at one exposure.

Automatic developing machines were used in many of the larger plants developing amateur roll film. Other automatic machinery to be found in many plants were printers, glossy print driers, and straighteners. Developing machines for handling standard motion-picture film came into greater use in the majority of film-finishing laboratories, especially for handling sound-on-film prints.

New lenses were made available for many types of cameras particularly for professional and amateur motion-picture use. In the latter class one English firm marketed a super-speed lens claimed to have an aperture of  $f/0.99$  for use on three makes of 16 mm. cameras (*Brit. J. Phot.*, 76, 1929, p. 704). A new studio lens called the *Multi-Focal* lens, of effective aperture of  $f/3.3$ ,

was designed by a Buffalo photographer, H. D. Beach. Although of unusual optical design, this lens was claimed to possess a greater depth of focus at full aperture, more speed, and better delineation than other comparable anastigmat lenses of the same aperture (*Bull. Phot.*, 44, 1929, p. 740).

The mechanical movements of professional motion-picture cameras of standard make were re-designed to make them more silent-running for use in connection with sound-on-film pictures. Sound-proof housings also were introduced by cameramen for reducing the noise of their cameras, particularly for combined sound and color motion pictures. Synchronized phonographic sound-reproducing equipment was made available for the cine amateur and a few libraries were started for circulating sound records and pictures.

**THE PHOTOGRAPHIC PROCESS** The time and temperature method of negative development in tanks advocated by manufacturers for several years came into more general use with portrait and commercial photographers in 1929. This was encouraged probably as a result of the extensive employment of the highly sensitive panchromatic films and plates requiring safe lights for dark-room use to be a dark green rather than red, in order to avoid fogging the sensitive materials. A yellow-green safe light was introduced for use in printing rooms for persons who found difficulty in judging print quality by the more common orange safe light.

Types of fog on negatives were classified by several investigators and its prevention by the use of desensitizers and by potassium bromide and iodide was discussed (*Trans Soc M P Eng*, 12, 1928, p 1096, *Brit J Phot*, 75, 1928, pp 689 and 706) The action of various developers on exposed individual silver grains were studied photomicrographically, rapid development giving rise to a spongy deposit, whereas slow development gives compact crystalline silver (*Phot Ind*, 27, 1929, p 482) Further comprehensive investigations were made on a fine-grain-negative developer for motion-picture film (*Amer Cinemat*, 10, July 1929, p 17 et seq.) A series of papers were published dealing with (1) the general chemistry of developers and development, considering rational formulas, (2) metol-quinol and metoquinone developers, and (3) effect of dilution " " " " properties of developers (A " " " " p 227 et seq.)

The results of a long investigation on the chemistry of fixing baths were recorded by Crabtree and Hartt who presented criteria for compounding various baths and gave data for compounding solutions having specific properties (*Trans. Soc. M. P. Eng.*, 13, 1928, p. 364). A symposium on the subject was held by the Royal Photographic Society and brought forth many useful comments (*Phot. J.*, 53, 1929, pp. 310-17).

A new method of producing brown tones on paper consisted in bleaching in a ferrieyanide solution, bathing in zinc chloride, and toning in ammonia (*Mitteilungen*, 1, April 1929, p 3). A number of valuable suggestions were recorded on the use of dye solutions in the colouring of prints (*Brit J. Phot.*, 76, 1929, p 105). The efficacy of a large number of methods of sulphide toning were discussed in a series of articles by Wiegbe (*Brit J. Phot.*, 76, 1929, p 363 et seq.). Selenium toning methods were also reviewed (*Phot Ind.*, 26, 1928, pp. 1190 and 1218).

Two new pigment processes found some appli-

ration by pictorialists, namely the Fresson direct-carbon process (*Amer. Ann. Phot.*, 43, 1929, p. 179) and bromoil lithography (*Amat. Phot.*, 67, 1929, pp. 127 and 150)

**PHOTOGRAPHIC THEORY** The fundamental unit of photographic emulsions is the silver halide grain and much of the theoretical research conducted in recent years was related to this unit. Further work has been in progress to determine the chemical identity of the sensitivity nuclei whose presence in silver bromide emulsions enhance their sensitivity (NEW INTERNATIONAL YEAR BOOK, 1928, p. 602). Although it seems clear that these nuclei may consist of any one of several substances, the greatest sensitizing action appears to be given by silver sulphide. Additional attempts were made to detect free silver in photographic emulsions, but the exact determination of its amount was still doubtful chiefly because of the great difficulties attending analytical determination (*Phot J.* 53, 1929, p. 471).

Evidence to date strongly supported the idea that the latent (invisible) photographic image consists to a large extent at least, of finely divided silver. Rawling has shown that emulsion sensitiveness cannot depend entirely, however, on the quantity of silver-sulphide nuclei present since changes in alkalinity during digestion influences their sensitiveness. Such changes were characteristic of the gelatin used and independent of the silver halide grain (*Phot J*, 53, 1920, p 83). The effects were confirmed by Sheppard and Wightman with fresh and old plates bathed to adjust the acidity of the gelatin previous to exposure (*Phot J*, 53, 1920, pp 22 and 134).

The close relation between the photo-conductance of silver halide and the mechanism of latent image formation was established more firmly by additional work of Toy and of Sheppard and their collaborators. Photo-currents were shown to start in very thin layers of silver bromide almost instantaneously after illumination of the specimen (*Nature*, 123 1929, p. 679). It was suggested that the mechanism of latent image formation is probably connected with the liberation of an electron from halide ions of the silver halide crystal with the formation of free silver and bromine (*Zeit. wiss. Phot.*, 27, 1929, p. 85, also *J. Phys. Chem.*, 33, 1929, pp. 331 and 1403).

**BIBLIOGRAPHY** (General reviews of cinematographic progress are published annually by the Society of Chemical Industry (British), the *British Journal of Photography*, and the American Photographic Publishing Company (Boston, Mass.) A progress report of the motion-picture industry is published semi-annually in the *Journal of the Society of Motion Picture Engineers* (New York). The more notable photographic books published during 1929 include: H. B. Hankin, *Sound Motion Pictures* (Garden City, L. I.), F. H. Richardson, *Handbook of Projection*, vol. III, (New York), R. Michling, *Sound Projection* (New York), J. R. Cameron, *Motion Pictures with Sound* (Manhattan Beach, N. Y.), Owen Wheeler, *Amateur Cinematography* (New York), O. P. Herrnkand, *Die Schmalformat. Kinetographie* (Leipzig), M. N. Gleason, *Scenario Writing* (Boston, Mass.), B. D. Wood and F. N. Freeman, *Motion Pictures in the Classroom* (New York), A. C. McKinley, *Applied Aerial Photography* (New York), E. T. Lerner, *Practical*

**PHYSICAL ANTHROPOLOGY.** See ANTHROPOLOGY

**PHYSICAL CHEMISTRY.** See CHEMISTRY

**PHYSICS.** Linking gravitation with electricity and magnetism by unified equations is an outstanding event in physics during 1929. Einstein again speaks and the world listens. His three brief papers (in 1905, 1916, and 1929) have set classic physics to experimentation, discussion, and agitation. He now unifies the conceptions of gravitation and electricity by referring both to a common basis.

The year, however, found relativity still a stubborn battle field. The challenge of precise measurement assails Einstein's basic assumption—zero ether drift and two of his three crucial predictions. Michelson's acceptance of relativity and his supporting results on ether drift seemed to quiet opposition, but not for long. Confronted by Miller's new observations, made with meticulous care, relativity is again challenged, for Miller's results cannot be ignored—confirming, as they do, his previous findings that a measurable, though small, drift exists.

Again, Meggers, Kiess, and Burns, in spectroscopy, find the predicted red-shift of solar wave lengths not according to Einstein's prediction—in some parts of the spectrum being too small and elsewhere too large. The known accuracy of wave-length measurements, especially by these masters, is a challenge which must be met by experimental data of equal accuracy.

Again, a searching analysis of sources of error in the eclipse observations on starlight deflection in the sun's powerful gravitational field surprised relativists who had thought this prediction of Einstein finally verified. It appears, however, that factors were ignored and direct plate measurements all too few. Poor now claims that eclipse observations cannot test relativity, since they involve no postulate of relativity, that not even gravitational retardation can be so tested, that no effective checks or controls were used for temperature effects, that there was no systematic study of all the data, and that stellar displacements freed from assumptions, fail to agree in direction, size, or rate (degrees from the sun),

and that finally, if real, they may be explained by temperature effects in the air.

This sweeping indictment is discussed quantitatively and offers a third challenge to relativity—two of the three basic predictions all being questioned and strong evidence being offered for the measurable ether drift. Clearly, relativity still remains to be proven with adequate rigor. Meantime, the theory stimulates physicists everywhere. Methods of measurement are being scrutinized and improved and the principles of physics, such as conservation of mass, energy, and momentum, are being reexamined and recast to meet the exigencies of relativity theory.

The sensational sale of Einstein's brief paper is an index of the world-wide interest in a theory so momentous in its application and so fraught with sensational implications. It is but fair to say that these implications, developed chiefly by his adherents, must be reexamined, and perhaps their fantastic extremes may be tempered when it is realized that twisted space-time is a mathematical concept alone, graphic rather than pictorial, and that twisted space-time has no more objective tangible existence than Euclidian space-time. The purpose is to describe the world, and Einstein's latest work completes what is perhaps the most comprehensive generalization ever formulated in physics.

The merging of the mathematical attacks on atomic structure continues. We read of radiation compared to a gas, and find statistical systems yielding solutions where earlier methods were inadequate. Comparative studies of the methods lead to their improvement by testing their predictive value with experimental observations.

Johnston announces a new theory of atomic structure and the periodic system on purely classical lines based on four factors only—gravitation, positive electrostatic charge, negative electrostatic charge, and magnetism. He treats the atom and its electrons as a system of synchronous motors or motor generator and finds that the periodic system follows naturally in its minutest details from several basic simple principles. Johnston reports Maxwell's equations as adequate for the computations.

Davis and Barnes found that in parallel beams of alpha and beta rays the capture of an electron by an alpha particle occurs when the electron speed equals that in a circular quantized orbit of singly ionized helium. A significant fact! The graph of percentage captures vs. electron energies consists of sharp peaks, one of which is zero relative velocity of alpha particle to electron, while the others correspond to capture in quantum numbers from one to eleven.

Dempster finds that protons (hydrogen canal rays) give patterns indicating that they behave as waves. The lines are velocity spectra of the protons. Wave mechanics cannot as yet distinguish between the hydrogen ion and the hydrogen atom.

The French Academy of Sciences installed the largest electromagnet in the world, weighing 120 tons and using 2500 kilowatts. This was to be used for studying the structure of crystals and molecules. It was hoped to orient asymmetrical molecules and thus determine their shape. It was also planned to study the movements of electrons and protons between the magnet poles.

Two chemical elements were isolated for the first time during 1929. Both are in the same group family (Va) of the periodic system. The first

(atomic number 91) is protoactinium, the rarest metal known. Grosse has isolated it and finds the average radioactive life of its atoms is twenty times longer than that of radium, while the maximum energy of the beta and gamma rays are nearly twice that of radium. Its gamma wave lengths are proportionately shorter.

The second element (atomic number 41) was isolated and exhibited as being all of the existing supply of the metal columbium. It is ductile, easily worked cold, of silvery appearance, may be rolled, drawn, hammered, spot-welded, and shaped with ordinary tools, and its value is half that of gold.

Witmer suggests that the ratio of masses of a proton and an electron may be a fundamental quantity of integral value. It is  $43^2$  within limits of error, and  $43=1+2^2+2^2+3+3+4$ , which sequence doubled gives the number of electrons in the successive periods (shells) of the periodic system of the atoms.

Controllable voltages by 1929 had exceeded 5,000,000 volts and Tuve exhibited a new vacuum tube capable of using 100,000 volts for his experimental attack upon atomic nuclei and gamma-ray scattering.

Richardson was awarded the Nobel Prize (1928) in physics for researches on the emission of electricity from incandescent materials and upon the laws defining the rate of emission of electrons. De Broglie, the Nobel Prize winner in physics for 1929, was to be credited with the wave conception which has added so much to the new quantum theory of the wave atom.

The work of Bose, Raman, Ramsdas, and others shows India as a contributor to fundamental physics. A new item again emphasizes this. Ray and Chaudhuri on the theory that free electrons cause electrical and thermal conductivity, sought and found a relation between ionization potential and electrical (or thermal) conductivity per atom. An analysis showed that for metals of the same crystal structure, with few exceptions, the product of the electrical conductivity and the ionization potential varies inversely as the atomic number.

The physical properties of hydrogen have been studied anew in light of Bouhoeff's and Hantek's discovery that one-fourth of molecular hydrogen is of a modified form, convertible at liquid hydrogen temperatures into the parahydrogen form. Drawing the hydrogen through a special charcoal at liquid hydrogen temperatures, the former demonstrated the nearly complete separation of the two kinds of molecular hydrogen in which the two atoms, each spinning like a disk, may either spin alike or in opposite directions. The two forms differ notably in their specific heat.

Hevesy gives details of his method of quantitative chemical analysis by X-rays. He was led by necessity to devise some means of measuring the purity of his hafnium extractions. Briefly, he mixes the substance to be determined with a suitable reference substance, then compares the intensities of selected reference lines by their X-ray spectra.

Meissner reports superconductivity in a compound. Copper wire heated in sulphur vapor becomes copper sulphide, retaining its original form. Its specific resistance taken as unity at 0° Centigrade, falls to 3 in liquid air (86° Absolute) and to .02 in boiling hydrogen (20°), .004 at boiling helium (4°) and at 166° the resistance becomes immeasurably small. Such

low value has hitherto been encountered only in very pure metals.

In another notable symposium of the Faraday Society—"molecular spectra"—eminent physicists discussed the fundamental subject of band spectra as related to atomic nuclei, isotopes, molecular formation and dissociation, Raman effect, structure of excited states, the solid state, and a unified notation for molecular spectra designed to harmonize with the latest notation for atomic spectra.

Refined measurements of the oxygen band spectra revealed the existence of oxygen isotopes 17 and 18, showing that such spectra are more sensitive than that of the positive ray spectrograph. Since oxygen is 16 as the basis of the entire system of atomic weights, 18 is presumably the average weight of the oxygen atoms and may need no change, but the isotopes cannot be integral since they differ both from the oxygen 16 and from the average of the oxygen isotopes. It may be necessary to raise the question, for discussion at least, whether oxygen is the ideal basis. Already a return to hydrogen has been suggested. Incidentally, the new isotopes form about 1 part in 1200 of ordinary oxygen.

During 1929 articles on the Raman effect gave much new data. The crucial test, however, involves precise wave-length measurements of the modified radiation and careful correlation of such measurements with the long-wave characteristic radiation with which the modified wave lengths are specifically associated. Recent very precise measurements, however, raise a serious doubt as to the adequacy of the assumed cause of the Raman effect and call for further precise experimental research to resolve the doubt.

Ilel has completed 16 sets of observations of the gravitational constant, and computation of 11 sets of these gives a value in cgs units of  $6.68 \times 10^{-8}$ . Birge gives the density of the earth as 5.522. Gravimetric research shows that rock under the sea is heavier than that on the continents.

The study of the interior of the earth by seismic records continues to increase in volume and precision. The New Zealand earthquake of June 17 was recorded in Europe as a single wave instead of two, which suggests a liquid centre absorbing the deeper waves. Daly estimates the temperature as 90,000°C and the pressure at 25,000 tons per square inch. Jagger was enlisted the cooperation of amateurs in the study of earthquakes and attention is being given to the design of a simple and cheap form of seismograph. Local seismic, one day, world-scale records once a week, and earth tremors every few seconds, with tilting movements, form a subject of interest, the data on which would add materially to our knowledge of the earth and its movements. The helium-lead ratio was applied to dating geologic strata. The production of helium and lead from uranium was hailed by one authority as making possible the year by year climatic history of the earth comparable in success to the tree-ring measurements of Douglass.

Epstein's study of cooling rates of the moon's surface shows that it cools at the same rate as pumice, but differs in rate from granite, black lava, quartz sand, or sandstone. Wright's polarization observations yielded the same conclusion.

Brown's measurements of the changing length of the day show that in 1928 the earth was 32 seconds ahead of its average rotational motion.

for the past three centuries. A rhythmic lengthening and shortening with a cycle of about 300 years appears, with the maximum change found to be a part in 30,000,000 or a second a year. A tenth of this is readily measurable.

Egedal in a study of air tides correlates these with the heights of the bases of the aurora. The two maxima of the frequency curve at latitude 72° shows that the air mass above 100 km at ebb tide equals the air mass above 106 km at flood tide. Observations of the lowest limits of meteors show good agreement with aurora results.

Experimental lightning, now possible with high voltages and high insulation, promises light on the behavior of natural lightning. For example, in a laboratory experiment lightning strikes and leaves an airplane at its tips. Peter's new klydonograph photographs lightning, revealing fine structures, size, intensity, and arrangement which are under study with the hope of understanding and later controlling its distinctive effects.

Physical instruments and devices continue to multiply in sensitivity, range, precision, and ingenuity. Baron Shiba has perfected a research motion-picture camera which takes 60,000 pictures a second for research work on air streams, mechanical flights, and other high-speed phenomena. New instrumental resources range from Abbott's radiometer, in which a part of a fly's wing functions as a vane, to the plans for the new 200-inch giant telescope with its quartz reflector with four times the light gathering power of the largest now in use.

A new French sounding balloon automatically broadcasts by radio its measures of temperature and pressure throughout its flight. For high-altitude work the 9-foot Goddard rocket has brought back autographic records of atmospheric conditions. His plans contemplate recording temperature and radiation of "even the regions beyond" the atmosphere. Other daring experiments such as Opel, Peil, and Oberth are tying out rocket and jet-type propulsion, while research in aerodynamics, materials, and motors finds its dramatic climax in Oberth's speed of 6 miles a minute, seven times faster than attainable 10 years ago.

The Villier 3000-hp racing car is equipped with a visual indicator which receives signals from a radio beacon set at both ends of the course.

Devices developed include the new twelve-course radio-beacon and visual indicator, which opens the way for air travel in any desired direction. Another is the unique automatic radio landing beacon system by means of which the pilot, even in a fog, need only watch the visual indicator and guide his plane so that two vibrating reeds retain equal amplitude. The local signal is so designed that the resulting motion is an easy, smooth curve, flattening out horizontally as it reaches the ground level. Radio frequency can now be maintained constant to within a part in a million over moderate periods or to an average of a part in ten million over an interval of 24 hours.

Three unique devices are a flame of powdered aluminum burning in oxygen and able to cut through any known solid; a high-efficiency white light consisting simply of a gas-filled tube (glass) without wire filament, and a 3-beam shadowless light for surgery with filters to give daylight quality.

Abbott estimates the solar energy reaching the earth as equal to that released in burning 507,000,000,000 tons of coal per day and states that man actually burns the equivalent of 5,000,000 tons per day. Goddard has developed a fused quartz mirror device for utilizing solar energy—a clear quartz boiler in which water and mercury are sprayed to form an opaque absorbent for the solar energy. The mercury vapor and steam are utilized in a turbine device directly.

Several significant advances in biophysics will serve as typical of the many active researches in this most important field. Crile, reporting new experimental results to sustain his bipolar theory of living processes, finds a potential difference of a fiftieth volt developed in fruit (apples) and by a special technique he is able to devitalize and revitalize an amoeba by control of the polarity and potential difference between the nucleus and cytoplasm.

Huxley's analysis of the size of living things shows that man is midway between a star and an atom, and humanity half-way between the universe and the electron.

Since Mueller found that irradiation by X-rays causes mutations at 150 times the rate occurring in nature, Goodspeed has extended the experiment to plants, and Babcock and Collins have used radio-active rays. The conviction is growing that X-rays, gamma rays, and cosmic rays simply affect organic evolution and it is now suggested that the variations in these rays will furnish data of great value to students of evolution.

Fishbein reported that in some cases "control of the metabolic rate of the egg permits the development of male or female as the experimenter may desire." In the mold research of the Carnegie Institution, Sex X showed larger sugar content than Y. One plant used for comparison showed that the female produces larger sugar content, hence, potentially larger rate of metabolism. Optics again achieves a notable service in the ultra-violet microphotography of living cells, magnifying 6000 diameters with a resolving power of 1/150,000 inch. Fluorite or quartz lenses accurately computed are used and mechanical focusing is provided since visual focusing is impossible with ultra-violet light.

The rise of the Bell Laboratories had added research facilities in physics unequaled in the domain of speech and sight transmission. The group has just perfected 15,000-mile radio-wire transmission from New York to Australia, first reported in the words "We are becoming a world of neighbors." Twenty-one countries are now linked to America by transoceanic circuits. Radio-wire communication is homologous to air-rail transportation. See TELEPHONY.

The recent achievement of color television by Ives is a climax of research. The artificial laynys is a triumph of applied acoustics. It produces a "voiced tone" of variable pitch, the quality of which may be modified by muscular adjustment of the usual vocal resonance cavities.

In automatic telephony one new device "tests its own circuits before the call is advanced" to other apparatus and in case of defect automatically substitutes new equipment. During this year also was demonstrated the new device which translates a dialed number into mechanical speech.

That mechanization in human life does not eliminate its idealism is clear from the words of a leader in telephony—Carty says. "I believe that

the art which was founded by Bell will provide the means for transmitting throughout the earth a great voice proclaiming the dawn of a new era in which will be realized that grandest of all our earthly aspirations—the brotherhood of man."

See MICROBIOLOGY.

**BIBLIOGRAPHY.** A wealth of new books on physics appeared in 1929. Ames's work, *Mechanics*, is an introduction to mathematical physics by a master of exposition. The atom continues to be a centre of interest as shown by Cugni's *Structure de l'Atome, tourbillon d'éther et pensées scientifiques indépendantes*, Sommerfeld's *Atombau und Spektrallinien* (in its 1929 edition, including wave mechanics), Weller's *Transmutation des Elements*; Flint's *Wave Mechanics*, Houg's *Electronic Physics*, Bricout's *Ondes et électrons*, Condon and Morse's *Quantum Mechanics*. Radiation is represented by Pacotte's *Les Méthodes Nouvelles en analyse quantique*, Wagner's *Experimental Optics*; Vogelmann's *Chart of Nature's Vibrations* (showing 170 octaves). Materials and their properties are the subject of Newman and Searle's *The General Properties of Matter*, Hatschek's *Viscosité et la Plastification*, Rawlins and T aylor's *Infra-red Analysis of Molecular Structure*, Peddie's *Molecular Magnetism*, and Lawrence's *Soap Films, A Study of Molecular Individuality*. In the latter, Lawrence, an assistant of Dewar, reports a soap film preserved unbroken for three years in the cellar of the Royal Institution.

On general physics, we find Leigh Page's *Introduction to Theoretical Physics*, Dull's *Modern Physics*, Mason and Weaver's *The Electromagnetic Field*, and in the classic series of Germain Handbooks, Wien and Harn's *Handbuch der Experimentalphysik*. Timoshenko's *Vibration Theory and Engineering Practice* deals with this important subject as affecting the balancing of high-speed machinery, whirling shafts, torsional oscillations in engine arrangements, vibrations of rotating turbine wheels, vibrographs, dynamic balancing machines, and critical speeds.

Notable are the new studies in contemporary physics in the *Physical Review Supplement*, issued quarterly. The first two issues cover general physical constants, corpuscular properties of light, statistical theories of matter, radiation, and electricity, quantum mechanics, recombination and photo-ionization, spectroscopy of soft X-rays. These superb reviews were most welcome to the physicist who aims to keep abreast of the deluge of new data in physics.

In *The Universe Around Us*, Jeans described the progress of scientific interest from the earth to the sun, from the sun to the stars, and of the astounding effects of the quantum and relativity theories in giving us new views of the universe of atoms and stars. The volume abounds in passages of eloquence all too rare in scientific writing, but as stimulating to the imagination as the new cosmogony itself is disturbing to the classic view.

**PIATIGORSKY, GREGOR** See MUSTO, under Artists.

**PICTET, pék'té, RAUL PIERRE** A SWISS physiologist and chemist, died July 27, 1929. He was born at Geneva in 1842, where from 1879 to 1880, he was professor of industrial physics at the University of Geneva. He first attracted notice by employing sulphurous acid in freezing machines and by the liquefaction of oxygen,

(1877). He also made a number of experiments with acetylene, chloroform, and the purification of alcohol. He published *Mémoire sur la liquéfaction de l'oxygène, la liquéfaction et la solidification de l'hydrogène et sur les théories des changements des corps* (1878), *Synthèse de la chaleur* (1870), *Nouvelles machines frigorifiques basées sur l'emploi de phénomènes physico-chimiques* (1895), *Etude critique du matérialisme et du spiritualisme par la physique expérimentale* (1896), *L'Acétylène* (1896), *Le carbure* (1896), *Zur mechanischen Theorie der Explosivstoffe* (1902); *Die Theorie der Apparate zur Herstellung flüssiger Luft mit Entspannung* (1903).

**PIRQUET, pér'ká, CLEMENS BARON VON** AN Austrian pediatricist, died by his own hand, Feb. 28, 1929. He was born in Hirschstetten, near Vienna, May 12, 1874, and was graduated in medicine from the University of Graz in 1900. In 1908-10 he was professor of pediatrics at The Johns Hopkins University in Baltimore, Md., in 1910-11 at Breslau, and, after 1911, at Vienna. He discovered the diagnostic value of tuberculin as a cutaneous reaction in 1907. During the World War, he devised a new notation for nutrition to improve upon the calorie. The new unit, the *nem*, represented a cubic centimeter of mother's milk. An addendum in 1920 to *System der Ernährung* (1917) set forth this discovery. During 1919-23 he was general commissioner of the American Relief Administration for Austria's children. His writings include *Die Serumkrankheit* (1905), with B. Schick, *Allergie* (1910), *Das Bild der Masern auf der aussere Haut* (1913), the article "Masern," in Nothnagel's *Spezielle Pathologie und Therapie* (1911). In 1922 he published in English *An Outline of the Pirquet System of Nutrition*.

**PITTSBURGH, GREAT.** See PENNSYLVANIA, under Political and Other Events.

**PITTSBURGH, UNIVERSITY OF.** A non-sectarian institution of higher education for men and women in Pittsburgh, Pa., founded in 1787. The total autumn enrollment for 1929 was 10,945, distributed as follows: College, 1910, engineering, 446, mines, 97, business administration, 677, education, 1090, graduate, 1065, medicine, 260; law, 312, pharmacy, 360, dentistry, 333, retail training, 23, downtown division, 2690, Johnstown centre, 775, Erie centre, 593, Umontown centre, 314. The extension division had an enrollment of 1428 and the 1929 summer session, of 3231. There were 999 faculty members, including 204 new appointments. The productive endowment amounted to \$1,838,289 and the income from endowment to \$76,589, the income from the Pennsylvania State Legislature was \$585,200. The following bequests were received: \$600,000 for the Heinz Memorial Chapel from the children of H. J. Heinz and the H. J. Heinz Company, \$400,000 additional for the Falk Clinic from Maurice and Leon Falk, and \$250,000 from the Buhl Foundation for business research to cover a period of eight years. The library contained more than 130,000 volumes (Chancellor, John G. Bowman, LL.D.).

**PLATINUM.** During the year the production of platinum was at a rate in excess of the absorbing capacity of the market and as a result the price of refined platinum declined from an average of \$70 in January to \$63.24 in December with an average for the year of \$67.655. Crude platinum ruled at about 10 cents less during the year Russia continued as the largest source of platinum and was stated to be the lowest-cost producer. Platinum from Russia was marketed by the Soviet independent of other producers and dealers. In the fiscal year ending September, 1928, Russia exported 2454 19 kilograms of platinum valued at 9,820,000 rubles or 78,926 86 troy ounces valued at \$5,053,372, or an average value of \$64.03 an ounce. This was a considerable decline from 1927 when the exports from Russia amounted to 163,103.93 ounces valued at \$13,072,407, or an average of \$83.83 an ounce. The next important producer was Colombia which in 1928 exported approximately 54,000 ounces as against 45,830 ounces in 1927. The South American Gold & Platinum Co., operating three dredges in the Condoto River Valley, had an estimated production for 1929 of 23,500 ounces of platinum as compared with 20,393 ounces in 1928.

In the United States, mine returns for 1928 indicated a production of 160 troy ounces of crude platinum in Alaska, 357 ounces in California, and 21 ounces in Oregon, or a total of 528 ounces in the United States as against 20 ounces from Alaska, 127 ounces from California, and 6 ounces from Oregon in 1927. In 1928 platinum refiners in the United States reported the purchase of 305 ounces of domestic platinum and 57,962 ounces of foreign crude platinum of which amount 1086 ounces came from Australia, 14 ounces from Canada, 53,744 ounces from Colombia, and 3118 ounces from South Africa. In addition to the refining of crude platinum, secondary metal to the amount of 47,157 ounces was recovered in 1928.

In connection with platinum the various platinum metals are considered in the statistics of production and were in 1928 as follows: New platinum, 51,427 ounces, palladium, 5148 ounces, iridium, 1658 ounces, osmium, 458 ounces, others, 348 ounces, making a total of 59,039 ounces. Secondary platinum metals recovered in 1928 were as follows: New platinum, 47,157 ounces, palladium, 4156 ounces, iridium, 2090 ounces; others, 2428 ounces, making a total of 55,831 ounces.

The imports of platinum into the United States in the form of grains, nuggets, sponge, or scrap during 1929 amounted to 74,063 troy ounces valued at \$4,460,149, as compared with 78,399 ounces valued at \$5,294,668 in 1928. Platinum ingots, bars, and sheets or plates, amounting to 40,594 ounces valued at \$2,640,097, were imported in 1929, as compared with 20,362 ounces valued at \$2,348,840 in 1928. There also were sent to the United States in 1929, 564 ounces of ores of platinum metals (platinum content)

valued at \$43,152, as compared with 686 ounces valued at \$49,094 in 1928.

**PLATYHELMINTHES.** See ZOOLOGY.

**PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA.** An association organized in 1906 by Theodore Roosevelt, Jacob A. Rile, Luther H. Gulick, and others for the purpose of binding together in a national movement the efforts growing up in various parts of the country to provide safe and adequate areas where children might play under experienced leadership. A staff of field workers is maintained to assist cities in organizing year-round recreation programmes for children, adults, and the community as a whole, to strengthen existing programmes, and to help secure State legislation for facilitating the development of municipal recreation. There are also an employment service for recreation workers and a correspondence and consultation bureau which answers letters of inquiry and holds personal conferences on local work.

The community drama service of the association supplies practical suggestions and literature to amateur dramatic groups and prepares programmes for holiday and special-day celebrations. The community music service promotes this form of recreation and provides an exchange for community music information. The national physical education service is active in sponsoring physical education legislation. The association maintains a bureau which gives assistance to Negro groups in securing recreation opportunities and, in co-operation with the U. S. Department of Agriculture, has assigned three full-time workers to help in the training of rural leaders for recreation.

A national training school was established in 1926 to provide graduate courses in professional recreation training. The association publishes *Playground and Recreation*, a monthly magazine, maintains a weekly bulletin service, and publishes pamphlets and books pertaining to recreation. The sixteenth annual recreation congress of the association was held in Louisville, Ky., in October, 1929. The officers for the year were President, Joseph Lee, treasurer, Gustavus T. Kirby, secretary, Howard S. Braucher. Headquarters are at 315 Fourth Avenue, New York City.

**PLESSEN, GEN. HANS GEORG HERMANN VON.** A Prussian general, died in Potsdam, Jan. 28, 1929. Born in Spandau, Nov. 26, 1841, he entered the army, serving in the Seven Weeks' War, 1866, and in the Franco-German War, 1870-71. After being aide-de-camp to Wilhelm I, 1879-88. General von Plessen was commissioned chief adjutant in the army of Wilhelm II in 1893, becoming general of the Infantry in 1899. Appointed chief of the Military Household of the Emperor, 1892, he served through the World War until the Kaiser's abdication in 1918, being also commissioned chief field marshal in 1908. After the establishment of the Republic, General von Plessen retired to Potsdam, still loyal to the Hohenzollern family.

**PNEUMONIA.** Dr. U. Friedmann of Berlin points out in the *Klinische Wochenschrift* for August 27, that in extensive epidemics of pneumonia every conceivable variety of the disease is represented and that this speaks for the unity of the disease. The clinical or pathological form of the malady is of much less importance than the resistance of the patient, and this in turn depends largely on the relative virulence of the causal organism. A contagious element may or

may not be present and contagious forms are seen especially in the dark races, the whites being relatively immune—a result, the author believes, of immunization in childhood. The very young white child before this immunity can develop is remarkably susceptible to the disease, although it is apt to run a mild or latent course and in this way tends toward the development considerable immunity.

Many different microorganisms may cause the same clinical and pathological manifestations, and these are believed to be much less the product of the disease than of the effort of the body to defend itself from the infection. The pneumococcus is the predominant form and about two-thirds of all cases respond in some degree to specific serum treatment. Quinine and derivatives seem also to have specific powers. Surgical complications of pneumonia, notably empyema, respond poorly to surgical intervention.

**PREVENTION OF PNEUMONIA BY FORCED EXPIRATION.** Henderson and Haggard contributed an article on this subject to the *Journal of the American Medical Association* for February 9. Thus far the resource had been used only after surgical operations and poisoning by carbon monoxide. Whether it would avail after exposure, chill, etc. and in the presence of bronchial colds, influenza, etc., was not surmised. The authors believed that the presence of collapse of small portions of the lung tissue from obstructed bronchi may prove to be the decisive factor, for forced breathing may overcome this condition and thus open up the occluded lung tissue. Analogous as a resource is the utilization of carbonic acid gas which is equivalent to forced expiration in its effects. Since the authors believe that atelectasis, or collapse of areas of lung tissue, is a factor in all true pneumonia, it follows that this preventive resource should have a wide range of usefulness. Since many patients threatened with pneumonia may be physically unable to practice forced expiration, the routine use of carbonic acid gas inhalation is evidently for the time being the most available method to secure the desired result. This method should probably be combined as a preventive with the use of diathermy over the base of the lungs.

**USE OF IMMUNE HORSE SERUM IN TYPE I PNEUMOCOCCUS PNEUMONIA.** Dr. Rufus Cole in the *Journal of the American Medical Association* for September 7 gives the results of treatment carried out in the Rockefeller Institute Hospital, New York, since 1913. Since the form of disease due to type I pneumococcus promised the best results from serum treatment, an early diagnosis was essential. The serum was obtained from horses highly immunized to this organism. The total number of cases referred to the hospital since 1913 is 1256, of which 431 were due to pneumococcus type I. Serum, as a rule, has been administered in large doses. The number of deaths was 44, a mortality of 10.2 per cent. The same quality of result does not seem to have been obtained by others who have used the serum in question and the superior outcome at the Rockefeller may be attributed to the high quality of the serum and the large doses used. Early diagnosis may also have been a factor. Of those who succumbed to the disease, some certainly should have recovered and the author does not anticipate lowering the death rate below 10 per cent. The use of a concentrated serum in small doses, suitable perhaps to intravenous use, does not appeal to the author and it may be added that such se-

rum has already caused a fatality in a patient oversensitive to equine emanations.

**POETRY.** See LITERATURE, ENGLISH AND AMERICAN; FRENCH LITERATURE; GERMAN LITERATURE; ITALIAN LITERATURE; SCANDINAVIAN LITERATURE; SPANISH LITERATURE, PHILOLOGY, MODERN.

**POLAND.** A European republic formed as a result of the World War and comprising the territory formerly divided among the three governments, Austria-Hungary, Russia, and Prussia, from the three partitions of Poland in 1772, 1793, and 1795, which were confirmed by the Congress of Vienna in 1815. After the World War (1914-18), Poland in addition to this original territory known as Congress Poland, acquired Prussian Poland, Polish Galicia, Upper Silesia, and a portion of the Vilna territory Capital, Warsaw.

**AREA AND POPULATION.** The total area, according to recent estimates, is 149,958 square miles, and the population, according to the first official census of the Polish Republic in 1921, 27,176,717; estimated in 1928, 30,212,962. The largest cities with the estimated populations in 1928, and the 1921 census population in parentheses, were Warsaw, 1,050,182 (936,713), Łódź, 580,529 (451,974), Lemberg, 238,303 in 1927 (219,388); Posen, 236,265 (184,758), Kraków, 191,385 in 1927 (183,706), Wilno, 200,000 (128,954), Katowice, 115,697 in 1927 (104,868). Poles formed 69 per cent of the population in 1921, and Ruthenians 15 per cent, followed by Jews, Germans, and white Russians. Births averaged 994,379 and deaths 510,099 annually from 1923 to 1927.

**EDUCATION.** Primary instruction is free and compulsory and all other grades of education are free. In 1928 there were 26,642 elementary schools with 70,585 teachers and 3,379,667 pupils; 796 secondary schools with 14,808 teachers and 215,470 pupils; 204 colleges for teachers with 1931 teachers and 37,420 pupils; and 850 technical and professional schools with 110,000 pupils. The universities and institutions of university rank numbered 16 with 950 professors and 36,590 students in 1926.

**PRODUCTION.** The principal occupations of the country are agriculture and stock raising, which engage about 66 per cent of the total population. In 1927 about 47 per cent of the total area, or 45,239,000 acres, were under cultivation, 15,732,000 acres were permanent meadow and pasture, and 22,392,000 acres were woods and forests. The area and production of the chief crops in 1928 were: Wheat, 3,187,000 acres, 59,218,000 bushels; rye, 13,197,000 acres, 240,548,000 bushels; barley, 2,857,000 acres, 70,145,000 bushels; oats, 5,036,000 acres, 172,077,000 bushels; corn, 224,000 acres, 3,348,000 bushels; potatoes, 6,189,000 acres, 1,016,332 bushels; sugar beets, 499,000 acres, 4,400,000 metric tons; beet sugar, 758,000 metric tons; flax, 281,000 acres, 114,640,000 pounds. There was little change in the area sown, since virtually all the arable land was under cultivation. As the best means of increasing production, the government and agricultural co-operatives were fostering intensive farming. The application of modern methods of farming showed marked increase. Livestock in the country on Jan. 1, 1928, included 8,571,000 cattle, 6,397,000 swine, 1,918,000 sheep, and in 4,128,000 horses. The 1929 crops were the best in a number of years, but low prices prevailed.

Lumbering is an important industry in Poland,

accounting for about a fourth of the total foreign trade. The forested area totals 22,323,630 acres, of which 7,058,515 acres are owned by the state and 10,498,342 acres by private owners.

Poland is one of the leading industrial nations of eastern Europe, employing 899,000 workers in the principal industries in 1928, as compared with 808,000 in 1927. The workers were distributed among the industries as follows: Mining and metallurgy, 212,000; textiles, 178,900; metals and machinery, 99,800; foodstuffs, 88,350; cement, ceramics, and other nonmetallic minerals, 65,000; wood, 50,750; chemicals, 37,100. The output of all the leading mining and metallurgical industries continued on the up-grade in 1928, the production in terms of quantity being as follows: Coal, 40,599,000 metric tons; petroleum, 5,461,000 barrels, natural gas, 459,486,000 cubic meters, iron ore, 698,900 metric tons, salt 401,000 metric tons, crude potash, 342,900 metric tons, petroleum products, 633,685 metric tons, ozokerite (pure), 770 metric tons, pig iron, 684,000 metric tons, steel, 1,437,000 metric tons; lead, 36,480 metric tons, zinc, 161,700 metric tons. In most lines the expansion of production was based on increased domestic production, exports of manufactured products having failed to keep pace with the development of production.

In value of output the textile industry ranks highest among the manufacturing lines. The manufacture of leather, paper, and chemicals also is important. Imports of raw hides and skins and of finished leather increased by from 12 to 18 per cent in 1928, the paper output increased 10 per cent, and the value of chemical production reached 660,000,000 zlotys (\$73,000,000) in 1928, as against 250,000,000 zlotys in 1924. The number of unemployed at the end of 1928 totaled 126,420, as compared with 163,268 at the end of 1927. Industrial production in 1929 showed a gradual downward trend, with the exception of coal production.

COMMERCE Poland after the World War annually borrowed large sums abroad for the development of her resources and industries and consequently was usually faced with an adverse balance of foreign trade. The trend toward a heavy excess of imports over exports continued in 1928, when imports reached a peak of \$377,000,000, or 16 per cent more than in 1927, while exports totaled \$281,000,000, or slightly less than in the previous year. The adverse trade balance was \$96,000,000, as against \$42,000,000 in 1927. In 1929, however, there was a 7 1/4 per cent decline in imports while exports increased by 12 per cent over the 1928 figure. Germany was the principal source of Polish imports in 1928, supplying 26 9/10 per cent of the total, while the United States followed with 13 9/10 per cent, the United Kingdom with 9 5/10 per cent, France, 7 3/10 per cent, Austria, 6 6/10 per cent; and Czechoslovakia, 6 3/10 per cent. Germany was also the leading customer, taking 34 2/10 per cent of the total exports, while Austria took 12 4/10 per cent, Czechoslovakia, 11 8/10 per cent, the United Kingdom, 9 per cent, and France 17 per cent.

The chief imports for consumption included raw cotton, \$35,023,000, machinery, other than electrical, \$32,589,000, electrical machinery, \$13,789,000, chemicals and allied products, \$30,745,000, metals and manufactures, \$27,446,000, wheat, \$13,303,000; wool, \$20,521,000, leather, \$11,294,000; hides and skins, rice, rye, and other

foodstuffs, wool and cotton yarn, automobiles and parts, etc. Leading exports were wood and its manufactures, \$66,204,000, coal, \$40,708,000, metals and manufactures, \$30,187,000; swine, \$23,350,000, eggs, \$16,235,000; and raw sugar, eggs, seeds, chemicals and allied products, and various animals products.

FINANCE. For the calendar year ending Dec. 31, 1929, the revenues and expenditures exceeded the budgetary estimates by 6 and 7 per cent, respectively, with total receipts reaching 3,009,714,000 zlotys (1 zloty equaled approximately \$0.1120) and expenditures 2,921,915,000 zlotys, leaving a surplus of 87,799,000 zlotys (\$9,833,488). Higher receipts from most of the internal taxes and from the state monopolies produced the higher revenues while the increase in expenditures was due to the higher salaries paid military officers and public officials, larger investment expenditures, and an increase in the payment on the public debt. Actual returns for 1927-28 and 1928-29 and the budget for 1929-30 are shown in the accompanying table.

## POLISH FINANCIAL OPERATIONS

Receipts	311	338	332
Expenditures	287	315	311

\* 1 zloty equals approximately \$0.1120

For the fiscal year 1929-30 preliminary returns showed an increase in receipts over those for the previous year. Expenditures showed a greater proportionate increase than in the previous year, however, and the surplus was considerably reduced. The public debt late in 1929 totaled \$460,000,000, or about \$15 50 per capita, according to Charles S. Dewey, American financial adviser to the Polish government. On Dec. 31, 1928, the total debt was \$464,742,000, of which \$206,187,000 was due the United States government.

COMMUNICATIONS. Practically all of the Polish railways, which had a total of 12,040 miles of line in 1927, were owned and operated by the Government. In the same year the railways carried 158,505,000 passengers and 73,432,000 metric tons of freight, earning gross receipts of 1,352,707,000 zlotys (\$152,721,000). In 1928 about 60 miles were put in operation on a new line, which, when completed, will shorten the

distance between the coal fields and the Baltic seaports by about 90 miles. Traffic through the Polish port of Gdynia nearly doubled in 1928 while that through the Free City of Danzig remained stationary. The ancient water route from the Baltic ports of Gdynia and Danzig to the Rumanian ports of Galatz and Constantza on the Black Sea was being developed in 1929 and a treaty was being negotiated with Rumania covering traffic over the route. In 1928 Polish commercial aviation lines, which are under the Ministry of Communications, carried 6656 passengers, 593,622 pounds of goods, and 73,338 pounds of mail, the total distance flown being 740,559 miles. In 1929 there were 54,372 miles of telegraph line and 46,028 miles of telephone line, all owned and operated by the state.

Vessels entering and clearing from Gdynia in 1928 totaled 1108 of 985,000 net registered tons and 1093 of 974,000 tons, respectively, as compared with entrances of 530 vessels of 423,000 tons and clearances of 519 vessels of 416,000 tons in the preceding year. At Danzig 6198 vessels of 4,045,000 net registered tons entered and 6183 of 4,027,000 tons cleared in 1928, as against entrances of 6950 vessels of 3,900,000 tons and clearances of 6942 of 3,933,000 tons in 1927.

**GOVERNMENT** Under the constitution adopted May 17, 1921, executive power is vested in the President, chosen by both houses of the National Assembly for a period of seven years, and legislative power is vested in the National Assembly, consisting of the Senate of 111 members and the Diet (444 members), called the Sejm, both elected by universal suffrage. President in 1929, Ignace Moscicki, elected June 1, 1926. The cabinet was composed as follows: Premier, Casimiri Bartel; War, Joseph Pilsudski; Foreign Affairs, August Zaleski; Finance, M. Grodzinski; Justice, Stanislaw Cui; Interior, Slawoj Skladkowski; Commerce and Industry, Eugene Kwiatkowski; Agriculture, Charles Niezabitowski; Agrarian Reforms, Witold Stanisiewicz; Communications, Alphonso Kulin; Labor and Social Affairs, Dr. Jankiewicz; Public Works, Andrew Moraczewski; Education, Casimir Switalski; Posts and Telegraphs, Boguslaw Miedzinski.

#### HISTORY

As in previous years, important events in Poland during 1929 revolved almost entirely around the dominating figure of Marshal Joseph Pilsudski. Despite the repeated attacks of the disorganized Opposition parties in the Sejm under the outspoken leadership of the Speaker, Ignace Daszynski, former Vice Premier, and a partial victory obtained by the Opposition in the overthrow of the Switalski cabinet in December, Pilsudski still remained virtual dictator of the country at the end of the year. In the field of foreign affairs the year was marked by a few important developments. The dispute with Lithuania over Vilna continued to agitate the relations of these two countries, and there were some evidences of a growing intimacy with Italy, which were considered nothing more serious than a warning to France that the continuance of her alliance with Poland depended upon the exchange of mutual benefits. There was some irritation in Warsaw at France's failure to consult Poland in connection with the evacuation of the Rhineland.

**PARLIAMENTARY DIFFICULTIES** Marshal Pilsudski's antipathy to the Sejm and to attempts to restore parliamentary government in Poland

was demonstrated again early in the year when he and his supporters in the cabinet, refused to attend the parliamentary hearings on the budget to present reasons in support of requests for appropriations. Furthermore, he announced January 31 that he would not preside at the tenth anniversary of the opening of the Sejm on February 9. The Marshal's conception of the role parliamentary government ought to play in Poland found expression in the draft of a projected new constitution which was published on February 21 with the indorsement of 111 deputies forming the government, or Pilsudski bloc, in the Sejm. Among the radical changes proposed were that the President be elected by plebiscite of the whole population instead of by the two Houses of Parliament, and that the choice be restricted to two candidates, one chosen by the Sejm and the other by the retiring President, and that the President should have the right to open and dissolve Parliament, appoint ministers and judges, sign and ratify treaties without the approval of Parliament, veto bills passed by the Sejm, and give the final decision in case a parliamentary election was protested. The Senate of 111 popularly elected members would be replaced by a chamber of 150, two-thirds elected by popular suffrage and one third nominated by the President. Although enthusiastically acclaimed by the pro-government press, no action was taken to put the proposed constitution into effect during the year.

The Minister of Finance, Gebriel Czechowicz, resigned on March 8 after the budget committee of the Sejm had voted to investigate expenditures of some \$880,000 which he had authorized in 1927-28 without the required approval of the Sejm. His resignation was followed on April 3 by that of Premier Casimiri Bartel. It was indicated that both Finance Minister and Premier resigned principally because obstruction interposed by the numerous conflicting groups and interests within the Sejm made it difficult to carry on their cabinet duties. Premier Bartel had long been little more than a monthpiece for his Minister of War, Marshal Pilsudski. Difficulty was experienced in forming a cabinet and it was not until April 14 that the Minister of Education, Maj. Casimiri Switalski, another Pilsudski follower, was elevated to the Premiership. Four other changes were made in the cabinet which further strengthened the Marshal's hold on that body.

These events and the impeachment of the former Finance Minister by the Sejm led Pilsudski to publish a violent denunciation of Parliament. He threatened to again become Premier to prevent the Supreme State Tribunal from trying M. Czechowicz. At the trial of the former Finance Minister in June Pilsudski assumed full responsibility for the unauthorized expenditures and defied the court, indirectly, to do something about it. The court avoided the issue by suspending the case until the Sejm should give its opinion as to whether the excess expenditures, which M. Czechowicz had admitted making, were "necessary and expedient."

The impeachment of M. Czechowicz represented an effort on the part of the Sejm to reassert its power, which for some time had been restricted to voting the budget. In an apparent attempt to prevent further efforts in this direction, Marshal Pilsudski, at the opening of the new session of Parliament on October 31, entered the Sejm as

compained by some 90 armed officers. The speaker of the Sejm, M. Daszynski, refused to convene Parliament while Pilsudski and his army officers were in the building and later, by presidential decree, the session was ordered to reconvene on December 5.

On December 6 there was a motion expressing lack of confidence in the Switalski cabinet was carried by a vote of 246 to 120 and on December 7 the cabinet presented its resignation, agreeing to remain in office, however, until a new cabinet could be formed. Due to the illness of Marshal Pilsudski and the lack of unity among the Opposition parties, it was December 21 before President Moscicki brought the cabinet crisis to an end by calling on M. Switalski's predecessor, Casimir Bartel, to form a new government. Four of the new members were holdovers from the Switalski ministry, including Marshal Pilsudski, who retained control. The new cabinet was composed as follows: Prime Minister, Casimir Bartel, Foreign Affairs, August Zaleski, Interior, Henry Joscifski; War, Marshal Pilsudski, Finance, Col. Ignaz Matuszewski, Justice, Felix Dutkiewicz; Education, Adolf Czerwinski; Communications, Alfonso Kuhn, Commerce and Industry, Eugene Kwiatkowski, Agriculture, Wiktor Lesniewski, Public Works, Max Matakiewicz, Labor, Col. Aleksander Prystol, Agrarian Reforms, W. Staniewicz, Posts and Telegraphs, Col. Ignaz Horner.

**FOREIGN AFFAIRS.** The German government was indirectly charged with participating in the agitation for revision of the Polish western frontier by Foreign Minister Zaleski early in 1929. Declaring such activities to be contrary to the spirit of the League of Nations protocol, he said that Poland distrusted Germany but "did not hate her." Relations between the two countries improved thereafter and on November 1 a treaty was signed at Warsaw intended to end the economic differences which had agitated Polish-German relations for the preceding eight years.

Poland's rising position as an important European power was evidenced in October when Great Britain raised its legation in Warsaw to the status of embassy. In December it was announced that the United States would follow suit. Poland on September 9 was elected a new member of the Council of the League of Nations. For the status of the Vilna dispute, see LITHUANIA, under *History*, see also VILNA, *Jews*.

**POLAR RESEARCH, ANTARCTIC.** On Nov. 29, 1929, Richard Evelyn Byrd returned to his base at Little America having accomplished one of the major objectives of his expedition—that of reaching the South Pole by airplane. This polar flight, however, was far from being the only achievement of the Byrd Antarctic Expedition. On Nov. 22 at the Ross Sea Barrier on Dec. 25, 1929, a base was established at Little America in the Bay of Whales near the former site of Framheim. Amundsen's base for his trip to the South Pole in 1911. Although all energies were directed to preparing the base camp for the winter season, a short flight on Jan. 16, 1929, was followed by a longer trip to the Scott Nunataks whence, 50 miles to the southwest, a new range of mountains rising over 2000 feet was seen and named the Rockefeller Range. A further flight on February 19 disclosed more mountains to the east of the Rockefeller Range and outside of the Ross Dependency. This region was claimed for the United States and named Marie Byrd Land. On a later

trip the Rockefeller Range was photographed from the air. On March 7 a party including Professor Gould, the geologist and second in command of the expedition, flew to and landed at the Rockefeller Range in order to determine their correct position and to make geological and topographical studies. A prolonged silence on the eleventh day of this expedition resulted in an aerial rescue by Byrd who found that their plane had been wrecked by a 120-mile gale. The whole party was returned to Little America by plane.

During the winter the necessarily close confinement to quarters was alleviated by constant radio communication with many parts of the world and especially with the United States whence programmes were regularly broadcast to Little America. Much valuable information on radio and atmospheric problems was acquired. On October 16 the outdoor season opened when a depot-laying party set out in advance of the geological party. On November 4 the geological sled party headed by Professor Gould commenced a 440-mile trek to the Queen Maud Mountains. On November 19, a base of supplies was established by Byrd at Mt. Fridtjof Nansen at the edge of the Polar Plateau by means of an airplane flight. This flight which paralleled Amundsen's route to the Queen Maud Range failed to confirm the existence of Amundsen's Carmen Land. A new range was discovered (Charles Bob Mountains).

The supply depots being laid and the weather being reported as favorable by the geological party which was then 400 miles to the south and ready in case of emergency, Byrd took off by airplane for the South Pole on November 28. He was accompanied by Balchen and June as pilots and by McKinley who operated the surveying camera. The high Polar Plateau was reached by flying up Liv Glacier, a perilous passage where air currents tossed the plane about and all superfluous weight had to be discarded in order to attain the necessary 12,000 feet of elevation and reach the Plateau itself. A flight over the "limitless plateau" brought them to the South Pole, a circuit was made and a northerly course was set. After descending the Plateau at Axel Heiberg Glacier an easterly detour was made before returning to Little America.

On December 5 another flight was made east of King Edward VII Land where Byrd discovered a new mountain range separated from the Alexandra Mountains by an arm of the sea and running into Marie Byrd Land. This flight was also recorded by the aerial camera. Meanwhile the geological party confirmed Byrd's discoveries at the edge of the Polar Plateau and obtained geological evidence that the Queen Maud Mountains are of the same rock formation as the mountains in South Victoria Land. The supply ships of the expedition at the end of the year were preparing to reach the Bay of Whales and embark the expedition.

On the other side of the Antarctic Continent, Captain Sir Hubert Wilkins continued his exploration of the Graham Land Sector. Bad weather at Deception Island made a more southerly base necessary and the royal research ship, *William Scoresby*, was employed to transport the expedition to the south of Adelaide Island. There, a short flight confirmed the discoveries of 1928. On December 31 a flight over Charcot Island and to the south added some 300 miles of new coast line to the Antarctic Continent.

Sir Douglas Mawson, in Captain Scott's old vessel, the *Discovery* after visiting the Crozets, Possession Island, and Heard Island, sailed for the Australian Sector of Antarctica to carry on oceanographical studies. By means of a small plane carried by the expedition, low-lying land was sighted east of Kemp Land.

The *Nornega*, in the interests of Norwegian whalers, at the end of the year was on a voyage around the Antarctic Continent. Riiser-Larsen, an aviator attached to the expedition, surveyed Bonvet Island from the air. On a later flight new land was sighted between Enderby and Kemp lands. The aviators landed and took possession of it in the name of Norway.

ARCTIC REGIONS Exploration in Arctic regions was much less spectacular than that in the Antarctic, but much significant work was accomplished. Donald B. MacMillan spent the summer on an expedition to eastern Baffin Island where he studied two ice caps between Frobisher Bay and Hudson Strait. Accompanying scientists pursued botanical and fisheries investigations. The 1929 cruise of the Canadian Government steamship *Brother* was accompanied by Dr. Taveener who examined the musk ox of Devon Island, and by Dr. J. J. H. who administered medical aid to the Eskimos. The Royal Canadian Mounted Police continued their patrol and exploration of Baffin Island. Professor Barnes continued his experiments in iceberg destruction.

In Greenland the University of Michigan Greenland Expedition completed a series of meteorological studies on the Greenland ice cap. Mapping surveys were carried out for the Geodetic Institute of Copenhagen. Therkel Mathiasen studied archaeological ruins in the Upernivik District. Professor Wegener accomplished the preliminary arrangements for an expedition to the Greenland ice cap which will involve detailed studies at stations widely separated but on the same latitude. Kund Rasmussen continued his work among the Eskimos at Thule during the summer. Lange Koch conducted geological field work from Sabine Island to Scoresby Sound and obtained considerable information on the geological history of Greenland.

Barents Sea and outlying lands were visited by an Italian expedition under Albertini in search of any clues to the fate of the hallooed group of the ill-fated *Italia* expedition of 1928. The Aeroelastic (International Society for the Exploration of the Arctic Regions by means of the Air-ship) continued plans for extensive explorations with the *Graf Zeppelin*. Difficulty in insuring the airship for the proposed polar expedition delayed the plans and led to its temporary abandonment, the trip being scheduled for 1931.

The Soviet ice-breaker *Sedon* left Aichanglo on July 21 for Hooker Island, Franz Josef Land, in order to establish there the most northerly meteorological station in the world. On July 22 a radio message was sent from the new station which was to be operated throughout the year. The *Sedon* was accompanied by a number of scientists who pursued geological, biological, and geographical studies. A hydrographic traverse across Barents Sea also was made. Another northerly meteorological station, reporting by radio to Soviet headquarters is that on Wangen Island. The station was built during the summer when the Soviet ice-breaker *Lutke* reached the island on the annual visit to the colony established there several years previously.

**POLISH LANGUAGE AND LITERATURE** See **PHILOLOGY, MODERN**

**POLISH NATIONAL EXPOSITION.** See EXPOSITIONS

**POLITICAL AND SOCIAL SCIENCE, THE AMERICAN ACADEMY OF** A national forum for the discussion of political and social questions, founded in Philadelphia Dec 14, 1889, and incorporated Feb 14, 1891. The organization does not take sides upon controverted questions but seeks to secure and present reliable information to assist the public in forming an intelligent and accurate opinion. In addition to monthly meetings during the winter, an annual meeting is held in the spring of each year at which six sessions, extending through two days, are devoted to the discussion of some general subject. The thirty-third annual meeting, which was held April 26 and 27, 1929, considered the general subject, "Present Day Causes of International Friction and Their Elimination." Other meetings conducted during the year discussed the following subjects "Italy and Mussolini", "Long Term City Planning", "The Problems of Modern Diplomacy", "A Frenchman's Impressions of the United States", and "Modern Application of the Theory of Congressional Representation." *The Annals* is published bimonthly as the official organ of the academy, each issue being devoted to a study of a particular topic of economic, political, or social importance. In 1929 the following volumes were issued "Tariif Problems of the United States", "Farm Relief"; "Radio", "Women in the Modern World", "Foreign Office Organization", "Present Day Causes of International Friction and Their Elimination", "Lobbying", "Law and Social Welfare"; "India"; and "The Police and the Crime Problem." In the past few years these publications from time to time have included special studies prepared by research fellows appointed by the academy. The officers in 1929 were President, Dr L S Rowe, secretary, Dr J P Lichtenbeiger, treasurer, Charles J Rhoads, and vice presidents, the Hon Herbert C Hoover, Dr Ernest Minor Patterson, and Dr Charles E Merriam. The address of the academy is 3622 Locust Street, Philadelphia.

**POLITICAL ECONOMY.** Subjects in the field of applied economics are treated in this volume under the following heads: BANKS AND BANKING; BUSINESS; CIVIL, FINANCIAL REVIEW; CHILD LABOR; COOPERATION; LABOR ARBITRATION AND CONCILIATION, LABOR LEGISLATION, MATERNITY PROTECTION, MINIMUM WAGE, OLD-AGE PENSIONS, STRIKES AND LOCKOUTS, UNEMPLOYMENT, WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION. See also such articles as CHILD WELFARE, LABOR, AMERICAN FEDERATION OF, STATISTICS, SOCIALISM; TRADE UNIONS, WELFARE WORK. See also the articles on AGRICULTURE and the various crops. Further discussions are to be found in articles on the several industries, minerals, public utilities, etc. Books on political science and economics for the general reader are to be found listed in the article LITERATURE, ENGLISH AND AMERICAN, under *Economics and Politics*.

**POLITICAL SCIENCE, ACADEMY OF** A national institution for advancing the political sciences and promoting their application to public problems, founded in 1880 in New York City and incorporated in 1910. On Dec. 31, 1920, it had 7103 members, of whom 10 were honorary

members, 221 life members, and 1200 subscribing members, chiefly libraries and organizations. All States in the Union, the District of Columbia, Porto Rico, Hawaii, the Philippine Islands, and more than 60 foreign countries are represented in both the individual and subscribing memberships.

Two general meetings were held in 1920. The semi-annual meeting was held on April 24 at Columbia University to discuss the subject, "Railroad Consolidation." Three sessions were held dealing with unification under the present law, advantages and disadvantages of consolidation, and pending consolidation legislation. The papers and addresses, with some additional material and a prefatory note giving some account of the meeting and information concerning the speakers, were published in the *Proceedings*, vol. xiii, no. 3, under the title, "Railroad Consolidation."

The annual meeting, held November 22, was devoted to the subject, "Business, Speculation, and Money." Three sessions were held as follows: Speculation, credit, and business, credit regulation through the Federal Reserve System, and business, speculation, and money. The market cataclysm of the autumn of 1920 afforded a spectacular demonstration of the need for scientific exploration of this subject. Seldom has a financial event of such moment been so closely followed by a contemporary account devoted to expert analysis of its causes and meaning. The papers and addresses prepared for the meeting were published in the *Proceedings*, vol. xiii, no. 4, together with some account of the meeting.

Four issues of the *Political Science Quarterly*, the official organ of the academy, were published during the year. The officers for 1920 were: McCune Lindsay, president; Albert Shaw and Paul M. Warburg, vice presidents; Paiket T. Moon, secretary and editor of publications; George A. Plimpton, treasurer; and Ethel Wainer, executive director and assistant treasurer. Headquarters are in Fayerweather Hall, Columbia University, New York City.

**POLITICS.** INSTITUTE OF Formed for the discussion of foreign affairs, so as to promote a more sympathetic understanding of the problems and policies of other nations, these annual sessions were inaugurated by the trustees of Williams College in September, 1919. The first session of the institute was held in Williamstown, Mass., in the summer of 1921. Membership is open to men and women on the faculties of colleges and universities, to writers on foreign politics, to persons engaged in the direction of foreign commerce or banking, to diplomatic and consular officials, to officers of the Army and Navy, to editors, foreign correspondents of the press, and, by invitation, to others who have had training and experience in international law and politics. In 1924 the General Education Board and the Carnegie Corporation joined with Bernard M. Baruch, who had made the first three meetings possible, in financing the movement for a five-year period.

The ninth session of the institute met Aug. 1-29, 1929, in Williamstown, Mass. Addresses were delivered by visitors of international reputation, including George Young and Prof. T. E. Gregory of London, and Count Giovanni Elia of Rome. Lecture courses were conducted by Dr. William E. Rappard of Geneva, whose topic was "The Trend of International Cooperation in Europe since the

War," and by André Siegfried of Paris, his subject being "The Political System in France." The following is a list of round-table subjects with their respective leaders: "Canadian-American Relations," Dean P. E. Corbett, McGill University; "Limitation of Armaments," Rear Admiral C. L. Hussey, U. S. N., ret.; "The Interests of United States Citizens in Latin America," Prof. Herbert I. Priestley, University of California; "Post-War Constitutional Changes in Europe," George Young, London; "Planned Prosperity: The Effect of Public Fiscal Policies on Trade and Employment," Dr. William T. Foster, Newton, Mass., and Waddill Catchings, New York City; "Banking, Currency, and Exchange," Prof. T. E. Gregory, London School of Economics; "Trade Relations as Affected by Politics, Science, and Finance," Dr. Harrison E. Howe, Washington, and "Inter-Ally Debts and Reparations," Prof. Jacob Viner, University of Chicago.

Each of these leaders conducted two open conferences during the session at which there were discussions, for the benefit of those who were not members of the round-table, of the more specialized study which had taken place in these conferences. In addition, there were special general conferences on the following subjects: "Mexico: Financial, Social, and Political," since 1910," led by Dr. Eyer N. Simpson, Mexico City; "Financial and Commercial Relations with Latin America," Prof. Harry T. Collins, University of Pennsylvania; "American-Canadian Mineral Resources," Prof. C. K. Leith, University of Wisconsin, and "Chinese-Russian Relations," Prof. George H. Blakeslee, Clark University.

There were 266 members in attendance at the 1929 meeting. The institute publishes an annual report including an outline and selected bibliography for each of its conferences and a summary of all the main ideas developed by the conference leaders, lecturers, and members of the institute, copies may be obtained from the office of the secretary, 1 Hopkins Hall, Williamstown, Mass. The officers of administration in 1929 were: Harry Augustus Garfield, chairman; Walter Wallace McLaren, executive secretary; and Willard Evans Hoyt, treasurer. Headquarters are at 1 Hopkins Hall, Williamstown, Mass.

**POLO.** After the extraordinary interest of the preceding international years when the United States repelled the British and Argentinian invaders, the year 1929 provided a calm for the high-goal players. It was a busy year with the players concentrating on weekly matches and the tournaments under the auspices of the United States Polo Association. The younger element which took hold of United States polo in the series with the Argentine team in 1928 again dominated the scene. The United States not only watched with interest the work of the veteran youngsters—Tommy Hitchcock, E. A. S. Hopping, and Winston Guest, but followed with even more care the work of the Old Aiken four, a team composed of college graduates, not one member of which was over twenty-one. This Old Aiken four, consisting of Elbridge T. Gerry of Harvard, and James P. Mills, Stewart B. Inglehart, and J. C. Rathborne of Yale, won the national junior championship, the Third Westbury Cup, and the Herbert Memorial Cup, besides reaching the final in the hunt for the Monty Waterbury Cup.

Hitchcock played amazingly well all season, yet his Sands Four lost the open title and the Waterbury Cup. The open championship was

captured by Laddie Sanford's Hurricanes for the second time in four years. Sanford had Capt. C. T. I. Rark, the Irish internationalist, J. Watson Webb, veteran lefthander, and Bobby Strawberry riding with him. John Hay Whitney's Greentree four, with Whitney, Winston Guest, Eric Pedley, and Elmer J. Boescke, Jr., won the Waterbury Cups. The latter two players, Pedley and Boescke, the Californians, made a fine showing on Eastern fields during the season as did H. W. Williams, six-goal Texan, and the Roarks, Captain Pat, and Aidan.

The indoor game spreading further in the land was featured by the continued championship success of the Brooklyn Riding and Driving Club. Carl Pfing, Gerard Smith, and Warren Sackman of that club won the open title for the third year, while Stewart Ighehart and the two guests, Winston and Raymond, formed the Optimist Club team which won the Class-A championship. Harvard won both the outdoor and indoor intercollegiate laurels.

**POND, REAR ADMIRAL CHARLES FRÉMONT** American naval officer, died Aug. 4, 1929, in Berkeley, Calif. He was born in Brooklyn, Conn., Oct. 26, 1856, and was graduated in 1876 from the U. S. Naval Academy. He was promoted through the grades of the U. S. Navy to the rank of rear admiral in 1914. He retired in 1918, after more than 24 years of service at sea and almost 18 years of shore duty. With the U. S. Coast and Geodetic Survey, he was engaged in a survey of the Pacific coast (1879-83 and 1886-90), during 1881-83 he inaugurated a coast and geodetic survey in Alaskan waters. In the Spanish-American War, he served on the U. S. S. *Panther*. Admiral Pond was commander-in-chief of the Pacific Reserve Fleet from April to October, 1915, was with the Atlantic Fleet in 1915-16, and commander of the cruising force of the Atlantic Fleet from July to November, 1916.

**POPE, RALPH WAINWRIGHT** An American engineer and editor, died Nov. 1, 1929, in Great Barrington, Mass. He was born there Aug. 16, 1844, and at the age of 15 became a telegrapher for the Housatonic Railroad Company. From 1862 to 1865, he was an operator for the American Telegraph Company in New York City, New Haven, Conn., and Providence, R. I. In 1866 he was quartermaster on the Collins Overland Telegraph Expedition to British Columbia. Mr. Pope became associate editor of the *Telegrapher* in 1868 and of the *Electrical Engineer* in 1884; and in 1890 he founded and became editor of *Electric Power*. From 1885 to 1911, he was secretary of the American Institute of Electrical Engineers in New York City, and after that time, honorary secretary.

**POPE PIUS XI.** See ROMAN CATHOLIC CHURCH.

**POPULATION, RURAL.** See AGRICULTURE.

**PORK.** See LIVESTOCK.

**PORTLAND CEMENT.** See CEMENT.

**PORTO RICO, pòr-to-ré-kò** An island possession of the United States in the West Indies, the most easterly and smallest but most densely populated of the Greater Antilles, lying 480 miles east of Cuba, 1380 miles southeast of New York, Capital, San Juan.

**AREA AND POPULATION.** The area of the island is 3425 square miles and the population, according to the census of 1920, 1,299,809. On June 30, 1920, the population was officially estimated at 1,472,755, about 27 per cent of whom live in

cities. The movement of population in 1928-29 was: Births, 50,682; deaths, 40,890; marriages, 16,414. Deaths in 1928-29 totaled 11,208 more than in 1927-28, the increase being due exclusively to the hurricane of September, 1928. The capital, San Juan, had a population of 70,707 in 1920, estimated in 1929 at about 100,000. Other important towns are Ponce (78,608), Mayaguez (44,375), Arecibo (50,313), and Caguas (43,804). In 1928-29, 17,369 persons emigrated to the United States and 6458 returned to the island from the United States.

**EDUCATION.** Elementary education is free and compulsory between the ages of 8 and 14. According to the governor's annual report for the fiscal year 1928-29, in the publicly supported schools of all grades under the Department of Education, there were employed 4498 teachers. The total enrollment for the year was 220,634. Of this number, 125,549 were enrolled in the rural schools, 87,547 in the elementary urban schools, 6879 in the secondary schools, and 659 were special students. In addition to those enrolled in the public schools, 8879 were enrolled in private schools. The total expenditure for educational purposes by the Department of Education was \$4,191,657. In addition \$1,625,785 was disbursed by municipalities from their own funds. The total amounted to \$5,817,442. A total of 443 government-owned schoolhouses were wholly or partially destroyed by the hurricane of 1928 and a larger number of rented school buildings were wrecked. The University of Porto Rico had an enrollment of 3493 in all its various schools in 1928-29.

**PRODUCTION.** Porto Rico is primarily dependent upon sugar production for its prosperity, with tobacco and coffee as the other major crops. Cotton, cacao, beans, fruits, and various textile fibres also are grown. For the fiscal year ending June 30, 1929, the production of sugar was 586,760 short tons, or 21.6 per cent less than the 1927-28 crop of 748,677 tons, the largest ever produced on the island. Sugar exports shrank to \$35,222,162, as against \$54,579,020 in the preceding year, with resultant depressing effects upon the economic condition of the population. The decline in production of sugar, as well as other crops in 1928-29 was due to damage wrought by the 1928 hurricane. Crop damage alone was estimated at \$54,462,945, losses to farm buildings, sugar mills, etc., bringing the total agricultural loss to \$62,432,076. The tobacco crop for 1928-29 was estimated at 246,000 quintals, as compared with 270,000 quintals in the preceding year. The storm destroyed the largest crop of coffee ever produced on the island, valued at about \$12,000,000.

Likewise attributable to hurricane damage was the decline in exports of grapefruit, oranges, pineapples, and other fruits to \$2,322,980 in 1928-29 from \$5,657,000 in 1927-28, and the decline in coconut exports from 23,088,000 valued at \$697,972 in 1927-28 to 8,668,000 valued at \$249,065 in 1928-29. The hurricane also destroyed one-fifth of the depleted forests of the island, setting back the reforestation programme of the insular government, which owns about 40,000 acres of forest land.

The chief manufacturing industries are engaged in the production of sugar, needlework, women's wear, and men's clothing. The dense population of the island, averaging 400 to the square mile, results in a more or less

continuous unemployment problem Reconstruction work necessitated by the hurricane furnished some relief in 1928-29

**COMMERCE** Porto Rico's commerce with the United States and foreign countries during the fiscal year ending June 30, 1929, declined by \$10,293,438 to a total of \$179,583,630, the decrease being almost entirely attributable to the hurricane of September. The growth of the island's trade and the effects of the hurricane are shown in the accompanying table

PORTO RICAN TRADE

	1900	1927-28	1928-29
Brought from the United States	\$6,952,114	\$79,743,088	\$85,078,596
Shipped to United States	3,350,577	96,662,619	76,418,210
Brought from foreign countries	3,037,391	12,599,241	12,782,164
Shipped to foreign countries	3,261,922	6,872,120	5,304,660
Totals	\$16,602,004	\$195,877,068	\$179,583,630

For the 28 years ending in 1928 the trade of the island showed an average annual increase of \$6,400,000. The balance of trade, which had been favorable to Porto Rico with the exception of four years in the period 1900-1928, showed an adverse balance of \$16,137,890 in 1928-29, as compared with an excess of exports valued at \$11,102,410 in 1927-28, at \$9,256,684 in 1926-27.

The four major exports are sugar, tobacco, coffee, and fruits. The amount and value of these exports in 1928-29, with figures for the previous year in parentheses, were as follows: Sugar, 471,244 short tons (605,538), valued at \$35,222,162 (\$54,579,020); coffee, 1,278,615 pounds (7,838,104), \$456,831 (\$2,596,572); tobacco, 26,593,693 pounds, \$10,773,481; fruit, \$2,322,980 (\$5,657,000). Ninety per cent of all trade was with the United States.

**FINANCE** Revenues during the fiscal year 1928-29 amounted to \$11,004,138, as compared with \$12,446,219 in the preceding year and with the budget estimate of \$10,499,000. Including the balance of \$758,797 from the previous year, non-revenue receipts of \$2,764,520, hurricane loans extended to the amount of \$1,002,050, and miscellaneous receipts, the total available resources for 1928-29 amounted to \$14,834,129, leaving a cash balance on June 30, 1929, of \$816,555. Of the disbursements those against appropriations totaled \$11,320,663, repayments amounted to \$2,764,520, and the remaining payments were for the reduction of the floating debt (\$462,669), redemption of municipal bonds (\$32,500), and transfers (\$253,775).

Preliminary returns for the fiscal year 1929-30 indicated that the tax receipts would not exceed \$9,500,000, as against the budget appropriations of \$10,499,000. At the end of 1929 the net insular bonded indebtedness stood at \$25,390,000 and the insular floating indebtedness at \$3,024,950, as compared with a bonded indebtedness on July 1, 1928, of \$25,517,000 and a floating indebtedness of \$1,945,833. Much of the increase in the floating indebtedness was incurred through the issuance of temporary hurricane loans.

**COMMUNICATIONS** There were in Porto Rico in 1928 about 335 miles of railway line, 1072 miles of telegraph wire, and 27,745 miles of telephone wire. An air-mail line between Porto Rico and the United States was inaugurated in January, 1929.

In 1928, 1118 vessels of 1,257,000 tons entered and 1119 of 1,306,000 tons cleared Porto Rican ports.

**GOVERNMENT** The constitution, as determined by the so called Jones Act passed by the United States Congress in 1917, vests executive power in a governor appointed by the President of the United States and legislative power in a legislature of two elective houses: a senate of 19 members and a house of representatives of 49 members. A resident commissioner, elected by the people for a term of four years, represents Porto Rico in the United States Congress. The six departmental heads form an Executive Council, presided over by the governor. The Jones Act conferred United States citizenship upon the people of the island. Governor in 1928, Theodore Roosevelt, son of the late President Roosevelt, appointed by President Hoover in 1929.

**HISTORY** The poverty habitually afflicting large numbers of Porto Ricans became increasingly prevalent in 1929 due to the blow inflicted upon the island's agriculture and industry by the hurricane of September, 1928. The newly appointed Governor, Col. Theodore Roosevelt, appealed for aid to the people of the United States in December. From personal observation and official reports Governor Roosevelt estimated that 60 per cent of all children on the island were undernourished and partially starved.

The first session of the legislature elected in November, 1928, was convened Feb. 11, 1929, and much of its deliberations were concerned with measures for hurricane relief. Laws were also passed abolishing the death penalty and amending the electoral law so as to confer suffrage on literate females and to restrict it to literate males. A special session of the legislature was called by the Governor on June 10 to make appropriations for essential services inadequately provided for in the general appropriations act passed at the regular session.

**PORTS AND HARBORS** The notable series of articles on the harbors of the world by Dr. Brysson Cunningham (continued throughout the year in *Engineering* (London) and included discussions of Bremerhaven, Bremen, and Hamburg.

**Todd Dry Dock, Brooklyn, N. Y.** In spite of unusual difficulties encountered in excavation, difficulties which recalled the struggle during the construction of the Brooklyn Navy Yard Dock, this new work made rapid progress. It was built by the Todd Shipyards Corporation at its Robins Plant in Eric Basin and was opened during the year. It is the largest dock in New York Harbor, with a total length of 715 feet, a top width of 113 and a bottom width of 93 feet. In constructing the dock new methods were followed. In the inner portion or section, 500 feet long, the usual plan of driving piles and then placing a heavy blanket of concrete, sufficiently thick to counterbalance the upward water pressure when the dock is empty, was abandoned. Instead, a line of steel sheet piling was driven around the section, to cut off any direct water flow, and the timber bottom of the lock was left open, permitting ground water to seep up through the floor when the dock is emptied. This water will be taken care of by drainage pumps. Obviously, this plan offers a great reduction in the amount of excavation and concrete required. The 250-foot outside section was built under water. That is, dredges were used for excavation, foundation piles were driven and reinforced concrete side walls and bottom were built by depositing the concrete

TODD DOCK AT THE ROBINS DRY DOCK AND REPAIR COMPANY'S PLANT,  
BROOKLYN N. Y.

This dock of the Todd Shipyards Corporation is the largest private dock of its type on the Atlantic seaboard. The Munson Line, "Southern Cross," is shown entering the Gate.

Photo by Photopress London

OPENING OF TILBURY DOCK, PORT OF LONDON

NEW DOCKS OF 1929

through a tremie tube. A 500-ton floating steel gate, similar to that used at the Brooklyn Navy Yard, is used to close the entrance to this dock.

**LONDON** The Port of London officially opened the improved docks at Tilbury in September. This is considered the most up-to-date dock system in the world and cost \$15,000,000. The works include a dry dock 750 feet long and 110 feet wide which can be lengthened, if found necessary later, to 1000 feet.

**SOUTHAMPTON** Early in March the first of the huge monolith blocks of concrete for this great dock project was placed. The work will cost in all about \$65,000,000 and its most imposing feature will be a huge quay wall with concrete deck.

**AIRSHIP DOCK** One of the most interesting of modern structures was the Goodyear-Zeppelin Airship Dock or hangar nearing completion at the Akon, Olivo, municipal airport. The building has a total length of about 1184½ feet and is formed by 13 arch trusses having spans of 325 feet and a centre height of 108½ feet. A unique feature of the design is the huge 450-ton "orange-peel" doors. The doors form roughly a half-hemisphere in two sections. The top of these sections is pivoted on a huge pin at the centre of the roof over the entrance. The base of each door, a quarter-circle in form, rests on curved tracks. When the doors are opened, they are moved to each side on these curved tracks, fitting closely along the sides of the building and giving a full end opening. It was expected that this type of construction would reduce the cross-wind currents which interfere with airship docking and which the usual flat vertical doors, such as those at Lakehurst, were said to develop. Similar but smaller docks have been built in Germany. See *AERONAUTICS*.

**PORTUGAL.** A republic of Europe, situated west of Spain in the Iberian Peninsula, the westernmost of all the States of Europe. Capital, Lisbon.

**AREA AND POPULATION** The area of continental Portugal is 34,254 square miles, population, according to the census of 1920, 5,621,977, as compared with 5,545,595 in 1911. The Azores, with an area of 922 square miles, had a population of 242,613 in 1920, and Madeira, with an area of 314 square miles, a population of 169,777 in 1920, the total area, therefore may be considered 35,490 square miles and the population in 1920 may be placed at 6,032,991, because the Azores and Madeira are considered integral parts of the Republic, estimated population in 1927, 6,265,000. During the years 1923-27, inclusive, births averaged 209,932 and deaths 127,120, the excess of births amounting to 82,812 annually. The Portuguese colonial possessions in Africa and Asia had an estimated area of 936,264 square miles, with a population of 8,737,853, of which 927,292 square miles with a population of 7,736,700 were in Africa. Lisbon, the capital, had a population at a special census in 1925 of 529,524 and Oporto, the next largest city, 225,000 (1926). Primary education is compulsory. In 1920-27 there were 7174 public elementary schools with 318,437 pupils, 33 secondary schools with 11,430 pupils, and 5 primary normal schools with 793 students. For higher education there are three universities, which had 4461 students in 1920-27.

**PRODUCTION** Agriculture is the main industry. The Ministry of Agriculture estimates that of the total continental area of Portugal, about 28 per cent is cultivated annually or under meadows or

pasture, about 8 per cent is under vineyards or fruit trees, 17 per cent under forests, and 49 per cent waste land. Nearly all sections of the country experienced a partial failure of the crops in 1928, but due to the considerable crop surplus from the large harvest of 1927 the effects were minimized. The area and production of the chief crops in 1928 were: Wheat, 1,082,000 acres, 6,578,000 bushels, rye, 618,000 acres, 3,418,000 bushels, barley, 193,000 acres, 1,983,000 bushels, oats, 552,000 acres, 3,876,000 bushels. In 1927 the potato crop was 11,427,000 bushels, wine 244,808,000 gallons, and olive oil, 39,109,000 gallons. Corn is another major crop, the production in 1926 being valued at \$16,080,000. In 1925 there were 768,000 cattle, 1,117,000 swine, 3,684,000 sheep, 1,558,000 goats, and 30,000 horses.

Although Portugal has considerable mineral deposits, only a few are worked due to the lack of fuel and cheap transportation. In 1927 the mineral output consisted of 204,400 metric tons of coal and lignite, 302,300 tons of copper pyrites and cement ore, and 1083 tons of tin ore. Textiles constitute the principal manufacturing output, the textile industry employing 60,000 workmen in 1928. Other manufactures are decorative tile, chinaware, superphosphate of lime, handmade lace, and embroidery. Fishing is an important industry, employing 52,518 men and boys in 1926.

**COMMERCE** In 1927, the last year for which figures were available, imports totaled \$133,904,000, as compared with \$120,156,000 in 1926, and exports declined to \$36,345,000 from \$37,775,000 in the preceding year. The large excess of imports shown in these two years is a normal condition in Portuguese economy. The chief items of import in 1927 were: Wheat, \$13,649,000, coal, coke, and briquets, \$7,544,000, machinery and tools, \$7,121,000, raw and waste cotton, \$6,774,000, codfish, \$6,522,000, vegetable oils, \$6,028,000. The principal export items were: Wines, \$12,141,000, fish and shellfish, \$6,788,000, cork, \$4,020,000, coal (ships' supplies), \$2,321,000, fruits and nuts, \$1,238,000. The United Kingdom and Germany are the principal purchasers of Portuguese products and also the chief sources of imports. In 1927 the United States ranked third as a source of imports and sixth as a market for exports.

**FINANCE.** The total of the annual deficits which characterized Portuguese budget operations from 1919-20 to June 30, 1928, the end of the fiscal year, was \$191,349,000, the estimated deficit for 1927-28 alone being \$19,508,000. The budget estimates for 1928-29 virtually balanced, receipts being estimated at 1,919,388,000 escudos (\$85,700,000), and expenditures at 1,917,811,000 escudos (\$85,630,000). The expenditure budget was 19,000,000 escudos lower than in the previous year, while by a revision of taxation, an increase in revenues of 364,629,000 escudos was anticipated. The ordinary budget for 1929-30 provided for revenues of 1,910,933,000 escudos and expenditures of 1,843,855,000 escudos. With the extraordinary budget figures added, total revenues were estimated at 2,033,433,000 escudos and total expenditures at 2,024,855,000 escudos (1 escudo exchanged at \$0.0446 in 1928-29).

The total public debt was estimated in 1927 to amount to \$406,134,000, exclusive of the World War debt to Great Britain which had a "present time" value of about \$27,000,000 in December, 1928. Of the total, \$95,419,000 represented the floating debt, \$246,537,000 the internal funded debt, and \$154,179,000 the external funded debt.

**COMMUNICATIONS** The railways of Portugal, which totaled 2103 miles of line in 1927, were practically all operated by one private company, including 894 miles of state line leased from the Government in 1926. In 1927 the railways carried 29,950,000 passengers and 5,959,000 metric tons of freight, earning gross receipts of 288,706,000 escudos (\$14,526,000). There were also 19,317 miles of telegraph wire and 78,880 miles of telephone wire. The telegraph system and some telephone lines were operated by the government.

**GOVERNMENT** According to the constitution of 1911, executive power is vested in the President, elected by the parliament for four years but ineligible for reelection, who acts through a responsible ministry, and legislative power in the Parliament of two chambers, the Upper House having 71 members elected by the municipal councils and the Lower House, 164 members elected for three years by direct suffrage. Acting President in 1929, General Antonio Oscar de Fragozo Carmona (appointed in December, 1926). The cabinet as constituted Nov. 10, 1928, was as follows: Prime Minister, Minister of the Interior, and Minister of Commerce and Communications, José Vicente de Freitas, Foreign Affairs, Commander Manuel Carlos Quintão Meireles, Marine, Commander Masquita Guimarães, Finance, Dr. Antonio de Oliveira Salazar, Justice, Dr. Mario de Figueiredo, War, Col. Ernesto de Moraes Sampaio, Instruction, Dr. Gustavo Ramos, Agriculture, Pinto Bravo, Colonies, José Bacelet Rebello.

**HISTORY** Portugal experienced a comparatively uneventful year in 1929 under the tactful and able supervision of its dictator, President Carmona. Increasing intransigence in the relations between Portugal and Spain, as evidenced by a visit to Spain made by President Carmona in the autumn, the reorganization of the cabinet in July, and the continuation of internal progress were the most noteworthy developments. The budget was reported to show a surplus in 1928-29 for the first time since the World War and improvements in the roads, ports, and telephone and telegraph systems were provided for in the 1929-30 budget. President Carmona announced that he would sanction the return to a parliamentary form of government as soon as he had ironed out the financial difficulties of the country and reorganized commerce and industry on modern lines. In anticipation of the end of the dictatorship the cabinet council on October 4 announced that the drafting of a new constitution would be one feature of an extensive programme of social and economic reform, which included the reorganization and extension of the educational system.

An Associated Press report from Lisbon on November 10 announced that the cabinet council had authorized the return to Portugal of 86 army officers and noncommissioned officers who had been banished to the Azores for taking part in a conspiracy against the dictatorship. Two eminent citizens of Portugal died during the year, Dr. Antonio José Almeida, President of the Republic from 1919 to 1923, on October 31 and Field Marshal Gomes de Costa, commander of the Portuguese expeditionary force on the western front in the World War, on December 5.

**PORTUGUESE EAST AFRICA, or MOZAMBIQUE** A colony of Portugal, extending along the east coast of Africa from 10° 40' S latitude to the boundary of the Union of South Africa, bounded on the west by the Union of South Africa and

Rhodesia, and on the north by Tanganyika. Area, 428,132 square miles. The estimated population is 3,657,008. There are three clearly defined divisions of the colony: (1) the Province of Mozambique, 295,000 square miles, population in 1927, 3,482,914; (2) the territory under the Mozambique Company, 59,840 square miles, population in 1926, 308,543; (3) the district under the Nyassa Company, 73,292 square miles. In addition, there is the Kionga Triangle, formerly belonging to German East Africa, situated south of Rovuma, which was allotted to Portugal by the Treaty of Versailles. Lourenço Marques, the capital and chief port for foreign trade, had a population of 37,301 in 1927. Other ports are Mozambique, with a population of about 361,839 (472 Europeans), Ibo, Chinde, Beira, Quilmane, and Inhambane. The chief products are beeswax, coconuts, sugar, raw cotton, maize, and mineral products. Rubber and ivory are exported. Imports into the province in 1927, exclusive of gold and silver, amounted to 57,260,765 escudos and exports to 56,905,087 escudos. The proposed provincial budget of Portuguese East Africa for the fiscal year 1928-29 balanced at 322,483,961 escudos (one escudo equalled \$0.503 in 1927).

**PORTUGUESE GUINEA, g'ñê** A colony of Portugal on the west coast of Africa, entirely surrounded on the land side by French territory. It includes the archipelago of Bijagós, together with the island of Bolama on which is situated the capital, Bolama. Area, estimated at 13,940 square miles, population at 350,000. The principal port is Bissau. The chief products are wax, rubber, ivory, hides, and oil seeds. The imports in 1927 were valued at 34,322,414 escudos, exports at 34,309,015 escudos. The estimated public revenue and expenditure for 1928-29 was 34,970,000 escudos (one escudo equalled \$0.503 in 1927).

**POST OFFICE.** See UNITED STATES.

**POTASH.** The potassium salts produced in the United States in 1929, according to the U. S. Bureau of Mines, contained the equivalent of 61,590 tons of potash ( $K_2O$ ). The output in 1929 increased 3 per cent in  $K_2O$  content above that of 1928. Sales of salts decreased 4 per cent with a decrease of 5 per cent in  $K_2O$  content. Potash materials of domestic origin sold in 1929 were valued at \$2,988,448, that imported, at \$23,719,056, for approximately 929,819 short tons. This represented a decrease of 4.7 per cent in gross weight; and an increase of 5 per cent in value.

The production of potassium salts came from natural brines, flue dusts of blast furnaces, from the waste of molasses distillation, and from Steffen's water. During the year the Bureau of Mines, the Geological Survey, and other government bureaus continued the investigation of potash deposits in Texas, New Mexico, and other localities.

Of the 1928 imports, virtually all crude salts and much the larger part of the refined salts imported originated in Germany and France, Germany alone sending material valued at \$14,544,000. The potash produced in Germany in 1928 was stated as 1,090,469 metric tons, while in France the production for 1928 was stated as 427,997 tons. In 1929 the United States imported potash fertilizers as follows: Crude chloride (muriate), 230,966 tons valued at \$8,224,661; crude sul-

phate, 79,510 tons valued at \$3,047,839; kainite, 75,930 tons valued at \$643,950, manure salts, 390,828 tons valued at \$5,113,085, and other potash-bearing substances, 675 tons valued at \$9,313. See **CHEMISTRY**, **INDUSTRIAL**, **FERTILIZERS**, **GEOLOGY**.

**POTASSIUM**. See **CHEMISTRY**, **INDUSTRIAL**.  
**POTATOES**. In 1929 the potato production of 20 countries reporting to the International Institute of Agriculture, Rome, was estimated at 3,054,586,000 bushels, indicating a decrease of 4.4 per cent as compared with the production in 1928 and an increase of 9 per cent over the average crop of the five years 1923-27. The area devoted to potatoes in these countries, 17,169,000 acres, was 2.5 per cent below that of the year before and 2.2 per cent above the area of the five-year period. The European crop, which constitutes about nine-tenths of the world's yield, was reported as generally satisfactory although below the large production of 1928. Among the important producing countries, Germany reported a decrease of 6.7 per cent and Poland of 12.9 per cent as compared with their yields in 1928. In all countries of Europe reporting, the production was above the average for the five years 1923-27. The leading producing countries, not including the United States, reported the following yields: Germany, 1,414,771,000 bushels, Czechoslovakia, 340,341,000 bushels, England and Wales, 125,007,000 bushels, Netherlands, 121,252,000 bushels, Belgium, 112,710,000 bushels, and Hungary, 80,586,000 bushels.

A preliminary estimate placed the yield of Poland for the year at 884,774,000 bushels. The Soviet Republics, which generally rank highest in potato production, reported a yield of 2,009,149,000 bushels in 1927. Of the countries of the Southern Hemisphere, which usually report a total yield of less than 100,000,000 bushels, Argentina, the leading country, has an annual production of about 30,000,000 bushels and Australia of about 15,000,000 bushels. Canada in 1929 had an estimated yield of 74,447,000 bushels.

The Department of Agriculture estimated the potato crop of the United States in 1929 at 357,451,000 bushels, which was 107,899,000 bushels or 23 per cent below the preceding crop of 465,350,000 bushels and 6.6 per cent below the previous five-year average of 382,756,000 bushels. The smaller production in 1929 was due to a reduction in acreage and a lower yield per acre. The area in potatoes was estimated to be 3,370,000 acres as compared with 3,337,000 acres in 1928, a decrease of about 12 per cent. The average yield per acre was 106.1 bushels as against 121.3 bushels in 1928 and 106.4 bushels for the 10-year average. The commercial production of early potatoes amounted to 35,613,000 bushels or 36 per cent less than the crop of 55,475,000 bushels in 1928 but its value of \$46,662,000 was 50 per cent above the 1928 value of \$31,076,000. The average farm price on Dec. 1, 1929, of \$1.31 per bushel was nearly two and one-half times the average price of 53.9 cents per bushel in December, 1928. The total value of the 1929 production based on this price was estimated at \$469,701,000, which was 87 per cent greater than the value of the 1928 crop, although the 1928 production was 30 per cent larger. Potatoes were produced in all the States, the leading ones and their yields being as follows: Maine, 47,644,000 bushels, Minnesota, 25,896,000 bushels, Pennsylvania, 25,740,000 bushels, New York, 24,840,000 bushels, Wisconsin, 20,240,000 bush-

els, Michigan, 18,410,000 bushels; Virginia, 17,461,000 bushels, and Idaho, 17,136,000 bushels. In average yield per acre, Utah led with 185 bushels followed by Maine with 176 bushels, Nevada with 170 bushels, and Idaho with 168 bushels. The average farm prices per bushel on Dec. 1, 1929, ranged from \$1 in Minnesota and Utah to \$1.80 in Florida.

The results of a study by the Department of Agriculture indicated that of the production in 1928 of 420,891,000 bushels of 35 States growing late potatoes, 266,541,000 bushels were sold or available for sale and 64 per cent of the yield graded as U S No. 1. Of the portion not sold, 7,406,000 bushels were not harvested on account of market conditions, 8,245,000 bushels had been tied to Jan. 1, 1929, 39,929,000 bushels were unfit for food or seed, and 64,479,000 bushels were saved for food where grown. The production of certified potatoes for seed in 1929 was reported at 7,916,000 bushels for the United States and 4,750,000 bushels for Canada. Of the certified seed crop of the United States, nearly 4,000,000 bushels were produced in Maine.

**PRAIRIE PROVINCES**. The name applied to the three Canadian provinces of Manitoba, Saskatchewan, and Alberta. Total area, 758,817 square miles (Manitoba, 251,832, Saskatchewan, 251,700, Alberta, 255,285). Population in 1929, 2,195,900 (Manitoba, 663,200, Saskatchewan, 886,700, Alberta (646,000). For production, etc., consult the articles on the respective provinces and on **CANADA**.

**PRATT INSTITUTE**. A nonsectarian educational institution in Brooklyn, N. Y., founded in 1887 and composed of four schools. Fine and applied arts, household science and arts, science and technology, and library science. The 1929 autumn enrollment was 4920, distributed as follows: Arts, 1704, household science, 910, science and technology, 2174, library school, 26. There were 183 members on the faculty and 36 special lecturers. The library contained 143,000 volumes. President, Frederic B. Pratt, A. M., LL. D.

**PRESBYTERIAN CHURCH**. The Presbyterian Church, with the Reformed churches, rests on features of the Reformation brought forward by Zwingli and Calvin. It consists of bodies in the United States, the British Isles, and elsewhere, following the doctrinal and ecclesiastical system developed in Holland and France and more fully in Scotland under John Knox. The distinctly Presbyterian bodies of the United States are derived for the most part from bodies in Great Britain, but are in many respects similar to the Reformed churches in the United States, sprung from parent bodies in other parts of Europe, and particularly in Holland. The following organizations in the United States bear the Presbyterian name. The Presbyterian Church in the United States of America, Presbyterian Church in the United States (South), United Presbyterian

Church of North America, Cumberland Presbyterian Church; Cumberland Presbyterian Church, Colored, Reformed Presbyterian Church, Reformed Presbyterian Church, General Synod, Associate Synod of North America, also known as the Associate Presbyterian Church; and the Associate Reformed Presbyterian Synod, The Presbyterian churches of the United States have general affiliations with the Alliance of Reformed Churches throughout the World Holding the Presbyterian System and also with the General Council of the Presbyterian and Reformed Churches in America, a similar organization of purely American scope. Steps were taken at the meeting of the American section of the World Alliance at Richmond, Va., in 1925 to effect a union of the world and American bodies, and at the meeting at Pen Mar, Pa., in August, 1929, resolutions were adopted calling upon all presbyteries, synods, and general assemblies of the Presbyterian and Reformed churches to take definite action toward achieving absolute, organic union. In Scotland, the union of the Church of Scotland and the United Free Church took place in Edinburgh in October, 1929, after 20 years of negotiation. The Very Rev. John White of Glasgow was elected first moderator of the reunited church.

**PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA** This is the largest body of the denomination and is represented by churches in every State of the Union and by official mission stations in Alaska, Cuba, Porto Rico, and foreign lands. In 1929 the churches in the United States were organized into 46 synods and 296 presbyteries. Statistics for the year ending March 31, 1929, showed a net gain in membership for the year of 41,029 and a total membership of 2,004,467. The Sunday-school enrollment totaled 1,595,313, a loss of 18,700 for the year, whereas for

the previous year there had been a gain of 17,496. As a result of the movement on foot to dissolve churches having a nominal existence and to combine churches where possible, the number was decreased by 71, giving a total of 9361, including 46 churches organized during the year, as against 121 which were dissolved. The number of ministers in 1929 was 9906. Contributions during the year amounted to \$65,113,110, the largest amount ever raised by the denomination in one year and an increase of \$514,580 over the previous year. Of the total income, \$49,450,686 was used for congregational expenses, while \$15,233,818 was devoted to benevolences, including \$4,404,123 given to the board of national missions, \$1,806,946 to the board of foreign missions, \$920,000 to the board of Christian education, and \$3,693,208 to miscellaneous benevolences. The board of pensions received \$423,877 of the total contributions to benevolences and, in addition, \$2,239,914 from subscriptions to the \$15,000,000 endowment fund of the laymen's committee for the new service pension plan, making a total of \$8,264,681 received in three years.

The 1929 meeting of the general assembly was held May 23 to 29 in St. Paul, Minn., the Rev. Cleland Boyd McAfee, D.D., LL.D., of Chicago being elected moderator for 1929-30. The assembly authorized continuance of special emphasis on young people's work throughout the year and also evangelistic emphasis leading up to the observance in 1930 of the 1900th anniversary of the founding of the Christian Church. Canvassing the returns on overtures, it found that the proposal to eliminate willful desertion as a recognized cause of divorce was defeated, and a special commission was appointed to study further the entire subject of divorce and remarriage. Overtures also were sent to the presbyteries, to be acted upon

**COMPARATIVE SUMMARY OF THE PRESBYTERIAN CHURCH IN THE UNITED STATES OF AMERICA FOR FIVE YEARS**

during the year, which, if adopted, would admit women members to equal rights with men as local evangelists, elders, and ministers. A special national loyalty commission was appointed to promote law observance, particularly as relating to the Eighteenth Amendment. The denomination maintains 52 colleges and 13 theological seminaries. Its official organ is the *Presbyterian Magazine* (monthly). Privately-owned Presbyterian periodicals are the *Presbyterian Advocate*, the *Presbyterian Banner*, and the *Presbyterian* (all weekly). The chief permanent officer is the stated clerk, who in 1929 was the Rev. Lewis Seymour Mudge, D.D., LL.D., 514 Witherspoon Building, Philadelphia.

**PRESBYTERIAN CHURCH IN THE UNITED STATES (South).** This division of the Presbyterian denomination covers the territory commonly known as the Southern States. It was composed in 1929 of 17 synods and 92 presbyteries, with 3581 organized churches, 2386 ministers, and 453,988 members. The ruling clerk numbered 15,877 and deacons, 17,579. Contributions for the year were: Current expenses, \$10,423,182, a gift of \$21.38 per capita, and benevolences, \$4,361,974, a gift of \$10.53 per capita. In 1929 the church was supporting 434 missionaries in Africa, Brazil, China, Japan, Korea, and Mexico; these missionaries were assisted by 3177 native workers. In the six countries there were 44,481 church members and 71,489 Sunday-school members. The church maintains four theological seminaries, one training school for lay workers (white), one training school for lay workers (colored), 18 colleges, 13 junior colleges, 12 secondary schools, 19 mountain schools, two Mexican mission schools, and 15 orphan's homes and schools. The church publishes the *Presbyterian Survey* which is the medium of communication of all departments with the membership of the church. Privately owned papers of the denomination are the *Christian Observer*, *Presbyterian Standard*, and *Presbyterian of the South*.

The General Assembly of the Presbyterian Church in the United States met in Montreal, N. C., May 16, 1929. This assembly approved the basis of union with the United Presbyterian Church of North America recommending the submission of the plan to the presbyteries for their advice and consent. The ad interim committee on closer relations also was instructed to approach the Associate Reformed Synod, and an ad interim committee on union with all Presbyterian churches in the United States was appointed with the moderator, the Rev. William Ray Dobyns, as chairman. The next meeting of the assembly was to be held in Charlottesville, Va., May 22, 1930. The offices of the general assembly and bureau of vacancy and supply are in Dallas, Texas. The Rev. J. D. Leslie was stated clerk and treasurer in 1929. See **REFORMED CHURCHES THROUGHOUT THE WORLD HOLDING THE PRESBYTERIAN SYSTEM, ALLIANCE OF**.

**PRESBYTERIAN CHURCH OF NORTH AMERICA, UNITED.** A branch of the Presbyterian Church formed by the union of the Associate and the Associate Reformed churches (Secession and Covenanters) effected in Pittsburgh in 1858. It represents the earlier covenantal and secession movements of the denomination in Scotland, from which it inherited whatever was distinctive in their views and usages. In organization and government it is in accord with other Presbyterian bodies, having the same courts-

session, presbytery, synod, and general assembly, and observing the same general methods of baptism, admission to church membership, and ordination to the ministry.

The general assembly convened in Pittsburgh May 29, 1929. On that date there were in the United States 11 synods, 57 presbyteries, 894 congregations, 908 ministers, 5016 ruling elders, and a church membership of 178,131. The total membership, including missionary fields, was 240,983. The Sunday-school enrollment was 176,397, while the young people's societies numbered 955 with a membership of 25,806. Contributions during 1929 totaled \$6,023,007, an average of \$33.81 per member and missionary contributions, \$1,949,606, an average of \$10.94 per member. Congregational expenses amounted to \$4,179,960, and the average pastor's salary was \$2489. New houses of worship were erected during the year at a cost of \$807,100 and the total estimated value of the church property of congregations was \$26,027,400.

The denomination supported 385 men and women in four foreign-mission fields and 365 men and women in homeland missions. It carried on medical work in 31 foreign hospitals and dispensaries, conducted educational work in 333 schools at home and abroad, maintained nine colleges and four theological seminaries at home and abroad, and reached 35,500 young men and women in its schools and colleges, from which more than 6000 were graduated. In 1929 the value of property and permanent funds of the mission boards was \$9,710,776, the value of property and permanent funds of the colleges, seminaries, and women's association was \$9,737,266, and the total value of property and permanent funds of the denomination was \$48,718,630. The official organ of the church is the *United Presbyterian*, a church-owned yet independent weekly, published in Pittsburgh. The moderator of the general assembly in 1929 was the Rev. John McNaughton, D.D. of Pittsburgh, Pa., and the stated clerk was the Rev. D. F. McGill, D.D., LL.D. of Bellevue, Pa.

**PRINCE, MORTON.** An American neurologist and author, died Aug. 31, 1929, in Brookline, Mass. He was born in Boston, Mass., Dec. 21, 1854, and was graduated from Harvard University in 1875. He received the M.D. degree from Harvard in 1879, and the following year began the practice of medicine in Boston. From 1885 to 1913, he was physician for nervous diseases in the Boston City Hospital, and consulting physician after 1914. He was professor of nervous diseases at Tufts College Medical School from 1902 to 1912, and professor emeritus after 1912. In 1926 he became also associate professor of abnormal and dynamic psychology at Harvard University. He became editor of the *Journal of Abnormal and Social Psychology* in 1906. Dr. Prince was in Paris during 1918-19 as manager of the Massachusetts Soldiers' and Sailors' Information Bureau, and in 1915 he became chairman of the Serbian Distress Fund. For his service, he received a number of foreign decorations. Dr. Prince wrote *Nature of Mind and Human Automatism* (1885),

*Dissociation of a Personality* (1906); *The Unconscious* (1913); *The Psychology of the Kaver* (1915); *The Creed of Deutschtum* (1918). He also collaborated in the writing of *Nervous Diseases by American Authors*, *American Systems of Practical Medicine*, *International System of Electro-Therapeutics*. In 1920 Dr. Prince's collected works were published under the title *Clinical and Experimental Studies in Personality*. See **PSYCHOLOGY**.

**PRINCE EDWARD ISLAND.** A Maritime Province of Canada, the smallest province in the Dominion, situated at the mouth of the Gulf of St. Lawrence and separated by Northumberland Strait from the mainland of New Brunswick and Nova Scotia Area, 2184 square miles, population, according to the census of 1921, 88,615, estimated June 1, 1929, at 86,100. The capital is Charlottetown, with a population of 12,347 in 1921. In 1927 the average daily attendance in the schools was 11,777. The chief industries are agriculture, stock raising, fishing, and the breeding of silver foxes. (For particulars of agriculture and livestock, see under CANADA.) The value of the fish catch in 1927 was \$1,307,807, as against \$1,358,934 in 1926. The gross value of manufactured products in 1927 was \$4,493,628. The revenue for 1927 was \$836,748 and the expenditure \$870,427. The bonded indebtedness of the province in the same year was \$1,933,000. The province is under a lieutenant-governor and a legislative assembly of 30 members, elected for four years, a property qualification being required in the case of one-half the members and the other half being elected by universal man and woman suffrage. Lieutenant-Governor in 1929, Frank R. Hertz, Premier and Attorney-General, A. C. Saunders, Secretary-Treasurer, W. M. Lea, Public Works, J. P. McIntyre, Ministers without Portfolio, J. Blanchard, P. Sinclair, B. W. Le Page, W. B. Butler, and J. F. McNeill.

**PRINCETON UNIVERSITY.** A nonsectarian institution of higher education for men in Princeton, N. J., founded in 1746. The total enrollment for the autumn of 1929 was 2489, of whom 2250 were undergraduates and 239 were graduate students and fellows. The faculty numbered 308, there were also 36 assistants and 34 administrative officers. In addition to several promotions and reappointments, E. L. Katzenbach, Attorney-General of New Jersey, was appointed lecturer in politics, L. A. Morrison, visiting professor of economics, and W. W. Swingle, professor of biology. Losses by death included Dean Henry B. Fine and Prof. C. R. MacInnes of the department of mathematics, Prof. H. C. Longwell of the department of philosophy, and Dr. J. M. Carnochan, university physician.

The endowment in 1928 was \$19,351,475, the total income, \$2,419,016, and the total expenditures, \$2,383,022. Requests during 1929 included \$100,000 from the late Charles H. Ditson to establish the Charles H. Ditson endowment for the musical interests of the university and \$100,000 from the late Percy R. Pyne to establish a chair in French literature. Among the gifts received were \$200,000 from the class of 1897 to endow a chair of astronomy, \$1,000,000 from the General Education Board in recognition of the extensive capital expenditure made by the university for buildings and research in the scientific field, thus enabling the university to restore that sum to its endowment fund, \$500,000 from D. B. Jones and Miss Jones for the erection and endowment of a

mathematics hall in memory of the late Dean H. B. Fine; \$500,000 from the family of the late James T. Walker, toward establishing a bureau of international finance, affiliated with the department of economics and contingent on the university's raising an additional \$200,000 for a professorship in international finance in honor of Dr. Edwin W. Kemmerei; and \$100,000 from L. W. Smith to permit an intensive study of the history of New Jersey and the publication of a series of monographs to be known as the *Princeton History of New Jersey*. The library in 1929 contained 620,000 volumes, exclusive of pamphlets, broadsides, and manuscripts.

New buildings planned and in process of erection during 1929 were the H. B. Fine Mathematics Hall, the T. N. McCarter Theatre, the Walker and 1903 dormitories, which will reduce to 15 per cent the number of students rooming off the campus, and Dickinson Hall, a new wing of McCosh Hall which perpetuates the name of the old recitation hall burned in 1920. The Fick Chemical Laboratory was formally dedicated in September, 1929. A reorganization of the freshman curriculum also was effected in 1929, a feature being the arrangement whereby freshmen with distinguished entrance records might elect sophomore courses. The expedition of the department of geology in Wyoming, financed by the W. B. Scott Fund, made discoveries of great importance to American paleontology and stratigraphy. President, John Grier Hibben, Ph.D., Litt.D., LL.D.

**PROHIBITION ENFORCEMENT.** The subject to receive the greatest general attention, in the Prohibition debate of the year, was that of enforcement. It will be recalled that, during the presidential campaign of 1920, Mr. Hoover, the successful Republican candidate, promised that he would provide for the conduct of an impartial inquiry for the purpose of looking into the question of the enforcement of the Prohibition law. Early in 1930, a Commission was appointed, the scope of its work being extended, however, to include an examination of the enforcement of all law, not merely the Prohibition Amendment and the statutes affecting it. In the article **CRIME**, the details are presented concerning the make-up of this commission and the elaborate plans laid out by it for the conduct of its inquiry. While the year closed without any definite conclusions having been presented as to where the fault lay in the failure of public authority to enforce the Prohibition law, a preliminary announcement was made by Chairman Wickersham in July, 1929, which seemed to indicate along what general lines the final report would be made.

Speaking before the annual conference of State governors at Groton, Conn., Mr. G. W. Wickersham, chairman of the Law Enforcement Commission, asked for a division of authority and co-operative action between the Federal and State governments. Asserting that, because of lack of cooperation from the States, the Federal government had been compelled to carry the chief burden of Prohibition enforcement, Mr. Wickersham outlined his proposal as follows: (1) The national government was to attend to the checking of importation, manufacture, and the shipment in interstate commerce of intoxicants. (2) The States were to undertake the internal

police regulations to prevent the sale in saloons and speak-easies Mr Wickersham's statement contained the remarkable admission that Prohibition was not being enforced at the present time, when he said that, as a result of such a division of functions, "The national and State laws might be modified so as to become reasonably enforceable and one great source of demoralizing and pecuniarily profitable crime removed."

The reception accorded Mr. Wickersham's proposal was of mixed character. A number of the governors present at the conference indicated their hostility by insisting that State public authority was making every effort short of general compulsion to enforce the Prohibition laws, as they then stood. Andrew J. Volstead, father of the Volstead Act, declared that such a division of authority, in effect, would repeal the Eighteenth Amendment in wet localities. On the other hand, Seymour Lowman, Assistant Secretary of the Treasury, in charge of Prohibition activities, and Dr James M. Doran, Commissioner of Prohibition, gave their approval to Mr. Wickersham's programme. Mr. Lowman believed that it was imperative that the States become more aggressive and Dr Doran called for a clarification of Federal and State functions. It was apparent that, with the sort of division proposed, nullification on the part of the wet States was possible, particularly if Federal authority was not in a position to exercise the police power.

In December, it became increasingly apparent that White House councils were seriously divided as to the form which the final recommendations to be made by the Law Enforcement Commission would take. In March, in announcing his preliminary plans for the Law Enforcement Commission, President Hoover had declared that it was to be the work of the commission "to cover the entire question of law enforcement and organization of justice. It will also naturally include consideration of the method of enforcement of the Eighteenth Amendment and abuses which have grown up."

As the year drew to a close and no definite statement of policy had yet made its appearance from the Law Enforcement Commission, dry advocates became openly impatient. Their discontent was brought into the open, late in December, when it became plain that Senator Borah, one of the nation's outstanding dry leaders, was beginning to evidence serious dissatisfaction with the President's enforcement programme (or lack of any). This presaged a bitter fight on the floor of Congress, with the opening of the session after the Christmas recess, and it was apparent that party whips were failing in their efforts to bridge the ever-widening gap of disagreement. Senator Borah charged that many of the United States district attorneys were permitting flagrant and open violation of the liquor laws to go on without taking any steps to punish the guilty. Mr. Borah was understood to have stated bluntly to the President that enforcement was not sufficiently stringent because of "inefficient personnel."

It was generally understood that President Hoover was almost prepared to submit to the Congress the first recommendations of his Law Commission covering plans to relieve congestion in the courts, unification of broader patrols and transfer of the dry unit from the Treasury to the Department of Justice. By the end of 1929, criticisms of the public press became more open, some of them verging on hostility, when they taxed

the President with an attempt to avoid directly the issue in question. The whole machinery of the Law Enforcement Commission was looked upon by the more outstanding critics, notably the *New York World*, as a device for the purpose of side-tracking the bothersome question of Prohibition in a general discussion of the sanctity of the law, the adequacy of the courts, the police authorities, crime statistics, etc., etc. From all quarters as the year closed, there appeared demands for a frank facing of the issue, i.e., was or was not the Federal government prepared to admit that the Eighteenth Amendment could not be enforced in those areas where public opinion would have none of it?

**THE JONES LAW.** Early in the spring, Congress made another effort to strengthen the hands of public authority in the enforcement of the Eighteenth Amendment. On March 2, President Coolidge signed the so-called Jones Law, with its provisions for heavy penalties for all those persons engaged in the illegal manufacture, sale, and transportation of intoxicating liquors. The Jones Act itself was framed by the prohibition division of the Department of Justice, under Mrs. Mahel Walker Willebrandt. It contains two sections as follows:

Section 1. Be it enacted by the Senate and the House of Representatives of the United States of America in Congress assembled: That whenever a penalty or penalties are prescribed in a criminal prosecution by the national prohibition act, as amended and supplemented, for the illegal manufacture, sale, transportation, importation, or exportation of any liquor as defined by Section 1, Title II, c. 1, prohibition act, the penalty imposed for each such offense shall be a fine not to exceed \$10,000, or imprisonment not to exceed five years, or both. Provided that it is the intention of Congress that the court, in imposing sentence hereunder, should discriminate between casual or slight violations and habitual sales of liquor, or attempts to commercialize liquor, the law.

Section 2. This act shall not repeal or eliminate any minimum penalty for the first or any subsequent offense now provided by the said national prohibition act.

One of the principal arguments by the Drys, in the Senate debate, was that the measure was necessary for the enforcement of Prohibition in the large urban areas, certainly in New York, where it was generally estimated that there were 32,000 speak-easies in operation. The Jones Law met with immediate hostility, particularly in New York. Here, there was at once organized a lawyers' defense committee composed of prominent members of the New York City bar, who pledged themselves to defend free of charge all persons arrested for violation of the Jones Law. The committee was headed by Frederick R. Couderd, Jr., later Republican nominee for the office of District Attorney of New York County. It characterized the penalties in the Jones bill as preposterous, called them un-American and wholly incompatible with the spirit of the country's institutions.

A statement issued by the committee is significant as indicating the character of nullification that is to be found in New York City. "It is felt that, if the Congress of the United States, under the spur of dry organizations, is prepared to imprison for five years any and all violators of a law which has created a legal offense which is not a moral wrong, lawyers who still believe in the Bill of Rights, can well afford to offer some of their time and energy in a purely professional capacity as a protest against such savage fanaticism." It is interesting to record that six months after

the passage of the law, New York City had not yet seen a single conviction under it. It is interesting to record, too, that in other cities throughout the country defense committees headed by young lawyers were springing up to fight to a finish the drastic penalties provided under the Jones Law. When the year ended, it was seen that the United States attorneys were employing "a wise discretion as to the character of the cases in which they were seeking indictments" (This last phrase is from an order to the United States attorneys by Mrs. Willebrandt, Assistant Attorney-General, who was in charge of Prohibition enforcement).

Another effort to strengthen the Prohibition enforcement machinery was the bill introduced by Senator Shepherd of Texas for the purpose of amending the Prohibition law to make the purchasers of whiskey as guilty in the eyes of the law as the sellers. Senator Shepherd's device was simple. He called merely for the amendment of the national Prohibition Act by inserting the word "purchase" between the words "manufacture and sell," so that the law would read: "No persons shall on or after the date when the Eighteenth Amendment to the Constitution of the United States goes into effect manufacture, purchase, sell, barter, transport, import, export, deliver, furnish, or possess any intoxicating liquor."

The bill was referred to the judiciary committee and had not been reported to Congress, when the year closed.

**PROHIBITION KILLINGS.** One of the most important aspects of the Prohibition question arousing public attention during the year was the continuance of Prohibition killings. The public press and the floors of Congress carried on the debate heatedly, and the recurrence of Prohibition deaths, justifiable or not, over the year continued to excite public opinion. The Association Against Prohibition Amendment, in a pamphlet published in November, reported that the government estimate of 263 civilians or officers killed as the result of Prohibition was a serious understatement. It was their contention that the figure would exceed 1000, if a thorough canvass were to be made of all local records throughout the country.

The Treasury figures itemized 199 deaths, 145 of these being civilian deaths and 54 those of "dry" officers. This naturally does not take into account the many deaths as a result of State enforcement operations. Through 1929, according to the Federal Bureau of Investigation, the year-by-year killings were as follows: 1920, 6 agents and 5 civilians; 1921, 8 agents and 14 civilians; 1922, 12 agents and 13 civilians; 1923, 4 agents and 17 civilians; 1924, 2 agents and 22 civilians; 1925, 5 agents and 20 civilians; 1926, 6 agents and 17 civilians; 1927, 5 agents and 16 civilians; 1928, 7 agents and 10 civilians; 1929, 1 agent, and 8 civilians.

The Association Against the Prohibition Amendment insisted that, in this total, were to be included the deaths as a result of the activities of the Customs Service, the Coast Guard, and the Indian Service. The work of the Customs Service had resulted, up to mid-October, 1929, in 37 deaths, of which 26 were those of civilians and 11, those of agents. The work of the Coast Guard had resulted in 18 deaths, of which 12 were civilians and 6, those of agents. The work of the Indian Service had resulted in 9 deaths, of which 3 were those of civilians and 6, those of agents.

**ADMINISTRATION.** The report of the Assistant Attorney-General Mabel Walker Willebrandt, in charge of Prohibition enforcement, showed that, during the fiscal year 1929, 21,602 persons were sent to jail or prison for violating the Prohibition law for an average sentence of 147 days. The number of criminal Prohibition prosecutions instituted during the year was 56,786. Cases were terminated in four different ways, as follows: Convictions, 47,100; nolle prossed or discontinued, 4835; quashed or dismissed, 3043; acquittals, 1477. Thus, there were about 32 convictions to each acquittal. The aggregate of fines, forfeitures, and penalties imposed was \$7,476,300, and the total amount collected was \$4,200,000. There were 4885 trials by jury and 43,183 pleas of guilty.

Mrs. Willebrandt reported considerable gains in Prohibition enforcement by use of the padlock or injunction proceedings. There were 7455 petitions for injunctions, an increase of 1949 over the preceding year. Of these, 6303 permanent injunctions were granted, as compared with 3999 over the preceding year. Mrs. Willebrandt reported considerable success in the celebrated New York night-club cases. Of the 98 defendants in 22 clubs, 18 stood trial and, of these, 15 were convicted. The remaining 80 were sentenced on pleas of guilty. The total fines imposed aggregated \$18,660, total actual jail time, 125 months and 10 days, total jail time sustained, 138 months, total time on probation, 59½ years. In addition to the criminal cases, padlock actions brought closing orders aggregating 18 years. In Brooklyn, N. Y., 140 defendants were indicted in a conspiracy case. There, it was ascertained that "real whisky" of popular domestic and foreign brands was being manufactured by soaking in a solution of alcohol and distilled water shavings from barrels which had, in the distillery, contained whisky.

Mrs. Willebrandt declared that the control of various rum runs continued to be a significant problem in law enforcement. During the fiscal year 1929, 17 foreign liquor-running vessels were seized, of which 14 were forfeited. These 17 seizures constituted the smallest number in the last five-year period. It would appear, too, that the larger vessels were gradually abandoning the trade because of the increasing risk of seizure and that a greater portion of the captured foreign vessels was made up of motor boats. The Year Books have reported from time to time the witting of treaties between the United States and foreign nations under which Prohibition enforcement authorities were to receive the right under proper circumstances of boarding, search, and seizure of suspected liquor-running vessels within a distance of one hour's run from the coast of the United States. A complete list of the treaties of this character now effective follows:

Contracting Governments	Date of signing	Effective date
Great Britain	Jan. 23, 1924	May 22, 1924
Norway	May 24, 1924	July 2, 1924
Denmark	May 29, 1924	July 25, 1929
Germany	May 19, 1924	Aug. 11, 1924
Sweden	May 22, 1924	Aug. 18, 1924
Italy	June 3, 1924	Oct. 22, 1924
Panama	June 6, 1924	Jan. 19, 1925
Netherlands	Aug. 21, 1924	Apr. 8, 1925
Cuba	Mar. 4, 1926	June 19, 1926
Spain	Feb. 10, 1926	Nov. 17, 1926
France	June 30, 1924	Mar. 12, 1927
Belgium	Dec. 9, 1925	Jan. 11, 1928
Greece	Apr. 25, 1928	Feb. 18, 1929

From time to time, the United States government sought to strengthen the liquor-smuggling treaty of June 6, 1924, between Canada and the United States. Because the treaty permits the official clearance through Canadian customs of intoxicating liquor, the United States' view has been that it led to the illegal introduction of whiskey into that country. In January, 1929, a conference between the representatives of the two governments was held in Ottawa, Canada, for the purpose, as far as the United States was concerned, of strengthening the treaty. This conference terminated without any favorable results having been obtained. Another question that had significant international repercussions was the sinking of the *I'm Alone*, a British schooner, by a Coast Guard vessel in the Gulf of Mexico in March, 1929. The *I'm Alone*, a recognized rum runner, was detected by the Coast Guard off the Louisiana coast on March 20.

The Coast Guard reported that the schooner was within boarding distance of the shore (an hour's run) as specified in the convention with Great Britain, above indicated. The vessel, upon its refusal to heave to, was pursued for two days and sunk on March 22, 21½ miles off the Louisiana coast, with the loss of a seaman's life. The captain and the crew of the vessel were brought back to the United States in irons and accused of conspiracy to violate the Prohibition laws. Upon direct orders from Washington, the members of the crew were released on their own recognizance, and the captain of the boat was placed under a nominal bond of \$500. The Canadian government filed a formal protest, in view of the fact that the boat was under its registry, with the result that the case was referred to international arbitration as provided in the Treaty of 1924.

Miss Willebrandt resigned her post during the summer and on November 1, the White House announced the appointment of G. Aaron Youngquist, Attorney-General of Minnesota, to the office of Assistant Attorney-General, in charge of Prohibition enforcement. It was expected that Mr. Youngquist would head up the whole dry-enforcement machinery under the new scheme of Prohibition enforcement contemplated by Mr. Hoover, by which there would be combined in the Department of Justice the various Prohibition activities at that time in the Treasury and Justice departments. This last recommendation was largely held to be the result of the work of John MacNab of San Francisco, who was appointed by Mr. Hoover on October 1 to study and formulate the changes in Federal administration and judicial machinery for the more effective enforcement of the laws under the Eighteenth Amendment.

**STATISTICS** The Moderation League reported in October that its researches indicated that the rate of death from alcoholism under national Prohibition had increased over the rate under State Prohibition, in practically every State which had dry laws before the enactment of the Eighteenth Amendment. There follows here an analysis of these death-rates in the States which had Prohibition laws before 1920.

**Alabama** had Prohibition in 1915. The earliest census figures are for 1925, 1926, and 1927, showing alcoholic death rates of 0.9, 1.4, and 1.1 per 100,000 population. **Arizona** adopted Prohibition in 1914. The alcoholic death rate figures for 1926 and 1927 are 2.5 and 3.5, respectively. **Arkansas** adopted Prohibition in 1915, but in view of the fact that this State does not belong to the death registration area, figures were not available. **Colorado** adopted Prohibition in 1914, effective on Jan. 1, 1916. The rate was 3.0 in 1916 and,

in the ensuing years, it fell steadily to 0.8 in 1919. In 1920 it fell to 0.7. In 1922 it climbed to 4.2, dropping to 1.7 in 1925, then going up to 2.4 in 1927. **Florida** adopted Prohibition in 1918, effective Jan. 1, 1919. The rate was 1.4 in 1919, 1.9 in 1920, and 4.9 in 1927. **Georgia** adopted Prohibition in 1907. The 1922 rate was 2.5, the 1923 and 1924 rates were each 1.8.

**Idaho** adopted prohibition in 1915. The 1922 rate was 2.2, in 1926, 3.8, in 1927, 1.9. **Indiana** adopted Prohibition in 1917, effective Apr. 2, 1917. The rate in 1919 was 0.8, in 1920, 0.5, in 1927 it climbed to 2.1. **Iowa** adopted Prohibition in 1925. In 1923 the rate was 1.05 and in 1927, 2.2. **Kansas** adopted Prohibition in 1887. The earliest figure for alcoholic death rates was in 1914, when the rate was 1.3, in 1919, 0.2, since that time, the trend has been upward, the 1926 and 1927 rates being 1.8 and 1.4, respectively. **Kentucky** adopted Prohibition in 1919, effective July 1, 1920. The rate was 0.4 in 1920, but by 1927 reached 2.1. **Maine** the oldest Prohibition State, adopted Prohibition in 1858. The rate in 1910 was 2.8, in 1914, 3.5, in 1919, 1.7, in 1920, 1.3, in 1921, 3.1, in 1927, 2.1.

**Michigan** adopted Prohibition in 1917, effective May 1, 1918. In 1919 the rate was 1.1, in 1927, 4.4. **Mississippi** adopted Prohibition in 1908. In 1919 the rate was 0.6, in 1920, 0.3, in 1927, 1.4. **Montana** adopted Prohibition in 1916, effective Dec. 31, 1918. In 1919 the rate was 1.9, in 1920, 1.8, in 1927, it climbed to 8.1, the highest rate under national Prohibition. **Nevada** adopted Prohibition in 1916. The rate in 1920, the first year available, was 0.5, in 1927 it reached 1.5. **Nevada** adopted Prohibition in 1918, but no rates were available for this State. **New Hampshire** adopted Prohibition in 1917, effective May 1, 1918. In 1919 the rate was 1.6, in 1920, 1.8, in 1927, 4.2. **New Mexico** adopted Prohibition in 1918, but rates were not available. **North Carolina** adopted Prohibition in 1916. The rate in 1917 was 0.9, in 1918, 0.5, in 1927, 1.3.

**North Dakota** adopted Prohibition in 1889. The 1924 rate was 1.0, 1925, 1.1, 1926, 1.9, 1927, 0.9. **Ohio** adopted Prohibition in 1918, effective May 27, 1919. The rate for 1920 was 1.2 and in 1927, 3.2. **Oklahoma** came into the Union in 1907 with constitutional Prohibition but no rates were available. **Oregon** adopted Prohibition in 1914. In 1918 the rate was 0.9, in 1927, 2.4. **South Carolina** adopted Prohibition Dec. 31, 1915. In 1918 the rate was 0.5, in 1927, 1.5. **South Dakota** adopted Prohibition in 1916. No rates are available. **Tennessee** adopted Prohibition in 1909. The 1917 rate was 1.0, 1927, 1.4.

**Texas** adopted Prohibition in 1918. No rates available. **Utah** adopted Prohibition in 1916, effective Aug. 1, 1917. The 1919 rate was 0.7, 1926, 3.5, 1927, 1.5. **Virginia** adopted Prohibition in 1914, effective Nov. 1, 1916. From 1917 to 1920, the rate varied from 1.0 to 0.7. The 1927 rate was 1.9. **Washington** adopted Prohibition in 1914, effective Jan. 1, 1916. The 1917 rate was 1.8, 1927, 3.8. **West Virginia** adopted Prohibition in 1912. The 1925 rate was 2.0, 1927, 2.8. **Wyoming** adopted Prohibition in 1918. The 1922 rate was 3.9, 1927, 5.8. In the District of Columbia, Prohibition went into effect Nov. 1, 1917. In 1918 the rate was 0.9, in 1920, 1.1, in 1927, 2.6.

On the other hand, the Metropolitan Life Insurance Company reported that, among its 18,500,000 industrial policyholders, the death rate from alcoholism in 1924 was 3.3 per 100,000, as against 3.5 in 1927. In 1928 there were 599 deaths among policyholders, resulting from acute or chronic alcoholism, as compared with 603 deaths in 1927. These figures (and the same is true of the discussion above) do not include deaths from poisoning from wood and denatured alcohols. Of the 1928 deaths from alcoholism, only 7 occurred in Canada among 1,200,000 insured persons, while there were 591 deaths among the 17,250,000 policyholders in the United States. In 1922-28, inclusive, deaths from alcoholism among the company's policyholders in the United States totaled 3459 and in Canada, only 37. The company estimated that, if the American rate had held in Canada, the total of Canada would have been 241, or a little more than six times the number that actually occurred.

In August, the Association Against the Prohibition Amendment issued a pamphlet which reported a steady rise in drunkenness and liquor deaths. The organization's report also contended

that there was an increase in alcoholic insanity, a larger number of cases of acute alcoholism in public hospitals, and more arrests for drunkenness. The report also declared that the number of pieces of distilling apparatus increased from 15,416 in 1920 to 21,511 in 1928, and that the gallons of liquor seized increased from 153,735 in 1920 to 32,474,234 in 1928. Arrests for drunkenness in 518 cities rose from 279,939 in 1920 to 608,324 in 1927. The association's figures showed that deaths from alcoholism per 100,000 population in the re-creation States were 5.5 in 1910, 6.3 in 1917, 3.1 in 1918, 1.9 in 1919, 1.2 in 1920, 2.0 in 1921, 3.0 in 1922, 3.0 in 1923, 3.9 in 1924, 4.4 in 1925, 4.7 in 1926, and 5.0 in 1927.

**REFERENDUMS.** Since November, 1926, Prohibition had been brought directly before the electorate in 10 States. In Illinois, by a vote of 3 to 2, in New York, by a vote of 3 to 1; and in Nevada, by a vote of 4 to 1, the electorate had petitioned Congress to amend the Volstead Act. In Massachusetts, the Wets carried 33 State senatorial districts out of 36, on the question of a petition favoring amendment. In Montana, a State enforcement act was repealed by popular vote in 1926 and in 1928 a referendum also defeated an alternative proposal to employ the Federal law as a State statute. In Wisconsin, two referendums were held, one in 1926, approving a petition to Congress to legalize 2.75 per cent beer, and the other in March, 1929, favoring the repeal of the State enforcement act. In the following four States, proposals to repeal the State laws were voted down: North Dakota, Colorado, California, and Missouri.

The New York *World*, in analyzing the figures in these popular votes, found that the wet victories have been won by wide margins, as in Illinois, New York, and Nevada, while the wet defeats have been produced by small margins. In Missouri, the Wets lost by votes of 4 to 3, in Colorado, by 5 to 4, in California, by 10 to 9, and in North Dakota, by 15 to 14. In the vote of North Dakota, particularly, the *World* found a refutation of the contention that moderation was essentially an urban sentiment. North Dakota in the Middle West is essentially a rural community, a thousand miles from the influence of the Atlantic seaboard. It has no cities and only one town of 20,000 population. It has been dry for 40 years, entering the Union with a dry law on its statute books in 1880. Yet, in 1928 this State showed that 48 per cent of the electorate was prepared to relinquish the State enforcement law. The *World* concludes:

It is ridiculous, in the face of every referendum, without exception, held on the Prohibition question in the last few years, to talk of dissatisfaction with Volsteadism as if it were something confined to the side walks of New York. Prohibition has failed so signally to command popular support that, in all sections of the country, save perhaps the South, there is either a majority or a ponderable minority ready to vote for moderation or repeal.

**CANADA.** Observers have found that Canada has succeeded in putting bootlegging out of business, as the result of the operations of the government liquor control administrations. For example, the Association Against the Prohibition Amendment found, in an extensive survey made public during 1929, that (1) The actual operations of government control have demonstrated that the liquor traffic can be so regulated as to prevent abuses which affect public welfare and morality, (2) that the liquor boards are enabled, because of their broad powers, to correct summarily any

disturbing conditions; (3) that organized bootlegging has been wiped out; (4) that the trend of drinking is toward wine and beer; (5) that the law is being generally supported by public opinion, (6) that intemperance has decreased, (7) that prison sentences for intoxication have increased, owing to stricter enforcement and heavier penalties, including mandatory jail terms.

This survey found that, in 1928, the total consumption of spirits was 4,105,982 gallons (in a population of 9,658,000), as compared with a consumption of 7,605,254 gallons in 1912 (in a population of 7,365,205). In 1912 per-capita consumption was 1.032 gallons, as compared with 0.425 gallons in 1928. In 1912, the consumption of wine was 898,389 gallons, or 0.122 per person, in 1928, the consumption of wine was 5,486,614 gallons, or 0.567 per person. Consumption of beer and ale increased from 48,970,003 gallons in 1912 to 58,625,673 gallons in 1928.

Under government control, it would appear that the rate of arrest for drunkenness for all Canadian provinces is now less than half of the pre-war rate and considerably well below the 1920 rate. Gross sale receipts of the liquor boards for the fiscal year 1928 totaled \$107,094,384, or more than \$10 per capita. In 1929, as a result of the action of Nova Scotia, only the Province of Prince Edward Island still clung to Prohibition. In the remaining eight provinces, Prohibition has been abandoned in favor of government liquor control. In October, in a popular referendum by a majority of at least 20,000 votes, Nova Scotia voted to repeal the Prohibition law and substitute government control. See NOVA SCOTIA, under *History*.

In Ontario, in the provincial elections in October, the Ferguson government, committed to the retention of government liquor control, was overwhelmingly victorious, returning 90 members to the House, against 21 members of other groups. Ontario, which is the richest and most populous of the Canadian provinces, instituted the system of government control in 1927. The victory of the Ferguson government, after a two-year trial of the government-control system, indicates that popular sentiment is definitely committed against state Prohibition. The Ontario system was devised after careful observation of the liquor-control associations of Quebec and the Western provinces. Liquor can be bought only by possessors of annual permits in sealed packages not to be opened on the premises. The government liquor stores are established only in those communities which want them and never in dry communities. See ONTARIO, under *History*.

Mention has been made above of the failure of the American and Canadian commissioners to reach an agreement looking toward the strengthening of the 1924 liquor treaty existing between the two countries. A statement issued in July by the Dominion Minister of National Revenue, W. D. Euler, while it did not point definitely toward the clearing up of the difficulties between the two nations, indicated that Canada was willing to help in keeping her nationals out of the business of running liquor into the United States. Mr. Euler, however, indicated that the responsibility rested to a large extent with the Americans and that the Canadian government was willing to consider reasonable measures to co-operate, if the United States authorities would first insist on clearances for their own boats. Mr. Euler was authority for the statement that practically 100 per cent of the rum runners were

American citizens. From 2 to 5 per cent of the liquor consumed in the United States comes from Canada. His statement said:

There is a remarkable condition to which the attention of the United States has been called, whereas we in Canada oblige all boats leaving our shores to obtain clearance, the United States has no such regulation. The boats engaged in the traffic leave the American shore without being obliged to obtain clearances. Thus, the United States have no effective check on their own boats and their own people engaged in violation of their own law. In my opinion, if they would follow the Canadian practice, they would have a means of control which would provide in a large measure the remedy for the conditions of which they complain.

MRS. WILLEBRANDT ON PROHIBITION. In a series of widely published newspaper articles, Mrs. Mabel Walker Willebrandt, United States Assistant Attorney General, in charge of prohibition enforcement from August, 1921, to September, 1929, dealt with a great variety of questions including the following: Is the Prohibition amendment law unenforceable? Is Prohibition enforcement effective? Who is responsible for the nonenforcement of the Prohibition laws? Are the best methods being employed in the enforcement of Prohibition? Should there be more rigid enforcement? What are the big leaks under Prohibition enforcement? Can our big cities be "dried" up?

Mrs. Willebrandt charged that politics was, to a large extent, the basis of the current dispute of the Prohibition laws. For many years, the Prohibition force was filled with unfit men and in the six years, 1920-1926, for example, more than 750 Prohibition agents were dismissed for delinquency or misconduct. There were notoriously poor appointments in high places under General Lincoln Andrews. In discussing the sources of Prohibition leaks, Mrs. Willebrandt added nothing new to current knowledge. Leaks from industrial alcoholism came first, border smuggling ranked second, and the operations of rum row were third.

That nullification was possible where the State authorities refused to cooperate with the Federal government was confessed by Mrs. Willebrandt. She cited the case of New York State, where, as a result of legislative repeal of the State enforcement law, the Federal authorities were left alone in the field and obtained no cooperation, or very little, from 2000 to 3000 State police, the 16,000 city police, 113 State Supreme Court judges, and the 62 county prosecutors. She approved the passage of the Jones Law with its rigorous penalties of five years' imprisonment and \$10,000 fine.

In conclusion, Mrs. Willebrandt charged that Prohibition was not being effectively enforced, often with and by the connivance and collusion of public officials. It was her personal opinion, after 10 years' experience in the work, that the Prohibition law was as much enforceable as the laws against burglary, murder, and embezzlement. She confessed that an articulate public opinion in the States and localities in favor of the law was a prime desideratum. "It is impossible for a comparatively small force of Federal Prohibition agents to do the work of local police in small boot-legging cases and when all such cases are diverted to the limited number of Federal courts, with only one or two judges in a large district, jury trials cannot be had for months or even years." In her programme, the former Assistant Attorney-General made the following concrete suggestions:

(1) The division of responsibility between Federal Government and State and local governments. (2) The concentration of the Prohibition enforcement machinery in the Department of Justice. (3) The employment of a higher grade of personnel. (4) The cutting off of bootleggers from the supply of industrial or denatured alcohol. (5) The cutting off of the flow of liquor from Canada and other points outside the United States. (6) The strengthening of the border patrol. This can be effected by the coordination and consolidation of the two patrols operating under the Commissioner of Customs and the immigration border control. (7) Elimination of political appointees and the placing of the Prohibition enforcement personnel strictly on a civil service basis. (8) The appointment of United States district attorneys and their assistants on the basis of legal fitness, integrity, and willingness to enforce the laws, instead of on a basis of political influence.

"When the majority of Federal Prohibition agents are men whose honesty and integrity are amply vouched for and who have brains and judgment, as well as special training for the collection of legal evidence by means that will not endanger lives or outrage the law-abiding citizens. Prohibition will gain 100 per cent in effectiveness."

A careful reading of Mrs. Willebrandt's proposals indicated that there was nothing novel in either her analysis of the situation or the recommendations she made.

SUPREME COURT. A Prohibition case of outstanding importance was decided during 1929, when the United States Supreme Court upheld a decision of a lower court in its ruling that the obtaining of evidence by the tapping of telephone wires was legal. The case arose out of the prosecution of a bootlegger named Olmstead, at Seattle, Washington. Most of the evidence against Olmstead and his gang was obtained by enforcement officials through the interception of messages over telephones. The wires of the violator were tapped just outside their homes, and the telephone lines leading from their office also were tapped.

The State of Washington had no law against the tapping of wires, and the case was fought on the grounds that the Federal Constitution prevented the obtaining of evidence in this fashion. The conviction of Olmstead was appealed to the Circuit Court of Appeals, where it was upheld. The Supreme Court of the United States had first denied a review of the suit, but finally it granted one. In its decision, the Supreme Court upheld the legality of the methods employed. Concerning the contention of the conspirators that wire tapping violated the Fourth and Fifth Amendments of the United States Constitution, the opinion of the United States District Judge sitting on the case is significant.

A man's house is his castle, the invasion of which was the evil prohibited without a search warrant, based on proper cause. These amendments [the 4th and 5th] do not make the walls of this house or castle coextensive with the limits of the city, State, or nation, and give immunity to criminals in carrying forward their unlawful schemes by telephonic activities. In the light of the evil to be averted, which must be taken into consideration, such immunity cannot be given and the law abiding people of the community placed at the mercy of criminals seated in their own homes, giving command and direction to conspirators throughout the city, State, or nation, and carrying forward the criminal activities. The people have some rights under these amendments as well as the criminals.

**PROTESTANT EPISCOPAL CHURCH.** A religious denomination representing the Anglican communion in the United States, of which the Church of England is the parent church, and which was brought to America by the Jamestown colonists in 1607. The first American service from its Book of Common Prayer, however, was held in the year 1579, on the first Sunday after Trinity, on the Pacific coast near the present site of San Francisco, when the Rev. Francis Fletcher, chaplain of the fleet under command of Sir Francis Drake, conducted service, preached a sermon, and celebrated Holy Communion. The Virginia colony was permanently established with regular ministrations of the church in 1607, and, despite the absence of a colonial episcopate, the church, under English clergy, maintained a firm foothold for 170 years. In 1789 the first American bishop was consecrated in Scotland, and three years later two more were consecrated. The church completed its organization at a convention in Philadelphia in October, 1789, at which the constitution and name were adopted and the Book of Common Prayer was set forth.

The government of the church centres in a general convention which meets triennially, a convention having been held in Washington in October, 1928, and one was scheduled to be held in Denver in September, 1931. Between sessions, the affairs of the church are conducted by a national council made up of 16 representatives elected by the general convention, among whom there are four bishops, four priests, and eight laymen, supplemented by eight others named by the eight provincial synods. This council conducts its work with the aid of three major departments—missions, religious education, social service—and three others, finance, publicity, and field. The council is also the board of directors of the domestic and foreign missionary society, conducted through the department of missions and church extension. The presiding bishop of the church, elected by the general convention, is also president of the national council. The whole work of the church is incorporated in a general church programme adopted triennially.

In 1929 the total number of communicants was 1,267,016, an increase of 25,188 over the preceding year. There were also 6290 clergy, an increase of 53 over the preceding year, and the 15 theological seminaries of the church reported an increase of 37 in the number of candidates for the ministry. The total contributions to all causes within the church amounted to \$46,005,492, an increase of \$77,436 over the preceding year. There were more than 5000 church (Sunday) schools under the direction of 58,068 teachers, with an enrollment of 476,964 pupils.

Operating on a balanced budget, the church in 1928 reported total expenditures amounting to \$3,606,160. Of this sum, the total expenditure for missions, domestic and foreign, was \$2,697,664, divided in practically even amounts between the two fields. The foreign-mission field included Japan, China, Liberia, Mexico, the Philippines, Alaska, Hawaii, Brazil, the Canal Zone, Cuba, Porto Rico, Haiti, the Dominican Republic, the Virgin Islands, and Palestine, in addition, there were establishments in 10 important European centres. Domestic missionary activities included work among the foreign born, Indians, Negroes, mountaineers, and mill workers, in addition to a wide range of social service. American missionaries abroad numbered, men and women, respec-

tively, 147 and 181, native staff abroad, 1119 and 531; American missionaries in the United States, 457 and 90, native staff in the United States, 101 and 2, making a total of 2028 persons. During the year, 58 new missionaries were appointed. The church also maintains five colleges.

The National Council is assisted in its work by a group of cooperating agencies, including the Woman's Auxiliary, the Brotherhood of St. Andrew, the Daughters of the King, the Guild of St. Barnabas (for nurses), the Girls' Friendly Society in the United States (for girls and young women), the Young People's Fellowship (for young men and women), the Church Mission of Help, the Seamen's Church Institute, and the American Church Institute for Negroes. Official periodicals are the *Spirit of Missions*, *Church at Work*, *Findings in Religious Education*, and *Bulletins* of the national council, together with material dealing particularly with each department of the council. Several independently owned publications make an important contribution to the life of the church: *The Living Church*, *The Churchman*, *The Witness*, *The Southern Churchman*, weeklies, *American Church Monthly* and *The Chronicle*, monthlies. In addition, there are some 80 monthly diocesan publications in the home field and a score of others in the mission field.

In October, 1929, the first of the annual meetings of the House of Bishops, authorized by the previous general convention, was held in Atlantic City. The chief business of the session was the election of two missionary bishops, the Rev. Elmer N. Schmuck, D.D., was selected for the Missionary District of Wyoming and the Rev. S. Harrington Lattell, S.T.D., veteran missionary in China, as Missionary Bishop of Honolulu. The resignations of the Rt. Rev. Boyd Vincent, Bishop of Southern Ohio, and the Rt. Rev. Robert LeRoy Harris, D.D., Bishop of Marquette, were accepted. A shadow was cast over the whole session by the death of the presiding bishop, the Rt. Rev. John Gardner Murray, D.D., at the closing meeting. The senior bishop of the church, the Rt. Rev. William A. Leonard, D.D., immediately issued a call for a special meeting of the House of Bishops in Washington on Nov. 13, at which meeting the Rt. Rev. Charles Palmerston Anderson, D.D., Bishop of Chicago, was elected presiding bishop to serve until the general convention in 1931.

The year 1929 was marked by the death of four bishops, besides the presiding bishop, the Rt. Rev. Charles Henry Brent, D.D., Bishop of Western New York and a world figure in peace and church-unity activities, who was succeeded by his coadjutor, the Rt. Rev. David L. Ferris, D.D., the Rt. Rev. Lucian Lee Kinsolving, S.T.D., first Bishop of Southern Brazil (1899-1928); the Rt. Rev. Davis Sessums, D.D., Bishop of Louisiana, and the Rt. Rev. Theodore Nevill Morrison, D.D., Bishop of Iowa, who was succeeded by his coadjutor, the Rt. Rev. Harry Sheinman Longley, D.D. During the year, the Rev. J. P. Almon Abbott, D.D., was elected Bishop of Lexington, the Rev. Francis M. Tait, S.T.D., Bishop Coadjutor of Pennsylvania; the Rev. Harwood Sturtevant, D.D., Bishop Coadjutor of Fond du Lac, the Rev. Cameron J. Davis, D.D., Bishop Coadjutor of Western New York, and the Rev. Hayward S. Ablewhite, Bishop of Marquette.

In December, 1929, a call was issued for a meeting of the commissions appointed by the

Protestant Episcopal Church, the Presbyterian Church, and the Methodist Episcopal Church to be held in Atlantic City June 2-3, 1930, to discuss further a proposed platform for the ultimate union of these bodies. At this meeting the position of the communions also was to be considered on the following points: The relation of Church and State, war, international relations, industry, the family, marriage and divorce, racial relations, and law observance. The headquarters of the National Council are in the Church Missions House, 281 Fourth Avenue, New York City.

**PRUSSIA**, prūs'hā. A constituent republic of the German Republic, a kingdom of the German Empire until the October Revolution of 1918, proclaimed a republic Nov. 13, 1918. Capital, Berlin. Area, Apr. 1, 1925, 113,059 square miles, as compared with 135,134 square miles before the World War, population, according to the census of 1925, 38,120,178, as compared with 40,165,219 in 1910. The later figures for area and population are exclusive of the Saar district, Eupen and Malmedy, and the territory of Upper Silesia which was ceded to Poland, showing a loss to Prussia, as a result of the Treaty of Versailles, of 21,644 square miles and a population of 4,601,626. The movement of population in 1927 was: Births, 738,824; deaths, 486,496; marriages, 333,245. The chief cities with their populations in 1925, according to the census of that year, are Berlin, 4,024,165; Cologne, 700,222; Breslau, 557,139; Essen, 470,524; Frankfurt-on-Main, 467,520; Düsseldorf, 432,633; and Hanover, 422,745.

The area under the principal crops and the yields in metric tons for 1927 were as follows: Wheat, 2,540,484 acres, 2,002,243 tons, rye, 8,812,113 and 5,138,645, summer barley, 1,901,853 and 1,487,209, oats, 5,757,981 and 4,388,726, potatoes, 4,578,707 and 2,873,668, hay, 6,933,106 and 11,435,426. In the same year, 40,292 acres of vineyards yielded 6,871,057 gallons of wine, valued at 40,605,858 marks (one mark equalled \$0.2376). On Dec. 1, 1926, the livestock included: Cattle 10,335,400, sheep, 2,379,700, swine, 13,781,400, goats, 1,084,400, horses, 2,547,000, and poultry 40,682,142. The chief minerals are coal, lignite, iron ore, and salt. The railway mileage, which has been taken over by the Federal government, is about 19,500. The revenue and expenditure for 1928-29 balanced at 4,107,460,298 reichsmarks. Legislative powers are vested in the hands of the Diet and State Council, the members of the former being elected for four years by secret and direct ballot on the basis of proportional representation, the latter is elected by the provincial assemblies on the basis of one for every 50,000 inhabitants. Executive powers rest with the minister, which is appointed by the Prime Minister elected by the Diet. As a result of the elections of May 20, 1928, the following parties were returned: Social Democrats, 137; Centre (Catholics), 71; German National party, 82; National Socialists, 6; German People's party, 40; Democrats, 21; Communists, 56; Economic party, 21; German Hanoverians, 4; the Polish party, 2; Farmers' party, 8; German Race party, 2; People's Right party, 2, total 450. The Prime Minister in 1929 was Otto Brann (Socialist, appointed Apr. 4, 1925).

**HISTORY** The Prussian Diet on July 9, 1920, ratified a treaty governing the relations between the State of Prussia and the Roman Catholic Church. Under the treaty, the Prussian government raised its endowment for the administration of the Catholic Church within Prussia from 1,400,000 marks, the sum formerly paid, to 2,800,000 marks (about \$672,000). It also agreed to continue to pay the salaries of the Roman Catholic clergy, totaling about 21,000,000 marks annually. The evangelical state churches receive similar subventions. The treaty provides that only German citizens educated in German schools and universities may be appointed to ecclesiastical posts and that candidates for appointment to the post of bishop must be politically acceptable to the Prussian government. It also provides for the creation of archbishoprics at Cologne, Breslau, and Paderborn and for the seating of two new bishops at Berlin and Aachen. For terms of the proposed merger of Prussia with the German Reich and for details of the negotiations with France for the return of the Saar coal mines, owned by the Prussian State, see **GERMANY**, under *History*; see also **VATICAN CITY**.

**PRUSSIA, HENRY, PRINCE OF** See **HENRY, PRINCE OF PRUSSIA**

**PSITTACOSIS** This strange and rare disease affecting birds and men came into evidence during the latter months of the year and provoked considerable discussion, as there seemed to be indications of its spreading. While this disease, the first case of which was reported from Germany in 1879, has been infrequent, during 1929 cases were reported in Europe and South America. Previously there had been recorded an epidemic of psittacosis in Paris in 1892 when parrots were fashionable pets, and subsequently cases occurred at intervals in Italy, France, and Germany, with but few in England and the United States.

The opinion was held by some scientists that the only cases of this rare and highly fatal malady had been reported among pets in homes or shops, none having developed in zoological parks or collections. The human cases have occurred as a result of intimate contact with infected birds, but the method of transmission from bird to man was not known. In fact, some scientists expressed doubt as to whether all cases pronounced parrot fever were due to infection contracted from parrots, as it was possible that cases of pneumonia or typhoid fever occurring in a home with a pet parrot might result in a report of parrot fever on the grounds of circumstantial evidence. This was particularly significant, as psittacosis in human beings presents the symptoms of pneumonia and also of typhoid fever. The patients suffer from extreme weakness, high fever, nausea, and intestinal disturbances. The disease is fatal in 35 to 40 per cent of the cases. In the parrot the disease is confined to the digestive system, but in man it is localized in the lungs. It seemed that generally the disease developed after direct contact with a sick bird, or under circumstances where the germs could be carried. At the end of the year research laboratories in various parts of the world were working on this disease which was attracting wide attention.

**PSYCHIATRY** See **PSYCHOLOGY**  
**PSYCHIATRY AND CRIME** See **CRIME**  
**PSYCHICAL RESEARCH** Again a sharp distinction must be drawn between purported

mental phenomena and purported physical phenomena. Alleged mental phenomena include the presentation of knowledge not normally acquired, through telepathy, mediumistic deliverances, the handling of objects unknown to the psychic (psychometry), etc., the appearance of apparitions at or near the time of the deaths of the persons thus cognized or at the time of some significant and usually emotional event, and so on. Alleged physical phenomena include the corporeal reappearance of deceased persons, the production of a myterious and protean substance called ectoplasm, which is supposed to issue from, and to be reabsorbed by, the body, telekinesis, or the movement of objects without contact, casts of spirit hands and feet, spirit photographs, the appearance of spirit writing upon slates, etc.

Not only are the two fields so sharply differentiated that skepticism regarding, say, the latter, logically should in no degree throw a shadow upon the former, as it in fact does in the minds of the majority, but also the distinction is emphasized by the reactions of investigators. There is, in regard to mental claims, a much nearer approximation to unanimity on the part of veteran investigators, that types are actual and certain outstanding cases valid, it is seldom that one who has spent years in the investigation of mental phenomena and has become convinced of certain types and certain cases, recants in either particular, and such differences as do exist in regard to actuality or mode of causation are usually discussed on calm academic lines. On the other hand, it is simply recording history to say that it is the commonest thing among subscribers to physical phenomena to be at war with each other as to which are the genuine cases, recantations are not infrequent, and it is almost the rule for argument to be carried on at least on one side, with bitterness and personal rancor.

Reviewing the literature of the year, one finds that, as hitherto, the writer of any report adverse to the claims of a physical medium is usually charged with prejudice and unfairness. One defender has covered much paper in ascribing to a dozen or more persons in disagreement with him, various shades of mental incompetence and moral obliquity.

It is not meant that all the leaders who accept the facts of the mental field agree in their theories of causation. They range from the writers who try to make telepathy the solvent of all types, to those who accept both the telepathic and the spiritistic hypothesis. Physical phenomena attract the major share of attention on the continent of Europe, while the tendency, with some marked exceptions, on the part of the more critical in Great Britain and America is to place emphasis upon mental phenomena. At the one extreme are certain writers so engrossed in telekinetic and ectoplasmic claims that they pay little heed to evidences in the mental field, at the other extreme are those who hold that the physical marvels are the product of sensory illusion through conjuring under favoring conditions, and that it is almost hopeless to get a hearing for the evidence in scientifically presented mental cases until the physical incubus has been finally banished. The divisions of opinion are hardly greater, however, than those of academic psychology, for example, between the introspective and psychoanalytic schools on the one hand, and behaviorism on the other.

Less spectacular, as the arts of peace are less

spectacular than those of war, the publications of the year relating to the mental field have made no great noise; but among the books which stand out for one or another reason, some critical and others less so, are the following: *Phantom Walls*, by Sir Oliver Lodge; *Comrades on the Homeward Way*, by Helen A. Dallas, *Our North Sense*, by Charles Richet, *Case Studies Bearing on Survival*, by John F. Thomas; *Telka*, by "Patience Worth"; *The Case of Patience Worth* (2d ed.), by W. F. Prince, *The Life and Work of Mrs. Piper*, by Alta L. Piper, *James H. Hyslop—A His Book*, by Gertude O. Tibbys, *Telepathy and Spirit Communication*, by L. Margery Bazett, *The Projection of the Astral Body*, by S. J. Muldoon and Hereward Carrington, *L'Enigma de la Mort*, by E. Wiétrich, *L'Avenir et son Mystère*, by E. Wiétrich, *La Transmutation de l'Esprit et Volonté* (partly physical), by E. Bozzano, *Die Psychometrische Begabung der Frau Lotte Plaatz*, by Dr. Paul Sunner. Also, in *Proceedings, Society of Psychical Research*, "Report on Experiments with Mrs. Elliott," by J. F. Saltmarsh, and "Tests for Historicity," in a *Bulletin of the Boston Society for Psychical Research*. In Theodore Besterman's "Report on a Four Months' Tour," of investigation in Europe (*Proceedings, Society for Psychical Research*), we learn that he was highly impressed by the work of Mme. Kahl, was so to a less degree by that of M. Fortmuv, and found M. Danmal's results suggestive but inconclusive.

Aside from the books *Erinnerungen aus Scanzan mit Kluski*, by O. Norbert, and relating to a medium much fought over in past years, and *Modern Psychic Mysteries, Millesimo Castle*, by (wendolyn K. Haek (Preface by Bozzano), the ... of which were being fought over, ... of the year relating to physical phenomena was to be found mostly in the publications of societies. The chief subjects of battle during the year have been:

(1) The "mysteries" of Millesimo. These included such as the supposed bringing into the séance room by spirit agency of various objects, carrying the medium ... solid walls etc. Bozzano, chiefly ... the conduct of the sittings, was criticized by Rudolph Lambert, himself benevolently inclined toward physical phenomena, for gross neglect of precautions necessary to give the results any value. (omit Solovovo, Mr. Besterman, and Mrs. W. H. Saltmarsh agreed with these criticisms, but *Light and Psychic Science* approved of Bozzano's indignant reactions.)

(2) The trumpet medium, Valentine. Following a new burst of confidence in him, Professor Kroner, expecting to add another to the physical mediums who have impressed him, joined others in a series of experiments in Berlin and reported at length the indications which convinced him and the group that fraud had been employed throughout. Following the Berlin series, another was held in Genoa, with a similar conviction on the part of the investigating group there, which actually included some of the principals for and believers in Millesimo. Dennis Bradley of England attacked both groups in successive issues of *Light*, ... Valentine with great aid.

(3) ... Brothers, physical mediums of Austria. J. M. Bird reviewed the war in several issues of *Psychic Research*, recounting how Vincent, Prince, and he himself found indications of fraud, while Price, who is more fortunate than

most in such discoveries, found wondrous phenomena under supposedly perfect control.

(4) Margery of Boston This medium expressly declined to appear before any more scientific committees, and persons known to be suspicious were excluded from experimentation, hence the most that was written during 1929 was on one side The A S P R *Proceedings* was wholly devoted to advocacy of the case, and its *Journal* contains a number of articles of the same complexion On the one hand, the list of believers lengthened, and on the other, none of the obdurate have repented The moving agents, whether discredited as held by one party, or corporal, as believed by the other, were versatile, seeming resolved to leave no type of phenomena, physical or mental, unadorned Rather surprisingly, since the *Revue Métapsychique* was generally favorable to physical claims, one of its departmental editors expressed various reasons for doubting, followed by a reply from Dr Clandon and a rejoinder on the part of M Maïre

(5) The "Medium, Blaise, of Mantes, France Phenomena here had been quite noted for years, when M Maïre and a friend visited the circle, discovered pantaloons under the draperies of the *soi-disant* lady spirit, grabbed the spirit and found the medium, and were nearly murdered, according to their testimony, by the medium's friends, before they got out of the house A torrid controversy followed

(6) The discussion as to whether the famous horses and dogs which spell, solve arithmetical problems, etc., independently work out these results, get them telepathically, or in response to signals, this year concerned the horses, "Lady" and "Black Bear," and the dog, "Zou" Doctors J B and Louise E Rhine announced in the *Journal of Abnormal and Social Psychology* that their tests showed a faculty of telepathic reception by the horse "Lady," and that later, she lost it

There have been other minor conflicts, and the tip of Mr Besterman already referred to resulted also in further evidence emphatically adverse to the noted Frau Silbert and in the complete exposure of the allied physical mediums, Molnar and Papp On the whole, it was a bad year for physical phenomena, while on the mental side, among accredited subjects, there was no scandal, but the addition of some good evidence together with a number of offers of evidence of little or no value, as usual

During the year, Dr Baron von Schrenck-Notzing, the leading protagonist for physical phenomena, died also Heri Kaul Krall, of the Elberfeld "thinking horses," so-called, and Mr J Hewat McKenzie, a zealous English investigator

**PSYCHOLOGY. NOTES AND NEWS** The most significant event in the psychological world during 1929 was the Ninth International Congress held at Yale University, New Haven, Connecticut, September 1 to 7 It was the first time in the 40 years of the existence of the Congress that it met in America The total attendance was 1051, the largest group of psychologists ever assembled Twenty-one foreign countries were represented by from 1 to 22 psychologists There were 22 from England, 17 from Germany; 10 from the Union of Socialist Soviet Republics of Russia; 8 from the Netherlands, 6 from India, 5 each from Austria, France, Japan, and Switzerland, 4 each from Belgium and Poland, 3 from Italy;

2 from China, and 1 each from Australia, Brazil, Denmark, Egypt, New Zealand, Norway, Spain, and Sweden The president of the International Congress, James McKeen Cattell, delivered the opening address, "Psychology in America" This was followed by an address by Edvard Claparède, Secretary of the International Congress

As the annual meeting of the American Psychological Association was merged with the congress, the address of K S Lashley, president of the former, was one of the formal events of the congress "Basic Neural Mechanisms of Behavior" comprised a summary of the implications of his researches on the effects of cortical lesions upon learning and other mental functions

The work of the congress was divided into three parts a series of 79 formal papers was read at 11 morning sessions, a series of 31 symposia was conducted during the afternoons at which 370 papers were informally presented, and a series of eight lectures was given in the evenings by eminent psychologists The topics of the morning sessions were theory and history (2), comparative psychology, educational methods and technique, social psychology, child development, physiological psychology, personality, abnormal and clinical psychology, experimental psychology (2), industry and personnel

The symposia were arranged for the discussion of animal behavior, applications of psychology to methods of teaching, effects of drugs, industrial psychology, maladjustments, psychogalvanic reflex, theoretical psychology, character and personality, general intelligence, legal psychology, meaning and symbols, psychophysics, abnormal psychology, child development, eye movements, laboratory and teaching devices; memory and learning, music, race differences, nature of consciousness and physiological psychology, social psychology, statistical method, sleep, aesthetics; mental tests, motivation, reflexes, religious psychology, and sensation and perception

The evening lectures were delivered by Pavlov, Koehler, Michotte, Piéron, Stern, Poinzo, Spearman, and Thorndike Pavlov spoke in Russian (interpreted by Anept), Michotte, Piéron and Poinzo, in French, Stern, in German, and the others, in English

Prior to the congress, the foreign guests were entertained at the psychological laboratories of Columbia and Princeton universities, and after the congress, at Clark and Harvard universities Opportunities were afforded to many distinguished psychologists to visit and lecture at institutions in the East and Middle West It was decided to hold the next international congress at Copenhagen, Denmark, in the latter part of August, 1932

The research interests of 212 American psychologists were indicated in replies to a questionnaire concerning topics of discussion at a forthcoming meeting The order of preference for topics was in part as follows: Personality, the nature of a first course in psychology, mental tests, motivation, childhood and adolescence, feelings and emotions, abnormal psychology, individual differences, methods of learning Among the topics least preferred were Sensations of taste, smell, audition, and vision, aesthetics, language, mind-body problems and the introspective method These results were interpreted as showing a stronger technological than theoretical and experimental interest

The first number of the *Revue de psychologie concrète* appeared during February. This journal was intended to be the international medium of the "new psychology, to unify the criticisms against classical psychology, and to make firmer the foundations of psychoanalysis, individual and technological psychology, and characterology. The journal carried five departments—foundations of psychology, positive research; documentary studies; permanent problems, and reviews and bibliography.

The first *Congrès International de psychologie appliquée* was held at the Sorbonne Mar 21 to 27, 1929. Pierre Janet, Professor of the College of France, was elected the first president of this congress. The permanent association *International de Psychologie Appliquée* was organized with a central permanent committee comprising members from Germany, Belgium, Bulgaria, France, Italy, Netherlands, Poland, Rumania, and Czechoslovakia. The function of the organization was reported to be to bring together widely diversified interests within psychology and to draw scientists and men of action into closer contact. The work of the congress was organized into five divisions: General theory, methodology, and history, applications to learning, applications to business, applications to physical and mental therapeutics, and applications to social relations.

Announcement was made of the first International Congress on Mental Hygiene scheduled to convene in Washington, D. C., on May 5-10, 1930. President Herbert C. Hoover was chosen honorary president. The organization committee included representatives of 26 countries. Dr. William A. White, Washington, D. C., was chosen president and Clifford W. Beers, secretary-general. "It is the contention of those promoting the congress that mental hygiene has to do with the conservation of mental health in general, not merely with nervous and mental diseases. The point of view of clinical diagnosis and treatment will be considered, as well as that of administration of institutions and agencies."

In March, 1929, the initial number of the *Revue de la Science du Travail* appeared, it is the first publication in the French language to be devoted entirely to the technical applications of psychology. The founders and directors of the new publication are J. M. Lahy, France, a psychologist, P. Lallier, Belgium, a physician, and J. P. Aïend, Luxembourg, an engineer. The journal was launched as a quarterly, to cover original articles and general reviews, new procedures in technopsychology, accounts of activities and organizations both at home and abroad, book reviews, and abstracts of periodicals.

The establishment of the Institute of Human Relations was announced at Yale University. Its purpose was described by President James R. Angell of Yale University to be "to bring together sociologists, biologists, psychologists, and economists, who will combine with their colleagues in such fields as law, medicine, and psychiatry to correlate knowledge of the mind and body, and of individual and group conduct, and to study further the interrelations of the many factors influencing human actions." The Institute of Psychology, already in existence at Yale University, was to function as a part of the Institute of Human Relations. The Rockefeller Foundation furnished \$1,500,000 for the construction of a building to house the institute.

The Sixth International Conference of Psychotechnic which was to have been held in Barcelona, Spain, on Sept. 25-29, 1929, was postponed until some time during the spring of 1930. This change of date was made because so many psychologists were planning to attend the International Congress of Psychology in America earlier in September and would have found it inconvenient or impossible to attend a second congress after so short an interval of time.

The National Vocational Guidance Association held its annual meeting in Cleveland, Ohio, February 20-23. Many problems of psychological interest found a place on the programme, particularly the question of personality and its measurement.

Announcement was made of the establishment of the Thomas William Salmon Memorial to be awarded each year to that individual anywhere in the world who has during that year made the greatest contribution in the fight against mental disease. The administration of the memorial rests with the New York Academy of Medicine. It was expected that the awards would provide for the wider dissemination of knowledge concerning mental hygiene and insanity. The late Dr. Salmon had been Professor of Psychiatry at Columbia University and Medical Director of the National Committee for Mental Hygiene.

The new York State Psychiatric Institute and Hospital, which is associated with the Medical Centre of New York City, was dedicated on Dec 3-4, 1929, with a programme of scientific meetings. Among the guests from Europe who took part in the programme were Prof. Eugene Bleuler of Zurich, Prof. Henri Claude of Paris, Prof. Ernst Kretschmer of Marburg, Dr. Ernest Jones of London, Dr. David K. Henderson of Glasgow, Prof. Walter Spielmeier of Munich, and Prof. Constantin von Economo of Vienna.

Announcement was made of the establishment of the *Institute de Recherches de Psychiatrie* in connection with the *Ecole des hautes Etudes*, Paris. The institute was to comprise laboratories and lecture courses. The first series of lectures was to be on mental fatigue and diminution of the power of attention which underlie many psychopathic conditions.

The Social Science Research Council announced the establishment of a new publication, *Social Science Abstracts*, the first issue of which appeared about March, 1929. It was prophesied that about 15,000 articles would be abstracted the first year. The editor was F. Stuart Chapin, with headquarters at Columbia University.

Dr. Gustav Kafka, professor of psychology in the University of Dresden, was visiting professor of psychology at The Johns Hopkins University for the winter semester, of 1929-30.

Dr. Charlotte Buehler, professor of psychology in the University of Vienna, was visiting professor of psychology at Barnard College, Columbia University, during the winter semester, 1929-30.

On October 10, Prof. Carl E. Sealshore, University of Iowa, celebrated the completion of his twenty-fifth year as professor of psychology. The chief events were the presentation by his former students of a life-sized portrait, and a commemorative volume of studies edited by Walter R. Miles and Daniel Starch, appearing as No. 178 of *Psychological Monographs*.

At the close of the academic year, 1929-30, Professor Mary Whiton Calkins, of the department of philosophy and psychology, Wellesley

College, retired from active teaching after 40 years of service. She was given the title of research professor.

Dr. Morton Prince (q v), eminent psychologist and neurologist, founder, owner, and editor of the *Journal of Abnormal and Social Psychology*, died on August 31. He was professor emeritus of neurology at Tufts Medical College. Among his best-known works were *The Nature of Mind and Human Automatism*, *The Dissociation of a Personality*, and *The Unconscious*.

The establishment of the National Institute of Psychology, incorporated in the District of Columbia, was announced in July. Its function was reported to be to conduct and promote research in psychology and other sciences and arts, and to promote the application of scientific facts to problems of life.

The *Psychological Register*, an international directory of psychologists, published by Clark University, Worcester, Mass. (Carl Murchison, editor). The names were grouped according to countries. In addition to the customary biographical information, the *Register* contains the complete list (chronologically arranged) of the publications by each person.

GENERAL AND THEORETICAL PSYCHOLOGY. A survey of the field of theoretical psychology during 1929 shows a continuation of the controversy among the various schools. At the International Congress of Psychology held at Yale University in September, one of the most active of the many symposia was one devoted to the discussion of the "G" factor. This is the general factor in mental organization according to the theory of Charles Spearman, London. Numerous researches in the various laboratories, particularly in England and the United States, were directed toward the solution of the puzzle of general vs. special vs. group factors in mental organization.

The year saw the concept of the conditioned reflex actively extended from the simple reflexes studied by the physiologist to more strictly mental reactions. Attempts were being made particularly in Russia and the United States to give the concept a larger and larger place in mental development. On the other hand, the European countries were stressing an opposite trend, designated by Gestalt psychology and Intuitive psychology. While the concept of the conditioned reflex in mental life out of the stimulus-reaction unit, the concept of Gestalt and Intuition (Verstehen) would find patterns of experience to be immediately perceived. The contrast was one between the study of the individual reacting as a whole and the study of specialized responses.

There were signs of these controversial questions finding their way into textbooks of general psychology. R. H. Wheeler, for instance *The Science of Psychology* (New York, 1929), drew heavily from Gestalt psychology as "a means of reorganizing the facts of psychology in a way that may assist in removing the difficulties" (in its preface the status of psychology). R. S. Woodworth *Psychology: A Study of Mental Life* (rev. ed., New York, 1929) made much use of the conditioned-reflex concept, and the concept of reintegration systematically presented by H. L. Hollingworth, *Psychology: Its Facts and Principles* (New York, 1928).

Two noteworthy books published during the year testify to a growing interest in the laboratory type of psychology coordinate with the renewed interest in theory. *A History of Experi-*

*mental Psychology*, by E. G. Boring (New York, 1929) offered a comprehensive survey of the origin, growth, and present status of the experimental science. His treatment emphasized men rather than movements. The book filled a long-felt need for an adequate treatment of laboratory psychology. Somewhat in contrast to this was *The Foundations of Experimental Psychology*, edited by Carl Murchison (Clark University Press, Worcester, Mass., 1929). This was a collection of 23 surveys of specialized fields by as many authorities, about one-third of whom were not psychologists. For instance, "Heredity," was the subject discussed by T. H. Morgan, a biologist, "Hunger and Thirst," by W. B. Cannon, a physiologist, "Reaction," by Alexander Forbes, a physiologist, and "Chemical Senses," by G. H. Parker, a biologist. Although not a systematic survey of the whole field of experimental psychology, it represents one of the outstanding contributions of the year to that field.

A conference on experimental psychology was held under the auspices of the division of anthropology and psychology of the National Research Council in the spring of 1928. Its purpose was to study the peculiar difficulties under which the psychological laboratories labored in regard to the attack upon certain important problems. The conference led to the organization of a National Institute of Psychology. The ultimate purpose of the institute was to establish a national laboratory of experimental psychology with sufficient endowment to carry on long-time studies of certain selected problems, to provide fellowship facilities for research, and generally to promote the growth of scientific psychology. The institute was incorporated in the District of Columbia with a limited active membership of 50 experimental psychologists and with a few honorary members. In its articles of incorporation was the following statement of the purpose of the organization:

The particular business and object of the society is to conduct research in psychology and the other sciences and arts, to promote research in all suitable ways, to promote the application of scientific facts and principles to problems of life and welfare, to promote welfare and well-being in all ways consistent with the other purposes of the society, to hold scientific meetings, lectures, and discussions, to disseminate information through all or any appropriate means including radio and moving pictures, the manufacturing and publishing of books, monographs, journals, pamphlets, circulars, leaflets, and other vehicles of publicity, and to receive, hold, invest, and disburse funds for the support of research in experimental psychology and other purposes of the society.

SOCIAL PSYCHOLOGY. The problem of social psychology has come to be the study of the individual in the process of adapting himself to social, political, and economic institutions, while the social sciences concern themselves with the problem of such adaptation. Thus, the motivation of the individual in his reactions toward other individuals, toward his family, etc., as well as the reactions themselves have occupied the attention of investigators. Consult *The Motives of Men*, by George H. Coe (New York, 1928), *The Springs of Human Action*, by M. K. Thompson (New York, 1927), and *The Love of Superiority*, by Wayland F. Vaughan (New York, 1928).

One discordant note was struck during the year in the general trend noted above. Carl Murchison, in his *Social Psychology* (Clark University Press, 1929), discarded motivation and "drives" as logical fallacies and retained only the differ-

ences in the reactions of people as the basis of social life. Thus, in regard to ambition, he says (p 193)

It is usually supposed that ambition is a driving force in the affairs of men. It is so described in the drama, in romantic fiction, and in scientific literature. The fact is supported by the fact that human life . . . . . great variation in the degree of success achieved by various individuals. It is usually supposed that this variation in degree of success is a direct result of variation in degree of ambition. Young men are usually classified as individuals who either possess a "drive" or who possess very little of it. . . . . concerning eventual eminence and worldly success are based very largely upon the existing degree of the presence of this mysterious drive. There is no evidence, however, that such a drive exists. No one has made reported observation of it in any way. The only thing that can be observed is a great variation in the performance of individuals. It is this very fact of variation in degree of performance that suggests, to the casual observer, the presence of some unseen drive to which is given the name *ambition*. . . . . A description of the mere facts of inequality is all that can be used in support of the assumption of drives, and is in itself all that is necessary for an adequate description of social phenomena.

In the meantime, the bulk of the research that was done during 1929 was concerned with the measurement of the reactions of individuals and groups to each other, to institutions, to test situations, and the like. For a survey of methods, consult H. W. Odum and K. Koecker, *An Introduction to Social Research* (New York, 1929). As an illustration of the analysis of reactions to institutions, consult H. W. Drieser, *Psychology of Religion* (New York, 1929). For a study of the interaction of the individual and the group, consult G. R. Wells, *Individuality and Social Restraint* (New York, 1929).

As an illustration of the reactions of individuals to the artistic, consult M. J. Adler, "Musical Appreciation: An Experimental Approach to its Measurement" (*Archives of Psychology*, 1929, No. 110), and M. M. Meier, "A Measure of Art Talent" (*Psychological Monographs*, vol. 39, 1929). The studies of the differences among individuals, groups, nations, and races to test situations were numerous and varied. Many of these were directed to the measurement of personality as well as intellectual differences. (Consult P. C. Young, "Intelligence and Suggestibility in Whites and Negroes" (*Journal of Comparative Psychology*, 1929, vol. 9).) A great deal of effort was expended in the construction and perfection of tests for the measurement of social traits (consult, for example, L. L. Thurstone and E. J. Chave, *The Measurement of Attitude*, University of Chicago Press, 1929).

The Clark University Press announced a new periodical, *The Journal of Social Psychology*, under the editorship of John Dewey and Carl Murchison, with an international board of . . . . . editors. It was to be published quarterly . . . . . number to appear in February, 1930.

**APPLIED PSYCHOLOGY.** The year 1929 witnessed increasing recognition of the importance of the human factor in industry and business. Researches by the Personnel Research Federation into the causes of accidents in which vehicles are involved found the accident-prone individual to be a vital factor. It was found that an unduly large proportion of accidents were to be attributed to repeaters. Upon investigation of these cases, there were found to be only temporary handicaps in some cases, such as lack of skill, while in other cases there were constitutional defects, such as slow or irregular reaction time,

which clearly disqualified the individual for such service. Consult W. V. Bingham, "Personality and Public Accidents—A Study of Accident-Prone Drivers" (*Reprint and Circular Series of Personnel Research Federation No. 18, or Transactions of the 17th Annual National Safety Congress of National Safety Council, 1928*).

The annual conference of the Personnel Research Federation held in November in New York City was devoted to the psychological factors in industry. Studies reported by the Western Electric Company showed that, in the determination of output, the so-called mental factors, such as attitude toward the job, far outweighed in importance such factors as environmental conditions, hours of work, etc.

The influence of personality was further demonstrated in the work of V. V. Anderson in a large commercial organization, a report of which appeared in his *Psychiatry in Industry* (New York, 1929). Personality difficulties were found to be responsible for many cases of inefficiency. Some of these were corrected after readjustment of the individual, while others were found to be too serious for reconstruction. The need for due consideration of the human factor in industry, in terms of the personality of the worker, was the theme of *Human Nature and Management*, by Ordway Tead (New York, 1929).

The whole field of the applications of psychology to practical affairs was canvassed by H. E. Burt in his *Psychology and Industrial Efficiency* (New York, 1929). Even here, heavy emphasis was laid upon the personality of the worker in creating efficient working conditions.

The National Institute of Industrial Psychology (England) continued its unusual service to business and industry and reported a number of its researches in the *Journal of the National Institute of Industrial Psychology*. C. S. Myers, director of the Institute, and his associates in *Industrial Psychology* (New York, 1929) presented a series of 12 papers on various aspects of industrial psychology. These papers reflected in a very effective manner the achievements of the institute during the last few years.

The process of measuring capacities and skills continued to play an important rôle in applied psychology. A convenient source of information in regard to the use of tests in vocational work will be found in *Vocational Psychology and Character Analysis*, by H. L. Hollingworth (New York, 1929).

**ANIMAL PSYCHOLOGY.** The most interesting development during the year in the field of animal psychology was the announcement of the construction of an ape farm in Florida to be conducted in conjunction with the animal research by the Institute of Psychology at Yale University. It was intended to provide adequate facilities for rearing and observation of anthropoids under conditions approximating the natural habitat of these animals.

As a part of the general project of research on the apes, R. M. Yerkes and A. W. Yerkes published *The Great Apes. A Study of Anthropoid Life* (Yale University Press, 1929). They say, "This volume is an attempt to share our laboriously achieved informational resources with all who may wish to acquaint themselves generally with the subject, to study aspects of it intensively, or to consult the relevant literature. Only incidentally does the volume support theories or present hypotheses, it is offered, in the disinter-

ested spirit of science, to promote knowledge and enlightenment through the encouragement of honest, painstaking, unprejudiced observation."

After a brief historical survey of our acquaintance with the anthropoid apes, there are sections dealing with the gibbon, orang-outan, chimpanzee, and the gorilla. The volume contains 172 excellent illustrations.

One of the important projects under way for several years in the animal laboratories of the United States, particularly at Yale, Columbia, and Stanford universities, namely, the study of sex development in animals, was continued actively during 1929. These studies took their significance from the fact that our knowledge of human sex development must rest largely upon research in the animal kingdom. Typical of the work done during the year was the study at the Yale University Laboratory, and financed by the committee for research in the problems of sex, National Research Council. It was reported in "Reproductive Behavior of the Guinea Pig," by C. M. Louthit (*Journal of Comparative Psychology*, 1927, vol. 7; 1929, vol. 9).

**EDUCATIONAL PSYCHOLOGY** The year 1929 witnessed a re-examination of the whole conception of the learning process. New discoveries and resulting new theories had made a reevaluation necessary. The studies of animal learning by the behaviorists, by the proponent of Gestalt psychology, by the champions of the concept of the conditioned reflex, and by the purposive psychologists have called into question the generally accepted laws of frequency, recency, primacy, and particularly Thorndike's law of effect. The application of the techniques of the animal laboratory to children presented the problem squarely before the educational psychologist. There has resulted a mass of discussion and research. Particularly noteworthy in the first class was the book by B. H. Bode, *Conflicting Theories of Learning*. It presented a clear statement of the various theories and their implications.

Laboratory studies in progress under the direction of Thorndike showed that, in the process of human learning, results increased the rate of learning. These were interpreted as the "connections" by a satisfying after-effect, mere repetition without knowledge, and consequently without satisfying results, produced little or no learning. (Consult "The Law of Effect," by E. L. Thorndike, *American Journal of Psychology*, 1927, vol. 39, also, M. B. Cuff, "The Law of Effect," *Journal of Educational Psychology*, 1929, vol. 20.) An annotated bibliography of recent work on educational psychology will be found in the *Psychological Bulletin*, 1929, vol. 26.

There was a continuation of activity in the development of measures of achievement in school work with a correlative examination of teaching techniques in the light of results disclosed by the tests. The first report of the use of achievement tests of college students on a grand scale appeared in the twenty-third Annual Report of the President and of the Treasurer of the Carnegie Foundation for the Advancement of Teaching (1929). Forty-four hundred seniors in 50 Pennsylvania colleges were tested in order to find out just what a college education teaches. The results were enlightening in many respects. Of more than casual interest were the comparisons of the various colleges as to the standing of their students in the tests.

In the primary and secondary schools, achievement tests have been developed and used for practically every school subject. The whole question of the relative value of the various measures of achievement has been dealt with in "A Critical Study of Measures of Achievement Relative to Capacity" (*University of Illinois Educational Research Bull.*, No. 45, 1929). For original reports of research upon tests of this nature, the reader should consult current numbers of the *Journal of Educational Psychology*, and the *Journal of Educational Research*.

**ABNORMAL PSYCHOLOGY** Of unusual interest in the field of abnormal psychology was the publication of the collected works of Morton Prince, under the title, *Clinical and Experimental Studies in Personality* (1929). The work was especially timely, as his death occurred in August. There is a preface and historical retrospect followed by a selection of basic papers covering a period of 40 years. With the death of Dr. Prince, the *Journal of Abnormal and Social Psychology*, which he founded and edited, passed into the hands of the American Psychological Association and its publication was to be continued by them.

The activities of psychologists, as distinguished from the psychiatrists, were concerned mainly with minor deviations of personality, their prevention, detection, and correction. The psychiatrists, too, have been particularly concerned with the same problems. The concentration of interest upon the normal is in strong contrast to that of earlier years in which the classical insanities occupied the field of attention. *Psychiatry in Industry*, by V. V. Anderson (New York, 1929) is a discussion of mild personality disorders such as are found in a large commercial organization. *The Adolescent His Conflicts and Escapes*, by S. I. Schwab and B. S. Veeder, represents an attack upon the same type of personality problem. Similar studies by psychologists were *Difficulties in Child Development*, by Mary Chadwick (New York, 1928), *The Process of Human Behavior*, by M. Sherman and I. C. Sherman (New York, 1929), and *Personality Adjustments of School Children*, by C. S. Zachary (New York, 1929). This latter work was particularly concerned with schoolroom problems. A more systematic discussion of the subject appeared in *The Child's Heredity*, by Paul Popenoe (Baltimore, 1929). A still more abstract treatment of the nature of normal and abnormal personality forms the subject matter of *Source and Personality*, by William Brown (Yale University Press, 1929).

A psychologist's interpretation of the more extreme deviations from normality was presented in "The Abnormal Individual," by S. I. Franz, being one of the chapters in *The Foundations of Experimental Psychology* (Clark University Press, 1929).

**MENTAL TESTS** The year 1929 was characterized by an examination of tests for validity and reliability and a searching for adequate concepts underlying tests more than by the construction of new tests. In the symposium on mental tests held during the International Congress of Psychology, 5 of the 30 papers were concerned with the *unit of mental measurement*, showing it to be the most important single topic offered for discussion. Nine other papers had to do with a critical examination of testing technique. In the symposium on statistical technique, all the papers were concerned with the treatment of test methods and results. Not a single new test of outstanding impor-

tance was presented at sessions of the congress.

The measurement of nonintellectual traits continued to receive the bulk of attention, particularly the measurement of interest. The urgent practical need for an adequate test of interest was felt in all vocational and school work. Stanford University reported that the interest test prepared by Cowdery and Strong had been standardized for the prognosis of interest in some 25 different occupations (see "Interests of Engineers: A Basis for Vocational Guidance," by I. K. S., *Personnel Journal*, 1929, vol. 7). The value of this interest test was discussed in "Diagnostic Value of the Vocational Interest Test," *Educational Record*, 1929, vol. 10.

Fred A. Moss, professor of psychology at George Washington University, designed a test, the purpose of which was to eliminate applicants for medical courses who would be likely to fail. Preliminary trial of the test in 22 medical schools gave hope that it would be more predictive of ability than present methods of choosing students.

R. H. Pavner, professor of psychology at Long Island University, reported some of his findings from the measurement of the mental reactions of drug addicts in various stages of addiction and treatment. The mental disorganization of individuals deprived of the drug appeared to be much less than was generally supposed to be the case.

One of the most significant and promising movements in the practical application of tests and measurements was inaugurated after two years of trial by the Educational Records Bureau, New York City. This is an organization for the administration of standard intelligence and achievement tests and keeping of records for school systems and individual schools. Over 100 independent schools had adopted the service at the end of 1929. Among the types of service offered by the bureau were the following: The administration of an annual testing programme in academic achievement and intelligence tests; the preparation of a cumulative educational history for each pupil on the basis of the tests; the comparison of any school with the work done generally by similar classes in other schools; and the comparison of the intelligence levels of the pupils of any school with the general level of similar schools. The service was being adopted by public schools, and according to the latest report a number of English preparatory schools had engaged the service. The comparison of schools, classes, and individuals from different countries would open most of the possibilities for a critical examination of teaching, etc. The bureau was not a commercial enterprise in any sense but was assisted financially by a corporation interested in educational progress. Its aim was to become self-supporting.

**PUBLIC AFFAIRS, INSTITUTE OF.** An organization inaugurated in 1927 at the University of Virginia for the purpose of advancing the popular understanding of public questions and stimulating in the public mind a more vital interest in public matters, particularly the domestic problems of the United States. The attendance at the 1929 session, held from August 4 to 17, consisted of more than 200 delegates from Virginia appointed by Governor Byrd, 305 registered members from 34 States, the District of Columbia, the Philippine Islands, Porto Rico, Peru, Nicaragua, Panama, and Spain, and 737 registered guests, making a total registration of 1242. There was an average daily attendance at the round tables,

open forum discussions, and evening meetings of 1334. Membership in the institute is open to men and women who have taken part in public life and to those who are interested in any phase of public affairs, national, State, or local. Members may attend all lectures and addresses delivered during the session and any two of the round-table discussion groups.

The programme of the 1929 session was planned in accordance with the announced purpose of the institute to limit its discussions primarily to a study of governmental problems of national, State, and local concern and to certain economic and social conditions underlying them. However, since Latin-American affairs are so intimately connected with the economic and industrial progress as well as the National policy of the United States, a round table and open forum on this subject was introduced and proved one of the most interesting features of the institute; it was predicted that some phase of foreign relations would be a feature of each recurring session. The programme in 1929 consisted of eight round-tables, each of which met every other day during the two weeks, an open forum each morning, and addresses each evening.

Following is a list of the round-table subjects with their leaders: "The County Life of the Nation," Dr. E. C. Branson, head of the department of rural economics and sociology at the University of North Carolina; "The Task of the County Church," Dr. Henry W. McLaughlin, director of the country church department of the Presbyterian Church in the United States; "The Economic and Industrial Development of the South," Major LeRoy Hodges, major in the army of the Virginia State Chamber of Commerce; "Democracy as Operative in America," Dr. Thomas H. Reed, professor of political science at the University of Michigan; "Our Latin-American Relations," Dr. Clarence H. Haring, professor of Latin-American history and economics at Harvard University; "Law Enforcement," Dr. Raymond Moley, professor of public law at Columbia University; "The Press in Public Affairs," Dr. Victor Rosewater, former editor and publisher of the *Omaha Bee*; "Problems in Contemporary Politics," Dr. William Starr Myers, professor of politics at Princeton University.

Speakers and topics at the evening sessions were as follows: "Legislative Farm Relief," the Hon. Carter Glass; "Tariffs as Trade Barriers," the Hon. Alfred Pearce Dennis; "The Passing of the Old United States," Dr. William E. Dodd; "A Realistic Approach to the Problems of Democracy," Norman Thomas; "Twenty-one Years of Rural Church Development," Dr. Warren H. Wilson; "Relations of the Church and the Press," the Hon. James I. Finney; "The Tariff," the Hon. David I. Walsh; "Farm Relief," the Hon. Tom Connally; "The Growth of the Chemical Industry," Dr. H. C. Parmelee; "The Newspaper and the Modern Age," Sherwood Anderson; "The Enforcement of the Eighteenth Amendment and the Volstead Act from the Point of View of the Individual States," the Hon. Albert C. Ritchie; "Prohibition," Stanley High; "Put the Liquor Problem up to the People," Wade H. Ellis; "The Policy of the South toward Labor," Dr. Matthew Woll; "The Government's Responsibility for Disrespect for Law," W. W. Cove; "The American Electoral Mission in Nicaragua," Maj.-Gen. Frank R. McCoy; "The Dilemma of Intervention," Dr. Henry Kittredge Norton, and "The Monroe

Doctrine," the Hon. Hugh Gordon Miller. The invited speakers, in addition to those who gave evening addresses, numbered 121.

The session of the institute in 1930 was to be held from August 3 to 16. The officers of administration in 1929 were: Dr. Edwin Anderson Alderman, president of the University of Virginia; Dr. Charles Gilmore Maphis, dean of the summer quarter and director of the institute, and an advisory board composed of 29 prominent educators and recognized leaders in public affairs, selected from all sections of the country and from the two political parties. Headquarters are at the University of Virginia.

**PUBLIC FINANCE, UNITED STATES.** The management of Federal finance during the year 1929, brought few innovations, as compared with the preceding year, except to the extent that certain modifications toward the end of the 12 months were produced, as the result of the October panic. Of these latter, the chief features were the recommendation to, and adoption by, Congress of a measure making a reduction of about \$160,000,000 in income taxes, while previously (June 17) Congress had passed an act giving permission for the adoption of a new method of placing short-term loans through the issue of Treasury bills instead of certificates. The panic and the resulting conditions made it desirable to resort to this new method, and it was accordingly put into effect in December. Except for these changes, the year brought no alterations of law and few modifications of methods of operation.

The total ordinary receipts of the year, were about the same as during 1928, but income taxes furnished approximately \$250,000,000 more than during the preceding year, while there was a slight shrinkage in internal revenue, and a more than offsetting gain in customs. As compared with expenditures, the situation was slightly less favorable, there being a surplus of about \$188,000,000 for the year, as compared with \$398,000,000 for the preceding year. The reduction thus suffered was of little importance, inasmuch as the Treasury still showed an ample surplus while general conditions continued fully as favorable as they had been, except in so far as the stock-market panic might be thought likely to cause, during the year 1930, a reduction of Federal taxes from profits on sales of securities, as well as from the regularly imposed duties on financial transactions. Payments continued to be made as usual by foreign governments on their obligation, while the Treasury Department carried further its effort to collect tax arrears and to bring them as fully as possible up to date. There was a falling off in the receipts derived from sources of a temporary nature, and among them the back taxes

on incomes showed a decline of \$41,000,000, due to the fact that work was more nearly current, while refunds of about \$42,000,000 more than in 1928 were made from internal revenue. The repeal of the excise tax on automobiles (manufacturers' sales) cut taxes by \$40,000,000. In the accompanying tables, the general revenue situation is set forth.

**ORDINARY RECEIPTS, EXPENDITURES CHARGEABLE AGAINST ORDINARY RECEIPTS, AND SURPLUS 1920 TO 1928**

[On basis of daily Treasury statements (unrevised)]

Fiscal year	Total ordinary receipts	Expenditures chargeable against ordinary receipts	Surplus
1920	\$6,694,565,388	\$6,488,090,191	\$212,475,197
1921	5,624,932,960	5,518,209,189	106,723,771
1922	4,109,104,150	4,795,405,499	313,801,651
1923	4,007,115,480	4,697,478,020	109,657,460
1924	4,012,041,701	3,506,677,715	505,366,986
1925	1,780,148,684	3,529,641,446	250,505,138
1926	1,962,755,690	3,584,987,873	377,767,817
1927	4,129,494,141	3,495,584,519	635,809,622
1928	4,042,148,156	3,645,519,875	398,828,281
1929	4,043,250,225	3,848,463,190	184,787,035

It is interesting to note that customs duties again showed an increase coming almost up to the level of 1927, when they had stood at the highest point for many years. This was doubtless partly due to the fact that, during the campaign of 1928, tariff revision had been promised and that, in the special session of Congress which opened as soon as President Hoover had taken office, bills for the revision of the tariff were introduced. Such legislation almost invariably results in fairly heavy importations of goods designed to anticipate possible raising of rates. In the new tariff as it came from the House of Representatives at the beginning of summer, extraordinary increases were provided for and, for a time, it seemed likely that they would be enacted. The heavy importations continued accordingly until the year was well advanced, when it became plain that higher tariff rates probably would not become operative. Thereupon, a decline in the level of importations occurred and, during the later months of the year, customs receipts fell off. The new act, however, already had induced a sufficient enlargement of the trade to place duties at an exceptionally high level for the year, even when the recession of the later months was allowed for.

**FEDERAL EXPENDITURES.** Federal expenditures amounted in the aggregate to \$2,107,000,000, or about \$150,000,000 larger than those of the preceding year, which themselves had revealed a considerable falling off, as compared with 1927. A survey of the outlays for 1928 and 1929 sustains the opinion often expressed that Federal

**ORDINARY RECEIPTS, FISCAL YEARS 1920 TO 1929**

[On basis of daily Treasury statements (unrevised)]

Year ending June 30—	Customs	Income and profits taxes	Miscellaneous internal revenue	Miscellaneous revenues, including Panama Canal Proceeds from foreign obligations	All other	Total

1926	579,130,093	1,982,040,088	855,599,289	194,237,957	351,448,263	1,962,755,690
1927	505,489,983	2,224,982,800	644,421,542	206,089,171	448,380,643	4,129,494,141
1928	569,000,000	2,173,400,000	621,000,000	205,900,000	468,900,000	4,042,148,156
1929	600,810,838	2,331,374,428	608,135,016	199,111,566	293,896,505	4,043,250,225

outlay had become fairly well stabilized of recent years. Among the factors which led to the increase already noted should be indicated the somewhat enlarged expenses for War and Navy resulting from the adoption of a larger programme of defense during the preceding year. Rather more money also was spent for the Veterans' Bureau. Among the ordinary executive departments, the one which received the greatest increase in appropriations was Agriculture. The accompanying tables show in detail the comparative development of the various items.

**THE SURPLUS.** What has just been said indicates the general conditions surrounding the position of the surplus which has given rise to so much controversy of recent years. For some time past there had been a feeling that too large a surplus was being habitually accumulated by the Treasury Department and that income taxes were being maintained at too high a level, notwithstanding the fact that business would profit greatly from curtailment of the tax burden. A review of recent experience shows that the annual

surplus reached its highest point in 1927, while 1928 reflected a decrease of rather more than a third in its amount. The change in income-tax legislation of two years previously cut this figure by rather more than one-half, leaving the balance for 1929 as already indicated. Of the total of about \$185,000,000 shown by the year's operations, about \$124,000,000 was applied to the retirement of public debt and the balance was carried forward as an increase in the net balance of the general fund, to be applied to debt retirement shortly after the beginning of the fiscal year 1930. Measured in terms of total receipts, the surplus for the year was only 4.58 per cent, and the income-tax reduction made by Congress at the close of the year was estimated (should receipts and disbursements be the same for the year 1930 as for 1929) to absorb practically all the remaining balance of receipts over expenditures.

This might bring about a rather different fiscal situation during the succeeding fiscal year. It is, of course, to be remembered, as usual, that the term "year," as used in this discussion, relates

## EXPENDITURES CHARGEABLE AGAINST ORDINARY RECEIPTS

<i>General Expenditures</i>		1928	1929

Total gross debt		\$16,931,197,747 60

further the programme which had been previously worked out and which involved constant payments into the sinking fund, with corresponding lessening of the total debt burden. Public-debt issues for the year, amounted to \$2,815,000,000, while retirements were \$3,488,000,000, so that the gross debt was reduced from \$17,004,000,000 to \$16,931,000,000, or a curtailment of \$673,000,000. This total reduction was composed of—

1. Retirements of about \$550,000,000 of 4½ per cent bonds taken from the surplus, to which reference already has been made in a preceding paragraph.

The striking financial features of the year included the completion of the refunding of the Third Liberty Loan, which matured on Sept. 15, 1928. This was finally disposed of through the issue on July 16, 1928 (in the fiscal year 1929, therefore), of 3½ per cent Treasury bonds of 1940-43, followed by two issues of Treasury certificates of indebtedness at 4½ per cent and amounting, respectively, to \$549,000,000 and \$309,000,000. Other financing during the year was restricted to the usual quarterly issues of Treasury certificates of indebtedness. In the first quarter of the fiscal year 1930, Treasury certificates were offered at 4½ per cent, being dated Sept. 16, 1929, and being the first under the Act of June 17, 1929, which authorized issues exempt both as to principal and interest, from all taxation except State and inheritance taxes—a fact which led to a heavy oversubscription.

In the latter part of the calendar year, Treasury bills were issued dated December 15, under the Act of June 17, already referred to, permitting the Treasury to place these bills on a discount basis, i. e., to sell them at less than their face, the maturity resulting in the payment of a flat amount without interest, the discount having taken the place of the interest. This issue amounted to \$100,000,000 and was successfully floated, but the general attitude of the public toward the new method was still to be determined. It was announced that the purpose of the Government was not to displace the old system entirely, but rather to supplement it by the issue of small amounts of these bills when the need for funds between quarterly dates arises, and the need for funds coincided with a favorable condition of the money market. The table on page 707 states the position of the public debt at the latest available date.

**TREASURY FINANCE** The disposal of the Third Liberty Bonds, as already recalled, left the outstanding bond situation in a distinctly new position, with other maturities of long-term bonds considerably deferred, while the remainder of the World War financing, still left over, continued in short-term shape. For the years 1930, 1931, and 1932, very great redemptions were thought to be in sight, with the prospect of a need for continually renewed operations, while the market in the meantime became decidedly less favorable. Throughout the first ten months of the calendar year 1929, interest and money-market conditions were unfavorable, while the low rates of interest which succeeded the panic were recognized as purely artificial. The cost of Treasury financing consequently became heavier, relatively speaking, during the year and the necessity of relying largely upon the Federal Reserve System was continued, notwithstanding that that system was having great difficulties of its own in providing for the requirements of the banks of the country. The Treasury Department, however, having de-

termined to continue the war system of finance during the long-continued easy-money period after 1922, could not change it when money-market conditions became more difficult. It has, moreover, continued to expect the Reserve banks to maintain the value of government obligations by making a market for them, while the Reserve banks have found sales and purchases of Treasury obligations an easy way of "dumping" funds in the market, or withdrawing them, according to what may be deemed necessary. It seemed probable that this system of financing would be continued until some very unexpected and decided development should occur to check it. In that belief and owing to the steady decline of the amount of debt outstanding, as a result of regular redemptions through the sinking fund and out of surplus, government obligations became widely distributed among the banks and have obtained a sort of scarcity value there. This has not helped but has materially hindered efforts to get back to a sound method of dealing with the general market situation and of adjusting the banking position thereto.

**BUDGET ESTIMATES** The estimates of outlay for the years 1930-31 are herewith presented, with the usual comparison with former years. The statement as prepared by the Appropriations Committee foreshadowed a total of incomes and outgoes during the fiscal year 1931 expected to amount to \$5,915,000,000, or approximately \$21,000,000 more than the total shown in the general fund at the close of the fiscal year 1930 (June 30, 1930). No very material changes in expenditures were in sight. The tables on page 709 indicate the main facts of the situation.

This review of the state of things for two years and forecast for the ensuing year thus once again confirms the belief that Federal taxation conditions have become fairly well stereotyped and that income-tax reductions have probably about come to an end, in the absence, of course, of changes in the financial situation which cannot now be foreseen.

**LEGISLATION, NEW AND PROPOSED** As already mentioned, the legislative feature of the year from the Treasury standpoint was furnished by the recommendation of the Department, coinciding with the same recommendation, on the part of the President, that a cut in income taxes be made. President Hoover, in his message at the opening of the congressional session, recommended that "the normal income-tax rates, applicable to the incomes of individuals, for the calendar year 1929 be reduced from 5, 3, and 1½ per cent, to 4, 2, and ½ per cent, and that the tax on the income of corporations for the calendar year 1929 be reduced from 12 to 11 per cent." The President remarked, "It is estimated that this will result in the reduction of \$160,000,000 in income taxes, to be collected during the calendar year 1930. The loss in revenue will be divided approximately between the fiscal years 1930 and 1931. Such a programme will give a measure of tax relief to the maximum number of taxpayers, with relatively larger benefits to taxpayers with small or moderate incomes."

These changes were made by Congress in a measure passed prior to the holiday adjournment and the bill was immediately signed by the President, thus making it applicable to the tax returns to be filed early in 1930. Inspired by the fact that a serious panic had developed during the preceding autumn, the measure in question was hastily drafted and inevitably failed to pro-

**SUMMARY OF RECEIPTS AND EXPENDITURES FOR THE FISCAL YEAR 1929**  
*[On the basis of daily Treasury statements (unrevised) and estimated receipts and expenditures for the fiscal years 1929 and 1931]*

	1929	1930	1931
Net balance in the general fund at the beginning of fiscal year	265,526,981	326,713,003	265,526,981
Receipts	4,033,250,225	4,249,283,434	4,225,727,686
Ordinary	2,209,293,135 *	1,318,466,844	1,424,187,034
Public debt			
Total	6,508,070,341	5,894,443,281	5,915,441,681
Expenditures			
Ordinary	4,298,859,486	3,393,716,300	3,467,614,700
Public debt chargeable against ordinary receipts	549,603,704	630,365,600	895,124,000
Other public debt	2,332,894,148 *	1,605,234,400	1,546,976,000
Net balance in the general fund at close of fiscal year	326,713,003	265,526,981	265,526,981
Total	6,508,070,341	5,894,443,281	5,915,441,681
<b>POSTAL SERVICE</b>			
Postal receipts	696,947,578	725,400,000	754,400,000
Postal expenditures	791,647,322	809,400,000	832,900,000
Deficiency in postal receipts *	94,699,744	84,000,000	78,500,000

\* Other public debt expenditures and public debt receipts, as shown in this statement, are exclusive of \$2,984,941,500 Treasury certificates issued and retired within the same fiscal year.

\* The postal deficiency for 1929 and the estimated postal deficiencies for 1930 and 1931 are included in the ordinary expenditure shown above.

**GENERAL FUND OF THE TREASURY, JUNE 30, 1929**

*[Revised figures]*

In Treasury offices			
Gold	\$175,568,898 06

Balance in Treasury June 30, 1929			\$324,506,850 83

vide for the relief, most needed, from the inequalities of faultily prepared schedules in already existing income taxation. It seemed probable, therefore, that the next legislation that Congress would enact would be directed toward the rectification of these schedules rather than toward further net reductions in rates.

**PURDUE UNIVERSITY.** A State technological institution in Lafayette, Ind., founded in 1869. The main purpose of the institution has been to train men for service in the fields of engineering, agriculture, and applied science, and women in the fields of home economics and general science. The enrollment for the autumn of 1929 was 4026, of whom 3390 were men and 636, women; registration in the 1929 summer session was 564; and there were 390 members on the faculty. The endowment amounted to \$2,639,804 and the library contained 92,000 volumes. During 1929 a graduate school and a course in physical education for men were organized. President, Edward C. Elhott, Ph.D., LL.D.

**QUEBEC, kwé-bék'** The largest province in Canada and one of the four original provinces in the present Dominion of Canada, bounded on the west by Hudson Bay and Ontario, on the north by Hudson Strait, on the east by Labrador, and on the south by New Brunswick, the United States, and southern Ontario Area, as amended by the Labrador Boundary award, 591,434 square miles, population, according to the census of 1921, 2,361,199, of whom there were 1,038,128 rurals, 367,295 of British origin, and 1,889,090 of French origin, estimated June 1, 1929, 2,690,400. Capital, Quebec. The chief cities with their populations, according to 1926 municipal statistics are as follows: Montreal, 1,300,000, Quebec, 165,000, Hull, 35,233, Verdun, 42,247, Three Rivers, 35,000, and Sherbrooke, 25,021.

The area planted to crops in 1927 was 6,877,900 acres and the total yield was valued at \$144,273,000. Wheat, oats, barley, rye, peas, buckwheat, mixed grains, flaxseed, corn, potatoes, hay, clover, and alfalfa are the principal crops grown. For other statistics of production, see CANADA.

The mineral production of the province in 1929 reached a record valued of \$44,814,021 (including quarries), or an increase of \$7,488,734 over the previous high figure of \$37,325,287 in 1928. The province is exceeded as a mineral producer only by Ontario and British Columbia. The most important mineral products in 1929 were asbestos, with an output of 306,035 tons, valued at \$13,172,581, and copper ore, valued at \$10,019,901 (\$4,909,792 in 1928).

Quebec is the chief province in the production of pulp-wood, having more than half of the Canadian production. The total imports for consumption in 1927-28 amounted to \$305,065,204, total exports, \$362,860,712. The revenues for 1927-28 were estimated at \$31,000,000 and the expenditures at \$28,000,000. The public debt, as of June 30, 1928, was \$58,827,532. Quebec has 5267 miles of railway, including 400 miles of electric tramway. In 1929 the provincial department of roads maintained 10,195 miles of improved highways and constructed 1584 miles of new road. At the head of the . . . lieutenant-governor appointed . . . General of Canada, who acts through a responsible ministry, legislative power is vested in a bicameral body, a council of 24 members appointed for life, and a legislative assembly of 85 members elected for five

years. Quebec is the only province in Canada in which women are not enfranchised or eligible for election to the legislature. Lieutenant-Governor in 1929, N. Pérodeau; Premier, Attorney-General, and Minister of Municipal Affairs, L. A. Taschereau; Lands and Forests, H. Mercier; Treasurer, J. Nicol; Secretary, A. David; Agriculture, J. E. Caron; Colonization, Mines and Fisheries, J. E. Perrault; Public Works and Labor, A. Galipeault; Roads, J. L. Perron; Ministers without portfolio, E. Moreau, L. Lapierre, J. H. Dillon, Alfred Leduc.

**QUEEN'S COLLEGE.** A college for women in Charlotte, N. C., founded in 1771, nonsectarian in purpose but under the direction of the Presbyterian Church. The enrollment for the autumn term of 1929 was 307. There were 30 members on the faculty. The income for the year amounted to \$130,000. The library contained 12,000 volumes. President, William H. Frazer, D.D., Latt D.

**QUEENSLAND.** A state in the Commonwealth of Australia situated north of New South Wales, the second in size of the constituent Australian states. Area, estimated at 669,894 square miles, population, according to the census of 1921, 755,972; estimated, Sept. 30, 1929, 929,905. The movement of population in 1928 was: Births, 19,783, deaths, 7976, marriages, 6321. The immigrants in the same year numbered 68,894 and the emigrants, 65,031. Capital, Brisbane, with a population in 1928 (10-mile radius) of 308,580.

During 1927 there were 1738 state schools (including 13 high schools and 117 provisional schools) with 4296 teachers and an average daily attendance of 110,632. The total value of all crops in 1928 was \$12,709,041, as compared with \$14,503,791 in 1927. The principal crops are green fodder, sugar cane, corn, wheat, cotton, hay, and bananas. The total value of the mineral production in 1927 was \$1,645,991. Coal is also an important mineral product (1,099,040 tons produced in 1927) and among the other mineral products are copper, silver, tin, wolfram, lead, cobalt, etc. In 1927-28 the imports amounted to \$11,758,358 and the exports to \$21,854,945. For the fiscal year ending June 30, 1928, the net revenue totaled \$16,718,070 and the net expenditures, \$16,707,564. In 1928-29 there was a deficit from financial operations of about \$170,000. On June 30, 1928, the gross public debt stood at \$111,733,969 and the gross debt minus the accumulated sinking fund, at \$109,752,365. The registered shipping in 1928, consisted of 176 sailing vessels of 6651 net tons and 67 steamers of 17,428 net tons. In 1928, 6345 miles of railways were under operation.

Executive power is vested in the governor, who acts through a responsible ministry, and legislative power in the single Chamber or Legislative Assembly of 72 members elected for three years (the Legislative Council was abolished in 1922). Governor in 1929, Sir T. H. C. Godwin (appointed February, 1927); Lieutenant-Governor, W. Lennon; Prime Minister, W. McCormack.

**HISTORY.** After controlling the State of Queensland for 14 years, the Labor government headed by Premier W. McCormack was overwhelmingly defeated in the general election of May 11, 1929, and replaced by a coalition ministry of the Nationalists and the Country party led by A. E. Moore, the former leader of the Opposition. The chief issue was the Labor party's semi-socialistic

economic programme, which the Opposition charged had not only involved the state deeply in debt but also had prevented the development of its industries. Premier Moore later in the year announced that his government would sell to private interests all of the state enterprises except the State Insurance Department. He estimated the losses sustained through state operation at nearly \$20,000,000. See AUSTRALIA.

**QUICKSILVER** World production of quicksilver declined markedly in 1929, but the European cartel managed to keep price levels at about the same point as in 1928—from \$115 to \$130 a 76-lb flask. Consumption of the metal was probably not much lower than in 1928, but because of the slow liquidation of surplus stocks the output was only about 135,000 flasks, according to an estimate by *Engineering and Mining Journal* compared with about 150,000 flasks in 1928. Under these tying conditions, the Spanish and Italian producers who control the world output agreed to lower production rather than price. Spanish mines produced about 65,000 flasks and Italian mines about 42,000 flasks. Properties in the United States shared the benefits of the cartel, although not participating in it. Under the stimulus of continued high prices, output was about 21,000 flasks, compared with 17,000 flasks in 1928, and about 11,000 flasks in 1927. Nevada made the greatest strides of any of the States in quicksilver production, several new properties putting retort plants into operation.

**QUINN**, EDMOND An American sculptor, died in New York City, Sept. 9, 1929. He was born in Philadelphia, Pa., Dec. 20, 1868, and was educated at the Pennsylvania Academy of Fine Arts, studied under Thomas Eakins and, in Paris, under Injalbert. Among his works are figures on Battle Monument at King's Mountain, S. C.; the statue of Zoroaster in the Brooklyn Institute of Arts and Sciences; the bust of Edgar Allan Poe in Poe Park, New York; the statue of Edwin Booth in the character of Hamlet at Grumercy Park, New York; the statue of T. C. Pemberton at Vicksburg, Miss.; busts of Chancellor Kent and Edwin Booth in the Hall of Fame, New York University; the Victor Herbert Memorial in Central Park, New York; and the World War Memorial in New Rochelle, N. Y. In 1915 he won the silver medal of the Panama-Philippine Island Exposition. He was a member of the Institute of Arts and Letters and an Associate National Academician. Mr. Quinn is represented in the Metropolitan Museum of New York.

**RACING** The sport of kings again showed that it is one of the most appealing sports by retaining its favor in 1929 and drawing huge throngs to the various tracks in the United States, Europe, Cuba, and Mexico. In no field, however, did an outstanding champion make his appearance. The Hurry Payne Whitney Stable carried off honors in the matter of prize money won with the magnificent total of \$334,272. There seemed little doubt that Mr. Whitney possessed the juvenile champion of the year in one of two colts—Whichone and Boojum. Whichone captured the richest Futurity ever run at Belmont Park. Boojum might have won had he not bolted to the fence when he was far in front and had the race fairly clinched. The Futurity winner also won the Saratoga juvenile stakes, but Boojum took Whichone's measure in the Hopeful. Neither raced after the Futurity, Whichone being pinned for the Preakness in 1930 and Boojum for the

Kentucky Derby. Another leading two-year-old was G. W. Foreman's Ned O that won the Walden. Flying Heels nosed out Spinach in the Pimlico Futurity, while Clyde Van Dusen won as he pleased in the knee-deep mud of the Kentucky Derby. Blue Licks, E. R. Bradley's horse, was generally recognized as the champion three-year-old, although beaten in the Kentucky Derby and in the Dwyer. He won the rich Withers and the Belmont stakes and took the 1929 1000 Guineas. Clyde Van Dusen in the Arlington Park stakes.

The Wheatley Stable's four-year-old Diavolo was unquestionably the best of the handicap division and a cup horse of rare quality as testified to by triumphs in the Saratoga Gold, Jockey Club, and Pimlico cup races. Walter J. Samlon's Display came back late in the season to place third among American money winners. Reigh Count, 1928 three-year-old champion, and that year winner of the Saratoga Gold, and Jockey Club cups, and the Lawrence Realization, which this year was captured by The Nut, tried for the Ascot Gold Cup in England but was beaten by the two-time winner—Invershin. The English Derby was taken by Trigo, while Hotwood won the Grand Prix de Paris. The Grand National Steeplechase went to Gregalach and the Thousand Guineas to Taj Mah. Frigo, owned by William Barnett, also finished first in the St. Leger stakes.

**HARNESS RACING** Whinnipeg, 1 57½, world's champion pacing gelding, led the fast brigade in both time and races won. He paced an exhibition mile at Grand Rapids, Mich., in July in 1 58½. He won at Toledo in 2 00 and won 11 races during the season without suffering a loss. The best time by a trotter was 2 01½ by Dewey McKinney at Syracuse in a memorable contest with his stablemate, Hazelton, 2 00½. A triple tie for time occurred in that the two, three-, and four-year-old records for trotters all held at 2 02½. Main McElwain won the first heat of the Lexington Stake in that time and Walter Dear, Hambletonian winner, won all three heats in that time. Gayworthy won at Lexington in 2 02¾.

**RACQUETS** Huntington D. Sheldon, a young graduate of Yale University, was the sensation of the 1929 racquet season, conquering Clarence C. Pell of New York in the final round of the national amateur tournament played at the Racquet and Tennis Club in New York City in March. Pell had held the title nine times before bowing to the younger man. Ten days before his defeat at the hands of Sheldon, Pell had won the national doubles title paired with Stanley G. Mortimer, of Tuxedo, in the tourney at Chicago. The pair downed Howard Lunn and Robert A. Gardner of Chicago in the final match. Pell also won the Gold Racquets championship for the ninth time at Tuxedo in late February.

In other court games, which have become increasingly popular of late, H. Morgan took the amateur court title, while the doubles event was captured by Jay Gould and W. C. Wright. Pierre Etchebaster, Basque and world's champion professional court player, successfully defended his crown at Philadelphia against the veteran Jock Soutar in January. J. Lawrence Pool, 2d, the Harvard Club player, garnered the amateur squash racquets title, the professional crown going to Charles Williams, of Chicago, formerly of England. Mrs. W. F. Howe Jr., of Weston, Mass., won the first holding of the women's national amateur tournament, defeating Mrs. George W. Wightman of Boston on the courts of the Har-

vard Club in Boston in February Rowland B. Haines retained the national squash tennis honor which he had held for the two previous seasons, defeating Dr Harold Myxell, the national veteran's champion in the final of the tourney in March.

**RADCLIFFE COLLEGE.** A nonsectarian college for women in Cambridge, Mass., founded in 1879. The enrollment for the autumn of 1929 was 1103, distributed as follows: Regular students, 742, graduate students, 322, special students, 39. Instruction was given to the students of the college by 250 teachers from Harvard University. The first appointment of professional rank under the new plan for appointments, supported in part by each institution, was that of Sidney Bradshaw Fay, formerly of Smith College, as professor of history. The productive funds amounted to \$4,804,486, and the income for college purposes was \$510,208. The library contained approximately 65,000 volumes, exclusive of pamphlets. During 1929 a lecture building, costing approximately \$600,000, was under construction to accommodate all classes except the science courses with laboratory. President, Ada Louise Comstock, Litt D., L.H.D., J.L.D.

**RADIATION.** See METEOROLOGY, PHYSICS

**RADIOBEACONS.** See LIGHTHOUSES

**RADIO COMMUNICATION.** The year 1929 was a very good one for the makers of radio receiving sets and proved that the popularity of radio in the home was still increasing. In spite of the unfavorable financial conditions in the last three months, there were more sets sold than in any previous years. These sets were mostly of the altered "pentode" type, using power from an electric-light socket, but differed from those of preceding years by the almost universal use of the "screen-grid" tube. This tube had an extra electrode between the grid and the plate, which had the effect of reducing the internal capacity of the tube, increasing the amplification factor and plate resistance and making neutralization easier. That is, making it possible to get a high degree of amplification without howls.

There also was introduced experimentally the "pentode," or five-electrode tube, with a screen grid about the main grid as well as about the plate, but this had not come into commercial use. There also was announced a new high-powered amplifier consisting of two tubes with which no transformer, or impedance, or resistance was required and thus the loss of energy and drain of current in any of these accessory devices were avoided. This was described under the name of the "Loftin-White Circuit."

The ever-increasing use of the "dynamic" or moving-coil loud speaker called for a much greater use of the larger high-power tubes and these have been manufactured on a large scale, and were standard products.

Many companies were manufacturing tubes of all kinds under various trade names, but mostly using the same standard number classification on the tubes according to their characteristics and application. These tubes were generally made under a license from the Radio Corporation, although there had been some court actions in the endeavor to avoid the requirement of a license.

The Radio Corporation of America divided its activities into two branches, that of maintaining radio telegraph communication, and that of manufacturing tubes and sets. The former was called

Radio Communications and an agreement has been reached by which it would be taken over by the International Telephone & Telegraph Co. if Congress would change the law which prohibited the combination on the ground of monopoly. The manufacturing business was merged with that of the Victor Talking Machine Co. as the Radio-Victor Co. which had its research and manufacturing headquarters at Camden, N. J. Later the General Motors Corporation came to an agreement with the Radio Victor Co. by which General Motors were to manufacture and sell radio receivers under the patents and licenses of Radio Victor.

The Radio Corporation also set up the Photophone Co. to engage in the business of making apparatus for talking moving pictures under Radio Corporation patents.

A number of the smaller companies in the business of making receiving sets were placed in the hands of receivers during the year as a result of overproduction and overconfidence.

There was general satisfaction among the listeners with the new assignment of wave-length channels, although the broadcasters themselves were not all so well pleased. Several cases were carried to the courts. WGY of Schenectady was successful in having full time awarded to it, while the municipal station of New York City, WNYC, was refused full time. The stations were maintaining more constant wave length as the result of improvements in the quartz crystal regulators. These were constructed to maintain the frequency within a range of plus or minus 50 cycles on either side of say 500,000 cycles.

There was a continued improvement in the programmes of the few larger broadcasting stations by the introduction of high-class artists, symphony orchestras, and opera companies. Noteworthy was the work of Dr. Walter Damrosch with his evening concerts for adults and morning concerts with musical instruction for the school-children of the whole continent. Unusual events were the programmes from London, Berlin, and Vienna on Christmas Day to listeners in America. This came across the ocean on a short-wave channel and was re-broadcast by the National Broadcasting Co. on one of the popular channels, also the sending of the regular studio programmes from American stations to the Byrd Antarctic Expedition by means of special short-wave stations. For Education by Radio, see EDUCATION IN THE UNITED STATES.

Successful two-way radio telephone conversation was maintained between an airplane in flight and the ground, and in some cases, this conversation was relayed by wire and telephone. Regular ship-to-shore telephone traffic was established as a commercial feature with the two large steamships *Leviathan* and *Olympic* by two different companies.

Transatlantic telephony was very much improved by the addition of the new two-way short-wave circuit of the American Telephone & Telegraph Co. This operates at a wave length of from 16 to 35 meters, the shorter wave length being preferable in daylight, and the longer one at night. By use of a new directive antenna, an increase of 50 times has been obtained as compared with a simple antenna.

During the year there was reported an increase of 25 per cent in transoceanic radio messages over the preceding year by the RCA Communications, Inc. Particularly in November and December

there was a gain of 50 per cent because of the interruption of Atlantic cable traffic caused by the earthquake that severed the lines.

On Jan. 1, 1929, the Radio Corporation of America was operating radio telegraph circuits to Great Britain, France, Germany, Italy, Norway, Sweden, Poland, Holland, Belgium, Turkey, Brazil, Colombia, Venezuela, Porto Rico, Dutch Guiana, China, Japan, the Philippines, Dutch East Indies, French Indo-China, Dutch West Indies (Curaçao), Argentina, Canada, Cuba, Hawaiian Islands, and Liberia.

During the year new circuits were established to the Fiji Islands, Spain, Syria, and Costa Rica, and to these were added the company's first domestic radio circuit. This was opened on May 15 between New York and San Francisco. Besides the direct circuits, two important relay extensions were set up. A service was established to Albertville, Belgian Congo, by way of Brussels.

San Francisco operates directly with Manila, from which point extensions were set up to a number of islands in the Philippine group and the Asiatic Continent. Circuits were established from Manila to Hongkong and Shanghai in China, Osaka in Japan, Java, Dutch East Indies, Bangkok, Siam, and Saigon, French Indo-China. In addition to these eight feeder stations were established on islands of the Philippine group.

The corporation also reported that short-wave development had brought not only economy of apparatus but also economy of power. Transoceanic service was maintained on the short-wave circuits with one-tenth the power required ten years previously.

New direct circuits were planned to be opened during 1930 which would extend the RCA radio network to Russia, Czechoslovakia, and Chile.

**RADIUM.** In 1929, as for a number of years, the radium industry was dominated by the Union Minière du Haut Katanga which, treating ores from the Belgian Congo, enjoyed a practical monopoly of production. It was stated that 40 grams of radium were sold by this interest in 1928, while in 1929 production was said to be at an even higher rate. In view of this monopoly the American industry had languished, but in other countries attempts were made to develop the mining and treatment and radioactive ores. In Russia it was stated that exclusive rights for such development had been granted to the Rjedkij Elementy. Various deposits in South and Southwest Africa also were under investigation, but little was accomplished in this region and lack of financing was given as a reason for the abandonment of further exploration. In Australia the Mount Painter radium deposits were being developed during the year, but no information was available as to results secured. The importance of an adequate supply of radium was evidenced in the report of the British Sub-Committee on Radium published during the year, which tended to encourage the development of new radium enterprises that might make other nations and especially Great Britain, independent of the Belgian corporation. In 1929 there was incorporated the English Overseas Radium Meiger, Ltd., with an authorized capital of £1,500,000 to develop an industry based on a merger of groups controlling radium-bearing ore properties in Cornwall, South Australia, and

Czechoslovakia. This syndicate was said to have acquired the mines and mining properties in the Mount Painter districts already referred to, various ore deposits and plants on Crow Hill, Cornwall, and various properties at Weipert, Czechoslovakia, adjacent to the radium mines at Joachimov which for a number of years were the leading source of radium. The plans of this organization included development of radioactive springs in the Fal Valley near St. Austell, Cornwall, England. In 1929 the United States imported 165 grams of radium salts valued at \$379,085 as against 169 grams valued at \$565,537 in 1928. For radium in medicine, see CANCER.

**RADOSLAVOFF,** VASHTI A Bulgarian statesman, died in Berlin, Germany, Oct. 21, 1929. He was born in Lovech, Bulgaria, Mar. 11, 1854. He was connected with the government of Bulgaria as early as 1884, when he became Minister of Justice. In 1914 he was Premier, and in this position he was the leader in bringing his country into the Central European alliance at the opening of the World War. With defeat of the Central Powers in 1918, Radoslavoff fled from Bulgaria to Berlin. In his absence he was tried for high treason on the grounds that he and his cabinet had declared war without the assent of the Bulgarian parliament. He was condemned to life imprisonment and his property was confiscated. Though he escaped imprisonment by refusing to return to Bulgaria, the second part of the sentence made him a pauper. In July of 1929 he was granted an amnesty by the National Assembly, but at that time he was too ill to return. He wrote *Bulgarian and the Weltkrieg* (1923).

# RAILROADS AND RAILWAYS

**RAILWAY ACCIDENTS.** The Interstate Commerce Commission, in its annual summary of accidents reported by the steam railways of the United States for the calendar year 1928, *Accident Bulletin No. 97*, reported 6509 persons killed as compared with 6821 in 1927, while the number injured was 85,561 as compared with 104,799 in 1927. The total number of persons killed in train accidents was 272, of whom 16 were passengers and 158 employees on duty; the total number injured was 2873, of whom 1404 were passengers and 1126 employees on duty. Accidents from collision, derailment, or other causes totaled 16,049, and the resultant damage to railway property was estimated at \$19,558,441. The total number of persons killed in highway grade-crossing accidents was 5800 in 1928, the largest number in history; the number of persons injured was 6666. Automobiles were involved in the case of 5046 of these accidents, resulting in the death of 2165 persons and injury to 6218 others. In 1927, 2371 persons were killed in highway grade-crossing accidents and 6613 were injured.

The annual report of the chief inspector of the Bureau of locomotive inspection to the Interstate Commerce Commission for the fiscal year ending June 30, 1929, showed that during the year there were 356 accidents caused by failure of some part of the steam locomotive, including boiler or tender, in which 19 persons were killed and 390 injured. In 1928 there were 419 such accidents, which resulted in the death of 30 persons and injury to 463, while in 1923 these accidents numbered 1348, resulting in the death of 72 persons and serious injury to 1560. This decrease has been largely the result of the cooperation of railroad officials and employees in

putting forth each year greater efforts to meet the requirements of the law

In Great Britain, the Ministry of Transport reported that the number of passengers killed in train accidents during 1928 was four times the average of the preceding eight years and that the number of employees killed was twice the eight-year average. According to these statistics, 48 passengers, 15 employees, and 9 other persons were killed in train accidents, and 716 passengers, 108 employees, and 71 other persons were injured. Of the 48 passenger fatalities, 41 were the result of the train wrecks at Darlington and Charfield. Train-service accidents and nontrain accidents increased the total number of persons killed in 1928 to 460 and the total number of persons injured to 24,324. In 1927, 435 persons were killed in all railway accidents in Great Britain and 25,403 were injured. The Board of Railway Commissioners of Canada reported, for 1928, 3013 railway accidents in which 445 persons were killed and 3193 injured, as compared with 2862 accidents in 1927 in which 353 persons were killed and 3091 injured.

Among the important railway accidents in the United States during 1929 were the following:

January 17 In a collision on the Pennsylvania Railroad at Shout Lane, Md., between northbound and southbound passenger trains, five employees were killed and 25 passengers, six mail clerks, and seven employees were injured. The primary cause of the accident was fog.

February 20 A broken rail caused the derailment of a northbound train on the Peoria Railway Terminal at Peoria, Ill., resulting in the death of six passengers and injury to 91 others. The train, consisting of eight wooden coaches, was loaded with miners on their way to work about 15 miles south of Peoria.

July 11 In a collision between a Cleveland-New York passenger train on the Erie Railroad and a derailed tank car of a westbound freight train near Corning, N. Y., six persons were killed.

July 18 The Colorado Express of the Chicago, Rock Island & Pacific Railway was derailed while crossing a bridge near Stratton, Colo., eight passengers and two Pullman porters being drowned and 80 others injured. The cause of derailment was the weakening of the track at the eastern end of the bridge by a flooded arroyo.

August 18 A St. Louis-San Francisco passenger train en route from Fort Worth, Tex., to Kansas City, Mo., struck an open switch and was derailed at Henryetta, Okla., causing the death of 13 persons. Investigation showed evidence of malicious tampering with the switch.

November 11 The Ponce de Leon Express of the Southern Railway was derailed at Glenmary, Tenn., four persons being killed and 50 others injured. It was conjectured that some part of a truck had become detached and caused derailment of the following car.

December 2 A derailment at Onley, Va., on the Norfolk division of the Pennsylvania Railroad caused the death of eight passengers and a brakeman and an injury to 40 others.

The significant European railway accidents of the year were the following:

January 8 An express train from Bristol to Birmingham cut through a freight train which was being switched at Aschurch Junction, near Tewkesbury, England. The engineer of the express and three passengers were killed and 25 others were injured.

January 16 In a collision near Turnu Severin, Rumania, of a Paris to Bucharest express 14 persons were killed and 40 or more injured. The wreck took fire from a gas tank, and most of the 14 victims were burned to death.

March 20 In a collision between westbound and eastbound passenger trains of the Canadian National Railways at Droccourt, Ont., 17 persons were killed. Most of the victims were in the passenger car of the westbound train which was derailed by a broken rail.

April 5 A passenger train was derailed near Buzau, Rumania, four coaches falling down a bank and being piled one on top of the other. The disaster resulted in the death of 20 persons and injury to 60 others.

April 17, In a collision between the Paris-Brussels Express and a freight train near Hal, Belgium, 10 per-

sons were killed and 20 injured. The primary cause of the accident was fog.

June 19 A passenger train was wrecked near Grammont, Belgium, 12 persons being killed. The alleged cause of the accident was weakness of the roadbed.

July 4 In a collision at Plascon, Poland, 19 persons were killed and 35 others injured.

August 23 In a collision between the Vienna-Rome Express and a slow train from Linz, five persons were killed and 20 others injured near Schwarzach St. Veit, Austria.

August 25 The Paris-Warsaw Express was wrecked at Bruir, Germany, resulting in the death of eight persons and injury to 30 others. The train consisted of 10 cars, seven of which were derailed.

September 25 A derailment of an express train from Moscow to Siberia in the Viatka district caused the death of more than 30 persons and injury to a considerable number.

**RAILWAYS** The O'Fallon decision by the United States Supreme Court fundamentally affected the possible price of railroad securities, especially stocks, in that it directed the Interstate Commerce Commission to give weight to present prices in determining the value of railroad properties on which value earnings of less than 6 per cent were to be retained by the companies carrying the railroads and above 6 per cent were to be divided with the government.

The O'Fallon decision was rendered by the Supreme Court in May, 1929. It was a test case submitted as such by agreement of both sides. The exact name of the case was the St. Louis & O'Fallon Railway Co. v. Interstate Commerce Commission.

The Transportation Act passed by Congress and made a law in 1918 provided that the Interstate Commerce Commission should fix freight and passenger rates for different sections of the country that would allow a well-managed railroad in one of these sections to earn a fair interest on a fair valuation of property. The Interstate Commerce Commission was given the power and the duty to make a valuation of the railroads and also to fix an interest rate that was fair.

Anything in excess of 6 per cent was to be divided and one-half was to be paid to the government to be used as a revolving fund from which the government could make loans to poor railroad companies. Thus the commission was told to make rates high enough to yield a fair interest rate on the value of the railroad property, but could recapture half of any net earnings in excess of 6 per cent on the valuation which the commission itself determined.

This involved making a valuation of the railroad properties of the United States by the Interstate Commerce Commission. This it proceeded to do at a considerable public expense and at a considerable expense to the railroads themselves. The Commission, feeling, as it always has, that it represented the public as against the railroads rather than that it was an impartial judicial body, attempted to find as low a valuation for the railroad properties as was possible.

It soon became obvious that an even approximately accurate valuation could not be based on historical value. That is, a railroad such as the Union Pacific which had been built from Civil War times to the present, the process never having been completed, never having stopped, could not be assigned a cost even approximating the actual cost in the past. Theoretically, in the bookkeeping had been on a sound basis such a determination of historical cost would have been possible, but as a practical matter the bookkeeping was not either on a sound or a uniform basis. The result was that the Interstate Commerce

Commission gave up the attempt to find an historical value and attempted to find a present value. But in doing this the Commission took the prices of 1914—not present prices. The huge difference in the value of the railroads of the United States amounted to many billions of dollars. What the Supreme Court did in the O'Fallon decision was to say to the Commission "You must take into consideration present prices as well as former prices before you fix a final value for railroad property and recapture (as it is called) half of their earnings above 6 per cent."

The Supreme Court did not say anything about rates. The Transportation Act, which is the Interstate Commerce Commission to fix rates that would yield a fair return to the average well-managed railroad in a certain territory, still stood. It was only the railroad so situated or so managed, or both, which could earn more than 6 per cent that the O'Fallon decision affected. The question of whether or not railroad companies could earn under rates fixed by the Interstate Commerce Commission a rate of interest that would enable them to pay their bond interest and an attractive dividend on their stocks was a matter of competition and management, situation and capitalization. What the Supreme Court did in the O'Fallon decision was to say that these other factors—management, competition, and situation—being favorable, the government could recapture earnings above 6 per cent on a valuation which took into consideration present prices for rails, ties, locomotives, shops, machinery, etc. Not a return of 6 per cent on a valuation arrived at by using 1914 prices.

The O'Fallon decision affected railroads in two ways. It stimulated the purchase of railroad stocks as an investment because it gave assurance that the government could not take away from the railroad stockholder any more than from the owner of a piece of city real estate, the unearned increment which came to the owner of the property with the growth in wealth and population of the country as a whole. The other effect has been almost entirely lost sight of by the general public but is of very great importance. It stimulated the railroad officer and the employee to put forth his best effort with the assurance that his employer, the railroad company—which means the railroad's stockholder—would benefit by his efforts. To see the results of this for oneself, one need only to travel or ship by railroad. The millennium has not come. There are still idle railroad employees, arrogant and arbitrary railroad officers. But the improvement that has taken place both in passenger service and freight service is immense.

To prove this, statistical reference may be had to the article in the annual statistical number of the *Railway Age*, by Julius H. Parmelee, Director of Bureau of Railway Economics. Mr. Parmelee said in this article:

Striking progress was made in operating efficiency. Nearly all of the factors of performance registered some gain, so that the whole standard of operation moved upward to a higher level than ever before. The results in 1929 again marked a forward step in the railway program, for greater operating efficiency year by year since 1923 has been making a valuable contribution to the economic progress and stability of the United States.

From a shipper's point of view, time as well as tons carried one mile must be taken into consideration. While, therefore, the measure of econom-

ical transportation of freight is the ton-mile cost, the best unit measure for the satisfactory ton-mile cost is the net ton-miles per car-day. Thus if a car is loaded with 30 tons of freight and is moved 100 miles in a day, the net ton-miles for that car-day is 300. Quoting again from Dr. Parmelee's article:

The average net ton miles per car-day in January 1929, was 513 as against 470 in January, 1928. In February, 1929, 554 as against 496 in February, 1928. In October, 1929, the net ton-miles per car-day averaged 623 as against 627 in 1928. The increase in 1929 as compared with 1928 was due to an unusually heavy movement of grain in 1928. On an average for the ten months of 1929, 557 ton-miles per car-day were shown, which is 33 units above the corresponding figures for the ten months of 1928. Somewhat smaller than the figures, the number of miles made per freight car per day for the first ten months of 1929 was 32.8 miles, or an average of 1.6 miles above the mileage made per freight car per day in 1928.

**EMPLOYEES AND WAGES** The Interstate Commerce Commission requires the railroads to report the number and wages of its employees. The number of employees on railroad pay rolls averaged 1,685,000 during 1929 as against 1,680,000 in 1928. The aggregate wages for 1929 was \$3,000,000,000 as against \$2,862,000,000 in 1928.

**RAILROAD CONSTRUCTION** The *Railway Age* made a careful, accurate compilation of the miles built each year since 1893. The figures are interesting. In 1929, 666 miles of line were completed. In 1928, 1025 miles. The accompanying table shows the miles of new line completed in each year since 1893.

MILES OF NEW LINE COMPLETED IN THE UNITED STATES SINCE 1893

Year	Mileage	Year	Mileage
1893	3,024		
1894	1,760	1912	2,997
1895	1,420	1913	3,071
1896	1,692	1914	1,512
1897	2,109	1915	973
1898	3,265	1916	1,098
1899	4,589	1917	979
1900	4,494	1918	721
1901	5,368	1919	686
1902	6,026	1920	314
1903	5,652	1921	475
1904	3,832	1922	324
1905	4,186	1923	427
1906	5,621	1924	579
1907	5,212	1925	641
1908	3,214	1926	1,005
1909	3,748	1927	779
1910	4,122	1928	1,025
1911	3,066	1929	666

As might be expected, long stretches of new railroad mileage were not built. For instance, the largest single project which was undertaken during 1929 was the West Side improvements of the New York Central in New York City which involved an expenditure of \$175,000,000 and called for the elevation and relocation of its tracks on Manhattan Island and the elimination of 90 street crossings at grade.

**MILEAGE ABANDONED** There were 475 miles of railroad abandoned in 1929 as compared with 512 abandoned in 1928. Apparently new railroad building, such as the extension of the Chicago, Milwaukee & St. Paul, from the Dakotas to the Pacific coast on a large scale was over with. The weeding out process as reflected in abandonment of unprofitable or uneconomical railroad mileage was not quite as drastic as it was and the intensive development of railroad facilities was the order of the day.

Again quoting from the annual statistical number of *Railway Age*, this time from an article by C B Peck, mechanical department editor

The most striking innovation of the year 1929 in locomotive design is the decision to make an application of roller bearings to the journals of locomotive axles. An order for a locomotive was placed with the American Locomotive Company by the Timken Roller Bearing Company in July in the construction of which such an application of Timken bearings is to be incorporated.

For several years the outstanding development in passenger equipment has been the increased attention paid to architectural treatment and ornamentation of the interior of passenger cars and to the appointments affecting the comfort of passengers. During the past year (1929) a number of railroads have extended this attention from the individual coaches to entire trains and several trains with deluxe appointments for coach passengers have been inaugurated. No marked innovations in freight-car design or equipment have been brought out during the past year.

Of importance, but not paramount importance, in intensive development of railroad facilities was electrification. The most important electrification programme announced during the year was that of the Pennsylvania Railroad which had as its object the electrification of 325 miles of railroad line—that is, four tracks are counted as one mile of line. It is proposed to electrify, for both freight and passenger service, the railroad of the Pennsylvania extending from Hell Gate Bridge east of New York where connection is made with the New England lines south to Wilmington, Delaware, and west from Philadelphia nearly to Harrisburg, Pa.

The Reading Company announced the electrification of the suburban lines at Philadelphia. The Delaware Lackawanna & Western announced the intention of electrifying its suburban lines in New Jersey. The New York Central announced that it had under consideration the electrification of the road between New York City and Buffalo, N Y. The Cleveland Union Terminal, the Great Northern, and the Illinois Central were each extending their electrification.

**LOCOMOTIVE BUILT.** The *Railway Age* makes a compilation of the railroad equipment ordered and built during the year. From its annual statistical number the following figures are taken. The number of locomotives ordered during 1929 was 1395, of which 1212 were for service in the United States, 77 for service in Canada, and 106 for export to other countries. This compares with 728 locomotives ordered in 1928, of which 603 were for use in the United States, 98 for use in Canada, and 27 for export to other countries. The total number of locomotives built in the United States was 1065 in 1929, and the total built in Canada and the United States was 1161. This compares with a total in the United States and Canada built in 1928 of 747.

The total number of freight cars ordered in 1929 was 124,140. This compares with 62,631 ordered in 1928. Of the total ordered in 1929, 111,218 were for domestic use; 9899 for use in Canada, and 3023 for export to other countries. The total number of freight cars built in 1929 was 93,965 comparing with 52,156 built in 1928.

The total number of passenger cars ordered in 1929 was 2458 comparing with 2293 ordered in 1928, and the number of passenger cars built in 1929 was 4318 as against 1008 in 1928.

It is rather . . . note that there were 160 motor cars . . . ordered for use on steam railroads in 1929 as against 194 in 1928 and 201 in 1927.

**DIVIDEND CHANGES.** No story of a ragged out-cast who fought his way to prosperity and respectability is more romantic than the history of 20 years of the New York, New Haven & Hartford R. R. In 1917 and 1918 the New Haven was on the brink of bankruptcy. In 1929 the dividend rate on the common stock of this company was increased twice during the year, from \$4 to \$5 in August, from \$5 to \$6 in November. As a mere dividend increase of a railroad stock the increase in the common stock rate of the New Haven was encouraging to investors in railroad common stocks, but as a practical example of what skill in management can do it gave hope for the whole railroad situation of the United States that was particularly encouraging because the New Haven situation was particularly desperate; conditions were bad in New England industries, freight rates within New England could not be raised without running the danger of killing the goose that laid the golden egg. New England was in competition with the South on cotton manufacture, with the Middle West on all classes of manufacture—for instance, with St. Louis on shoes. It was at a physical disadvantage in that labor conditions were bad. It had to import most of its fuel—there was some water power in New England but comparatively little—and New England manufacturers were dependent on Virginia and Kentucky coal to a large extent. Machinery in the New England cotton mills was obsolete as compared with machinery in the newly-built cotton mills of the Carolinas. Raw cotton had to be shipped into New England as well as the shipment of the finished product. Above all, years of experiment and the best thought of such a man as the older J. P. Morgan had demonstrated that transportation conditions made profitable railroad operation an impossibility.

No more sincere man has ever undertaken a difficult railroad problem than the late Howard Elliott. He had been trained by the very best of teachers in railroad operation, James J. Hill. He came to the presidency of the New York, New Haven & Hartford with the confidence and co-operation of J. P. Morgan and he found the problem of profitable operation of the New York, New Haven impossible. He was succeeded as president of the New Haven by another man who had learned railroading in the West, but this time in the Southwest instead of the Northwest. E. J. Pearson came to the presidency of the New Haven from the presidency of the Texas & Pacific but he came without the tradition that the New England railroad problem was an impossibility.

He had found that profitable railroad operation on the Texas & Pacific consisted in getting freight into long, heavy trains and he undertook to make New England railroad conditions fit into some such scheme of transportation. He ordered heavy, slow, powerful locomotives against the bitter opposition of his own superintendent of motive power. He built a big yard at the west end of the New York, New Haven near New Haven, Connecticut, and another big yard at the east end of the system just outside of Providence, R. I. He gathered the freight into one or the other of these yards and moved it in heavy train loads between the yards. The result was that from a company whose bonds were considered rather too highly speculative for a conservative investor the New Haven has gone to a credit position where its common stock is paying 6 per cent dividends.

This seems a rather long digression to make

about the change of a single company in its dividend rate, but it is believed that what the New Haven has demonstrated is of far wider importance than the tremendously important fact that the New Haven itself, with its stock and bonds held by private investors and institutions throughout New England, has gloriously come back. It is a practical example of what can be done by management even under adverse conditions and in the face of government interference.

Another illuminating example of a dividend change is that of the Chicago, Rock Island & Pacific. The dividend on this company's common stock was placed on a \$7 per year basis, increased from \$6 per year in 1928. The Chicago, Rock Island & Pacific had had a varied experience. Twenty years before, it was a gilt-edged railroad company, then speculators who had made their money in steel mills built up a financial structure consisting of a complicated system of two holding companies superimposed on the operating company which gave them control with a minimum investment. The stock of the topmost holding company was the medium of speculation on the New York Stock Exchange and the top-heavy financial structure made a conservative development of the railroad property itself almost an impossibility. A receivership of the holding companies took place and J. E. Hoffman was elected to operate the property with his chief concern profitable operation of railroad extending from St. Louis to Texas and from St. Louis to Denver in highly competitive territory. He has made a success of the task assigned to him and he has done it without the aid of financial cleverness. The Rock Island, as it was still called (that was the name of the second holding company, the operating company being called the Chicago, Rock Island & Pacific Company) earned and paid an increased dividend on its common stock because, like the New Haven, it was operated as a railroad to furnish transportation for freight and passengers and not as a financial scheme with the object of stimulating the demand of investors for certain pieces of stock certificates.

One of the companies' stocks which for more than 20 years ranked as a sound investment was that of the Pennsylvania Railroad. During the World War in Europe, the Pennsylvania having to bear the brunt of the transportation of war materials from Pittsburgh to the Atlantic seaboard had to cut its dividend rate. On Apr. 24, 1929, the directors raised the quarterly dividend rate making the annual rate \$4 for a \$50 share, or 8 per cent. The fact that the stock of the Pennsylvania was so very widely held as an investment by widows, orphans, and people dependent on their income from investments made the change to an 8 per cent rate of great importance.

**RECEIVERSHIPS AND FORECLOSURES** There were no important roads put in the hands of receivership in 1929 and the total mileage of the few roads for which receivers were appointed was only 634 miles. The longest road going into receivership was the Georgia & Florida, 446 miles, with \$13,379,441 funded debt outstanding, and \$6,492,000 stock outstanding. The road runs from Augusta, Ga., to Madison, Fla. It probably should never have been built. An extension from Augusta, Ga., to Greenwood, S. C. delayed in construction failed to bring enough new business to compensate for the strain put on the company's credit.

At the end of 1929 there were 31 railroads with

a total mileage of 5261 miles in the hands of receivers. By far the most important of these was the Chicago & Alton operating 1029 miles between Chicago, St. Louis, and Kansas City, and the Minneapolis & St. Louis, operating 1028 miles of line. There were no important roads sold during 1929 under foreclosure—that is, reorganized, and the reason that the two large properties, the Chicago & Alton and the Minneapolis & St. Louis were not reorganized and put on a solvent basis was quite different. The Chicago & Alton as a physical property was immensely valuable and it was believed it was capable of quite profitable operation. Two banking houses espoused the causes of two different classes of bondholders. Neither put forward any constructive plan of reorganization, neither would give its consent to a reorganization sponsored by the other.

In the case of the Minneapolis & St. Louis the physical facts were just the opposite. A very careful painstaking report was made on the property by a disinterested engineering firm and a very careful study of this report did not leave the impression that the property was capable of profitable operation even if present security holders were to accept a drastic cut in their nominal values.

**NEW SECURITIES ISSUED** The year 1929 stood out from all recent years in the history of American finance as a period during which investors preferred to buy stocks rather than bonds. It was well to bear in mind the distinction. A common stockholder is not promised any income on his investment. He becomes a partner in the business, the owner of what is left after expenses, taxes, and interest on borrowed money have been paid. But he is given no promise that there will be anything left. The bondholder, on the other hand, loans his money to a corporation with the corporation's definite promise that a certain interest rate will be paid and, failing payment of its specified interest, the corporation is placed in bankruptcy. Up till within a few years ago the conservative American investor preferred to put his money into bonds, railroad, public utility or industrials, or government securities rather than into stock.

The phenomenal success of industrial companies gave the investing public a realization that while a common stockholder suffered loss if the operation was not financially profitable enough to pay expenses, taxes, and interest and leave a margin for common-stock dividends, on the other hand, if the operations of the corporation were successful it was the stockholder, the common stockholder, who profited and the result was that bonds with a fixed rate of interest but without any provision for a participation in profits became very difficult to sell to life-insurance companies, saving banks, or individual investors in 1929.

It had long been recognized by students, railroad executives, and railroad bankers that raising new money for railroad companies through the sale of bonds rather than stock was unsound, that obligating the company to pay a fixed interest rate during times of depression gave an inflexibility that was dangerous. During 1929, therefore, railroad companies availed themselves of the market for stocks. The Pennsylvania Railroad offered to its own stockholders \$71,836,050 common stock at par. The New York Central offered its stockholders \$35,669,900 par value stock, the Baltimore & Ohio offered \$41,107,700 of its stock, the Canadian Pacific and the Chesapeake & Ohio

each offered \$30,000,000 of stock to stock-holders, and the Southern Pacific offered \$19,549,800 stock at a premium.

The outstanding bond issues of the year were \$65,160,000 4½ per cent bonds of the Southern Pacific, offered with the right to subscribe in the future at a fixed price to common stock, and \$72,335,000 4½ per cent bonds of the Chicago & North-western convertible into common stock; and, of more importance than the amount would indicate, \$46,392,000 5½ per cent bonds of the Missouri Pacific convertible at par for par into common stock. The importance of the Missouri-Pacific bond offering lies in the fact that the company had maturing obligations and a comparatively poor credit which seemed to offer difficulties in the way of continued solvency. The sale of convertible bonds, however, was a success, the obligations were taken care of, and there had been for the panic on the New York Stock Exchange it is generally believed that the Missouri Pacific would have been in a position to pay off through common stock the accumulations of dividends on its preferred stock.

The panic on the Stock Exchange should be mentioned in any account of the year, although the effect on railroad security prices was indirect. The lure of increasing prices of stock had been such that the whole country, not only New York City alone but the smaller cities and towns, had developed a demand for stocks. Earning power of the corporations of which the stocks were publicly bought and sold was lost sight of. The law of supply and demand became paramount. There was less of this wild speculation in railroad stocks than in industrial stocks, but when suddenly the demand ceased industrial-company stocks became salable only at ridiculously low prices and holders of railroad stocks and bonds offered their securities for sale in an effort to make good their margins on industrial stocks. The result was that railroad stocks sold for a time below their actual appraisal of their earning power would have justified. As a matter of fact, the greater the earning power of the railroad company and consequent higher price and greater salability of the stock made the percentage drop, in prices greater than the drop in railroad companies' stock, where the earning power, prices, and salability were less.

It was true that the earning power of railroads of the United States beginning in October compared unfavorably with the earning power shown by these railroads in October, 1928, and just as the panic in industrial stock prices indirectly caused an abnormally low price for railroad stocks, so an industrial depression, a falling off in manufacture, sales, and consumption of iron, steel, automobiles, and luxuries would cause a falling off in railroad earnings. One thing may be said, however, that the ability of railroad companies to sell stock in 1929 put them in a considerably sounder position to face the depression than they were at the beginning of the year. The improvement in economies in operation, the change in attitude of public regulating authorities and, most important probably of all, the change in attitude of railroad men themselves, may well be of far greater importance in the future of the railroads of this country than the temporary loss in credit and temporary loss in earning power due to the Stock Exchange panic and an industrial depression. See **ELECTRIC RAILROADS, FINANCIAL REVIEW.**

**RÁKOSI**, rá'kó-sé, JENÓ Hungarian journalist and author, died Feb 8, 1929. He was born in Acsád, Eisenburg, Hungary, Nov 12, 1842, and was largely self-educated. At 21, he went to Budapest, became a contributor to the *Napló*, when that journal was under the charge of Kemény, the famous Hungarian novelist and political writer, and in 1866 scored a great success with his comedy, *Ásop*. From 1875 to 1881, he was manager of the Hungarian popular theatre in Budapest and then founded the *Buda-pesti Hírlap*, a radical paper which he edited until 1925. His success with *Ásop* made him a leader of the younger literary circle. Among his later works are the tragedy, *Andrew and Joanna*, dealing with the murder of Andrew of Anjou by Joanna I of Naples (1885), a study of the nature of tragedy (1886); a Zolaesque drama entitled *Magdalene*; a novel, *The Greatest Fool*, and other dramas, comedies, and farces. His collected works in 20 volumes were published in 1905. At the time of his death, Rákosi was on the editorial staff of *Pesti Hírlap*, and he was president of the Hungarian Pen Club.

**RAMAN EFFECT.** See **PHYSICS**.  
**RANDOLPH-MACON WOMAN'S COLLEGE.** An institution for the higher education of women in Lynchburg, Va., under the auspices of the Methodist Episcopal Church, South, founded in 1893. The enrollment for 1928-30 was 827, distributed as follows: Seniors, 128, juniors, 142, sophomores, 202; freshmen, 309, irregulars, 21, specials, 9; and graduate students, 16. The faculty numbered 65. The endowment amounted to \$1,202,935, while the income for the year 1928-29 was \$502,307. The library contained 35,000 volumes and was housed in the new building erected during 1928-29 at a cost of \$150,000. Presser Hall, the new music building, named in honor of the Presser Foundation of Philadelphia, was also under construction at a cost of \$130,000, half of which sum had been met by the foundation. The General Education Board had pledged \$50,000 toward the construction of a new science building on condition that an additional \$150,000 be raised. President, Dice Robins Anderson, Ph.D., LL.D.

**RAPID TRANSIT.** While satisfactory progress was made during the year on subway projects under construction, at least two important undertakings were voted down. The need for modern transit facilities in many cities, other than the few great urban centres now possessing rapid transit subways, was, however, obvious, and subway construction although not very active in 1929 certainly would be more widespread in the future.

New York City construction work on the first 57 miles of the so-called municipal subway system (see 1928 YEAR BOOK), progressed satisfactorily, and it was expected that parts of the system would be in operation in 1931. Plans were announced on September 15 by the Board of Transportation for new lines, totaling 100 12 miles and comprising the second step in the development. It was estimated that this work would cost over \$438,000,000. Running from outlying districts in the Bronx, the line would pass down Manhattan Island along Second Avenue. Two new tunnels under the East River were proposed, at Houston and at Grand Streets, and the road was to extend across Brooklyn to branch out into several lines serving wide areas of Queens including the Rockaway Beaches.

**BUENOS AIRES.** A concession was granted to the Anglo-Argentine Tramway Company for the construction of a new line to connect the Retiro and Plaza Constitution railway stations. This line would cross the city from north to south. Construction on the east and west line was progressing rapidly, and it was expected that it would be in service by March, 1930.

**DETROIT.** A plan, apparently well conceived, for a beginning of rapid-transit construction in Detroit, was defeated by a popular vote. The blame was placed on a failure properly to inform the voters of the value of the plan and the fairness of the proposed method of financing. It was to be resubmitted.

**CLEVELAND.** The city council voted down a proposal of the Peoples Subway Company to build 75 miles of subway. It was said that the failure of the promoters to disclose the names of those backing the plan led to this action. See MUNICIPAL OWNERSHIP.

#### RARE EARTHS. See CHEMISTRY

**RAYON.** Throughout the world the production of rayon in 1929 showed a marked increase and exceeded expectations. The *Drapers' Organizer* (London) estimated the world's production at 412,350,000 pounds, as compared with 266,868,000 pounds in 1927 and 141,000,000 pounds in 1924, the 1929 figure being in excess of the

of which the viscose process accounted for about 86 per cent of the world's production and about 85 per cent of the United States production during 1929. The cellulose acetate and cuprammonium processes were next in order in importance, Great Britain and Germany being the chief producers by these processes. The accompanying table, also from the annual review number of the *Textile World*, indicates the distribution of rayon by countries and processes in 1929.

The record for 1929 in the United States did not, however, indicate that a limit had been reached to production, and at the end of the year trade forecasts seemed to indicate that the production might reach a total of 160,000,000 pounds. The most significant event of the year was the broadening of consuming markets which included increased production of all rayon broad goods and rayon mixtures as well as a development in the knitting industry.

The total rayon capacity of the United States in 1929 was estimated at 160,800,000 pounds, and this was distributed by States and regions according to the accompanying table from *Commerce Reports*.

#### RAYON PRODUCTIVE CAPACITY ESTIMATED BY STATES FOR 1929

	Pounds
New England	4,500,000
Massachusetts	1,500,000
Rhode Island	1,500,000
Connecticut	1,500,000
Middle Atlantic	40,800,000
Pennsylvania	31,000,000
New York	9,500,000
New Jersey	300,000
East North Central	
Ohio	5,000,000
South Atlantic	88,500,000
Virginia	41,500,000
West Virginia	24,000,000
North Carolina	11,000,000
Georgia	6,000,000
Maryland	4,500,000
Delaware	1,500,000
East South Central	
Tennessee	22,000,000

#### ESTIMATED PRODUCTION OF RAYON BY COUNTRIES AND PROCESSES—1929

From *Textile World* (New York)  
[In 1000 lb.]

Country	Viscose	Acetate	Cupra	Cellulose	Total
Austria	3,620				3,620
Belgium	10,700			2,800	15,000
Brazil	950				950
Britain	40,920	11,360	820		53,100
Canada	2,813	937			3,750
Czechoslovakia	4,250				4,250
France	32,730	3,500	700	70	37,000
Germany	33,200	800	11,000		45,000
Greece	580				580
Holland	20,000				20,000
Hungary				670	670
Italy	56,900	1,000	1,100		59,000
Japan	18,000				18,000
Poland	1,635			1,800	5,435
Spain	2,000				2,000
Sweden	420				420
Switzerland	12,250				12,250
United States	104,330	7,000	2,300	9,500	123,130
Total	347,298	26,097	15,920	14,840	404,155

*Textile World's* estimate of 404,155,000 pounds. The United States output in 1929 was 26 per cent over 1928, and 100 per cent over the 1926 output, the increase being due to the enlarged output of various European countries where it was anticipated that the overproduction prevailing at the end of 1928 would act to slow down production. The United States stood as the leading producer with a production over twice as large as that of Italy and nearly 10 per cent greater than the combined output of Italy and Great Britain, the latter country, as the table indicates, being the third largest producer. In addition to the domestic production of rayon yarns during 1929 amounting to 123,200,000 pounds, there was imported 15,950,456 pounds valued at \$12,148,926, making available for consumption in the United States about 139,000,000 pounds or nearly 35 per cent of the world's production.

Rayon is produced by four leading processes,

In 1928 the leading European and British companies formed the Bureau International pour le Standardization des Fibres Artificielles, and there was prepared during the following year the first set of rules for 1930 in which a number of leading European producers cooperated. The aim was to develop among the members of the bureau a system of rules for the standardization, classification, and denomination of the different categories of artificial textile fabrics.

#### REAYS, RADIATION. See PHYSICS

**REA, 1A, SAMUEL.** An American engineer and railroad official, died Mar. 24, 1929, in Gladwyne, a suburb of Philadelphia, Pa. He was born Sept. 21, 1855, in Hollidaysburg, Pa. In 1871 he began work with the Pennsylvania Railroad as locating and constructing engineer on various branches, becoming president of the road in 1913. He retired in 1925. During his years with the Pennsylvania Railroad, Mr. Rea had charge of the building of the New York tunnel and of the Pennsylvania Station in New York City. Before undertaking the supervision of this difficult engineering project, he spent some time in London studying the tunneling systems there. His book *Railways Terminating in London* (1888) is a product of that study. The New York Connecting Railroad, including Hell Gate Bridge over the East River, was also constructed under his direc-

tion He was appointed a member of the special commission on national defense of the Railroads War Board in 1917.

**READ, SIR (CHARLES) HERCULES** An English archaeologist and art connoisseur, died Feb. 11, 1929, in Rapallo, Italy. He was born July 6, 1857, and was privately educated. He became an assistant in the British Museum (1880) and, from 1896 to retirement in 1921, was keeper of British and medieval antiquities and ethnography. He was knighted in 1912, was a fellow of the British Academy, and held membership in many foreign societies and academies.

**RECLAMATION** Time was when irrigation, particularly in the United States, was hailed as a new gift which would make available thousands of acres for agriculture. Like many other movements, it would appear that by 1929 this wave of irrigation construction had exceeded any possible immediate economic justification or future requirements that could reasonably be anticipated. Obviously, a calmer and surer programme having due regard to actual economic necessities must ultimately prevail. It was natural, therefore, that a bill in widespread irrigation work in the United States should be expected, while such works as those in Egypt and India continued to grow slowly as economic needs justify their construction. Mexico, on the other hand, apparently failing to read the full story of reclamation in the United States, had embarked on an extensive programme of irrigation that would seem to offer little hope of immediate financial or economic return. It was an interesting situation.

**UNITED STATES** Dissatisfaction with the Federal reclamation policy in the United States was noted in the 1928 YEAR BOOK. At the biennial conference of the U. S. Bureau of Reclamation in Denver, Colorado, the chief engineer of the Bureau pointed out that no money had been appropriated for new projects for two years and that during the ensuing eight years the annual reclamation fund receipts would be fully used up in completing the ten-year programme that was under way. Criticism had centered on the use of Federal lands to construct projects for irrigating areas which were largely privately owned, whereas the Act of 1902 was planned primarily for the improvement of public lands. Also, it was claimed that projects had been built for areas from which there was no hope of securing even the low interest return contemplated in the Reclamation Act. It was also suggested that some of these works had been overbuilt and that long-lived, practically permanent, construction had been used at great cost where conditions could have been met much better by works of a temporary and less costly character.

President Hoover appointed a special commission to investigate and report on both the status of the public lands and reclamation work. Further constructions doubtless would depend upon the findings and advice of this commission.

**MEXICO** In January, 1926, a law was enacted in Mexico creating a National Irrigation Commission with functions similar to those of the U. S. Reclamation Service. A large number of projects were studied and work was under way for some time on several of these, notably the Mezquital, the Calles, the Nueva España, and the Mate, which were nearing completion. Some of these works involved dam constructions which would have been of the first rank a few years previously.

The Calles project, for example, involves a curved concrete main dam, 217 feet high, and an important multiple-arch diversion dam, 142 3 feet high. Several projects offered opportunity for considerable hydro-power development in addition to their use for irrigation.

**SUDAN** Further progress was noted during the year on the extensive irrigation work begun some four or five years previously and known as the Gezira development, on the Blue Nile. At that time the Semai Dam and regulators were built to furnish irrigation to this area, which ultimately might cover some three million feddans but had been completed for only one-tenth of this area. The second stage of this project was under construction and involves the extension of the main and lateral canals to cover additional areas. The main canal as built in 1929 would carry 84 cubic meters of water per second and, with this high capacity, large size regulator gates were required at the main points of distribution. See DAMS.

**RED CROSS, AMERICAN** An organization chartered by Act of Congress in June, 1900, and incorporated in January, 1905. Its purpose is to supply relief to sufferers from war, from disaster, or from any widespread pestilence or famine. It also engages in public-health work, trains in first aid and life saving, and maintains an enrollment of nurses as a reserve for the Army and Navy or for disaster. The society is a member of the League of Red Cross Societies, made up of similar organizations in 54 nations, and of the International Red Cross Committee of Geneva, Switzerland, composed of Red Cross societies of 58 nations, who are signers of the Treaty of Geneva. All powers of control, management, and administration of the American Red Cross are vested in a central committee of 18 persons, 6 of whom are appointed by the President of the United States, 6 elected by the chapters, and 6 by the board of incorporators.

On June 30, 1929, there were 3553 chapters of the American Red Cross. Service work for disabled veterans and their dependent families was carried on by 2821 chapters, which spent \$1,903,000 while the national organization spent an additional \$737,871 for the same purpose. Service to ex-service men and their families included assistance in filing death and disability claims for Federal and State benefits, such as compensation, bonus, etc., and social or financial and while adjustment of claims was pending. Recreation and other service was conducted in 65 government hospitals, including those of the Veterans' Bureau, Army, Navy, Department of the Interior, and also in two contract hospitals.

The year brought many opportunities to the Red Cross for rendering service, as there were 131 disasters, 120 of which were in the United States and its insular possessions. Contributions of funds were made to 11 foreign Red Cross societies for the relief of victims of major disasters.

For domestic disaster relief, the national organization spent \$4,863,570 and the chapters spent \$463,000, making a total of \$5,326,570. For insular and foreign operations in disaster relief \$3,343,037 was expended. The only nation-wide appeal for a relief fund was for the sufferers of the West Indies hurricane, and the public contributed \$5,883,726. Total expenditures of the national organization and chapters for the year ending June 30, 1929, were \$15,963,679, this sum

including the \$8,669,627 spent in disaster relief. The membership of the Red Cross was 4,127,946 adults, 6,878,423 children were enrolled in the American Junior Red Cross.

Enrollment of Red Cross nurses, acting as a reserve for the Army and Navy and other governmental nursing services and for call during emergency, totaled 49,153. The Red Cross employed 766 nurses in public-health work. Home hygiene and care of the sick certificates were issued to 42,234 graduates of this course, 4793 nutrition classes for children and adults were conducted, 52,596 first-aid certificates were issued, a total of 350,491 to date, and 46,898 life-saving members were enrolled, making a total of 220,404. The Red Cross furnished 210,088 garments for disaster victims, etc., and 2,959,304 surgical dressings, it also transcribed 1849 volumes into braille for the blind. Welfare service was provided for an average of 10,742 families each month in communities where no other agency existed for such work.

The President of the United States is the president of the American Red Cross. Other officers in 1929 were vice presidents, Calvin Coolidge, William Howard Taft, and Robert W. DeForest, treasurer, Ogden L. Mills, counselor, Charles Evans Hughes, Jr., secretary, Miss Mabel T. Boardman, chairman of the central committee. John Barton Payne, vice chairman in charge of domestic operations, James L. Fieser, vice chairman in charge of foreign operations, Ernest P. Bicknell, vice chairman in charge of finance, James K. McChesnut.

**REED COLLEGE.** A nonsectarian, liberal college of arts and sciences for men and women in Portland, Oreg., founded in 1911. The enrollment for the autumn term of 1929 totaled 302, of whom 182 were men and 180 women. These were distributed as follows: Freshmen, 132, sophomores, 126, juniors, 57, seniors, 35, special students, 6, graduate students, 6. The faculty numbered 30, with 10 graduate assistants. The productive funds for 1928-29 amounted to \$1,848,748, while the income for the year was \$94,515. Among important gifts was a bequest of \$100,000 from the late Eric A. Hanser, with which a memorial library was to be erected. The present library contained 40,000 volumes. President, Norman Frank Coleman, LL. D.

**REFINING OF METALS.** See METALLURGY.  
**REFORMED CHURCHES** THROUGHOUT THE WORLD HOLDING THE PRESBYTERIAN SYSTEM, ALLIANCE OF. An organization formed in London, England, in 1875, with the one great purpose, to encourage comity, cooperation, and efficiency in the accomplishment of Christian work. In 1929

there were 106 churches connected with the alliance. The members and adherents of the Presbyterian and Reformed churches throughout the world numbered about 50,000,000, including 113,000 members of the Evangelical Church in Germany. The Thirtieth Quadrennial General Council of the alliance met in Boston, Mass., June 20-27, 1929, with a representation of 400 delegates from Great Britain, Ireland, Belgium, Czechoslovakia, France, Germany, Hungary, Italy, Jugoslavia, Rumania, Switzerland, India, South Africa, Canada, and the United States. Topics of special interest included: Foreign missions, home missions in all lands, problems of higher education, reconstruction on the continent of Europe, church union, and international peace.

Officers elected for 1929-1933 were: President, the Rev. George W. Richards, LL. D., of Lancaster, Pa., vice presidents, the Rev. J. M. Wells, D. D., of Sumter, S. C., and the Rev. W. A. Curtis, D. D., of Edinburgh, general secretary, the Rev. W. H. Hamilton of Edinburgh, and American secretary, the Rev. Henry B. Mastri, D. D., whose offices are at 912 Witherspoon Building, Philadelphia. The next general council of the alliance was to be held in Belfast, North Ireland, in 1933.

**REFORMED CHURCH IN AMERICA.** Composed originally of settlers from Holland and known until 1867 as the Reformed Protestant Dutch Church in North America, the denomination has since become largely intermixed with elements from many other nationalities. It adheres to the doctrines of the Belgic Confession and the Heidelberg Catechism, in 1837 it endorsed the Westminster Catechism. The form of government is of the Presbyterian type, with four classes of officers: Ministers, teachers (or professors), elders, and deacons. Administratively, the church is divided into consistorys, classes, provincial synods, and the general synod, the latter operating through a board of direction. In 1929 the Reformed Church in America reported 739 churches, 846 ministers, 87,132 families, 158,662 communicants, and approximately 200 foreign and 200 domestic missionaries. The church maintained foreign missions in Japan, China, India, Arabia, and Mesopotamia, the latter jointly with the Presbyterian Church in the United States and the Reformed Church in the United States. The value of property used for purposes of worship was placed at more than \$38,000,000 in the Federal census of religious bodies of 1926. The church maintains seminaries in New Brunswick, N. J., and Holland, Mich., and also Hope College in Holland, Mich., and Central College in Pella, Iowa. The official periodical of the denomination is the *Christian Intelligence*. At the session of the general synod in June 1929 the Rev. Daniel A. Poling, D. D., LL. D., Litt. D., S. T. D., of New York City was elected president.

**REFORMED EPISCOPAL CHURCH.** A denomination formed in December, 1873, by clergymen and laymen who had withdrawn from the Protestant Episcopal Church. It was the outcome of an intense discussion over ritualistic tendencies. As indicated in its name, the denomination held that it supported the principles of the Anglican Church of the time of the Reformation, and of the Protestant Episcopal Church as organized after the American Revolution. Doctrine and polity, otherwise in general accord with those of the Protestant Episcopal Church, were anti-sacerdotal. A general council of the denomination

WORLD-WIDE PRESBYTERIANISM, 1929

Totals for 1913	35,110	29,929	6,529,938

(\$249,067,000); Great Britain, 409,000,000 (\$97,342,000), Italy, 213,700,000 (\$50,860,000), Belgium, 115,500,000 (\$27,489,000), Yugoslavia, 84,000,000 (\$19,992,000), Rumania, 20,100,000 (\$4,783,800), Greece, 7,000,000 (\$1,606,000); Portugal, 13,200,000 (\$3,141,600), Japan, 13,200,000 (\$3,141,600), Poland, 500,000 (\$119,000); United States, 66,500,000 (\$15,827,000), service of the Dawes Loan, 61,800,000 (\$14,708,400). The American share consisted of 40,000,000 Reichsmarks of mixed claims and 26,500,000 Reichsmarks for meeting the costs of the Army of Occupation. A 10 per cent reduction in the actual costs of the Army of Occupation was agreed to by Washington May 19, as an aid to the conference.

3 Reparation payments in the form of goods shipped direct to the creditor countries were to be reduced gradually from 750,000,000 Reichsmarks annually to 300,000,000 and were to cease at the end of 10 years.

4 Mortgages created under the Dawes Plan on the German Railway system amounting to \$2,500,000,000, and on German industry, amounting to over \$1,000,000,000, as security for reparation payments, were to be wholly lifted and there was substituted an annual tax upon the railway system for 37 years.

5 The post of Agent General for Reparation Payments and other foreign "controls" over German finances were abolished and their functions and the task of receiving and distributing German annuities were to be taken over by a Bank for International Settlements, upon the board of directors of which Germany was to have representation.

6 Not only was the responsibility for making transfers to the International Bank placed solely upon Germany, but the debtor nation was entitled to declare a partial moratorium of transfer for a period of two years in case of a financial crisis.

7 The new annuity was divided into two portions, one consisting of the sum of 660,000,000 Reichsmarks payable each year under all conditions. The other, consisting of the balance of the annuity, was subject to a moratorium for two years as regards its payment in foreign currencies and at the expiration of the first year of the moratorium even the internal Reichsmark payments might be arrested. The stipulation that 660,000,000 Reichsmarks (about \$150,000,000) should be unconditionally paid in foreign currencies for 37 years provided a safe basis for the issuance of reparation bonds and thus for the mobilization of some portion of Germany's debt for the immediate repair of war damage.

8 Within a year, there should be a general liquidation of the other financial problems raised by the War and the Versailles Treaty, such as German claims against the successor states to the Austro-Hungarian Empire.

The signatures of the Belgian experts were affixed to the Young Report with the understanding, agreed to by the German delegates, that Belgium's claims for compensation for the worthless paper marks with which the country was flooded during the German occupation, would be settled by direct negotiation. It was further agreed that the Young Plan, to become valid, would require the approval of the governments of at least 11 of the nations concerned.

THE HAGUE CONFERENCE. The plan had been drawn up by financial experts, primarily with

financial and economic factors in view. The political phase of the negotiations commenced with the convening at The Hague on August 6 of a conference of representatives of 12 interested nations to consider the Young Report. The conference, which lasted until the end of the month, was marked principally by emphatic protests against features of the plan voiced by Philip Snowden, the British Chancellor of the Exchequer, and the difficulty of reconciling the British view with those of the other Allied nations, and particularly with those of France. Mr. Snowden demanded 22 per cent of the total annuities for the British Empire, the percentage fixed at the Spa Conference of 1920, instead of 20 per cent, as allotted by the Young Plan. The difference amounted to about \$11,520,000 annually. He also demanded a revision of the Young Plan's allocation of conditional and unconditional payments, which he termed unfair to Great Britain, and of the stipulation that German deliveries in kind might continue for ten years. Under the compromise finally effected, the other governments agreed that the British share should be increased by 40,000,000 Reichsmarks annually, of which 36,000,000 (about \$8,640,000) was to be in annuities guaranteed by the other creditor nations. The amount of the unconditional annual payment to be made to Great Britain under the Young Plan was increased by about \$22,000,000. Finally, to offset the adverse effect on British industries of the continuance of German deliveries in kind, Italy agreed to purchase 1,000,000 tons of British coal annually.

The conference further agreed that the cost of the occupation of the Rhineland after Sept. 1, 1929, for which no provision had been made in the Young Plan was to be assessed 50 per cent against Germany, 35 per cent against France, 12 per cent against Great Britain, and 3 per cent against Belgium. The claims of German citizens for damages sustained as a result of the occupation were to be settled by the German government. A major factor in securing the German delegates' assent was the Allied promise to evacuate the Rhineland within eight months after the ratification of the Young Plan by France and Germany. See FRANCE, under *History*.

BANK OF INTERNATIONAL SETTLEMENTS. Probably the most original and noteworthy feature of the Young Report was the plan outlined for the establishment of the Bank of International Settlements. The suggested outline for the organization of the bank, included in Annex J of the report, stated that, "The purpose of the bank is to provide additional facilities for the international movement of funds and to afford a ready instrument for promoting international financial relations. In connection with the German reparation annuities, it shall perform as trustee for the creditor countries the entire work of external administration of this plan, shall act as the agency for the receipt and distribution of funds, and shall supervise and assist in the commercialization and mobilization of certain portions of the annuities." Authorized capital was fixed at \$100,000,000, but only 25 per cent of each share was to be paid in at the formation of the bank. Administrative control was to be vested in a board of directors consisting of the governor of the central bank of each of the seven countries represented on the Young Committee, or his nominee. An additional director was to be appointed by each of the seven governors, and the

Governor of the Bank of France and the President of the Reichsbank also might each appoint one additional director of his own nationality if he so desired, during the period of the annuities. These 14 or 16 directors were in turn to elect not more than nine additional directors from a list of candidates, four of whom were to be nominated by the governor of the central bank of each of the countries not represented on the Young Committee but which participated in the share ownership of the bank.

The functions of the bank, as outlined in the Young Plan, were to buy and sell gold coin, bullion, bills of exchange, and other short-term obligations of prime liquidity, to open and maintain deposit accounts with central banks, to rediscount bills for and make loans to the central banks, to buy and sell intermediate or long-term securities, to invest in Germany funds of the international bank held in the Reichsbank and not transferable due to a declaration of transfer postponement, and to issue its own obligations in order to lend to any central bank.

The temporary organization committee, the selection of which was also provided for in the Young Report, met at Baden-Baden October 4 under the chairmanship of an American banker, Jackson E. Reynolds, to draw up the charter, statutes, and deed of trust of the bank. Basel, Switzerland, was tentatively selected as the site of the bank and the charter and statutes were drawn up and unanimously adopted by the organization committee on October 30. Owing to the refusal of the Government of the United States to permit the Federal Reserve Bank to participate officially in the international bank, it was provided that the two American members of the board of directors should be elected by the representatives of the six other nations. The American share of the capital stock of the bank, it was indicated, would be held by an independent trust company. Elaborate safeguards were adopted to insure the bank's independence of the country in which it was located. Difficulty was experienced in agreeing upon the terms of the trust deed, but on November 10 the organization committee ended its labors and submitted a report, which required ratification by the nations concerned to become effective.

**EASTERN REPARATIONS.** In the meantime the Committee on Eastern Reparations was in session in Paris in an effort to arrive at a satisfactory adjustment of the reparations due the countries of the little Entente (Yugoslavia, Czechoslovakia, and Rumania) and Poland and Greece from Austria, Hungary, and Bulgaria. The committee was appointed at The Hague Reparations Conference in August. After working on the problem for two months, the committee announced on October 28 that the negotiations had reached a deadlock, principally over Hungarian reparation payments and the settlement of the Hungarian optants' claims. The whole problem of eastern reparations was then referred to the second Hague Reparations Conference for final settlement.

**RÉUNION, rā'nyōn'.** An island belonging to France, about 420 miles east of Madagascar. Area, 370 square miles, population, according to the census of 1926, 186,637, of whom 180,694 were Europeans, mainly of French origin. The chief towns with their population in 1926 were St. Pierre, 20,479; St. Denis, 23,390; St. Paul, 21,643, and St. Louis, 15,867. The chief port is Pointe-des-Galets. The principal products are rum, sugar, manioc, coffee, tapioca, vanilla, spices, etc. Imports in 1928 were valued at 152,906,000 francs, or 12 per cent less than in 1927, while exports declined 19.6 per cent to 118,107,000 francs. France furnished 86 per cent of the imports and took 99 per cent of the exports. There are 80 miles of railways. The budget for 1927 showed revenues of 51,799,299 francs and expenditures of 48,759,085 francs. The government of the island is administered by a governor, aided by a privy council and an elected council. Réunion is represented in the French Senate by one senator and two deputies.

**REVELSTOKE, JOHN BARING, SECOND BARON** OF An English banker, died April 19, 1929, in Paris, where he had gone as one of the British delegates to the Committee of Experts on Reparations. He was born Sept. 7, 1863. He went up to Trinity College, Cambridge, in 1883, but did not take a degree, leaving to travel in various parts of the world. In 1897 he succeeded to the title Lord Revelstoke and was created a Privy Councillor in 1902, a Knight of the Grand Cross of the Royal Victorian Order in 1911, and was appointed a member of the Council of the Prince of Wales in 1907. After 1908 he was Receiver-General of the Duchy of Cornwall, and in 1926 he was appointed Lord-Lieutenant of the County of Middlesex. He was Lieutenant of the City of London, a director in the Bank of England, and a partner in Baring Brothers & Co., Limited.

**RHODE ISLAND.** POPULATION. According to a State census made in 1925, the population was 679,260, as compared with 604,397 at the United States Fourteenth Census in 1920, and 595,986 at the census of 1915. The estimated population on July 1, 1928, was 716,000. The capital is Providence.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Hay	1929	45,000	64,000	\$1,394,000
	1928	45,000	69,000	1,503,000
Corn	1929	10,000	420,000	588,000
	1928	10,000	390,000	526,000
Potatoes	1929	2,000	250,000	450,000
	1928	2,000	244,000	220,000

\* Tons

**MINERAL PRODUCTION.** The total value of the mineral product of the State, \$1,310,756 for 1927 as against \$1,339,398 for 1926 remained little changed and of minor importance in the State's economy. Its leading component was the yield of stone, which attained 153,400 short tons for 1927 and 252,280 tons for 1926; in value,

\$734,164 for 1927 and \$895,718 for 1926. There was a small production of lime, of graphite, and of clay products.

**FINANCE.** State expenditures in the year ended Nov. 30, 1928, as reported by the U. S. Department of Commerce, were for maintaining and operating governmental departments, \$6,538,951 (of which \$470,472 was for local education), for conducting public-service enterprises, \$17,036, for interest on debt, \$861,985; for improvements, \$5,015,826, total, \$13,033,798 (of which \$4,099,746 was for highways, \$850,535 being for maintenance, and \$3,249,211 for construction). Revenues were \$11,573,300. Of these, property and special taxes formed 43.3 per cent, departmental earnings and compensation to the State for officers' services, 5.1, sale of licenses, 38.6 (including tax on taxation of \$1,152,373). The funded debt, Nov. 30, 1928, \$21,874,000 outstanding or \$17,987,785 net of sinking fund payments included \$6,503,000 for highways. The assessed valuation of \$1,344,544,741 were levied State taxes of \$1,013,454.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 196.28. There was no reported construction of additional line in 1929.

**MANUFACTURES.** According to the biennial Census of Manufactures, published by the U. S. Department of Commerce in 1929, there were in the State, in 1927, 1497 manufacturing establishments. These employed 120,009 wage earners, whose wages for the year totaled \$138,895,884. Materials and supplies used in manufacture cost \$313,107,075. The manufactured products attained the total value of \$592,232,047.

**EDUCATION.** The attention of the school authorities in the course of the year was directed especially to improving the constancy of attendance on the part of pupils in cities and towns where the attendance record was weak, and to a study of the adverse influences affecting the problem. The population of ages from 5 to 15 years was estimated at 140,834. There were enrolled in the public schools of the State, in the academic year 1928-29, 111,391 pupils, in parochial schools, 28,930, in private schools, 4078, in all schools, 144,399. Of the school pupils 90,943 were in public elementary and 17,517 in high-school grades. The expenditures for public-school education for the year totaled \$14,089,929. Salaries of teachers averaged annually \$1623.

**CHARITIES AND CORRECTIONS.** The central State authority in administrative matters relating to institutions of care or of custody resided in 1929 with the State Public Welfare Commission, a body of 3 appointive members, one of them a woman. The Commission had general supervision of the institutions of this character conducted by the State. The commission was created in 1929, and replaced a previous commission of nine members. The State institutions, with their inmate populations of Dec. 1, 1929, were State Hospital for Mental Diseases, 1880, State Infirmary (a home for the old and infirm), 765, State Prison and Providence County Jail, 651, Reformatory for Women, 27, Sockanossett School (Reformatory for boys), 172, Oaklawn School (Reformatory for girls), 45, State Home and School (neglected and dependent children), 1297, Kewster School (feeble-minded), 505. The State Home and School included a children's bureau. The Commission maintained also a mothers' aid department, which gave outside aid to

337 mothers in 1929, and a probation department, which handled during the year, 1879 cases.

**LEGISLATION.** The State Legislature held its regular annual session, convening in January. There were passed a number of measures affecting the political and administrative structure of the State. Primarily in order to carry out the redistricting of the city of Providence so as to comply with the nineteenth amendment of the State Constitution, allowing the city four State Senators, an act was passed creating a commission of seven members charged with an extensive relocation of senatorial district lines within Rhode Island, outside the city as well as within it. The bounds of the State's fiscal year were changed by act to correspond with those of the Federal fiscal year, the same act placed the auditing of the State's accounts in the hands of the State Comptroller, himself an appointee of the Finance Commissioner, and revoked the Finance Commissioner's power under previous statute to expend State funds without immediate legislative authority in the event of the Legislature's failure to pass an annual appropriation bill. The office of State Auditor was abolished. The comptroller, made to take up the duty of audit, was relieved of his concurring post of Insurance Commissioner and a salary of \$4000 was voted for the separate Insurance Commissionership. The small State police force was increased to the strength of 40 members. Retirement of the Chief Justice of the Supreme Court on his full pay of \$11,000 was provided for by statute.

**POLITICAL AND OTHER EVENTS.** The two sections of the State, the original Providence Plantations and Rhode Island proper, were united by the opening on October 24 of the Mount Hope Bridge. The bridge, which cost approximately \$4,000,000, was built by a private company. Unsatisfactory cables had necessitated extensive rebuilding before the structure was put to use. It replaced a ferry said to have operated since 1680. (See BRIDGES.) In Providence was completed a produce terminal and market built by the city, the New Haven system and the dealers in co-operation at a cost of \$1,000,000.

**OFFICERS.** Governor, Norman S. Case, Lieutenant-Governor, James G. Connolly, Secretary of State, Ernest L. Spagnue, Treasurer, George C. Clark, Comptroller, Albert E. Godfrey, Attorney-General, Charles P. Sisson who resigned and was succeeded by Oscar Heltzen.

**JUDICIARY.** Supreme Court, Chief Justice Charles F. Stearns, Associate Justices, Chester W. Barrows, John S. Muddock, Elmer J. Rathbun, John W. Sweeney.

**RHODESIA,** ro-dzh-l-a or -l-a. A British territory in south central Africa, extending northward from the Transvaal to the borders of the Belgian Congo and Tanganyika Territory, and bounded on the east by Portuguese East Africa, Nyasaland, and the Tanganyika Territory, and on the west by the Belgian Congo, Portuguese West Africa, and Bechuanaland. It is divided into Northern Rhodesia and Southern Rhodesia by the Zambezi River, Southern Rhodesia comprises Matabeleland and Mashonaland.

**NORTHERN RHODESIA.** In 1911 this region was formed from the former provinces of Northeast and Northwest Rhodesia. A legislature and the office of governor were created by an Order in

Council on Feb. 20, 1924 Area, 287,950 square miles The permanent European population in December, 1925, was 4624 and the native population, 1,140,642, estimated population in 1928, 1,269,700 of whom 7536 were Europeans In 1929 it was announced that the seat of government would be moved from Livingstone to a more central location in Northern Rhodesia, probably Chitanga The chief crops are corn, cotton, wheat, tobacco, fruits, and rubber, and the minerals include gold, copper, zinc, and lead The total value of all minerals mined in 1927 was £300,337, including copper, £197,231 and lead, £143,127 In 1929 it was established that Northern Rhodesia is one of the great copper belts of the world Imports in 1928 totaled \$11,516,000 and exports, \$4,122,000 The chief exports are live animals, lead, copper, corn, flour, hides and skins, and tobacco The government's financial operations in 1928-29 resulted in a deficit of £11,350 In 1927-28 receipts totaled £475,000 and expenditures £519,000 Expenditures for 1928-30 were estimated at about £547,000 The administration consists of a governor and executive council and a legislative council, partly official and partly elected, the official members having the majority Governor in 1929, Sir J C Maxwell, appointed Aug 31, 1927

**SOUTHERN RHODESIA** The area of Southern Rhodesia is estimated at 149,000 square miles The population at the census of May, 1926, totaled 873,647 (39,174 Europeans and 834,473 natives); estimated in 1928, 1,013,500 Capital, Salisbury

The principal crops are maize, tobacco, groundnuts, legumes, and fodders Fruit cultivation is expanding and the livestock industry is of major importance For the season 1928-29 the yield from 18,300 acres planted to tobacco was estimated at about 7,000,000 pounds, the maize yield from 337,000 acres at 1,970,000 bags, or 55 per cent more than in the preceding year, and the groundnut crops from 11,000 acres at 89,400 bags, or 75 per cent more than in 1927-28 The cotton acreage of 2528 acres was expected to yield 474,000 pounds of cotton seed The value of the total mineral output in 1927 was £4,238,300, including gold valued at £2,458,862 Imports in 1928 amounted to £8,179,000 (\$39,805,000) and exports to £8,509,000 (\$31,678,000)

For the fiscal year ending Mar 31, 1928, revenues totaled £2,165,000 and expenditures £2,761,200 In 1928-29 there was a budget surplus of £50,000 The public debt Mar 31, 1928, was £4,095,000 There were 2467 miles of railway at the end of 1927

Executive power is vested in a governor aided by an executive council, legislative power in an elected legislative assembly Governor and Commander-in-chief in 1928, Sir Cecil H Rodwell, appointed August, 1928, Premier and Secretary for Native Affairs, H U Moffat See SOUTH AFRICA, Union of

**RICCI, RUGGERO** See MUSIC, under Artists

**RICE** The total yield for the crop year 1929-30 of seven rice producing countries reporting to the International Institute of Agriculture, Rome, was estimated at 973,075,000 bushels Both yield and acreage were nearly the same for this year, the preceding season, and the average for the five preceding years The estimated yields of some of the principal producing countries, not including the United States, were reported as follows Japan, 536,622,000 bushels,

Java and Madura, 239,984,000 bushels; and Korea, 124,003,000 bushels India in the crop year 1928-29 produced 2,428,785,000 bushels. The annual production of Brazil is about 22,000,000 bushels

The rice production of the United States in 1929 was estimated by the Department of Agriculture at 40,217,000 bushels compared with 43,240,000 bushels in 1928 and the five-year average of 37,206,000 bushels The area harvested was reduced from 977,000 acres in 1928 to 893,000 acres in 1929, a decrease of nearly 9 per cent The average yield per acre was 45 bushels as against 44.3 bushels in 1928 The indicated total farm value was \$39,346,000 in 1929 and \$38,277,000 in 1928, on the basis of an average farm price of 97.8 cents per bushel on Dec 1, 1929, and 88.5 cents on Dec 1, 1928 The yields of the five States included in the estimates for 1929 were as follows Louisiana, 19,352,000 bushels, Texas, 7,524,000 bushels, Arkansas, 7,084,000 bushels, California, 6,222,000 bushels, and Missouri, 35,000 bushels The production of Missouri was 400,000 bushels in the preceding year This reduction was due mostly to a smaller acreage The average yield per acre in these States ranged from 35 bushels in Missouri to 65.5 bushels in California

In the year ended June 30, 1929, the United States exported 313,404,000 pounds of rice valued at \$11,582,000 an increase of about 70 per cent over the quantity exported in the preceding fiscal year During the same period, 7,000,000 pounds of rice flour, rice meal, and broken rice were shipped abroad, or practically the same quantity shipped the year before Preliminary reports recorded the following imports during the fiscal year 1929, cleaned rice, 25,166,000 pounds, uncleaned rice, 8,000,000 pounds, palau rice, for use in canned goods, 2,329,000 pounds, and rice meal, rice flour, and similar products, 1,239,000 pounds The principal exporting countries are British India, Siam, and French Indo-China and the principal importing countries, China, British Malaya, Japan, Ceylon, Germany, France, United Kingdom, and the Netherlands

**RICE INSTITUTE.** A coeducational institution for higher education in Houston, Texas, opened in 1921 The enrollment in the autumn of 1929 was 1334, and the faculty numbered 92 The plant equipment and productive funds of the institution were estimated at \$14,500,000, and the income from endowment for the fiscal year 1928-29 was in excess of \$600,000 The library contained approximately 75,000 volumes President, Edgar Odell Lovett, Ph D, Sc D, LL D

**RICKETS.** The remarkable success of recent years in the prevention and cure of rickets by the use of irradiated foods, the direct action of natural and artificial sunlight, etc., should not blind us to the fact that failures occur, in so much that a few physicians do not believe that the rickets problem has been entirely solved In the *Munchener medizinische Wochenschrift* for August 20, a number of articles are contributed from the pediatric clinic of Prof. M Pfandner, one of which deals with failures of treatment These not only occur in human rickets but are also seen in the artificial rickets of animals The inference was that under the general designation "rickets," an entire group of bone deformities was comprised which differ among themselves and in which a number of causal factors may be combined We may say of the most available of our remedies—

irradiated ergosterin—that it is a powerful antirachitic, that it can prevent and arrest the disease, but we cannot claim that it is a true specific for all which goes by the name of rickets.

**RIDGWAY, ROBERT** An American ornithologist died Mar 25, 1920, in Olney, Ill. He was born July 2, 1850, in Mt. Carmel, Ill. He was appointed in 1880 curator of the division of birds in the United States National Museum. He was one of the founders, and in 1898-1900 was president, of the American Ornithologists' Union. Mr. Ridgway wrote *A History of North American Birds*, 5 vols (1875), with Spencer P. Baird and Thomas M. Brewer, 1 *Nomenclature of Colors for Naturalists* (1886), *A Manual of North American Birds* (1887, 2d ed, 1896), *The Birds of North and Middle America*, 5 vols (1901-11), *Color Standard and Color Nomenclature* (1912).

**RISLER, EDOUARD** A famous French pianist died in Paris, Aug 22, 1929. He was born at Baden-Baden, Feb 23, 1873. A year after his birth, his parents settled permanently in Paris, where the boy attended the Conservatoire from 1886 to 1892, studying the piano under Diemer and composition under Chabrier, winning several prizes in piano, solfège, and harmony. He then continued his pianistic training under Khindworth, Stavenhagen, and d'Albert, and made a most successful debut in Paris, in 1894. During the summers of 1896 and 1897, he was one of the assistant conductors at Bayreuth. After that, he made extended tours of all European countries, recognized as one of the very greatest of contemporary pianists. His only tour of the United States (1923-24) was a series of triumphs.

**ROADS AND PAVEMENTS.** Expenditures for county highways and city pavements reached an estimated total of between \$2,000,000,000 and \$2,500,000,000 in 1929 and was estimated to run between \$2,500,000,000 and \$3,000,000,000 in 1930. More than half these outlays are expended by States and counties and the remainder by cities.

The mileage of officially opened and accepted streets in incorporated places in the United States is wholly unknown. The highway mileage outside municipalities totaled 2,886,000 in 1921, according to returns made by State highway departments sent to the U. S. Bureau of Public Roads for use as a basis for further Federal aid to State road construction. Later estimates of the Bureau indicate a mileage in excess of 3,000,000. Of this immense total, about 189,000 miles had been designated as Federal-aid roads on June 30, 1929, under the classification, "Main Interstate and Intercounty Highways," and of this, about 79,000 miles had been at least "initially improved" on that date, but due to a reclassification, the Federal-aid mileage was about 78,097, according to the report of the U. S. Bureau of Public Roads for June 30, 1929, in which full details are given.

The total extent of improved roads was divided as follows: 11,668 miles graded and drained earth roads, 7033, sand-clay surfacing, 1616, water-bound macadam, 4845, bituminous macadam, 2194, bituminous concrete, 20,618, Portland-cement concrete, 866, brick, and 277, of bridges of more than 20-foot span with their approaches. About 7000 miles were improved in 1928-29, not counting work under way but not yet completed. Of which, with other con-

nections, brings the total mileage on which Federal-aid money was expended during the year to about 9390 miles. The total cost of the work thus represented was \$195,298,000, of which the Federal government paid \$82,737,000, or 42 per cent, and the States the balance, but it should be understood that not all this outlay was made in one year. The actual disbursement of Federal-aid money in 1928-29 was a little over \$82,000,000, the excess over congressional authorization of expenditures of \$75,000,000 a year having been met from unexpended balances.

A highway construction programme in Alaska has been carried on since 1913 by the Alaskan Road Commission under the immediate direction of representatives of the Corps of Engineers, U. S. Army. Part of this programme fits into a project for an international highway extending from Fairbanks, Alaska, to and through British Columbia to Vancouver, where it will connect with a highway already improved to Seattle. The total length of the route from Fairbanks to Seattle is 2000 miles, of which about 1250 have been improved. In Alaska, 100 miles have been constructed and 200 miles remain.

Mexico. Work on a national highway system was prosecuted under the direction of a national highway commission organized in March, 1925. Construction costs were being met in part from the general national treasury and in part from a gasoline tax. The latter was increased in 1929 from 3 to 4 cents per liter Mexican currency, or  $5\frac{1}{2}$  to 7 $\frac{1}{2}$  cents per gallon, Mexican currency. See MEXICO.

GREAT BRITAIN. Of the 179,095 miles of public highways in Great Britain early in 1929, 153,851 miles were in England and Wales and 25,244 in Scotland. (Report on Administration of Road Fund for year ended Mar 31, 1929, summarized in *The Surveyor*, Dec 6, 1929 (London).) This was an average of a little over 2 miles of highway per square mile and 1 mile for each 250 population. Of the 179,095 miles, about 41,300, or 23 per cent, was described as "classified", 25,500 as main traffic routes (Class I), and 15,800 as feeders (Class II). Since the first classification in 1921, the total mileage has increased by about 2000 and the classified mileage about 4700. The 137,820 miles of unclassified roads is made up of 29,300 in urban and 108,500 in rural areas, the latter including some 40,000 miles of "grass lanes and moorland tracks." Receipts of the national road fund for the year 1928-29 totaled £21,298,300 (over \$100,000,000), of which considerably more than half was contributed toward repair and maintenance work conducted by local authorities, while various sums were similarly distributed to help meet the cost of road improvements, including "metalling" schemes, or the raising of "district" roads to Classes I and II grades. Under the Local Government Act, 1929 (see MUNICIPAL GOVERNMENT), all "district" roads in administrative counties will come under county jurisdiction on Apr 1, 1930. Bridges are included in contributions from the national road fund, 408 schemes for widening, reconstructing, and strengthening bridges being included in the 1928-29 grants. See GREAT BRITAIN.

**BIBLIOGRAPHY.** New American, Russian, and German books on highways and pavements include: Agg, *Construction of Roads and Pavements* (New York); Bennett, *Roadside Development* (New York); Crosby and Goodwin, *Highway Location and Surveying* (Chicago); James,

*Highway Construction, Administration and Finance* (Washington), Krynnie, *Highway Engineering*, in Russian (Moscow), Reiner, *Handbuch der neuen Strassenbauweisen* (Berlin).

**ROBINSON, SIR JOSEPH BENJAMIN** A South African miner and capitalist, died Oct. 30, 1929, in Cape Town, Union of South Africa. He was born at Claddock in the Eastern Province of Cape Colony, South Africa, Aug. 3, 1840. Until 1867 he was engaged in wool buying and farming. In that year he bought 20,000 acres on the Vaal River, finding there diamonds of rare purity. He was active in the life of the settlement, becoming in 1880 mayor of the town of Kimberley. He represented Griqualand West for four years in the Cape Parliament, at which time he secured the passage of the Diamond Trade Act. When gold was discovered on the Witwatersrand in 1886, he was one of the first to go there, buying the Randfontein fields.

**ROCHESTER UNIVERSITY** A nonsectarian institution of higher education for men and women in Rochester, N. Y., founded in 1850. It consists of three schools—the college of arts and sciences, composed of a college for men and a college for women, the Eastman School of Music, and the school of medicine and dentistry. A school of nursing is also maintained in conjunction with the Strong Memorial Hospital, the property of the university. The enrollment for the autumn session of 1929, exclusive of extension division and special music students, totaled 1,578, distributed as follows: Arts and sciences, 1,040, of whom 567 were men and 482 were women, bachelor of music course, 396, medicine and dentistry, 133. For the summer session, 909 were enrolled in the arts college and 363, in the music school. There were 1,644 in the extension division. The faculty had 337 members, distributed as follows: College of arts and sciences, 120, school of music, 74, and school of medicine and dentistry, 143, of whom 69 were on full time. The productive funds as of June 30, 1929, amounted to \$28,486,903, and the total resources, including land, buildings, equipment, and endowment, were approximately \$50,000,000. The main library contained 121,313 volumes, the Sibley musical library, 21,212 volumes, and the school of medicine library, 29,998 volumes. President, Rush Rhees, DD, LL.D.

**ROCHESTER MUSEUM.** See ART MUSEUMS.  
**ROCKEFELLER FOUNDATION.** An institution chartered in 1913 "to promote the well-being of mankind throughout the world." On Jan. 3, 1920, there was incorporated under the laws of the State of New York a new Rockefeller Foundation, formed by the merging of the former Rockefeller Foundation and the Laura Spelman Rockefeller Memorial. The new organization received from the two consolidating corporations all their assets, and it assumed all of their obligations. The plan of work adopted provided for cooperation toward the advancement of knowledge in the fields of public health, the medical sciences, the natural sciences (taking over the foreign programme of the International Education Board), the social sciences (formerly the province of the Laura Spelman Rockefeller Memorial), and the humanities. For the administration of the programme in public health an international health division was created, with a group of seven scientific directors. For each of the other fields of activity a director was ap-

pointed. During the year 1929 approximately \$20,000,000 was expended by the foundation for work in the five fields in which its interests lie.

**INTERNATIONAL HEALTH DIVISION.** The governments of 30 States of the United States and 46 foreign countries were assisted in projects for improving public-health conditions. This and included participation in studies of yellow fever, malaria, and hookworm disease, and in the reduction of yellow fever in Brazil. Demonstrations of malaria and hookworm control and of local health work, and in the development of essential services of State and national health departments.

**THE MEDICAL SCIENCES.** Aid for the advancement of medical education was given to the following institutions: Albany Medical College, Albany, N. Y., the Medical Faculty of the American University of Beirut, Syria, the Faculty of Medicine of the University of Cambridge, England, the Faculty of Medicine of Chulalongkorn University, Bangkok, Siam, the Faculty of Medicine of the University of Peking, Peking, China, the College of Medicine of Keio University, Tokyo, Japan, the Faculty of Medicine of the University of Lyons, France, the Faculty of Medicine of the University of Montreal, Canada, the National School of Medicine and Pharmacy, Port au Prince, Haiti, Peking Union Medical College, China, Faculty of Medicine Sio Paulo, Brazil, Shanghai Union Medical College, China, the Medical School of National Central University, Shanghai, the School of Medicine of Shantung Christian University, Tsinan, China, and the Medical Faculty of the University of Utrecht, the Netherlands.

Aid also was given to schools or university departments of public health to further the teaching of hygiene and public health. Six grants for special research projects were made in accordance with the policy of giving assistance in medical schools to individuals, groups, or departments engaged in research important to the advancement of medical knowledge.

The foundation granted and itself administered 105 fellowships in medicine for graduate students to enable them to study in countries other than their own. Four volumes of *Methods and Problems of Medical Education, Series A to D*, were published. The foundation continued its aid to nursing education, and to many other phases of medical and public-health work.

**THE NATURAL SCIENCES.** In the field of the natural sciences aid was given for the furtherance of research in physics, chemistry, geology, the biological sciences, and physical anthropology. Grants were made to 12 colleges and universities in the Orient to enable them to improve the teaching facilities of their departments of physics, chemistry, and biology. Seventy-nine fellowships for graduate study were supported and administered. Funds were contributed to the Australian National Research Council for the support of fellowships in the biological sciences, and to the National Research Council for the development of its research-aid programme for the support of fellowships in physics, chemistry, mathematics, the biological sciences, agriculture, forestry, and anthropology.

**THE SOCIAL SCIENCES.** The year's programme in the social sciences included aid to universities and other institutions or organizations for research in the fields of economic, political science, international law, sociology, psychology, and anthropology.

**THE HUMANITIES** In the humanities division a grant was made to the Bibliothèque Nationale, Paris, toward the cost of completing the publication of its general catalogue, and in cooperation with the American Bibliographical Society the foundation entered upon a project to aid the Library of the British Museum in the publication of a new edition of its catalogue. Funds were contributed to the American School of Classical Studies in Athens for the support of fellowships in archeology, and aid was given to the American Council of Learned Societies for the provision of fellowships and grants for the furtherance of research in humanistic studies.

At a meeting of the board of trustees of the foundation, held June 13, 1929, Thomas B. Appleget was elected vice president, for work immediately related to the New York office. At a meeting of the board on November 13, Dr. Max Mason was elected president to succeed Dr. George E. Vincent who had reached the specified age of retirement. Dr. Mason was to assume his office on Jan. 1, 1930.

**ROGERS, J. (AMES) HARRIS** An American inventor, died in Hyattsville, Md., Dec. 12, 1929. He was born in Franklin, Tenn., July 13, 1850, and was educated under private tutors and at St. Charles College in London. He lived in Hyattsville, Md., where he carried on electrical researches. His 50 or more patents were for inventions relating to multiplex and rapid-printing telegraphy, the electric light, telephone, and radio telegraphy. He discovered, and in 1893 perfected a method of synchronized telegraphic printing. His most important invention was a device for secret radio communications under ground and under water, used by the United States during the World War.

**ROLLINS COLLEGE** A nonsectarian, co-educational institution of higher learning in Winter Park, Fla., founded in 1885. The enrollment for the fall term of 1929 totaled 339, of whom 57 were seniors, 60 juniors, 70 sophomores, 117 freshmen, and 35 graduate, foreign exchange, and unclassified students. The faculty numbered 64. The productive funds of the college amounted to approximately \$750,000, the income from endowment, to approximately \$10,000, and the income from other sources, to about \$140,000. The library contained 25,000 volumes. President, Hamilton Holt, LL.D., Litt D., LL.D.

**ROMAN CATHOLIC CHURCH** The year was the most eventful in the modern history of the Church, as it marked the treaty of conciliation settling the 60-year-old controversy with the Italian Government. This was signed in the Lateran Palace on February 11 and recognized the Pope as the sovereign of a new state, the City of the Vatican, a territory of 160 acres with 518 subjects. This treaty, signed by Cardinal Gasparri and Premier Mussolini and formally ratified by the Pope and the King on June 1, also regulated the conditions of the Church and of religion in Italy in a concordat. On December 20 the Pope went unexpectedly to the Basilica of St. John Lateran and said mass, where 50 years before he had been ordained priest. It was the first time a Pope had been in the streets of Rome since 1870, although Pius XI had appeared in the Piazza of St. Peter's in a Eucharistic procession on July 25. The King and Queen of Italy paid their first visit to the Pope on December 5.

The first Consistory of the year was held on July 15, when Archbishop Schuster of Milan was created a cardinal. The second Consistory was held on December 10, when six other cardinals, Cerejra, Lavitiano, Minoretto, MacRory, Veidier, and Pacelli, were added to the Sacred College. The Pope issued two encyclicals, one early in the year on Gregorian chants and sacred music and the other on December 10, urging the activity in apostolic work and in the study of the sciences as a practical and most valuable aid to a Christian life. This was also the theme of his discourses on other occasions. He proclaimed an extra jubilee for the year early in January to mark his fiftieth year in the priesthood and at the end extended it to July, 1930. During 1929 over 200 jubilee pilgrimages came from all parts of the world, 11 from the United States.

The Pope spoke at length on December 8 to representatives of mission organizations and warned them of the danger of nationalistic propaganda, which he styled "a real evil and a malefaction in the mission field." On December 15 he presided at the beatification of 136 English martyrs who suffered death between 1594 and 1697, and on December 22, of Father John Ogilvie, a Scotch Jesuit. Other beatifications were of Don Bosco, the Salesian, on June 2, and of Father Claude Columbiere, S. J., on June 16, at which 21 nations were represented, including 150 pilgrims from the United States.

**OTHER SIGNIFICANT EVENTS** Concordats between Prussia and Rumania and the Vatican were ratified July 9. In Mexico announcement was made on June 21 that an agreement had been reached in settlement of the religious question between the Church authorities and President Portes Gil. The Apostolic Delegate of the Pope was Archbishop Leopoldo Ruiz y Flores, and Bishop Pascual Diaz of Toluca was named Archbishop of Mexico City and Primate. Services were resumed in the churches June 27 for the first time in three years.

**THE CARDINALS** The total number of the Sacred College, with the creations of the year, was 63. Of this total, the non-Italians numbered 33 and the Pope's creations, 32. The cardinals created during the year were: the Benedictine Abbot of the Basilica of St. Paul Outside the Walls, and later Archbishop of Milan, Ildefonso Schuster, at the Consistory of July 15 and, at the Consistory of December 16, Archbishops Emmanuel Gonçalves Cerejra, Patriarch of Lisbon, Luigi Lavitiano of Palermo, Carlo Dalmazio Minoretto of Genoa, Jean Veidier of Paris, Joseph MacRory of Armagh, and Mgr. Eugenio Pacelli, Nuncio to Germany. Eight cardinals died during the year, making 34 deaths since Pius XI began his reign. These included Eugenio Tosi, Archbishop of Milan, January 7, Antonio Vico, Bishop of Porto and Santa Rufina, February 25, Amelio Galli, March 26, Evaristo Lucidi, March 31, Francis Aidan Gasquet, Archivist of the Library of the Church, April 5, Antonio Mendes Bello, Patriarch of Lisbon, August 5, Louis Ernest Dubois, Archbishop of Paris, September 23, and Giuseppe Gamba, Archbishop of Turin, December 26.

Cardinals Hayes of New York and Dougherty of Philadelphia were present at the Consistory of December 16 and at the celebration of the Pope's Golden Jubilee. At the close of the year the resignation of Cardinal Gasparri as Secretary of State was announced, with Cardinal Pacelli as his successor.

THE Hierarchy Mgr Francis O'Hern was appointed Bishop of Rochester, N. Y., January 4, in succession to Bishop Thomas F. Hickey, resigned, and named Titular Archbishop of Viminacium, the Rev Robert J. ... was appointed Bishop of Sacramento, Calif., January 9, Mgr Gerald P. O'Hara, Auxiliary Bishop of Philadelphia, May 7, Mgr Joseph H. Albers, Auxiliary Bishop of Cincinnati, December 4, the Rev Aloysius J. Willinger, C.S.S.R., Bishop of Ponce, Porto Rico, May 3. In Canada on May 30, Bishop M. J. O'Brien of Peterborough was appointed coadjutor to Archbishop M. J. Spratt of Kingston and Bishop Thomas O'Donnell of Victoria, coadjutor to Archbishop E. J. McCarthy of Halifax. Archbishop Paschal Robinson, O.S.F., a former resident of New York, was appointed Nuncio to the Irish Free State November 27. The see city of Lead, S. Dak., was transferred to Rapid City. The deaths of the year were: Bishop Owen B. Corrigan of Baltimore, April 8, John Ward of Leavenworth, April 21, Edmund M. Dunne of Peoria, October 17, and Archbishop James J. Keane of Dubuque, August 2.

At the annual meeting of the hierarchy in Washington November 5 and 6, there were 60 prelates present. ... were cabled to the Pope on his ... an offering of \$50,000 was voted to him from donations by all the dioceses of the United States, and he was felicitated on the settlement of the Italian ques-

tion. All departments of the National Catholic Welfare Conference showed development and progress in their reports.

**STATISTICS.** The official lists in the *Annuario Pontificio* for 1929 show the whole Church, numbering 400,000,000 souls, divided into 1555 jurisdictions, administered by 14 patriarchs, 245 archbishops, 908 bishops, 57 abbacies, and 331 apostolic vicariates. The Holy See had 11 embassies and 18 ministers in its diplomatic corps and 24 nuncios, 4 internuncios, 1 chargé d'affaires, and 21 apostolic delegates. In the foreign representation were 11 embassies and 18 ministers. There were 37 monastic orders, 17 mendicant orders, 8 orders of clerics regular, 66 ecclesiastical congregations, and 10 religious institutes. In Rome there were 30 seminaries and ecclesiastical colleges of different nationalities and 23 colleges belonging to religious orders.

In the United States, the *Official Catholic Directory* for 1929 gave the total Catholic population as 20,112,758, a gain of 423,709 over the previous year. The converts reported number 36,376, a gain of 2385. The administration of the Church included 17 archbishops, four of them cardinals, 104 bishops, a gain of five, 25,773 priests, a gain of 580 (7403 are of the religious orders). There were 11,903 churches with resident priests, a gain of 204, and 136 theological seminaries in which 14,686 students were enrolled, a gain of 254.

The Department of Commerce, in March made public its religious census of 1926, showing a total of 18,040 Roman Catholic churches with a membership of 18,605,003. Of these, 11,070 were rural, with 3,797,708 members, and 7800 urban, with 14,809,295 members. New York leads with 1781 churches and 3,115,421 members, Pennsylvania, 1730 churches and 2,124,882 members, Illinois, 1064 churches and 1,352,719 members, Massachusetts, 705 churches and 1,029,424 members. Sunday schools with 1,201,330 pupils and 19,498 teachers were reported by 8239 churches. The value of 16,254 churches reporting was placed at \$837,271,053. The debt figures are incomplete, more than 2000 churches not reporting, 5361 gave a total of \$129,937,504.

There were 20 Roman Catholic chaplains in the U. S. Army, and during the year they said Mass in the military reservations 1923 times with a total attendance of 275,582. There were seven Catholics in the U. S. Senate. The colored Catholics in the United States numbered about 130,000 with 150 local church congregations, 117 of them in urban territory. In 1916 the churches numbered only 83 and the members 51,688.

In England and Wales the Catholic population was 2,156,140, an increase for the year of 12,841. In Australia and New Zealand the total is 1,378,991.

**EDUCATION.** The twenty-sixth annual meeting of the National Catholic Educational Association was held in Toledo June 24-27, and all the reports showed marked progress. There were 237 colleges for boys, an increase of 12, and 734 academies for girls, an increase of five. Since 1920, 39 women's colleges had been established, and the students in all the Catholic colleges totaled close to 100,000. The total of instructors in the institutions of higher learning is 6800, and of these 2990 were of the religious orders and 3810 laymen and laywomen. In the 7063 parish schools there were 2,488,682 pupils, an increase of 53 schools and 206,846 pupils. The normal rate of increase is

State	Number of Churches		Number of Members	
	1926	1916	1926	1916

Oregon	207	244	55,574	49,728
California	717	620	520,808	494,539

2 per cent a year. In 116 colleges, of the students entering 57.2 per cent came from Catholic high schools.

**MISSIONS** A total of \$1,278,257, an increase of \$139,360, was contributed in the United States to the mission funds of the Congregation for the Propagation of the Faith during the year, or virtually half the contribution of the entire world. Between March, 1922, and March, 1929, there were 78 new fields of action created, making 435 in all, 10 of these are under native clergy—seven in China, one in Japan, and two in India.

There were 94 missions in China, and on March 4 the Rev. Evariste Tehang was appointed Bishop of the new Vicariate of Siewantse and the Rev. John Tehang, Vicar Apostolic of the new Prefecture of Chuosuen. On November 25 the Rev. Onang Uon Cien was appointed first Vicar Apostolic of Shunking and the Rev. Francis Wang, first Vicar Apostolic of Wanhien. The Rev. Edward Sheehan was named Vicar Apostolic of Yukiang. January 29 and the Rev. F. X. Ochs, a former U. S. Army chaplain, Prefect Apostolic of Kwetich, Honan Province.

**ASSEMBLAGES** To celebrate the centenary of Catholic Emancipation, 300,000 persons attended the Mass in Phoenix Park, Dublin, June 23. The service was broadcast all over Ireland. All the hierarchy were present and with 1000 priests and the Irish Free State officials formed an imposing Eucharistic procession after the ceremony. The largest gathering of Catholics ever seen in modern England held a similar celebration in Liverpool September 8 at a Mass in Thringwall Park. The National Catholic Congress was held in London September 13-17 with immense success.

Notable conventions of the year were: The Catholic Press Association in Cincinnati, May 16-18, Catholic Students' Mission Crusade, Washington, June 20-23, Catholic Central Verein, Salem, Ore., July 13-18, Knights of Columbus, Milwaukee, August 19-22. The date for the next (thirtieth) International Eucharistic Congress was fixed to open in Carthage, Africa, May 7 and to close May 11, 1930. The following Congress was to be held in Ireland. There were 100,000 attendants at the Central American Eucharistic Congress which opened in Leon, Nicaragua, December 31.

**ROSEBERRY, ARCHIBALD PHILIP PRIMROSE, FIRST EARL OF.** An English statesman died May 21, 1929, at his country home in Epsom, Surrey. He was born May 7, 1847, in London, and in 1866 entered Christ Church College, Oxford University. He left Oxford in 1868 without taking a degree, and in that same year, at the death of his grandfather, succeeded to the Earldom of Rosebery. Lord Rosebery's first office was that of Under-Secretary for the Home Office, held during 1881-82. For short periods in 1885, he was Lord of the Privy Seal and Chief Commissioner of Works. In 1886 and again in 1892-94, during the ministries of Gladstone, he was Secretary of Foreign Affairs, where as a Liberal Imperialist, he was an advocate of the policy of Imperial Federation. When the London County Council was established in 1889, he became its first chairman, serving in 1889-90, and for a few months in 1892.

On the retirement of Mr. Gladstone as Premier in 1894, Lord Rosebery succeeded him, remaining in office until 1895. The failure of his premiership was due both to the opposition of the Radical party and to divisions within the Liberal party itself. For three years longer, Lord Rosebery remained in name leader of the Liberal party, but, when even Gladstone showed disapproval of his views, he withdrew from political life. His writings, chiefly historical, include *Life of William Pitt* (1891), *Appreciations and Addresses* (1899), *St. Robert Peel* (1899), *Napoleon: The Last Phase* (1900), *Oliver Cromwell* (1900), *Lord Randolph Churchill* (1906), *Chatham: His Early Life and Connections* (1910), *Miscellaneous Literary and Historical* (1921).

**ROSENWALD FUND.** See EDUCATION IN THE UNITED STATES, UNIVERSITIES AND COLLEGES.

**ROSSITER, WILLIAM SIDNEY.** An American printer, census official, and statistician, died in Concord, N. H., Jan. 23, 1929. Born in Westfield, Mass., Sept. 9, 1861, he was graduated from Amherst in 1884. After being in the business office of the *New York Tribune*, he went to the *New York Press* in 1888, where he remained for a year. He was then made treasurer of the *New York Printing Company*. Mr. Rossiter was selected as the printer and publishing expert to aid in the printing of the 1900 United States Census, and in 1904 he was appointed chief clerk of the department. While he was still holding that position, in 1908, President Roosevelt commissioned him to investigate the government printing office. Elected vice president of the Rumford Press, a noted magazine-printing organization in 1909, Mr. Rossiter moved to Concord, N. H., and in 1916 he became president of the company, retaining that position until his death.

**ROTARY CLUBS.** Organizations established for the purposes of developing the highest ideal of unselfish service, of making practical application of that ideal to the business and professional life of the individual members, to organizations of which they may be members, and to the communities and nations in which they may live, and of promoting international peace and good will through a fellowship of business and professional men of all nations united in the ideal of service. Membership in the clubs is limited to one representative of each business, profession, or institution in a community.

The 1929 convention of Rotary International was held May 27 to 31 in Dallas, Texas, with an attendance of 9526 delegates, representing Rotary clubs in 30 countries. The convention acknowledged the recognition indicated by President Doumergue in accepting the honorary district governorship of the Rotary clubs of France. Previous conventions had similarly honored the action of Albert, King of the Belgians and Victor Emmanuel, King of Italy. To further the development of international friendship and goodwill the convention voted to hold the annual convention outside the United States at least once every four years. The 1930 convention will be held in Chicago, the home of the first Rotary Club, in honor of the 25th anniversary of this club. The 1931 convention will be held in Vienna, Austria.

On Nov. 8, 1929, Rotary International consisted of 3231 clubs with an approximate membership of 150,000 in 61 countries. There were 2370 clubs in the United States, 102 in Canada, 324 in Great Britain and Ireland, and 435 in Europe and in various other parts of the world.

Officers for 1929-30 were: President, M Eugene Newson, Durham, N C; first vice president, Dr Otto Böhler, Vienna, Austria, second vice president, Dr Edouard Willems, Brussels, Belgium, third vice president, Charles W. Ackley, Vineland, N. J.; directors: Vicconde de Casa Aguiar, Madrid, Spain; David Clark, Charlotte, N C; Clyde L. Hulsizer, Des Moines, Iowa; D W Oherm, Oklahoma City, Okla.; Sydney W Pascall, London, England; Roy Ronald, Mitchell, S D.; I B Sutton, Tampico, Mexico; D M Wright, Stratford, Ont., Canada, secretary, Chesley R Perry, Chicago, treasurer, Rufus F Chapin, Chicago Headquarters of Rotary International are at 211 West Wacker Drive, Chicago, with a branch office at 2 Pohnkustasse, Zurich, Switzerland

# **ROMANIA.** See RUMANIA

**BOWING.** The accomplishments of the Columbia University crews stood out in the list of 1929 rowing achievements. The Blue and White won the intercollegiate regatta at Poughkeepsie in June in a great victory in the toughest water the event has ever known. The Hudson was so turbulent that four of the crews—California, Olympic champion and 1928 Poughkeepsie winner, Cornell, Syracuse, and Massachusetts Institute of Technology—were swamped before the finish line was reached. Columbia beat out Washington, with Pennsylvania third, Navy fourth, and Wisconsin fifth. Cornell triumphed in the Junior Varsity race and the Syracuse freshman eight won the first-year event.

Earlier in the year Columbia made a clean sweep of the Housatonic, winning the Blackwell Cup from Yale and Pennsylvania, as the Freshman, Junior Varsity, and 150-pound crews also scored impressive victories. The four New York eights also swept Carnegie Lake at Princeton in search of the Childs Cup. Princeton was second with Pennsylvania third. The Yale eight led Harvard home by more than six lengths in the regatta at New London in June. Edward Brown, coach of Harvard, resigned in September, and Charles Whiteside of Syracuse was added to the Crimson coaching staff.

One of the most noteworthy events of the year was the victory of the Brown and Nichols School of Boston crew in the Henley in England in July. The Columbia University 150-pound eight also scored in foreign waters, winning the Marlow Cup, only to be defeated later in the Henley by the Trinity College crew. The Boston schoolboys led the Trinity eight to the finish in the Henley final. The Diamond Sculls at Henley was won by L. H. F. Gunther of Holland, who defeated the holder of the trophy, Joe Wright, Jr., of Canada.

Kenneth Myers, the Philadelphia sculler, won the national singles event from Wright in the annual regatta of the National Association of Amateur Oarsmen, on the Connecticut River at Springfield in August. The Penn Athletic Club crew won the national eight-oared shell crown, defeating the Springfield Rowing Association crew in the final.

Cambridge won the annual eight-oared race with Oxford on the Thames in March.

**RUBBER.** During the year the world's production of rubber was estimated at 858,500 long tons, or an increase over the 1928 production of 658,000 tons. The distribution of production is shown in the accompanying table, prepared by the Rubber Division of the U S Bureau of Foreign and Domestic Commerce.

## **WORLD RUBBER PRODUCTION**

	1928 Long tons	1929* Long tons
British Malaya	290,652	445,000
Netherland East Indies	225,983	260,000
Ceylon	57,287	80,000
India and Burma	10,790	12,000
Sarawak (Malayan imports from)	10,087	11,000
British North Borneo	6,698	7,000
Siam (Malayan imports from)	4,817	5,000
Indo China	9,616	9,000
Brunei (Malayan imports from)	484	500
Philippine Islands	709	800
Papua, Samoa, and Fiji	482	500
Amazon Valley	21,129	21,000
Other America, except Guayule	1,490	900
Guayule (United States imports of)	3,076	1,500
Africa	6,124	5,000
Total	658,000	858,000

\* Estimated

While there was increased consumption during the year, 1929, nevertheless the production, particularly in Malaya and the native areas, so greatly exceeded expectations that the year was considered disappointing. Prices receded so that at the close of the year the rubber market was quiet and many producers believed them to be near the cost of production. Conditions of production were such that toward the end of the year Dutch growers proposed controlling the rubber producing industry through a modified form of restriction, while some British leaders suggested coordinated selling, though neither plan appealed particularly in view of the lack of success which previously had attended the Stevenson plan of crop restriction.

Closely related with the production of rubber is the consumption, which the U S Bureau of Foreign and Domestic Commerce estimated for 1929 at 785,000 long tons, as compared with 680,700 tons in 1928. This is given in the accompanying table.

## **WORLD RUBBER CONSUMPTION**

	1928 Long tons	1929* Long tons
United States, consumption	437,000	475,000
United Kingdom, deliveries to man- ufacturers	48,500	65,000
Germany, net imports	37,800	49,000
France, net imports	36,500	54,000
Canada, net imports	30,400	35,000
Japan, net imports	25,600	30,000
Italy, net imports	12,400	17,000
Russia, net imports	15,100	11,000
Australia, net imports	8,400	15,000
Belgium, net imports	8,000	9,000
Other countries	21,000	25,000
Total	680,700	785,000

\* Estimated

The total consumption of crude rubber and reclaimed rubber in the United States during 1929, as determined by the Rubber Division of the Department of Commerce with the cooperation of manufacturers who submitted reports, compared as follows with preceding years:

## **UNITED STATES RUBBER CONSUMPTION**

	Crude Rubber Long tons	Reclaimed Rubber Long tons	Ratio of Reclaimed to Crude Per cent
1925	388,000	137,000	35.3
1926	366,000	164,500	45.0
1927	373,000	189,500	50.8
1928	437,000	223,000	51.0
1929	467,400	212,700	45.5

The accompanying figures indicate an increased use of crude rubber, though a decline in reclaimed rubber. The percentage use of reclaimed rubber declined 5 1/2 per cent from 1928 to 1929 and amounted to about the ratio for 1926. The Rubber Division states that in arriving at the 1929 consumption figures for crude rubber and reclaimed rubber certain estimates, in addition to the actually reported consumption, were necessary. The consumption actually reported was 460,321 tons of crude rubber and 206,722 tons of reclaimed rubber.

According to the Rubber Manufacturers Association the imports of crude rubber of all grades into the United States during 1929 totaled 561,454 long tons, being distributed as follows: Plantations, 548,987 tons. Paras, 10,405 tons. African, 445 tons. Centrais, 343 tons. Guayule, 1251 tons. Mancoha and Matto Grosso, 13 tons. This production for the year compared with 446,421 tons in 1928.

In 1929, according to the statistics of the Rubber Manufacturers Association, the total sales value of manufactured rubber products shipments, representing 92 per cent of the industry, aggregated \$1,055,165,000 as compared with \$1,099,790,000 in 1928 and \$1,206,022,000 in 1926, the year of maximum production. The leading rubber products are tires and tire sundries, and these in 1929 had a total value of \$703,027,000, as against \$771,066,000 in 1928 and a maximum of \$806,795,000 in 1926.

In New York the market for spot rubber, ribbed smoked sheets, opened in January, 1929, at 18 cents and closed at the end of the month at 22 1/2 cents, advancing through February and closing at 26 1/2 cents, a high point for the year. From this point there was a decline, with minor advances during the year, with a closing price on July 31 of 21 1/4 cents and on August 30 of 19 1/2 cents. Prices reported for October were about 20 cents until the end of the month when the closing price was 18 1/2 cents. November showed a further decline, with 16 1/2 cents quoted on November 30, while in December the record low price of the year, 15 1/2 cents, was reached, recovering, however, to 16 1/4 cents on December 31. The total transactions on the New York Rubber Exchange during 1929 involved 196,486 contracts representing 491,215 tons, as against a total of 176,369 contracts for 418,422 1/2 tons in 1928.

The total value of rubber and manufactures exported in 1929 was \$76,963,395, as compared with \$69,544,611 in 1928.

Imports of rubber and manufactures in 1929 were valued at \$247,420,893 as compared with \$253,020,242 in 1928. These included in 1929, 1,262,938,846 pounds of crude rubber and milk of rubber valued at \$240,906,780, and manufactures of rubber valued at \$23,519,837.

**RUBBER, SYNTHETIC** See CHEMISTRY, INDUSTRIAL.

**RUBIO, ORTIZ** See MEXICO, under *History*.

**RUINS** See ARCHAEOLOGY.

**RUMANIA.** A constitutional monarchy forming the largest and northernmost of the Balkan States, bounded on the south by the Danube River and Bulgaria, on the east by Russia and the Black Sea; on the north by Poland, Czechoslovakia, and Hungary and on the west by Yugoslavia. Capital, Bucharest, reigning sovereign in 1929, Mihai (Michael) I.

Rumania is divided administratively into the

two old principalities of Wallachia and Moldavia (united in 1861), the Dobruja; Bessarabia, ceded in March, 1918; Bukovina, ceded in November, 1918, and Transylvania, ceded in December, 1918. Area before the World War, including territory taken from Bulgaria by the Treaty of Bucharest, Aug. 7, 1913, 113,490 square miles, population, estimated in 1915, 7,904,104. Area after the War, 122,282 square miles, population, 17,393,149. The estimated population in 1928 was 17,900,000. The population of the chief cities in 1927 was Bucharest, 875,000, Chisinau (Kishinev), 175,000, Cernowitz, 175,000, Galati, 130,000; Ploesti, 115,000; Timisoara, 110,000, Jassy, 100,000, and Klausenburg (Cluj), 100,000, and Oradea Mare, 90,000.

Production. Agriculture is the main occupation of the great bulk of the Rumanian population.

In 1928 an unusually poor crop of corn, the principal food of the people and also the chief grain export crop, resulted in unsatisfactory agricultural conditions, although the aggregate yield of wheat, rye, barley, and oats was 20 per cent larger than the average for the five years from 1921 through 1927. The total value of farm crops in 1928 was \$409,220,000, as compared with \$410,019,000 in 1927. Lumbering and mining are other important industries. There are about 16,918,964 acres of forests in the country. The value of mineral production in 1927 was \$64,098,000, including petroleum, \$36,884,000, coal and lignite, \$16,537,000, salt, \$4,281,000, natural gas, \$1,462,000, and gold, \$1,357,000. Production of petroleum in 1929 was estimated at 4,860,000 tons as compared with 4,192,882 in 1928. Iron ore, silver, copper, and antimony are other minerals produced. The output of beer in 1927 totaled 24,528,000 gallons. Manufacturing is confined largely to the metallurgical industry, which produced 63,498,000 tons of pig iron in 1927.

COMMERCE. A \$60,000,000 decrease in cereal exports in 1928 resulted in a 28 per cent drop in the value of the total exports, which amounted to \$165,096,000 as compared with \$227,801,000 in 1927. Imports decreased by only 2 per cent, the value for 1928 being \$197,146,000, as against \$201,975,000 in the preceding year. The adverse balance of trade was \$32,000,000 as compared with a favorable balance of \$25,800,000 in 1927. The adverse balance in foreign trade continued in 1929, according to preliminary reports, due to the decline in cereal shipments resulting from the poor corn crop of 1928. Imports totaled 29,896,504,000 lei (about \$179,379,024) and exports 28,914,934,000 lei (about \$173,489,604), leaving an excess of imports of \$3,890,000. As compared with 1928, the imports declined 10 per cent and the exports increased 7 1/4 per cent.

FINANCE. There was a deficit of \$15,200,000 as a result of financial operations in 1928, the total revenues being \$202,500,000 and the expenditures \$217,700,000. The budget estimates for the year balanced at \$235,086,000, as compared with the budget estimate of \$209,226,000 in 1927. The budget for 1929 was estimated to balance at 37,700,000,000 lei (about \$226,200,000), the preliminary reports showed a 6 per cent increase in revenue collections as compared with 1928. The 1930 budget provided for the payment of all the old state debts by the end of that year and for the reduction of expenditures by the dismissal of some 5500 state officials. The total public debt in 1929 was reported to be about \$716,300,000, of

which \$65,661,000 was due the United States government. An additional \$101,000,000 loan was contracted in February, 1929, for use in stabilizing the currency and for the rehabilitation of the state railroads and other economic reconstruction purposes. The unit of currency is the leu (plural, lei), stabilized at \$0.00598 in February, 1929.

**COMMUNICATIONS** The railways of Rumania, as well as the telegraph and telephone systems, are state owned. In 1928 the 7102 miles of railways in operation carried 39,359,000 passengers and 17,035,000 metric tons of freight. Receipts totaling 11,006,000 lei (\$67,501,000).

**GOVERNMENT** Under the constitution of Mar. 28, 1923, which nationalized all forests and subsoil, executive power is vested in the King and a council of ministers, the King having a suspensive veto over the laws passed by Parliament, and legislative power is vested in the Senate of 170 members and the Chamber of 347 members. Michael I, born Oct. 25, 1921, was proclaimed King on July 21, 1927, after the death of his grandfather, Ferdinand I. (See YEAR BOOK for 1927.) The King, being a minor, ruled through a Regency Council composed of his uncle Prince Nicholas, the Patriarch Mgr. Miron I. Cristea of the Orthodox Church, and George Buzdugan, former president of the Court of Appeal. The Maniu Cabinet representing the National Peasants' party, appointed Nov. 11, 1928, included Prime Minister, Dr. Julius Maniu, Foreign Affairs, George Mironescu, Interior, Dr. Alexander Vayda-Voevod, Agriculture, M. Tim Mihailache, Education, Dr. Constantin I. Brucila, Finance, Dr. Mihai Popovici.

#### HISTORY

The history of Rumania during 1929 was marked by noteworthy internal progress and increasing stability under the enlightened leadership of Premier Maniu. Other important developments were the repeated attempts of Queen Marie to regain her former political influence and the important steps taken toward a settlement of outstanding foreign problems.

**INTERNAL REFORMS** The programme of converting Rumania into a democracy on Western lines announced by the Maniu Cabinet soon after its accession to power, was pushed with vigor and a remarkable degree of success. To achieve this end the government sought to decentralize the administration of the country, reform the police and gendarmerie system, and reconstruct the country economically, partially by encouraging foreign investments. Liberal treatment of the Hungarian and other minorities and the cultivation of friendly relations abroad were other items in Premier Maniu's programme. The cabinet's plan for administrative reform proposed to divide the country into six provinces, create a larger type of rural commune, and give scope to local elective bodies. The provinces would exercise much of the authority hitherto concentrated in the Ministry of the Interior.

The personnel of the gendarmerie was reduced by more than 10,000 and the system of attaching a gendarme to each village was revised to promote better discipline and more efficient patrolling. Of outstanding importance were the laws adopted by Parliament governing mining and the administration of state enterprises, which permitted foreign interests to secure leases on the same terms as those obtaining for Rumanian citizens.

While these reforms were highly popular among the masses of peasants and townspeople, they were equally objectionable to the adherents of the former Premier and virtual dictator of Rumania, Vintila Bratianu. The latter bitterly attacked the government on the ground that it was allowing foreign capital to gain control of the petroleum industry. A military conspiracy to overthrow the cabinet was discovered by the government early in July and 14 leaders arrested, while for a time a stringent censorship of the press was imposed. The 14 offenders were convicted of high treason a month later, but extremely light sentences were imposed.

**REGENCY COUNCIL DISPUTE** The Dowager Queen Marie's aspirations for political power appeared nearer realization following the death on October 7 of George Buzdugan, one of the three members forming the Regency Council. Her candidacy for election to the vacant post was supported by high court officials and by members of former Premier Bratianu's Liberal party, but owing to the firm opposition of Premier Maniu her name was not presented before Parliament. Constantin Saratzanu, counselor in the Rumanian High Court of Cassation, was elected as the new member at a special session of Parliament on October 9, receiving 455 votes. Former Crown Prince Carol received nine votes and General Presan, the candidate of the military and a section of the Liberals received 22. Shortly thereafter the Queen in an interview published in the newspaper *Universul* sharply criticized Premier Maniu and the policies of his government. The furor aroused was stilled when on October 17 the Court Chamberlain denied the authenticity of the interview on behalf of the Queen. In December the newspaper *Cugetarul* reported that Prince Nicholas, uncle of King Michael and son of Queen Marie, had decided to resign from the Regency Council to allow his mother to succeed him.

**FOREIGN RELATIONS** The progress which had been made earlier in the year toward a settlement of the Optants disputes with Hungary and Bulgaria received a setback late in November when the Rumanian government ordered the immediate liquidation of estates in Rumania owned by Hungarian and Bulgarian nationals. The order, which was apparently in violation of the Treaty of Trianon, was regarded as a maneuver to attain a strategic position for Rumania at the Reparations Conference scheduled for the following January. Both Bulgaria and Hungary had consistently refused Rumania's request that the indemnification of Hungarian and Bulgarian optants for properties confiscated by Rumania should be set off against reparation payments due Rumania by the other two powers.

In other directions more progress was made. The long-standing dispute with Soviet Russia over Bessarabia was at least temporarily resolved by the signing during the year of the Litvinov Protocol. Relations with Yugoslavia improved as a result of an agreement reached on minor differences, and in May a concordat with the Vatican, giving the Roman Catholic Church official status in Rumania, was ratified by both branches of the Rumanian Parliament. See HUNGARY and RUSSIA, under *History* for details of Optants question and Litvinov Protocol, respectively. See JEWS.

**RUMANIAN LITERATURE.** See *LITERATURE*, *MODERN*.  
**RUM BOW, RUM RUNNING, ETC.** See *PROHIBITION*.

**RURAL SOCIOLOGY.** See AGRICULTURAL EXPERIMENT STATIONS

**RUSSELL SAGE FOUNDATION.** An institution established by Mrs Russell Sage as a memorial to her husband The initial endowment was \$10,000,000, to which \$5,000,000 was added by her will It was incorporated by the Legislature of the State of New York in April, 1907, "for the improvement of social and living conditions in the United States of America" The members of the staff of the foundation study social conditions and methods of social work, interpret the findings, make the information available by publications, conferences, and other means of public education, and in various ways stimulate action for social betterment The departments and their directors in 1929 were as follows Charity organization, Joanna C Coleoid, industrial studies, Mary van Kleeck, library, Bertha M Hulseman, recreation, Lee F. Haumer, remedial loans, Leon Henderson, statistics, Ralph G Hurlin, surveys and exhibits, Shelby M Harrison A consultation service on problems relating to delinquency and penology was conducted by Hastings H Hart, and the *Year Book of Social Work* was prepared by Fred S Hall as editor. Although the foundation makes a few grants to other agencies with kindred purposes, it carries out its programme chiefly through its own departments

**CHARITY ORGANIZATION** The charity organization department studies and publishes in the field of social case work and family welfare The results of its most recent studies were published in two volumes, one entitled *Marriage and the State*, by Mary E Richmond and Fred S. Hall and the other entitled *Marriage Laws and Decisions in the United States*, by Geoffrey May

**INDUSTRIAL STUDIES** The department of industrial studies is engaged in investigations of human relations and conditions of employment in industry Its study of employees' participation in a large retail store (William I. & Co, Boston) was published in 1929, and its study of conditions arising under the agreement between operators and miners in the bituminous coal industry in Illinois was nearing completion

**LIBRARY** The library of the Russell Sage Foundation contained, in 1929, 29,008 bound volumes and 100,841 pamphlets and reports and subscribed to nearly 300 periodicals dealing with social problems and kindred subjects

**RECREATION** The department of recreation assists in the social organization of leisure time and in bringing about adequate provisions for all forms of wholesome recreation It encourages the best methods of promotion, organization, and administration of recreation facilities

**REMEDIAL LOANS** The object of the department of remedial loans is to protect small borrowers from extortion, to urge the passage and enforcement of adequate laws for the regulation of the small-loan business, and to encourage the formation of credit unions The department assisted in the preparation of briefs in cases where, during 1929, either the uniform law or some portion of it was held to be valid by the Supreme Courts of Virginia, Louisiana, Kansas, and Nebraska

**STATISTICS** The department of statistics makes statistical investigations relating to social condition and advises members of the staff of the foundation and others engaged in social work concerning sources of statistical information, the planning of inquiries, and methods of collect-

ing, analyzing, and presenting statistical data. During 1929 cooperative studies were carried on with groups of agencies in several fields of social work, directed toward the production of comparable statistics of their current operations, these statistics being published and distributed each month

**SURVEYS AND EXHIBITS** The department of surveys and exhibits studies and occasionally engages in community projects involving the collection, interpretation, and educational use of facts, advises with those facing practical problems in these fields, and spreads, chiefly through its publications, the information and experience thus gained

**DELINQUENCY AND PENOLOGY** As consultant in delinquency and penology, Dr Hastings H Hart responds to requests for advice and service His chief efforts have been directed to securing more decent, humane, and intelligent treatment for Federal convicts in Federal and local prisons

**PUBLICATIONS** The foundation publishes in book and pamphlet form the results of studies made by its staff During 1929 it published, in addition to *Marriage and the State*, *Marriage Laws and Decisions in the United States*, and *Training Schools for Delinquent Girls*, the following pamphlets *Mothers' Assistance, Economic and Social Aspects of Epilepsy, Indeterminate Sentence, Influence of Machinery on the Worker's Mind; Newspapers and Crimes, Older Workers in Industry, Model Jails of the Olden Time, Directory of Training Courses for Recreational Leaders, New York State Marriage Laws, Southern Mountain Schools, and Some Results of Two Years Study of Family Case Work Statistics* The following volumes were issued as part of the studies for the Regional Plan of New York and Environs *Population, Land Values, and Government; Physical Conditions and Public Services, and Neighborhood and Community Planning* Of two volumes containing details of the plan with recommendations, one entitled *The Graphic Regional Plan* was published

The trustees of the foundation in 1929 were Robert W. De Forest, president, Lawson Pimley, vice president and treasurer, Frederic A. Delano, John H. Pimley, Mrs. Frederic S. Lee, Dwight W. Morrow, Mrs. Evelyn J. Shepard, Harold T. White, and John M. Glenn, who was secretary and general director of the foundation Shelby M. Harrison was vice general director Headquarters are at 130 East Twenty-second Street, New York City

**RUSSIA** A republic comprising the greater part of the former Russian Empire, officially entitled the Union of Soviet Socialist Republics Capital, Moscow

**AREA AND POPULATION** According to the Soviet Union Information Bureau, which supplied much of the material used in this article, the area of the Union of Soviet Socialist Republics is 8,144,228 square miles The population as of Jan. 1, 1929, was estimated by the Central Statistical Board at 153,800,000 The population, according to the census of 1926-27 was 147,013,600, including 71,024,300 males and 75,989,300 females In 1914 the population of the same territory was 138,200,000 On May 1, 1929, the figure for unemployment was 1,428,000

The Union of Soviet Socialist Republics is composed of seven constituent republics with their respective populations as follows Russian Socialist Federated Soviet Republic, 100,858,000, White

Russian Soviet Socialist Republic, 4,983,900, Transcaucasian Federation, 5,850,700, Turkoman Soviet Socialist Republic, 1,030,500, Ukrainian Soviet Socialist Republic, 20,020,300, Uzbek Soviet Socialist Republic, 4,447,600, Tadzhik Soviet Socialist Republic, 822,600. The Tadzhik Republic (see TADZHIKISTAN) was established in October, 1929, out of territory formerly included in the Uzbekistan Soviet Socialist Republic. The Russian Soviet Federated Soviet Republic contains 76 per cent of the population and 94 per cent of the area of the Union. It contains eleven autonomous republics, twelve autonomous areas, with further subdivisions into provinces, counties, districts, and townships. The other constituent republics embrace similar subdivisions of autonomous republics and areas, along racial or national lines.

Population of the principal cities at the census of 1926-27: Moscow, 2,025,947, Leningrad, 1,614,008, Kiev, 513,789, Baku, 452,808, Odessa, 420,888, Kharkov, 417,180, Rostov-on-Don, 308,284, Tashkent, 323,613, and Tiflis, 292,973.

Education. Public education in the Soviet Union is a charge against the seven constituent republics and against the localities concerned. Local appropriations are in the aggregate several times those of the republican governments. Total appropriations for education were about \$500,000,000 in 1928-29, as compared with \$425,330,000 in 1927-28 and \$317,200,000 in 1926-27. In the autumn of 1928, the Central Statistical Board reported that 11,372,507 children were in primary and secondary schools (excluding kindergarten), 46 per cent more than before the World War. There were 118,184 schools, as compared with 106,400 in 1913. The teaching staff numbered 337,435. In the cities, 98.4 per cent of the children of school age were in school, and in the villages 66.4 per cent.

There were 137 universities in 1927-28 with an enrollment of 143,100 students, as compared with 168,000 students the previous year. The workers' faculties (higher training institutes for workers) numbered 105 in 1927-28, with 54,700 students, as compared with 45,700 students the previous year. Upward of 500,000 pupils were in trade schools of various grades. Schools for adult illiterates numbered nearly 50,000, with 1,500,000 pupils. The campaign to abolish adult illiteracy is conducted largely under voluntary auspices, particularly by the labor organizations. Among the general population (above seven years) illiteracy decreased by one-third in the six years preceding the census of 1926-27, which revealed that 65.4 per cent of the males were literate and 36.7 per cent of the females. In the last pre-war census (1897) the figures were, respectively, 37.9 and 12.5 per cent.

NATURAL RESOURCES. The natural resources of Russia have never been adequately surveyed. During recent years an inventory of these resources was in progress under the auspices of the Soviet Academy of Sciences and allied scientific bodies. Undeveloped water-power resources were estimated at 62,380,000 horse power, of which nearly two-thirds are in Asiatic territory. Coal reserves were placed at 474,673,000,000 tons, oil reserves at 2,884,000,000 tons, peat, 265,000,000,000 tons, iron, 2,782,000,000 tons, exclusive of the recently surveyed area in the Kursk district, where deposits were estimated at from 20,000,000,000 to 30,000,000,000 tons. Copper reserves in the Urals are estimated at 85,000,000 tons. Reserves of

bauxite are 8,000,000 tons. Deposits of sulphur aggregating several million tons were recently discovered in the Kara-Kum Desert in Central Asia, supplementing the former reserves of 500,000 tons in the Keich Peninsula. Potash deposits estimated at over 1,500,000,000 tons were discovered in the West Ural region in 1927. Large fields of gold and platinum are situated in Siberia. Other minerals include silver and lead ores, pyrites, graphite, phosphate rock, chromite ores, salt, asphalt, asbestos, mica, zinc, uraninite. The forest area covers upward of two billion acres. Resources of fish and furs are enormous.

Production, etc. Land and natural resources are held in trust by the government for the general population, and may not be acquired by private title. Every citizen is entitled to secure land for cultivation, the form of tenure being that of perpetual leasehold. Natural resources are exploited by State trusts, by mixed companies, under concession, in which the State has a participating interest, or by private companies under concession.

The adoption by the Soviet Congress in May, 1929, of an ambitious five-year plan for economic development was considered the most important constructive step since the revolution. The plan had been in tentative operation since Oct. 1, 1928, the beginning of the fiscal year 1928-29 and prior to final adoption was subjected to several revisions upward. The plan, as adopted, provided for an increase of 133 per cent in industrial production during the period and an increase of 55 per cent in agriculture. It envisaged total new investments of \$33,300,000,000 during the period, including \$8,500,000,000 for industry and \$12,000,000,000 for agriculture, with large sums for transport electrification, and housing. Imports for the period were set at \$3,200,000,000, mostly machinery and raw materials and exports about \$400,000,000 higher. Under the plan, production of key products in industry were expected to increase between 1927-28 and 1932-33 as follows (in metric tons): Coal, 35,400,000 in 1927-28 and 75,000,000 in 1932-33, oil, 11,600,000 and 21,700,000, iron ore, 5,900,000 and 19,000,000, pig iron, 3,300,000 and 10,000,000. Production of electrical energy was scheduled to expand from 5,050,000,000 kw-h in 1927-28 to 22,000,000,000 kw-h in 1932-33, railway mileage from 77,000 to 90,000 kilometers. In agriculture, the plans involved a great expansion of highly mechanized State grain farms, some of over 100,000 acres, and of collective farms, so that at the end of the period, 20 per cent of the grain crops would be produced in the "socialized sector." This area will include 21,000,000 hectares in collective farms and 5,000,000 hectares in State farms.

At the close of the fiscal year 1928-29 it was announced that the plan scheduled for the year had been exceeded. Industrial production, as compared with the previous year, had increased 24 per cent, as against 21.5 per cent in the plan. Collective and state farms, with a sown area of 5,080,000 hectares, were well above the programme, and as compared with the individual peasant farms, they produced appreciably more grain per acre at less cost. A revised programme for 1929-30 called for an increase in the output of industry of 31.5 per cent, an expansion of the collective farms to 15,200,000 hectares and of the state farms to 3,280,000 hectares.

In October, 1929, the Central Statistical Board estimated a total grain crop of 76,250,000 metric

tons (preliminary figures) from 95,700,000 hectares, compared with 73,580,000 metric tons from 92,300,000 hectares in 1928. The pre-war sowings to grain were 102,700,000 hectares, with a crop estimated at from 75,000,000 to 80,000,000 tons. The grain crop of 1929 showed a great expansion of the production of state and collective farms, which reached 4,190,000 metric tons. Grain reached the market more rapidly than in previous years, and by the end of October the estimated procurements had been virtually fulfilled in the Ukraine and other sections, and a surplus reserve of 1,500,000 tons was anticipated.

Crops, for 1928, in metric tons, were: Raw cotton, 801,000; sugar beets, 9,698,000; flax, 346,000; hemp, 489,000; sunflower seed, 2,169,000. Livestock estimate for 1928: Horses, 31,978,000; cattle, 66,671,800; sheep and goats, 136,190,200; hogs, 25,233,500.

In the autumn of 1929 it was announced that \$1,580,771,900 had been allotted for capital improvements in state industry (inclusive of electrification) during 1929-30, as compared with \$855,440,750 expended the previous year. The funds were derived from profits, depreciation account, and governmental budget appropriations. The average number of workers employed in large-scale state industry for the first 9 months of 1928-29 was 2,409,000, as compared with 2,150,000 for the same period of the previous year.

Three large-scale development projects had been inaugurated in the Soviet Union, which were expected to accelerate materially the advances in productivity. These were: (1) The Dnieper River hydro-electric development, with attendant waterway and irrigation projects. (2) The Siberian-Turkestan Railway, 920 miles long, was to connect the cotton belt in Central Asia with the grain and timber districts of Siberia, cutting the present railway distance between the two sections by 65 per cent. Construction was begun in 1927 and the total cost was to be \$100,000,000. (3) The Volga-Don Canal, connecting the two rivers, was to give the Volga, the chief waterway of the Soviet Union, which empties into the landlocked Caspian Sea, an outlet on the Black Sea.

A number of industrial enterprises and the greater part of the retail trade organizations are run by the cooperatives. These organizations increased their membership from 10,000,000 in the fall of 1924 to upward of 38,000,000 on Oct. 1, 1928. In 1927-28 they conducted 62.4 per cent of the retail trade and about 10 per cent of the foreign trade.

Production of coal by State Trusts in 1928-29 was 41,300,000 metric tons, as compared with 35,400,000 in 1927-28 and 28,356,000 in 1913. Production of oil was 13,700,000 metric tons in 1928-29, as compared with 11,502,000 in 1927-28 and 9,215,911 in 1913. Exports of oil were 3,618,500 metric tons in 1928-29, 2,683,700 in 1927-28, and 947,700 in 1913.

The production of iron ore reached 7,100,000 metric tons in 1928-29, as compared with 6,000,000 in 1927-28. Statistics for iron and steel production are as follows, in thousands of metric tons:

	1928-29	1927-28	1913
Pig Iron	4,100	3,281	4,206
Steel	4,800	4,156	4,247
Rolled Iron	3,700	3,277	3,509

COMMERCE. The foreign trade turnover for recent years is shown in the accompanying table:

RUSSIAN FOREIGN TRADE, 1925-29			
	Exports	Imports	Total
1924-25	\$296,125,000	\$370,800,000	\$666,925,000
1925-26	348,447,000	389,546,000	737,993,000
1926-27	396,807,500	366,989,000	763,796,500
1927-28	398,564,000	486,523,000	885,087,000
1928-29	441,620,000	424,201,000	865,821,000

Foreign trade turnover in 1913 was \$1,490,495,000. The country then included Poland, Finland, and the border states.

The trade total for 1928-29 showed a falling off of about \$19,000,000 from the previous year, due to a decrease of \$62,000,000 in imports. Exports increased \$43,000,000. The favorable balance of trade for the year was \$17,417,000, as compared with an unfavorable balance of \$87,959,000 the previous year.

The principal exports in 1928-29 in order of their value, were oil products, timber, furs, butter, flax, eggs, manganese, sheep casings. The oil exports of 3,618,500 metric tons represented an increase of 30 per cent over those for the previous year and were nearly four times those of 1913. Exports to England nearly doubled in comparison with those of the preceding year. Early in 1929 an agreement for the sale of oil in England was concluded between the Anglo-American Company and the Russian Oil Products, Ltd. Three-fourths of the 1928-29 oil exports went to European countries, and about 22.5 per cent to Eastern countries. Grain, which before the war was the principal factor on the export list, has not been exported in quantity for the past two years, as the crops have not shown an advance commensurate with the steady increase in the population.

The principal countries taking Soviet exports in 1928-29 were Germany, 23.8 per cent; England, 20.8 per cent; Latvia, 9 per cent; Persia, 8.9 per cent; France, 5.1 per cent. The principal countries furnishing Soviet imports were Germany, 23.3 per cent; United States, 15.8 per cent; Persia, 8 per cent; and the United Kingdom, 5.3 per cent.

The principal Soviet imports from the United States were raw cotton, industrial equipment, agricultural machinery, metals, chemical products, binder twine, automotive equipment, office supplies. According to the figures of Soviet trade organizations in the United States, purchases of American products for shipment to the Soviet Union in 1928-29 were \$109,000,000, as against \$91,230,000 for 1927-28. Purchases of industrial and electrical equipment were \$30,000,000, two and a half times the figure for the preceding year; purchases of agricultural equipment were \$30,000,000, double those of the preceding year; and purchases of automotive equipment were \$8,000,000, or triple the expenditures for this purpose in 1927-28.

The principal Soviet exports to the United States are furs, manganese, precious metals, sheep casings, flax and tow, hides and skins, hristles, and licence root.

FINANCE. By the end of June, 1924, Soviet currency was established on a gold basis and since that time there have been no unsecured paper issues. The budgets of Soviet fiscal years, ending September 30, for 1925-29, in millions of rubles (1 ruble equals \$0.515) are given on page 738.

	1925-26 (actual)	1926-27 (actual)	1927-28 (actual)	1928-29 (actual)
Revenues	3,900 7	5,201 8	6 761 1	7,910 0
Expenditures	3,867 8	5,151 4	6,239 1	7,765 6

Figures made public by the U S Department of Commerce placed actual revenues in 1927-28 at \$2,943,500,000 and actual expenditures at \$3,240,600,000, leaving a deficit of \$297,100,000. Of the total receipts, \$1,513,400,000 came from taxation and monopolies, \$118,600,000, from income taxes, and \$363,500,000, from import and export duties. Expenditure items included \$153,800,000 for the service of the debt, \$393,400,000 for defense; \$88,200,000, for education (Commissariat of Education only), and \$11,500,000, for social services. The total public debt was placed at \$1,080,400,000.

According to the Soviet Union Information Bureau, federal revenues for 1928-29 increased 17 per cent over the previous year and revenues from railways, posts, and telegraphs increased 19 per cent. The federal budget for 1929-30 was approved at 11,390,000,000 rubles (about \$5,700,000,000), an increase of about 44 per cent over the budget for 1928-29. Of this sum, about 2,000,000,000 rubles represented the anticipated revenue and expenditure in connection with railroads, posts, and telegraphs. Another 7,000,000,000 rubles was assigned for "Socialist construction," which included urban and agrarian industrialization, transport, electrification, and housing. Early in October, 1929, it was announced that the third industrialization loan of 750,000,000 rubles, opened September 1, had been oversubscribed.

Currency circulation on Nov 21, 1929, was 2,912,000,000 rubles, as compared with 1,740,000,000 rubles on Oct 1, 1928. Paper money in circulation has far outstripped the gold reserve, but while production of all kinds was increasing more rapidly than the currency, Soviet economists contended the inflation would not be harmful.

**TRANSPORT** In 1929 the railway mileage of the Soviet Union was 77,128 kilometers, an increase of about 30 per cent over the figure for 1913. Eleven new main and branch railway lines were under construction in 1928-29, including the Turkestan-Siberian Railway, which, it was announced, would be completed in May, 1930. New trackage scheduled for construction in 1929-30 amounted to 11,039 kilometers, and approximately a billion dollars was to be expended for new construction during the period of the five-year plan. There were 17,423 kilometers of airplane lines in regular operation in 1929, and 13,590 kilometers of new lines were to be opened in 1929-30.

The length of inland waterways in 1927 totaled 228,572 miles, of which 54,501 were navigated by steamers. In 1928 the mercantile marine consisted of 697 vessels of 437,000 tons, including inland waters.

**GOVERNMENT** A description of the constitution of the Union of Soviet Socialist Republics will be found in the YEAR BOOK for 1923. At the close of 1929, the Council of People's Commissars, the executive cabinet of the Soviet Government, was composed as follows: Chairman of the Council of People's Commissars, Alexi I. Rykov, vice chairman of the council, J. E. Rudzutak, V. V. Schmidt, and K. G. Orjonikidze, Commissar for Army and Navy, K. E. Voroshilov, for Trade, A. I.

Mikoyan; for Foreign Affairs, Maxim Litvinov (acting); for Transportation, J. E. Rudzutak; for Posts and Telegraphs, N. K. Antipov; for Finance, N. P. Brunkhanov, for Labor, N. A. Uglanov, for Peasants and Workers' Inspection, G. K. Orjonikidze, Chairman of the Supreme Economic Council, V. V. Kuybyshev, Director of Central Statistical Administration, V. P. Miliutin. Chairmen of the Central Executive Committee of the Soviet Union, M. I. Kalinin, G. I. Petrovsky, A. G. Chervakov, Gazanfar Mussabekov, Netybay Artakov, Faizulla Khodzhiyev. These chairmen of the Central Executive Committee are the presidents of the constituent republics. Josef Stalin, General Secretary of the Executive Committee of the Communist party, was the unofficial head of the Soviet Government.

### HISTORY

**FOREIGN RELATIONS** During 1929 the Soviet Government continued its policy of establishing a *modus vivendi* for peaceful cooperation with other countries. Having signed and ratified the Kellogg Pact, Aug 18, 1928, the Soviet Government at the beginning of 1929 invited its neighbors to a conference for the purpose of making the pact immediately effective as among them. A protocol to this effect was signed in Moscow February 9 by representatives of the governments of Estonia, Latvia, Poland, Rumania, and the U S S R and was subsequently ratified by all five governments. The Soviet government did not renounce its claim to Bessarabia. The protocol was adhered to later also by Turkey (February 27), Persia (April 3), and Lithuania (April 5). Despite the conclusion of the non-aggression pact with Poland, that country on September 1 renewed its treaty of alliance with France. The Franco-Polish pact was one of a series through which France established its hegemony in the states bounding Russia on the west, and had always been viewed with suspicion by the Soviet government. In December, however, Soviet diplomacy achieved a counter-acting triumph in the conclusion of a pact with Turkey which was similar in many respects to the entente cordiale existing between France and Great Britain previous to the World War.

Relations between Germany and Russia became somewhat strained toward the end of the year. The ostensible cause was the criticism leveled at Germany by high Russian officials in connection with the Manchurian dispute. Russia entrusted the care of her nationals in Manchuria to the German Embassy following the break with China and the German Foreign Office was then assailed for alleged laxity in these duties. The heavy hand with which the German police repressed Communist demonstrations in Berlin on May Day and on August 1, when a general strike was called, also embittered Communist feeling in Russia. German resentment at Russian criticism in connection with the Manchurian incident, was heightened by the memory of the Shakta trial in 1928, when German engineers in Russia were tried on charges of sabotage and criminal conspiracy. The Soviet government's apparent neglect and mistreatment of several thousand Mennonite peasants of German descent colonized in Siberia, who sought to remove to Canada rather than enter the collectives, also aroused German indignation. (See GERMANY, under *History*.) There was much feeling in Ger-

many over the encouragement openly extended by Soviet officials to the revolutionary activities of German Communists.

On October 3 Valerian Dvoglevsky, representing the Soviet government, signed a protocol with the British Secretary of State for Foreign Affairs providing for the resumption of diplomatic relations between the two countries, which had been broken off by the Baldwin government in 1927. The protocol provided for conferences to settle the matters in dispute between the two governments, after the exchange of ambassadors. It also repeated the text of that article of the treaty of 1924 binding both parties to refrain from subversive propaganda and to use restraint upon all persons or organizations within their jurisdiction. Grigori Sokolnikov, chairman of the Soviet Oil Syndicate and former Commissar for Finance, was appointed Ambassador to Great Britain and assumed his duties there December 20. (See GREAT BRITAIN, under *History*.)

A disturbing feature of the year was the rupture with the Nanking (Nationalist) government of China over the seizure of the Chinese Eastern Railway by Chinese authorities on July 10. (See CHINA, under *History*.) Guerilla warfare prevailed along the Manchurian border until the signing of the Khabarovsk protocol terminating it on December 22. The Soviet advance into Manchuria commencing November 17 induced the American Secretary of State, Henry L. Stimson, to dispatch notes to both Russia and China on November 30 reminding them of their obligations under the Kellogg-Briand Peace Pact. The note was delivered through the French Embassy at Moscow. At the suggestion of Secretary Stimson, Great Britain, France, and a number of smaller powers sent similar reminders. In Russia, the notes were generally considered to have been inspired by a desire to hamper direct negotiations between the Soviet government and Mukden Acting Foreign Minister Litvinov replied tartly to the American note, declaring that it was "not friendly" to Russia and an attempt to exert "unjustifiable pressure."

One of the significant events of the year was the retirement of Georges Tchitchine as head of the Foreign Office, a post which he had filled with recognized ability since the establishment of the Communist régime.

**INTERNAL AFFAIRS.** The inauguration of the five-year plan, described above, with its attendant developments, was the conspicuous event of the year in internal affairs. In connection with the working out of the plan, a continuous working week was devised, for industrial and other institutions, by which the machinery of production would be employed continuously, while the rest-days of the workers would be arranged on a staggered system. In August, the Council of Commissars issued a decree for the continuous working week, each worker to have one and a half day's rest in seven. In September, however, a new decree provided for the introduction of a five-day week, according to a plan sponsored by the Academy of Sciences. Under this plan, each month is to consist of six weeks of five days each. The worker has one day of rest each week under a staggered system, so that production is continuous. The five extra days during the year are to be national holidays. The plan entails a revision of the calendar and is applicable to industrial enterprises and offices. In tentative trials in various plants the new scheme was reported to have in-

creased production from 15 to 25 per cent and reduced production costs.

In the agricultural field the government's programme of rural "socialization" brought sporadic opposition in some sections from the peasants, particularly the "kulaks," or well-to-do farmers, who at times resorted to arson and the murder of officials—methods traditional in Russia's rural history—to oppose the extension of collective farms. During the harvest season, the execution of numerous peasants was reported. The reported success of the grain-marketing programme, however, indicated that this opposition was not widespread. The programme for grain procurements by state and cooperative agencies for the agricultural year ending June 30, 1930, was fixed at 50 per cent higher than the procurement of the previous year. By November 6, the government announced that 85 per cent of the programme for the entire agricultural year had been realized, and a large reserve store of grain was assured.

Observers in Russia were generally of the opinion that the Communist régime would stand or fall according to the success or failure of its effort to "socialize" agriculture and all aspects of rural life. Paul Scheffer, Moscow correspondent of the *Berliner Tageblatt*, reported in December, 1929, that the food shortage in Russia was more acute than during the 1928 shortage and that despite optimistic reports of progress by the government, the agrarian programme was in reality ruining the country. He pointed out that in the cities women waited hours before the ration stores for the simplest necessities, and that the government had introduced ration books for virtually all the necessities of life. His views were similar to those of the so-called "Right heretics" of the Communist party—Bukharin, Rykov, and Tomsky—who were disciplined for their opposition to the five-year plan. Bukharin was dismissed from the Political Bureau, or executive body of the Soviet Communist party, in November. Subsequently, he and his lieutenants announced that they had ceased their opposition.

These criticisms, the government contended, were disproved by the fact that the total area sown to winter grain in 1929 was  $4\frac{1}{2}$  per cent larger than in 1928, that even on collectives formed in the spring of the year there had been a bigger harvest than on the individual units they replaced, and that new collectives and state farms were scheduled to cultivate more than 25 per cent of the land in 1930. The rationing system, it was said, was not due to a food shortage but to the necessity of "pegging" prices in order to prevent a rise in the cost of living which would otherwise naturally result from the currency inflation. The inflation, according to Soviet economists, was temporary. Russia's enormous natural resources being relied upon to "take in the slack."

Leon Trotsky, leader of the Left Wing opposition to the Stalin majority, was officially banished from the Soviet Union on January 21 and went to Constantinople. He had previously been exiled to Alma Ata, a remote corner of the Soviet Union in Turkestan. In Constantinople, Trotsky revealed that the chief issue in his struggle with the Stalin faction had been the government's agrarian policy. The Trotsky faction demanded the rigorous suppression of peasant individualism in the economic structure and the dominance of

the industrial worker in politics. On January 23, the government arrested 150 of Trotsky's followers on conspiracy charges.

During the summer, the first American trade delegation to visit Soviet Russia made a four-weeks' tour of the country.

The Communist effort to eliminate organized religion was renewed in 1929 due to the rapid growth of the nonconformist churches, which the Government had previously encouraged to counteract the strength of the Orthodox Church. By January, 1929, it was estimated by Soviet officials that 20,000,000 people had become affiliated with the nonconformist churches—Baptist, Methodist, and Lutheran. The welfare, recreational, and social work carried on by these churches was considered their chief source of strength and in April the Government promulgated a new code which forbade such activities by religious groups. The Communist Youth Organization was also launched to counteract the churches and similar non-Communist influences.

In November, it was announced that the Academy of Sciences was working on plans to substitute the Latin alphabet for the old Russian alphabet.

For Social Insurance in Russia, see WORKMEN'S COMPENSATION.

See CHINA, GREAT BRITAIN, and GERMANY, under *History*.

**RUTGERS UNIVERSITY.** A nonsectarian institution of higher learning in New Brunswick, N. J., founded under the name of Queen's College in 1766. The registration for the autumn of 1929 was 2958, of whom 1157 were registered at the college for women. Enrollment in the 1929 summer session was 1842. Of the 290 members on the faculty, 174 were professors and 116, instructors. The endowment funds amounted to \$3,885,719, and the income for the year, exclusive of the State Agricultural Experiment Station, amounted to \$2,642,677. Lands, buildings, and endowments had a total valuation of more than \$12,000,000. The library contained 172,100 volumes. President, John Thomas, D.D., Litt D., LL.D.

**RYBNER, CORNELIUS.** An American composer and pianist, died in New York, Jan. 21, 1929. He was born in Copenhagen, Oct. 26, 1855. After studying at the Copenhagen Conservatory under Gade and Hartmann, he attended the Leipzig Conservatory, where his teachers were F. David (violin) and K. Reinecke (piano). In 1892 he succeeded Motil as conductor of the Philharmonischer Verein, which post he filled till 1904, when he was called to New York to succeed MacDowell as professor of music at Columbia University. This position he resigned in 1919. With his daughter, Dagmar, he frequently gave piano recitals for four hands. His compositions include a symphonic poem, *Friede, Kampf, und Sieg*, *Festouvertüre*, *Huldigungsmarsch*, *Marche heroïque*, *Nordischer Hochzeitsmarsch*; chamber music, piano pieces, and songs.

**RYE.** The 1929 production of rye in 23 countries reporting to the International Institute of Agriculture, Rome, was estimated at 934,980,000 bushels, which was slightly under the production in 1928 but 9 per cent above the average yield of the five years 1923-27. The area in rye in these countries, 45,753,000 acres as estimated, was 4.5 per cent higher than the acreage in 1928 but slightly below the average of the 5 years

1923-27. The world's rye production has decreased during recent years. The area harvested in 1928 was less than the pre-war average for the five years 1909-13 and less than the area of 1925. The leading countries in 1929, exclusive of the United States, reported the following yields of rye: Germany, 319,301,000 bushels, Poland, 246,447,000 bushels, Czechoslovakia, 63,596,000 bushels, France, 39,434,000 bushels; and Hungary, 32,996,000 bushels. The Soviet Republics have an annual production of about 850,000,000 bushels. Argentina, leading South American country in rye production, reported a yield of 7,606,000 bushels for the crop year 1928-29. The Canadian production in 1928 was estimated at 41,000,000 bushels, which was 1.6 per cent below the yield of the preceding season and over 25 per cent below the average yield of the five years 1923-27.

As estimated by the Department of Agriculture, the United States in 1929 produced 40,629,000 bushels compared with 43,366,000 bushels in 1928 and 54,703,000 bushels, the average of the preceding five years. The area for grain production dropped from 3,480,000 acres in 1928 to 3,225,000 acres in 1929, a decrease of over 7 per cent. The average yields per acre were 12.5 bushels and 12.6 bushels for the two years, respectively. The average farm price on Dec. 1, 1929, was 87.1 cents per bushel as against 86 cents the year before, indicating a total farm value for the United States of \$35,371,000 in 1929 and of \$37,290,000 in 1928.

During the year ended June 30, 1929, the United States exported 9,346,000 bushels of rye as compared with 26,064,000 bushels in the preceding fiscal year. About 24,000 barrels of rye flour were exported during the same period, or 23,000 barrels less than in the fiscal year 1928. In the fall of 1929, as reported by the Department of Agriculture, 3,466,000 acres of rye were sown in the 1930 grain crop.

**SAAR BASIN.** A section of the German Rhineland, which, under Article 45 of the Versailles Treaty, was awarded to France for exploitation of its coal fields, as compensation for the destruction of the coal fields in northern France by the German armies. Coal production in 1928 totaled 13,100,718 metric tons, as compared with 13,216,309 in 1913 and 9,410,433 in 1920. Area, 751 square miles; population, about 657,870. See FRANCE, GERMANY, and PRUSSIA, under *History*.

**SAEGER, OSCAR.** An American baritone and vocal teacher, died in Washington, D. C., Apr. 20, 1929. He was born in Brooklyn, N. Y., Jan. 5, 1868. After winning a scholarship and completing his musical studies under Bouhy at the National Conservatory in New York, he made his debut in 1891, with the Hunsicker Opera Company in Philadelphia. After a short time, he gave up an operatic career and devoted himself to teaching, at first at the National Conservatory, but after 1895 as a private teacher. In this field, he achieved unusual success, several of his pupils becoming principal artists at the Metropolitan Opera House.

**SAFETY, INDUSTRIAL.** See NATIONAL SAFETY COUNCIL.

**SAFETY AT SEA.** The outstanding event of the year was the International Conference on Safety of Life at Sea which was held in London April 16 to May 31. It was called by the British Board of Trade to conclude a convention pertaining to international standards for ocean-going

steamers that had been agreed to at a similar conference in January, 1914, but that on account of the outbreak of the World War had not been put into operation. The nations represented at this conference were Australia, Belgium, Canada, Denmark, Finland, France, Germany, Great Britain and Northern Ireland, India, the Irish Free State, Italy, Japan, the Netherlands, Norway, Spain, Sweden, the Union of Soviet Socialist Republics, and the United States. The delegates numbered 85 and the experts, 60.

The main problems under consideration at this conference were delegated to five committees. They dealt with ship construction and the adoption of rules which would make vessels as nearly unsinkable as practically possible, guarding them against fire and against dangers of storm, derelicts, and ice, life-saving appliances such as adequate lifeboats, rafts, and belts, radiotelegraphy by which the use of this device would be extended as a protection of life and as an aid to navigation, safety of navigation, by which the rules of navigation would be made responsive to the use of modern ships and changed conditions, and certificates of inspection and safety. Two sub-committees on general provisions and drafting were subsequently added. Radiotelegraphy was especially stressed in these discussions, and as a result there was embodied in the final act the rules that all passenger and cargo ships of 1600 tons or over, when employed in international service, must be equipped with radio apparatus and that all passenger ships of 5000 tons or over must be equipped with the radio compass. The convention, which was signed on May 31, will come into force July 1, 1931, provided that at least five parties have deposited their ratifications.

The Steamboat Inspection Service of the U. S. Department of Commerce reported for the fiscal year ending June 30, 1929, the following statistics. Total number of accidents resulting in loss of life, 260, an increase of 28 over the previous year, total number of lives lost from all causes, passenger and crew, 341, an increase of 66 over the previous year. Of the lives lost, 272 were from suicide, accidental drowning, and other causes beyond the power of the service to prevent, leaving a loss of 69 fairly chargeable to accidents, collisions, and foundering. The number of lives saved during the year by means of life-saving appliances required by law was 744. The number of passengers carried during the fiscal year on steam vessels that were required by law to report the number of passengers carried was 328,465,552, of whom 86 were lost, making 3,819,460 passengers carried for each passenger lost. The total loss in property from such causes as explosion, wreck or foundering, collision between vessels, fire, snags, and miscellaneous causes amounted to \$13,374,284.

The report of Dickerson N. Hoover, Supervising Inspector General of the Steamboat Inspection Service, showed further that 7086 vessels with a total gross tonnage of 15,708,824, including 6766 domestic vessels with a gross tonnage of 12,353,631 and 320 foreign passenger steam and motor vessels with a gross tonnage of 3,355,193, were inspected during the fiscal year. A report was delivered on July 20 by the British Board of Trade tribunal in the case of the Lamport and Holt liner *Centra* which sank on Nov. 12, 1928, off Virginia Capes with a loss of 112 lives. The contributory causes were found

to be overloading and the "lender" condition of the ship.

According to Lloyd's Register of Shipping, 288 vessels of a gross tonnage of 484,620 were lost at sea during the year, Great Britain and Ireland suffering the greatest loss. The following is a list of notable marine casualties and important rescues during 1929:

January 2 The French steamship *Malakof* sank off Minorca in the Mediterranean with a loss of 27 lives.  
January 10 The steam trawler *Seiner* which left New York for the fishing grounds off Georges Banks, with a crew of 21, was lost.

January 15 The Chinese steamer *Hsua Wah* struck a rock near Hong Kong and foundered with a loss of more than 370 lives.

January 21 The Chinese steamer *Hongchong* sank in the vicinity of Shanghai with a loss of 40 lives.

January 21 The West Hardepool freighter *Trees* bridge with a crew of 32, sank off Newfoundland.

January 23 Capt. George Fried, in command of the United States liner *America*, saved 32 persons aboard the Italian freighter *Florida*, 700 miles off the Virginia coast.

February 3 The German steamer *Deutler* sank in the Douro River, 26 of the crew being drowned.

April 22 The Japanese steamer *Togukiku Maru* crashed on a rock off Cape Ermo and 103 persons were drowned.

July 9 The British submarine *H 47* sank after collision with the submarine *L-12* in the Irish Sea, 21 of the crew being lost.

July 16 The Chilean transport *Abato* sank off the coast near Topolobampo with a loss of 44 lives.

July 26 The gun turret on the British cruiser *Deronshire* was blown away by explosion during firing practice at Scutthorpe in the Aegean Sea, 17 officers and men being killed.

August 18 The Spanish steamer *Onono* was rammed and sunk by a U. S. freighter off the mouth of the Humboldt River, 15 of the crew being drowned.

August 30 The coasting steamer *San Juan* collided with the oil tanker *S. C. T. Dodd* off Santa Cruz, Calif., 70 lives being lost.

September 7 The Finnish steamer *Kuru* was upset in a gale on Lake Mägarvi and 100 lives were lost, mostly children.

September 9 Fire occurred on the British oil tanker *Vineira* at Rotterdam, ten persons being killed.

September 9 The Nelson liner *Hughland Prude* struck rock and foundered near Vigo, Spain, all the 61 passengers and crew being rescued.

October 6 The Norwegian steamer *Naakon VII* foundered off the west coast of Norway, 35 lives being lost.

October 13 The Canadian Pacific Railway Company's transatlantic liner *Empress of Canada* ran on the rocks at Homer Bay, British Columbia, all the 100 passengers being safely removed.

October 22 The car ferry *Mdauakee* sank in Lake Michigan with a loss of 37 lives.

November 16 The freighter *Tilla Hermosa* sank off Montana, Mexico, 12 passengers and six of the crew being drowned.

December 12 The fishing boat *Penacore* capsized off Cape Rica, Portugal, with a loss of 12 lives.

December 18 The steamer *Fort Victoria* collided with the steamer *Algonquin* in Ambrose Channel, New York, 36 persons being rescued.

December 21 The Chinese steamer *Leo Cheang* sank near Hong Kong, more than 250 lives being lost.

December 25 The Norwegian steamer *Adalg*, with its entire crew of 24, was lost off Faronles, Spain.

December 28 The schooner *Beatriz Adela* was wrecked near Puerto Castilla, Honduras, 20 passengers and the entire crew being drowned.

**SAFETY COUNCIL, NATIONAL** See NATIONAL SAFETY COUNCIL  
**SAGHALIEN**. See SAKHALIN  
**ST. CHRISTOPHER** or **ST. KITTS**. See LEEWARD ISLANDS

**ST. HELENA** An island of volcanic origin in the South Atlantic, about 1200 miles from the west coast of Africa, and belonging to Great Britain. Area, 47 square miles; population, according to the census of 1921, 3747, estimated civil population, Dec. 31, 1927, 3754. Capital and seaport, Jamestown. The chief occupation is the

fibre industry, and fibre and tow are the principal exports. In 1927 the exports were valued at £34,274 and the imports at £49,678; revenue £20,486, expenditure, £16,740. There is no public debt. A detachment of the Royal Marine Artillery is stationed on the island, which is also a coaling station for the British Navy Governor in 1929, C. H. Harper.

**ST. JOHN'S COLLEGE.** A college of liberal arts and sciences for men in Annapolis, Md., founded as King William's School in 1896. The enrollment for the autumn term of 1929 was 270. There were 26 faculty members. The income for 1928-29, exclusive of gifts, was \$193,853, the value of gifts received during the year was \$70,000. The library contained 20,005 volumes. Acting President, Robert E. Bacon, dean of the college, who was appointed on the resignation of Enoch B. Garey in 1929.

**ST. LAWRENCE UNIVERSITY.** An institution for the higher education of men and women in Canton, N. Y., founded in 1856. The registration for the autumn term of 1929 was 3640. The faculty numbered 124 members. The endowment funds amounted to \$3,692,127 and the income for the year, to \$185,893. The library contained 52,600 volumes. Hepburn Hall of Chemistry was dedicated on Oct. 26, 1929, by Mine Curie President, Richard Eddy Sykes, D.D.

**ST. LUCIA,** ló'shi-lá. A British insular colony in the Windward group of the West Indies Area, 233 square miles, population in 1927, 56,068. Castries, the chief port and capital, is a naval base and coaling station. The chief products are cacao, sugar, lime juice, lime oil, bay oil, honey, limes, logwood, rum, fuel, molasses, and sirup. Imports in 1927 were valued at £228,845, exports at £213,602. Of the imports the largest share came from the United States and of the exports the largest share went to Great Britain. The total shipping in the same year was 1,153,633 tons, of which 891,103 tons were British. Revenue in 1927, £82,491; expenditure, £84,219, public debt, £203,159. The island is under an administrator aided by a nominated executive and a partly nominated and partly elected Legislative Council. Administrator and Colonial Secretary in 1929, Charles William Doorly.

**ST. PIERRE AND MIQUELON,** mō-ke-lōn'. Two small groups of islands in the Atlantic, close to the southern coast of France, and named from their two largest islands. Area of the St. Pierre group, 10 square miles, population in 1925, 3040, area of the Miquelon group, 83 square miles; population, 544. The islands are rocky and unsuited to agriculture, their main importance being as a centre for the codfishing industry. The chief town is St. Pierre, which has regular steamship communication with North Sydney and Halifax. In 1927, the imports totaled 165,801,030 francs, the exports, 127,409,172 francs. The imports consisted chiefly of textiles, salt, wines, foodstuffs, and meat, the exports, cod, dried and fresh, and fish products. The local budget for 1928 was Revenue, 10,011,500 francs, expenditure, 10,011,500 francs. The islands are under a governor aided by consultative and municipal councils. Governor in 1929, Audrien Juvanon.

**ST. THOMAS.** See SÃO THOMÉ AND PRINCE.

**ST. VINCENT.** A British insular colony in the Windward group of the West Indies Area, 150.3 square miles, population in 1927, 50,770.

Kingstown, with a population of 3836 in 1921, is the capital. The movement of population in 1927 was Births, 1891; deaths, 835; marriages, 133. In the same year there were 36 primary schools with an average attendance of 2936. The chief products are arrowroot, sugar, cotton, rum, cacao, and spice, cotton (Sea Island) being especially important and regarded as the best grown in the British Empire. In 1927 the imports were valued at £172,097, exports, £145,815, revenue, £56,469, expenditure, £61,564; public debt, £9170; total shipping, 554,918 tons. At the head of the administration is an administrator and colonial secretary, who is aided by a legislative council consisting of official, elected, and nominated members. Administrator of the colony in 1929, R. Walter.

**SAJOURS,** sa'zhōō', CHARLES EUCARISTE DE'. MEDICIN. An American physician and editor, an authority in the science of endocrinology, died in Philadelphia, Pa., Apr. 27, 1929. He was born at sea, off the coast of France, Dec. 13, 1852, and came to America in 1861. In 1878 he was graduated in medicine from the Jefferson Medical College in Philadelphia, where he lectured during 1881-90. He was professor of anatomy and physiology at Wagner Institute of Science during 1890-92 and dean and professor of laryngology at the Medical College in 1897-98. From 1909 to 1922, he was professor of therapeutics in the medical department of Temple University, and after 1921 professor of endocrinology at the University of Pennsylvania. He edited Sajours' *Analytical Cyclopaedia of Practical Medicine* (8 vols. and 10 editions, 1898-1925) and Sajours' *Annual of the Universal Medical Sciences* (5 vols. annually, 1888-96). From 1911 to 1919, he edited the *New York Medical Journal*. His son, Dr. Louis T. de' Medici Sajours, died on Jan. 16, 1929. See ENDOCRINOLOGY.

**SAKHALIN,** sa'ka-lvōn'. An island off the eastern coast of Siberia, separated from Japan by the narrow Strait of Soya. The portion south of the 50th parallel of N. latitude belongs to Japan, north of that line lies the Province of Sakhalin, belonging to Russia. Japanese Sakhalin or Karafuto (see KARAFUTO), has an area of about 13,934 square miles and a residential population (1927) of 203,573. The area of the Russian province is 14,688 square miles, with a population estimated at 34,000 in 1915. Valuable forests cover 75 per cent of the entire island.

**SALMON MEMORIAL.** See PSYCHOLOGY.

**SALUDA DAM.** See DAMS.

**SALVADOR,** sal'vá-dōr'. A Central American republic on the Pacific coast, bounded on the east by Honduras and on the north by Guatemala. Capital, San Salvador.

**AREA, POPULATION, ETC.** The area is estimated at 13,176 square miles, the population in 1928 was estimated at 1,688,000. The mestizos, or persons of mixed race, numbered 1,307,200 and the Indians 326,800. San Salvador had a population in 1927 of about 88,000. Other large towns with their populations at the same time were Santa Ana, 74,800, San Miguel, 37,800, Santa Tecla, 28,000; and San Vicente, 33,000. From 1923 to 1927, births averaged 59,204 annually and deaths, 31,728.

**EDUCATION.** Education is free and nominally obligatory from 7 to 14 years of age. During the 1928 school year there were 1636 primary teachers in 868 government schools, while the number

of pupils registered was 41,183 and the average attendance 22,832

**PRODUCTION** Coffee is the chief crop of this primarily agricultural country, the fertile mountain slopes being excellently adapted to its cultivation. The coffee crop is the major factor determining the economic condition of Salvador, as it normally constitutes about 90 per cent of the exports. In 1929 there was comparatively little foreign demand for the crop, prices were low, and general business conditions were unsatisfactory. Wages on some plantations were reduced, there was considerable unemployment, and the banks curtailed credit. The production of coffee in 1927-28 was the largest on record, totaling 119,489,000 pounds, of which 117,878,000 pounds valued at \$22,741,000 were exported. As a result of the heavy exports, conditions in Salvador were generally satisfactory in 1928. Sugar exports in 1928 totaled 21,500,000 pounds, or 26 per cent more than in 1927, while shipments of henequen fibre, balani, and indigo also increased. Tobacco and cotton also are produced, although the acreage devoted to cotton has rapidly declined. Limited quantities of gold and silver are mined and manufacturing is confined to sugar grinding, coffee cleaning, and the production of local necessities.

**COMMERCE** The record coffee crop of 1927-28 resulted in a 73 per cent increase in exports to \$24,464,000 in 1928 from \$14,152,000 in 1927. The value of imports also increased to \$19,187,000 from \$14,864,000 in the preceding year.

In 1929 exports declined to \$18,370,676, or 26 per cent below the 1928 figure. This was due largely to the decrease in coffee exports, which were valued at \$17,000,225, as compared with \$22,741,065 in 1928, also sugar exports decreased to \$906,905. Total imports were estimated at \$11,570,000.

**FINANCE** Ordinary revenues during 1928 reached the largest yearly total on record, or 25,546,000 colones (\$12,773,000), as compared with 20,514,000 colones in 1927 (1 colon equals \$0.50 at par). The increase was largely attributable to increased import and export duties, and the liquor tax. Expenditures totaled 25,367,000 colones (\$12,684,000), or 179,000 colones less than the revenues, having increased from 21,800,000 colones in the preceding year. Results of the extraordinary budgetary operations were not available. Revenues and expenditures for the fiscal year 1928-29 were calculated at 23,132,000 colones and 24,202,000 colones, respectively, a slight deficit being anticipated. Another deficit was anticipated in framing the budget for 1929-30, which calculated receipts at 25,490,000 colones and expenditures at 25,775,398 colones, or a deficit of 285,398 colones (\$140,000). The public debt at the end of 1927 totaled about 48,512,000 colones (\$24,256,000), of which \$16,784,000 was floated in the United States and £975,000 in Great Britain.

**COMMUNICATIONS** A new \$12,000,000 line of the International Railway of Central America, linking the railways of Guatemala with those in Salvador, was opened to traffic in July, 1929. There were about 380 miles of railway line in Salvador in 1928, in addition to 2761 miles of telegraph wire and 4177 miles of telephone wire. In 1927, 609 vessels of 1,295,202 tons entered the ports of the Republic.

**GOVERNMENT** Executive power is vested by the constitution in the President elected for four years, who acts through a ministry of four mem-

bers; and legislative power in the Congress of 42 members elected for one year by universal suffrage. President in 1929, Dr. Pio Romero Bosque, who assumed office Mar. 1, 1927, Vice President, Gustavo Vides.

**SALVATION ARMY.** An international organization with headquarters in London, whose sole purpose is the "salvation of mankind from all forms of spiritual, moral, and temporal distress." The movement was first organized as a mission in the East End of London in 1865 by William Booth, a minister of the New Connection Methodists. It spread rapidly throughout England and in 1880, as the Salvation Army, was extended to the United States. Incorporation took place in New York City in 1899.

The government is military in character and in 1929 was under the command of Gen. Edward J. Higgins. The higher command is divided into territories, each territory usually being a separate country, or colony, led by a commissioner and subdivided into divisions of a number of corps or posts under a captain and lieutenant. The United States has four territories with headquarters in New York City, Chicago, San Francisco, and Atlanta. The Salvation Army is active in 84 countries and colonies, and its gospel is preached in 67 languages.

The outstanding international event of 1929 was the assembling for the first time of the high council, a body created under the foundation deed of the movement to meet certain contingencies on the succession of a new general, which convened in London on Jan. 8, 1929. The prolonged illness of Bramwell Booth and his consequent inability to fulfil the duties of his office led to the convening of this body. Nominated by his father, William Booth, he succeeded to the generalship on the death of the latter in 1912. Bramwell Booth died on June 16, 1929, after a lifelong career in the service of the Salvation Army. See BOOTH, BRAMWELL.

In 1929 there were in the service of the Salvation Army throughout the world 24,513 officers and cadets, 9124 persons without rank wholly employed, 147,981 local officers and bandmen, 61,265 songsters, 33,109 corps cadets, and 15,517 corps and outposts in operation. Social institutions and agencies numbered 1533 and day schools, 1086. Among the social institutions were 30 naval and military homes, 149 hotels for men and 53 hotels for women, accommodating 35,433 persons; 5 inmates' homes with 199 patients; 100 homes housing 5090 children, 10 crèches, 24 industrial schools with 1570 pupils, 112 women's industrial homes, accommodating 3622 women, and 79 maternity homes with 2801 patients. The Army also maintained 309 miscellaneous social services, as well as 12 farms, 176 almshouses, 210 homes, elevators, workshops, and woodyards, accommodating 7341 persons. In addition to 17 separate food depots there were 123 combined shelters and food depots for men and 18 shelters and food depots for women. Through the 140 labor bureaus, 456,669 men were supplied with work. The organization publishes 122 periodicals, with an average circulation of 1,008,650 copies per issue.

In the United States there were, in 1929, 1735 corps and outposts, 4814 officers and cadets, 12,331 local senior officers and bandmen, and 12,550 local junior officers and bandmen. Converts during the year numbered 109,296, 558,171 in-

door meetings and 208,158 open-air meetings having been held. Among the social institutions were 67 men's hotels, 2 women's hotels, and 7 residential hostels for young women, accommodating a total of 7048 persons. Men's industrial homes numbered 124 with accommodation for 4883 persons, children's homes, 10 with accommodation for 848 persons, women's homes and hospitals, 35 with accommodation for 2333 persons, and general hospitals and dispensaries, 16 with a total of 49,224 patients.

The national headquarters of the Salvation Army in the United States are at 122 West Fourteenth Street, New York City. Evangeline Booth, daughter of the founder, is the commander-in-chief. The territorial commissioners in 1929 were Richard E. Holz (eastern), John McMillan (central), Adam Gifford (western), and William McIntyre (southern).

**SAMOA.** A group of 14 islands in the Pacific Ocean between 13° and 15° S latitude and 168° and 173° W ' ' ' about 2000 miles south of Hawaii and ' ' ' southwest of San Francisco. Since Feb. 13, 1900, the islands east of 171° W longitude have belonged to the United States, and the islands west of that line belonged to Germany until the outbreak of the World War in 1914, when they were occupied by New Zealanders and later turned over to New Zealand for administration, under a mandate of the League of Nations.

**WESTERN SAMOA.** The official name applied to the former German Samoa Islands is the Territory of Western Samoa. This territory includes Savaii and Upolu, two of the largest islands, and Apolima and Manono. Area of Savaii, about 660 square miles, Upolu, 550 to 600 square miles. Population, Dec. 31, 1927, 42,865, of whom 2564 were Europeans and half-castes, and 939, coolie laborers. The principal port is Apia, on the island of Upolu. About 11,400 pupils are instructed in schools conducted by the government and various missionary groups. The products include copra (the chief product), cacao, bananas, rubber, sugar, and cardamoms. The imports for 1927 were valued at \$304,369 and exports at \$335,078. The principal source of imports was Australia and the chief destination of exports was Great Britain. In the same year 51 vessels of 91,417 tons entered and cleared at the port of Apia. The revenue collected for the year ended May 31, 1928, was £126,038, expenditure, £143,421. The general control of the islands is under the New Zealand Ministry of External Affairs, and the local government is under an administrator. There is a Legislative Council, the membership of which is restricted to British subjects or persons born in Samoa of European descent, and a Native Council which advises the administrator in native affairs. Administrator in 1929, Colonel S. S. Allen, appointed March, 1928.

**AFRICAN SAMOA.** Tutuila, Tan, and the Manua group comprise the American Samoan group of islands. The total area of the islands is about 60 square miles, and the population on June 30, 1929, was 9172. The principal port is Pago Pago, at the extreme end of the bay of the same name on the island of Tutuila, the best and safest harbor in the South Seas. In 1929 there were 20 public schools with 1957 pupils and 54 teachers, 47 of whom were Samoans, and four missionary schools with 338 pupils. The sum of \$20,218, or one-fifth of the revenue, was allotted to education in 1929. Production of copra, the

sole export, totaled 1686 tons valued at \$167,911 in 1928. The fertile soil produces a variety of fruits. Imports in 1929 were valued at \$172,465 and the gross revenues for the year totaled \$108,522. The United States Navy has established a high-powered radio station on the island of Tutuila, which is in daily communication with the islands of the Pacific and the United States. The government is in the hands of the Governor of the United States Naval Station at Pago Pago. Governor in 1929, Captain Stephen V. Gihman, U. S. N. He was relieved by Captain G. S. Lincoln, U. S. N., on Aug. 2, 1929.

**HISTORY.** Four years of unrest in Western Samoa, resulting from the mandate power's rejection of native demands for greater autonomy, culminated in rioting at Apia on December 28, 1929, in which a white constable, the Samoan chief, Tamasese, and seven of his followers were killed and many injured. The chief, Tamasese, was one of the leaders of the Mau, or league of Samoan natives, which conducted the agitation for autonomy. The cruiser *Dundee* with a strong marine force was rushed to Samoa by the New Zealand government following the rioting. See **NEW ZEALAND**, under *History*.

**SAMOS.** An island in the Aegean Sea belonging to Greece. Area, about 181 square miles, population, according to the census of 1928, 70,497. Capital, Lamm Vathy, with a population of 8636. The island was acquired from Turkey as a result of the Balkan War of 1912-13.

**SANDERS,** GENERAL OTTO LIMAN VON. A German soldier and a field marshal during the World War, died in Munich Aug. 23, 1929. He was born in 1855, Otto Liman, in the Province of Pomerania, Prussia, and in 1875 was given a commission in the Grand Ducal Hessian Footguards. In 1879 he was transferred to the Hessian Dragoon Guards, and in 1911 he was appointed to command the 22d Division in Cassel. At the occasion of the Kaiser's Jubilee in 1913, Liman was raised to the nobility with the title *von Sanders*. He was sent in 1913 to reorganize the Turkish Army, at that time in a state of disintegration. In the World War, he was placed in command of the Turkish Fifth army in the Dardanelles, where he served with distinction. When the campaign there was abandoned, von Sanders was sent to Palestine to command the Turkish Army there. On the defeat of this army, he attempted to organize a new resistance at Adana, Turkey. After the Armistice was signed, he gave up his command and went to Constantinople to aid in the transport of the German troops detained by the British at Malta for several months; he began the volume of reminiscences which he later published under the title, *Five Years in Turkey*.

**SAN GABRIEL DAM.** See **DAMS**.

**SANITATION.** See **GARRAGE AND REFUSE DISPOSAL**, **SEWERAGE AND SEWAGE TREATMENT**, **TYPHOID FEVER**, **WATERWORKS AND WATER PURIFICATION**.

**SAN MARINO**, ma rē'no. A republic of Europe, located in the peninsula of Italy. Area, 38 square miles, population, in December, 1928, 13,013. The chief exports are wine, cattle, and the building stone quarried on Mount Titano. The revenue and expenditure for 1927-28 balanced at 4,053,072 lire. Legislative power is exercised by a council of 60 elected members and executive power by two regents appointed every six months by the council.

**SANTO DOMINGO.** See DOMINICAN REPUBLIC.

**SÃO THOMÉ,** soum tō-mă', AND PRINCEIPE, prên'thê-pâ. Two islands in the Gulf of Guinea, about 125 miles from the coast of Africa, and belonging to Portugal. Area, 300 square miles, population in 1921, 52,150 for São Thomé and 6905 for Principe. Cacao, cinchona, coffee, and rubber are the chief exports. The revenue and expenditure for 1926-27 balanced at 10,573,347 escudos. Imports for 1927 were 36,271,746 escudos, and exports 91,776,486 escudos.

**SARAWAK,** sa-u-wak. An independent state, comprising the northwestern part of the island of Borneo, under the protection of Great Britain. Area, about 42,000 square miles (coast line 400 miles). Population estimated at about 600,000, made up of Malays, Dyaks, Knavans, other Polynesian tribes, Chinese, etc. Kuching is the capital, with a population of about 2,000. There are large resources of coal, and an oil field has been opened up in the Baram region. The chief exports are petroleum products, plantation rubber, and sago flour. Imports in 1927 totaled 25,664,546 Straits dollars (1 Straits dollar equaled \$0.56 in 1927) and exports 49,780,143 dollars. In the same year revenues amounted to 6,243,065 dollars and expenditures to 5,764,318 dollars. Sir Charles Vyner Brooke was rajah in 1929. British supervision is exercised by the British agent for Sarawak and British North Borneo.

**SARRAIL,** sar'ail, MAURICE PAUL EMMANUEL. A French general died in Paris, May 23, 1929. He was born Apr. 6, 1856 at Carcassonne, and was educated at St. Cyr. Entering the army in 1877, he rose to the rank of general of a division in 1911. He early allied himself with the Radical-Socialist party, a fact which in part accounted for the tempestuous nature of his political career. At the opening of the World War, he was in charge of the infantry division in the 6th Army Corps. Appointed commander of the 3d Army in 1913, he was placed in command of troops in the Argonne, where he held the lines before Verdun against German attacks in spite of orders to retire, thus making possible Joffre's victorious counter-attack at the Marne. In 1915 he succeeded General Foch as commander-in-chief of the French forces at the Dardanelles, and in the same year commanded the expeditionary army landed at Salonika for service in Serbia. An account of these days he gave in *Mon Commandement en Orient*, written at the end of the War. In 1921 he was made High Commissioner in Syria, but was recalled in 1925 because of protests made at his severity in putting down an Arab revolt in Damascus. General Sarrail was buried in the Invalides.

**SASKATCHEWAN** A Prairie Province of Canada, situated between Alberta on the west and Manitoba on the east, extending northward from Montana and North Dakota to the Northwest Territories. Area, 251,700 square miles, population, according to the census of 1926, 821,042, estimated June 1, 1929, 886,700. Capital, Regina, with a population in 1926, of 37,320. Other cities are Saskatoon, 31,234, a gain of 25 per cent over 1921, Moosejaw, 19,039, Prince Albert, 7873. In 1927 there were 4799 public elementary schools with 193,903 pupils and 7760 teachers and 19,501 students in high or secondary schools. The total area under field crops in 1928 was 21,063,078 acres and the revenue was about \$334,867,000. The gross agricultural revenue of

\$403,915,000 in 1927 was derived chiefly as follows: field crops, \$347,515,000, farm animals, \$21,956,000, dairy products, \$18,560,000, poultry and eggs, \$12,498,000, fruits and vegetables, \$2,700,000.

Mineral production in 1928 was valued at \$1,536,965, including coal valued at \$808,807. Total exports in 1926-27 amounted to \$9,849,274 and imports to \$20,700,339. In 1926 there were 7237 miles of steam railways in the province.

The government is under a lieutenant governor, appointed by the Governor-General of the Dominion of Canada, and a legislative assembly of 63 members elected for five years by universal suffrage. Women vote and are eligible for seats in the legislature. Lieutenant Governor in 1929, H. W. Newlands, Premier and Minister of Education, Jas. G. Gardiner. See CANADA.

**SATIN MOTH.** See ENTOMOLOGY.

**SAULT STE MARIE,** CANALS AT. In 1929 the 19,793 vessels passing through the United States and Canadian canals at Sault Ste. Marie, Michigan, and Ontario, had a total registered tonnage of 68,219,370, as compared with 19,250 vessels of 66,835,763 tons in 1928. These consisted in 1929 of 18,035 steamers, 1217 sailing vessels, and 541 unregistered vessels as compared with 17,757 steamers, 1011 sailing vessels, and 487 unregistered vessels in 1928. The United States canal, there were 16,209 vessel passages with a registered tonnage of 63,463,447, and through the Canadian canal 3584 vessel passages with a registered tonnage of 4,876,123. Lockages in 1929 numbered 14,585, as compared with 14,101 in 1928. The number of passengers showed a decrease, the totals for 1928 and 1929 being 56,053 and 54,415 respectively.

The total freight passing through the canals aggregated 92,622,017 short tons, or an increase of 5,629,020 tons. Of the total freight tonnage, 71,840,016 were east-bound and 17,782,001 were west-bound. The leading items of east-bound freight carried through the United States canal were wheat, 201,522,937 bushels, grain, other than wheat, 49,732,469 bushels, and iron ore, 64,721,128 short tons which together with the tonnage carried through the Canadian canal brought the totals up to 225,421,673 bushels, 68,127,000 bushels and 64,827,025 tons, respectively.

Among the leading articles of west-bound traffic were 15,103,048 short tons of soft coal, of which 14,934,468 tons were carried through the United States canal and 168,580 tons through the Canadian canal. The total tonnage of hard coal was 729,321 of which 695,952 tons went through the United States canal and 33,369 tons through the Canadian canal.

**SAVINGS BANKS.** See BANKS AND BANKING.

**SAXONY.** The name Saxony is applied to three divisions of the former German Empire, the Republic of Saxony (formerly the Kingdom of Saxony), the former Grand Duchy of Saxony (now a part of Thuringia), and the Province of Saxony in Prussia.

**REPUBLIC OF SAXONY.** The third largest state of the German Republic, proclaimed a republic on Nov. 9, 1918. Area, 5786 square miles, population, according to the census of 1925, 4,994,281. The capital, Dresden, had a population in 1925 of 619,157. The largest city is Leipzig, with a population of 671,000. Other cities with over 100,000 in 1925 were Chemnitz, 333,851, and Plauen, 111,436. In proportion to its size, Saxony is the

leading state in German industry and rivals the chief industrial provinces of Prussia. In 1928 the area under cultivation was 2,491,435 acres.

Textile manufacturing is the chief industry, although mining and metal working are important. The production of coal in 1927 totalled 4,032,000 metric tons and of lignite 10,754,000 metric tons, the combined total having a value of 109,501,000 Reichsmarks. The output of 142 breweries in 1928 was 84,305,727 gallons of beer. The ordinary budget for 1928-29 balanced at \$100,716,555 and the extraordinary budget amounted to \$11,423,818. The present constitution of the Republic became effective Oct. 26, 1920. Premier in 1929, Herr Heldt (Socialist).

**SCALE.** See ENTOMOLOGY, ECONOMIC  
**SCANDINAVIAN LITERATURE.** This review includes the late books of 1928 in addition to the books of 1929, and is divided into Danish, Norwegian, and Swedish literature.

**DANISH.** *Poetry.* Johannes Vulf's *Kosmiske Sange* (Cosmic Songs) are dreamy, vague, and expressive of strong feeling. In *Den tredje Dag* (The Third Day), Poul La Coura portrays delicately man's inmost thoughts and feelings.

*Fiction.* Knud Andersen in *Perlemor* (Mother of Pearl) shows his usual familiarity with life on the sea and his usual ability to make it real to the reader. The book shows, also, strong sentiment and a deep understanding of religious problems. *Godaet på Månen* (The Estate on the Moon), by Aage Magelung, is worthy of mention for its beautiful descriptions of Swedish nature and for the strangeness of its hero, who leads a happy existence of dreams and hallucinations. This tendency away from reality to a kind of ethereal existence is seen also in Anker Larsen's *Sagnet der vokser ind i Himlen* (The Parish Which Reaches Heaven). A. C. Andersen's posthumous novel, *De stille i Landet* (The Peaceful in the Land), marked a return to the style of his first work, *Husmandens Datter*. Among collections of short stories we may mention Knud Hjørtoft's *Drømmen om Kvinden* (The Dream about Woman), characterized by a charming realism, a clever repartee, and a delicate use of language, and Johannes Bucholtz' *Fodspor i Støvet* (Footprints in the Dust), a mixture of autobiographical material and fine fancy, often running into the grotesque and improbable. The short stories found in Johannes V. Jensen's *Ved Livets Bred* (At Life's Shore) give the impression of a large background and make one feel the march of centuries.

*Religion, Biography, Criticism.* Paul Tuxen's *Buddha* is a scholarly and authoritative study of Buddhism and its present status. In Jeppe Aakjær's autobiography, *Fra min bitte Tid* (From My Short Years), the parts dealing with the author's mother are the best. *Scima Lagerlof*, by the German scholar, Walter A. Berendsohn, is an account of Lagerlof from the point of view alike of the man and of an appreciative understanding of the Swedish author.

**NORWEGIAN.** *Drama.* Helge Krogh's *Konkylien* (The Sea Shell) was staged under the supervision of the author himself. Nils Collett Vogt's *Forbi er forbi* (Past is Past) is a collection of four plays, perhaps the best ever written by the author. The great theatrical event of the season was the opening of the *Nye Teater* in Oslo.

*Poetry.* Charles Kent's *Den gode strid* (The Good Fight) is a collection of poems, manly, simple, full of heartfelt emotion, and free from

bombast. Alf Larsen's poetry has of late become more cheerful and more deeply pervaded by religious feeling. This is true also of *Med vdr under vingen* (With Spring under the Wing), which expresses a love of God and of nature. The religious element is strongly felt also in Edin Holme's *September-sol* (September Sun). Halldis Moren shows great lyric power in *Harpe og dolk* (Harp and Dagger).

*Fiction.* In *Helenes historie* (Helene's Story), Hulda Garborg tells in a realistic and gripping way the story of a girl who spends a part of her life in America. *Av skyggernes slægt* (Of the Family of Shadows), by Kristian Elster, Jr., shows an understanding of the times and a broad human sympathy. *Anakreons død* (Anacreon's Death), by far the best work written until now by Johannes Thorsen, gives a good picture of the life of Anacreon, a Christian in the nineties. In *Skogens eventyrer* (Adventures of the Woods), Mikkel Fønhus tells the story of a fox in an interesting manner. Among Landsmål productions are Peter Egge's *Han og hans døtre* (He and His Daughters), which depicts the conflict between the children and the plebeian conservatism of their parents, and Olav Duun's *Carolus Magnus*, which shows the danger of teaching a child that he is destined to become great.

*Literary Criticism.* Halvdan Koht added a second volume to his *Henrik Ibsen*. Olav Midtun wrote a short book on Aine Garborg.

**SWEDISH.** *Drama.* Per Lagerkvist's *Han som fick leva om sitt liv* (He who had to live his life), which is more realistic than the author's earlier plays, is permeated with a note of fatalism. In *Rembrandts son* (Rembrandt's Son), Tor Hedberg treats the old Ibsenian theme, a life calling, this time that of the artist. Hjalmar Bergman's *Patrasket* (Trash), which has literary merit combined with scenic effectiveness, was played with success.

*Fiction.* Albert Viksten's *Timmer* (Timber) gives a good picture of the industrial forest workers in northern Sweden. Although it is written objectively and dispassionately, we cannot help reading in it an indictment of the existing social order. *Långt från landsvägen* (Far from the Highway), by Vilhelm Moberg, the Swedish Thomas Hardy, is a sombre picture of life on the Swedish farm. Elin Wagnier feels with and for her characters and relates the everyday happenings of her story with a simplicity and charm that are rarely equaled. In *Skolorna flyga högt* (The Swallows Fly High), the noblest and most sympathetic character is a woman. Elin Bohlin's *Blenda* is the story of a girl who loved "not wisely, but too well" and who faces the consequences bravely. There is in this story much sympathy and humanity, and a few theories which, while not always orthodox, in some cases show a higher moral sense than that displayed by the exponents of conventional morality. In *Minnena* (Memories), E. Norlind tells the story of a couple who after a brief separation discover that the memories of their life together make the thought of a separate existence unbearable to either of them. Ryvind Johnson, the supreme master in the portrayal of human thought in its devious, broken, and often illogical path, gives a cross-section of modern life in his *Kommentar till ett stjärnfall* (Commentary to a Falling Star). Two excellent collections of short stories deserve mention. Sigfrid Siwertz' *Res-*

*kamraterna* (The Traveling Companions) and Ludvig Norström's *Svenskar* (Swedes).

**Memoirs and Criticism.** *Prostinan* (The Provost's Wife) contains memoirs and letters of Gunnar Wennerberg's mother, collected by his daughter, Signe Taube. In *Fredings sociala diktning* (Freding's Social Poems), Arne Munthe discusses Freding's poetry of the period around 1890. Einar Elg, Knit Hagberg, and Victor Svanberg contributed works on Viktor Rydberg. See also **PHILOLOGY, MODERN**.

**SCHAFF, MORRIS** An American army officer and author, died Oct. 19, 1929, in Southboro, Mass. He was born in Kirkersville, Ohio, Dec. 28, 1840, and was graduated in 1862 from the U. S. Military Academy. As second lieutenant of the Ordnance Corps, he entered the Civil War in 1862, was promoted to first lieutenant in 1863, and in 1864 was brevetted captain for gallant service in the Battle of the Wilderness. He resigned from the United States Army in 1871, and in 1882 was made inspector general of the Massachusetts Militia. General Schaff was the author of *Etna and Kerkersville* (1905), *Spirit of Old West Point* (1907), *Battle of the Wilderness* (1908), *Sunset of the Confederacy* (1912), *Jefferson Davis, His Life and Personality* (1922).

**SCHOOL AGE.** See **CHILD LABOR**.

**SCHOOLS.** See **EDUCATION IN THE UNITED STATES**.

**SCHURÉ, shu'ré, EDOUARD** A French musicologist, died in Paris, April 12, 1929. He was born in Strassburg, in 1841, and studied law and philology there. In 1867 he settled permanently in Paris. His chief works are *Histoire du l'écrit en Allemagne* (1868), *Le Dram musical* (1875), *Sourcins sur R. Wagner* (1900), *Précursurs et Reactions* (1904).

**SCHURIG, ARTHUR** A German author and critic, died Feb. 16, 1929. He was born in Dresden, Apr. 24, 1870, and studied at the universities of Leipzig and Berlin. He wrote *Wolfgang Amadeus Mozart* (1913), *Ihr vollkommene Spielesburger* (1927), *Die Legenden um Beethoven* (1927), *Der goldene Ball* (1927). He also translated and edited works by Mérimée, Flaubert, Balzac, Zola, and others.

**SCULPTURE.** Sculpture in America continued to be far behind painting in development, interest, and excellence, in spite of the fact that the largest exhibition ever held in the United States took place during the year. This exhibition, made possible by a gift of \$100,000 from Archer M. Huntington, was held in the California Palace of the Legion of Honor under the auspices of the National Sculpture Society of New York City. It opened in February and continued to be on view in San Francisco for six months. There were over 1200 pieces and 300 artists and the entries were valued at \$1,000,000. The sculpture exhibited included many monumental pieces, representing most of the better known American sculptors.

There were as usual very few exhibitions of sculpture alone, and some of these not of the best. An excellent exhibition, however, was shown in January, that of the French sculptor Duchamps-Villon which presented his work in wide range and offered an unusual opportunity to study "one of the few first-rate sculptors of modern times." Another worth-while exhibition was that of small bronzes by Bourdelle, doubly interesting because of the recent death of the artist.

**NECROLOGY.** The number of deaths of important sculptors included Emile Antoine Bourdelle, famous French sculptor and a great influence in his generation, the Italians, Vincenzo Gemito and Achille D'Orsi; Charles Gaffey, well-known American sculptor, also Emil Fuchs, sculptor and painter.

**BIBLIOGRAPHY.** Two publications of the National Sculpture Society coincidental with the exhibition of contemporary American Sculpture, *Contemporary American Sculpture* and *The Spirit of American Sculpture*, by Adeline Adams; *The American Renaissance*, a rather unduly pessimistic analysis of the present cultural status, but hopeful for the future, *Some Modern Sculptors*, by Stanley Cason, treating the period from Rodin to Epstein.

**SEAL FISHERIES.** See **ALASKA**.

**SEAPLANE.** See **AERONAUTICS**.

**SECREATIONS, INTERNAL, AND ENZYMES.** Considerable progress resulted during 1929 in the isolation of active principles of various glands of external and internal secretions. For the first time since its original discovery nearly a century previous, pepsin, the digestive enzyme of the stomach, was isolated in crystalline form by Dr. J. H. Northrup of the Princeton branch of the Rockefeller Institute. Insulin is considered as a drug under a separate section (see **INSULIN**), but we may add here that Professor Abel of Johns Hopkins, the first to isolate it in crystalline form, announced that only a fraction of the entire molecule possesses the therapeutic action seen in diabetes. Two hormones, each possessing a special functional and therapeutic efficacy, were isolated from the pituitary body by Kanam.

**SEISMOLOGY.** The time taken by an earthquake wave to travel from a focus near the surface to its antipodes is almost exactly 21 minutes. As the crust within and near the focus is for some days in a highly sensitive condition, it is possible that the return-pulsation may affect the frequency of after-shocks, and in examining the catalogues of the after-shocks of 11 great quakes, Davison detected a 42-minute periodicity in their occurrence. This periodic influence persists for several days as a rule, sometimes for several weeks, and after the great displacement that gives rise to a quake, the earth continues to throb for at least 10 days. The after-shocks seem to have two distinct origins, during the first five days, they result mainly from repetitions of the original movement, transferred in part to other regions, especially to those bordering the area of displacement, afterward, they are mostly produced by settlement of the displaced mass.

A search of the records of past earthquakes, by Terada and Miyabe, has shown that during the sixteenth century the locations of quakes in Japan and Eurasia moved farther south, while those in North America moved northward, i.e., they all tended to approach the equator; about the year 1600, this tendency was reversed, and they receded from the equator. By

1700 the Eurasian earthquakes began to move southward again, while those in South America began a new northward march shortly afterward. About 1800 the reverse tendency again appeared, while about 1900 a further reversal took place, successive quakes in Japan have recently shown a tendency to occur farther and farther north. It is suggested that this slow change in the latitude of quakes may possibly be due to a pulsation of the earth, whereby the equatorial protuberance alternately increases and decreases.

The Rev Francis A Tondorf, S J, a well-known seismologist, died November 29.

**SILANGOR - FEDERATED MALAY STATES**

**SENEGAL**, *sen'egal* A colony belonging to France on the west coast of Africa, under the Government of French West Africa (see **FRENCH WEST AFRICA**). Total area, 74,112 square miles, population in 1926, 1,318,287. Capital, St Louis, with a population in 1926 of 10,746 (Europeans, 1038). Other important towns are Dakar, the seat of the Government-General of West Africa, and a fortified naval station, population, 1926, 33,697 (Europeans, 2939), and Rufisque, population, 8953 (Europeans, 799).

Cotton is cultivated and a wild variety also is found, but the principal source of wealth consists of peanuts. Gum arabic, hides, rubber, and groundnuts also are produced for export. Total exports in 1928 amounted to 760,428,000 francs, of which 593,234,000 francs represented peanut shipments, and total imports to 895,536,000 francs (1 franc exchanged at 0.0392). Cotton piece goods, rice, coal, Guinea cloth, sugar, fuel oil, wheat flour, and automobiles were the chief imports. The local budget for 1927 totaled 134,442,000 francs.

Dakar is the only coaling station on the French West African coast. The administration is in the hands of a lieutenant-governor, assisted by a council of 40 members, 24 of whom are elected by the French citizens and 16 by representatives of the native chiefs. The colony sends one deputy to the French Parliament. Lieutenant-Governor in 1929, M. Jore, appointed in 1926.

**SERBIA**, A former Balkan kingdom which was proclaimed in December, 1918, a part of the new unitary Kingdom of the Serbs, Croats, and Slovenes, later (1929) officially named Yugoslavia. See **JUGOSLAVIA**.

**SERVISS**, GARRETT PUTNAM An American writer and lecturer on scientific subjects, died in New York, N. Y., May 24, 1929. He was born in New York, N. Y., May 24, 1857, and was graduated from Cornell University in 1872. Two years later he graduated from the law school of Columbia University, but he never practiced law. From 1882 to 1892, while an editorial writer for the *New York Sun*, he wrote for the paper anonymous articles on astronomical topics. Both his books and his lectures, for the most part on astronomical subjects, were popular.

**SEVENTH-DAY ADVENTISTS**. See **ADVENTISTS**

**SEVILLE EXPOSITION**. See **EXPOSITIONS**  
**SEWERAGE AND SEWAGE TREATMENT**. The United States Supreme Court decided Jan 14, 1929, that the Chicago Sanitary District could not legally divert water from Lake

Michigan to the Mississippi River system for the purpose of diluting and carrying sewage away from the lake to protect the water supply of Chicago. The decision was made in a suit (see **CALIFORNIA BOOKS**) brought by Wisconsin and other States to prevent the diversion on the ground of damage to navigation by lowering the level of the Great Lakes. The court did not pass upon the legality of diverting water from one drainage basin to its detriment for the benefit of another basin, holding it unnecessary to rule on that point because diversion to the injury of navigation is unwarranted. It ruled that some diversion was necessary at Chicago for the protection of Port of Chicago navigation against sewage pollution, but that the amount was not reasonable in comparison with the 8500 feet per second being diverted.

The court again appointed Charles E Hughes as referee in the case, this time to make specific recommendations for the device of the court, as to a programme for cutting down the diversion and as to what the diversion should be finally. After taking expert testimony and hearing arguments on both sides, Mr Hughes reported on December 17 advising that the diversion be reduced to a minimum of 1500 second feet by Dec 30, 1938, by stages as follows: 6500 feet by June 30, 1930, and to 5000 feet as soon as controlling works are built by the district to prevent the flow of the Chicago River into Lake Michigan in time of floods. This programme was based on the construction of additional sewage treatment works by the Sanitary District to be completed by stated dates. Several small and one large plant had been completed and another large one was under way at the close of 1929. (*Consult Engineering News-Record*, Jan 21, Dec 19, and Dec 26, 1929, for abstracts of the Supreme Court decision and Mr Hughes's findings and for a statement of the sewage treatment works already built at the close of 1929 and that must be completed at various dates in the following nine years.)

**BIBLIOGRAPHY** Revised editions of the following books appeared: Babbitt, *Sewerage and Sewage Treatment*, Folwell, *Sewerage*, Metcalf and Eddy, *American Sewerage Practice*, vol 1, "Design of Sewers" (all New York)

**SEX**. See **ZOOLOGY**

**SEYMOUR**, ADMIRAL OF THE FLEET, THE RIGHT HON SIR EDWARD HORACE An English naval officer, died in Maidenhead, Berkshire, on Mar 4, 1929. He was born Apr 30, 1840 and was educated at Radley. In 1852 he entered the Royal Navy, where he was promoted to commander in 1866, captain in 1873, rear admiral in 1889, vice admiral in 1895, and admiral in 1901. He served with distinction in the Crimean War in 1854-55, in the China War from 1857 to 1862, in West Africa in 1870, and in the Egyptian War (1882), he commanded H M S *Irish* from 1898 to 1900, he was commander-in-chief in China, during which time he had the distinction of commanding the ships of eight nations in the Boxer Uprising of 1900. He was commander-in-chief at Davenport in 1903-05 and, from 1905 to his retirement in 1910, he served as Admiral of the Fleet. He was knighted in 1897, and was given the Order of Merit in 1902. He published *My Naval Career and Travels* in 1911.

**SHAKESPEARE STUDIES**. See **PHILOLOGY**, **MODERN**.

**SHANNON POWER PROJECT**. See **IRISH FREE STATE**, under *Production*

**SHANTUNG**, shan'tōng'. One of the 30 provinces of China. In dispute between China and Japan after the Treaty of Versailles, it was returned to China by Japan in accordance with the agreement reached at the Versailles Conference. Area, 55,970 sq. miles; population, estimated at 30,803,245. See CHINA.

**SHARP**, DALLAN LORE. An American educator, naturalist, and author, died Nov. 29, 1929, in Hingham, Mass. He was born in Haleville, N. J., Dec. 13, 1870, was graduated from Brown University in 1895, and received the S.T.B. degree from Boston University in 1899. Ordained in the Methodist Episcopal ministry in 1895, he served as pastor of several churches until 1899. In that year he became assistant librarian at Boston University, assistant professor of English in 1902, and after 1902, until retirement in 1922, he was professor of English. He was a well-known naturalist, contributing to magazines articles on native birds and small mammals. His books also reflect his interest in nature.

**SHATTUCK**, FREDERICK CHEEVER. An American physician and educator, died in Brookline, Mass., Jan. 11, 1929. Born in Boston, Nov. 1, 1847, he was graduated from Harvard in 1868, receiving the A.M. degree in 1872, and the M.D. degree in 1873. He commenced his medical practice at Boston in 1875. Joining the Harvard medical faculty in 1879, he served as clinical instructor in auscultation and percussion until 1884, instructor in the theory and practice of physics, 1884-88, and Jackson professor of clinical medicine from 1888 until his retirement in 1912, when he was made professor emeritus. On his retirement he was elected overseer of Harvard University, serving until 1919.

**SHEEP**. See LIVESTOCK; WOOL.

**SHILOH**, EXCAVATIONS AT. See ARCHÆOLOGY.

**SHIP**, NAVAL. See NAVAL PROGRESS.

**SHIPBUILDING**. The total output of merchant shipbuilding launched in 1929

to the annual summary of the mere building of the world compiled by Lloyd's Register of Shipping, was 2,793,210 tons, or an increase of 93,971 tons as compared with 1928. These figures, as usual, did not include war-ships and took into account only merchant vessels of 100 tons gross and upward that were launched in 1929, whether they were completed during the year or were still under construction.

The vessels launched in 1929 included 27 vessels of 174,000 tons to be fitted with steam turbines and 25 vessels of 128,000 tons with a combination of steam reciprocating engines and turbines. Those to be fitted with internal-combustion engines amounted to 1,270,000 tons, as compared with 1,183,000 tons launched in 1928, representing 84.4 per cent of the world's output of steam tonnage as compared with 62.8 per cent in 1927, 29.50 per cent in 1924, and 7.75 per cent in 1921. The increase in the tonnage of motorships was indicated by the fact that at the end of 1929 there was under construction in the world 387,451 tons of motorships in excess of steam tonnage. The total steam tonnage of the year amounted to 1,504,000 tons, of which 410,000 tons included steamers fitted for burning oil fuel under the boilers, so that of the new tonnage only 39 per cent depended exclusively upon coal for propulsion.

Of the total number of vessels launched during the year, 1012 in number, there were 175 between 4000 and 6000 tons, 90 between 6000 and 10,000

tons, and 34 over 10,000 tons each. The largest six vessels launched during the year were as follows:

		Tons	Built in
Motorship	<i>Britannic</i>	26,840	Ireland
Turbine s.s.	<i>Empress of Japan</i>	25,000	Scotland
Motorship	<i>Yamato</i>	21,500	Japan
Turbo electric	<i>Prinzess Alice</i>	20,526	United States
Turbine s.s.	<i>Orontes</i>	19,970	England
Motorship	<i>Winchester Castle</i>	19,950	Ireland

In 1929, 49 vessels of 324,870 tons were launched for the carriage of oil in bulk, this number being exclusive of vessels of less than 1000 tons. The larger proportion of this tonnage was built on the Isherwood system of longitudinal framing, the total number being 33 craft of about 228,000 tons exclusive of those of less than 1000 tons.

The countries which built the largest shipbuilding outputs during 1929 were as follows:

	Tons
Great Britain and Ireland	1,522,623
Germany	249,077
Holland	186,517
Japan	164,457
United States	126,061
Denmark	111,496
Sweden	107,246

The table on page 750, from Lloyd's Register of Shipping, indicates the fluctuation in the year's totals of world's tonnage launched from 1913 to 1929. It may be noted that during the five years 1925-29 the average tonnage launched annually in the world was about 160,000 tons less than the average of the five pre-war years 1909-13. The following paragraphs show the items of interest in regard to the tonnage launched in various countries during 1929.

**GREAT BRITAIN AND IRELAND.** The output of Great Britain and Ireland in 1929, 1,522,623 tons, represented 54.5 per cent of the world's output and was 70,703 tons more than in 1928, in which year Great Britain and Ireland supplied 53.6 per cent of the world's tonnage as they did also in 1927, as compared with 48.2 per cent in 1926 and 58 per cent in 1913. The tonnage launched in England and Wales in 1929 amounted to 790,432 tons, in Scotland, to 588,336 tons, and in Ireland, to 143,855 tons. Distributed among the leading shipbuilding centres, the Clyde had 532,379 tons, the Tyne, 271,601 tons, the Wear, 245,511 tons, the Tees, 162,209 tons, and Belfast 143,855 tons. Of the total tonnage launched, 1,262,753 tons were for registration in Great Britain and Ireland and 259,870 tons were for owners in other countries, a percentage of 17.1 per cent comparable with 20.2 per cent in 1928 and an average percentage of over 22 per cent for the pre-war period 1909-13. Eighteen vessels of 10,000 tons and upward were launched, of which the largest were the motorship *Britannic*, 26,840 tons, and the turbine steamer *Empress of Japan*, about 25,000 tons. These were the largest vessels launched in the world during the year. Next came the turbine steamer *Orontes*, 19,970 tons, and the motorship *Winchester Castle*, 19,950 tons.

There were launched in addition 95 vessels of between 5000 and 10,000 tons each. Exclusive of vessels of less than 1000 tons, 25 vessels of 175,009 tons (12 steamers of 68,092 tons and 13 motorships of 106,917 tons) were launched during the year. Vessels fitted for burning oil fuel

launched during the year amounted to over 306,000 tons. Steam turbines were to be fitted to 15 vessels with a total tonnage of 107,477 and 10 vessels of 58,273 tons were to have a combination of reciprocating engines and low-pressure steam turbines. The 77 motorships of 464,188 tons launched during the year were equal to 44 per cent of the steam tonnage launched. Of these 22 were between 6000 and 10,000 tons each and 12, of over 10,000 tons. The average tonnage of steamers and motorships launched in Great Britain and Ireland, excluding vessels of less than 500 tons each, was 4443 tons.

GERMANY The tonnage launched in Germany during 1929, 85 vessels of 249,077 tons, showed a decrease of 127,339 tons from 1928. In the grand total were included two vessels of 12,080 tons fitted with steam turbines and 14 vessels of 65,186 tons with a combination of steam engines and low-pressure turbines. There

were also 28 vessels of 93,089 tons fitted with oil engines, the largest being the motorship *Mévauxée* of 16,889 tons. Three tankers of 26,217 tons—one a motorship of 8000 tons—were launched. In the year's totals two vessels exceeded 10,000 tons each; five were between 8000 and 10,000 tons; and 12 between 6000 and 8000 tons. It was interesting to note that 34 vessels of 111,576 tons were built for other countries, including 13 vessels of 49,086 tons for France.

HOLLAND The total tonnage launched in Holland during 1929 was 186,517 tons or the highest ever reached except in the record year of 1921 when 232,402 tons were launched. The 1929 total was 18,763 tons greater than the 1928. The figures, as usual did not include vessels intended for river navigation, of which a considerable tonnage is built annually in Holland. There were launched 11 vessels of over 6000 tons each, all of which were motorships. Five of these exceeded

\* Returns are not available as regards Germany and Austria-Hungary for the war period (1914-18) nor as regards Germany for 1919 and 1920

10,000 tons each, including the *Johan van Oldenbarnevelt* and the *Marna van St Aldegonde* of about 18,000 tons each. There were 48 vessels of 131,097 tons, or 70.3 per cent of the total output, to be fitted with internal-combustion engines.

**JAPAN** By an output of 104,457 tons, or an increase of 60,794 tons over the total for 1928, Japan stood fourth among the countries of the world with the largest total since 1921 when 227,425 tons were launched. In these figures are included 30 motorships of 134,673 tons, including the *Chichibu Maru* of 16,920 tons, the *Tatsuta Maru* of 16,780 tons, and seven others exceeding 6000 tons each. Of the total output 82 per cent was motorship tonnage. Two tankers of 15,942 tons also were launched.

**DENMARK** The tonnage launched during 1929, 111,496 tons, showed a decrease from the record figures for 1928, namely, 138,712 tons, but were the largest ever recorded with this exception. The largest vessel launched during the year was the *Amerika* of 10,300 tons, while the total motorship tonnage was 94,649 tons, including 14 vessels of 1000 to 6000 tons, one of 6866 tons and the *Amerika* already mentioned.

**SWEDEN** The tonnage launched in 1929, 107,246, slightly exceeded the record of the previous year, namely, 106,912 tons. In this were included 25 motorships of 104,490 tons, of which seven were between 6000 and 8000 tons and three tankers aggregating 23,400 tons.

**FRANCE** In 1929 France launched the motorship *Lafayette* of approximately 21,600 tons and the *Pelle Roussel* of about 17,000 tons. The country's total output of 81,607 tons was a slight increase over the 1928 total of 81,416 tons. The motorship tonnage, 62,928, was nearly four times the steam tonnage and in addition to the two ships mentioned included three vessels of between 6000 and 8300 tons each and two tankers of 16,213 tons. A turbine vessel of 4840 tons and a tanker of 7455 tons represented the steamer construction in excess of 4000 tons.

**ITALY** With an output of 71,407 tons there was a production of 12,857 tons higher than for 1928 but considerably lower than the post-war yearly average. There were launched a steamer of 6349 tons and a motorship tanker of 1450 tons. Internal-combustion engines were to be fitted on 20 vessels amounting to 55,447 tons or 77.5 per cent of the total output.

**UNITED STATES** According to *Lloyd's Register* the output for 1929 was 126,063 tons, or 34,706 tons higher than for 1928 but less than the average recorded for some years prior to 1928. There were six turbine steamers of 42,025 tons launched during 1929, including the *Pennsylvania*, a turbo-electric vessel of 20,526 tons built by the Newport News Shipbuilding & Dry Dock Co for the Panama Pacific Line of the International Mercantile Marine Company. There were two other vessels of 11,000 tons in which electric drive was employed, while the internal-combustion engine tonnage amounted to 36,452 tons. Three oil tankers or motorships of 12,303 tons were launched and one tanker of 1815 tons employing electric drive. In addition to the merchant tonnage built during 1929 the 10,000-ton scout cruiser *Salt Lake City* was completed by the New York Shipbuilding Company at Camden, N. J. Shipbuilding returns for 1929 were 126,063 tons. The *Engineering and Shipping Age* (New York) states there was an increase of 22.3 per cent in the amount of tonnage built in the

United States in 1929, as compared with the previous year. Merchant vessels of all types reported built and delivered during the year numbered 554 with a total gross tonnage of 284,226, the output of 54 shipyards, in 1928, 452 such vessels were built with a total of 231,531 gross tons, the output of 42 shipyards. Of the vessels completed in 1929, 27.1 per cent were propelled by steam, 15.7 per cent were motorships, and the remaining 57.2 per cent were barges and other non-propelled craft. The majority of the merchant vessels were built for foreign-trade use, and the increase in their construction was the result of the aid accorded shipowners by the mail contract provision of the Jones-White Merchant Marine Act of 1928 and of the construction loan fund created by that act.

**SHIPPING.** In June, 1929, according to *Lloyd's Register of Shipping*, the gross tonnage of seagoing steel and iron steamers and motorships amounted to 62,896,000 tons, as compared with 42,514,000 tons in June, 1914. These totals disregard sailing vessels and all wood vessels in view of their comparatively small importance in international trade. In this comparison reference should be made to the change that had taken place in the total tonnage of some types of vessels which are included in the above figures. Tankers had increased between 1914 and 1929 from 1,479,000 tons to 7,071,000 tons and motorships including sailing vessels fitted with auxiliary power from 234,000 tons to 6,628,000 tons. In 1914 the tonnage of steamers fitted for oil fuel was 1,310,000 tons, while the 1929 figures indicated 19,421,000 tons.

It was interesting to note that the idle shipping laid up throughout the world on Dec. 31, 1929, was less than that of any previous date since the World War. According to *Commerce Reports* (U. S. Department of Commerce) there were only 3,110,000 gross tons idle, a figure which represented a reduction of 858,000 tons or 22 per cent from January 1, and a reduction of 2,650,000 tons or 46 per cent from that of Jan. 1, 1926. As will appear from the table on page 752 most of the laid-up tonnage was in the United States, and most of the reduction had occurred in that country. During the year 1929 there was a reduction of 810,000 gross tons in idle tonnage, leaving a new post-war total of about 2,000,000 tons. An exception to this trend was to be noted

#### WORLD TONNAGE

[Number, gross tonnage, and description of vessels of 100 gross tons and upward belonging to each of the several countries of the world, June, 1929, as recorded in *Lloyd's Register*, 1929-30]

Notes.—A considerable number of vessels which are not completed appear in this table. Steamers of less than 100 tons gross and sailing vessels of less than 100 tons net are not included. Vessels trading on the Caspian Sea and wood or composite vessels trading on the Great Lakes of North America are not included. In the absence of satisfactory information, the record of most of the sailing vessels belonging to Greece, Turkey, and southern Russia are omitted from this table. Japanese sailing vessels are not reported in Lloyd's Register and therefore do not appear in this table. Under the heading "Country not stated" are included all vessels entered in Lloyd's Register without record of flag because definite information had not been received at the time these statistics were published, and under "Other countries" are grouped the figures for a number of countries because the tonnage owned by each country is comparatively small and therefore is not shown separately. The totals given above include steam, motor, and sailing vessels of steel, iron, wood, and composite in Great Britain and Ireland, where the idle tonnage was greater by 54,000 tons or 11.5 per cent on Dec. 31, 1929, than at the beginning of the year.

The year 1929, all things considered marked steady and substantial growth of overseas trade but with such growth the shipbuilding industry was a factor, acting to disturb the balance between average shipping and cargoes. See SHIPBUILDING. In most of the countries of the world the ocean borne imports and exports in 1929 exceeded the amount for the previous year. Thus in the United States such a trade for the first six months of 1929, excluding oils, totaled 29,837,000 long tons as compared with 26,196,000 tons in the corresponding months of 1928 or an increase of 12.6 per cent. In Germany the goods loaded and discharged at the principal ports during 1929 amounted to 41,707,000 metric tons, as compared with 40,217,000 tons in 1928, or an increase of 3.7 per cent. The goods loaded aggregated 13,804,000 tons or 6.6 per cent greater than in the previous year while the goods discharged totaled 27,913,000 tons, an increase of 2 per cent.

During the year a new transatlantic record was made by the North German Lloyd Company's steamship *Bremen* to which reference was made

\* Figures as of July 1, 1929

in the YEAR BOOK for 1928. On her maiden voyage in July the *Bremen* made an average speed of 27.81 knots, taking the record from the *Mauritania* which made an average speed of 20.25 knots in 1924. The *Mauritania*, it is interesting to state, in August, 1929, improved her record of three years previous with an average speed of 27.22 knots. The *Bremen* reached New York on July 22, 1929, having reduced the previous Chebourg-to-New York record by eight hours and fifty-two minutes, covering the distance in 4 days, 17 hours, and 42 minutes. Leaving New York on July 27 the steamer made a record crossing in 4 days, 14 hours, and 30 minutes on the return voyage to Plymouth, England. The North German Lloyd Company's *Europa*, sister ship of the *Bremen*, launched in 1928, was severely damaged by fire while under construction at Stettin, delaying completion until 1930.

**SHIPWRECKS** See SAFETY AT SEA

**SHOES, SHOE INDUSTRY** See BOOTS AND SHOES

**SHOOTING** Sergeant J. B. Jensen, U. S. Cavalry, from Fort Bliss, Tex., captured the national rifle championship for 1929 in the tournament held in July at Camp Perry, Ohio, succeeding Carl Cagle, U. S. Marine Corps, as titleholder. The United States Infantry won the team title. One of the features of the season was the breaking of 100 targets by Mrs. A. Troepfer, who for the one hundredth time since she took up the sport.

Trapshooting retained its popularity, with many of the golf and yacht clubs throughout the country holding weekly contests at the traps. Mose Newman, of Sweetwater, Tex., captured the Grand American championship while Mrs. Norman Tilg, of Houston, won the honors in the women's event. Fran Tiech, of Portland, Ore., took the amateur title and the Illinois team carried off the honors in the team race.

**SIAM, Siam** An independent monarchy in southeastern Asia, bounded on the west by Burma, on the east by French Indo-China, and

on the south by the Gulf of Siam Capital, Bangkok, reigning King in 1929, Prajadhipok, of Sukhodaya

**AREA AND POPULATION** The area is estimated at 200,149 square miles and the population, at the census of 1929 was 11,506,000 (2,208,845 more than in the year 1919), including about 8,000,000 of the Thai people, of original Siamese, 500,000 Chinese, and a considerable Malay element in the South Bangkok in 1927 had about 550,000 inhabitants In 1927 28, 140,102 deck passengers, mostly from China, arrived at Bangkok and 63,765 departed

**PRODUCTION** Agriculture is the principal occupation of the population and rice is the chief article of production as well as of export Fishing, the extraction of teakwood, mining, and rice milling are the other leading industries In 1926-27 there were 7,216,000 acres, or 6 per cent of the total area, under cultivation, 90 per cent of which was devoted to rice The rice crop in 1927 amounted to 6,261,000,000 pounds of which 2,007,000,000 pounds, valued at \$73,575,000, was exported The crop harvested in 1928 was considerably smaller and in 1929 a prolonged drought further reduced the rice output Tin production in 1928 totaled 781.3 metric tons Other minerals mined are tungsten, coal, zinc, manganese, and antimony The government controls the manufacture of prepared opium for smoking

**COMMERCE** For the fiscal year ending Mar 31, 1929 exports were valued at 252,000,000 bahts (\$110,880,000), as compared with 276,000,000 bahts (\$121,440,000) during the preceding year, and imports at 189,000,000 bahts (\$84,160,000), as against 201,000,000 bahts (\$88,441,000) in 1927-28 The decline in export values was chiefly due to the drop in the prices of tin and rubber and the smaller exports of rice Exports of copra increased in value to \$2,200,000 and shipments of teak and stick-lac rose to \$440,000 for each commodity With the exception of 1920-21, the balance of trade of Siam has been consistently favorable Imports from the United States in 1928-29 amounted to \$2,860,000, as compared with \$2,430,000 in the preceding year

**FINANCE** The budget for 1929-30 calculated expenditures at 98,000,000 bahts (\$43,120,000) and revenues at 106,000,000 bahts (\$46,640,000) The expected surplus was to be applied to the reduction of the public debt For 1928-29, the government estimated expenditures at 99,982,000 bahts and receipts at 100,628,000 bahts, while revised estimates for 1927-28 placed expenditures at 100,016,000 bahts and revenues at 100,550,000 bahts The public debt on Mar 31, 1929, amounted to 411,640,000, all of which was floated in London In 1928-29 the average exchange rate of the baht was \$0.44

**COMMUNICATIONS** The railways of Siam, most of which are owned and operated by the government, constitute one of the most efficient systems in the Far East In 1927 the state railways had 1701 miles of line, which in the fiscal year ending March 31 carried 6,095,000 passengers and 1,113,000 long tons of freight, earning gross receipts of 16,857,000 bahts (\$7,506,000) In the same year there were 4427 miles of telegraph and telephone line, also government owned The port of Bangkok handles about 85 per cent of the total trade In 1927-28 a total of 1183 ships of 1,227,485 net registered tons entered and 1183 vessels of 1,279,374 tons cleared the port

**GOVERNMENT** Executive power is vested in the

King, who is assisted by a consultative council of four elder statesmen of the royal household, and by an advisory cabinet council . . . the ministers of state and other high cabinet council functions as the legislative arm of the government, King Prajadhipok, who was born Nov 8, 1893, succeeded to the throne on the death of his brother, Rama VI, on Nov 26, 1925

**SIBERIA.** A vast area in northern Asia divided into a number of administrative units forming part of the Union of Soviet Socialist Republics Official Soviet sources estimated the area in 1929 at 15,764,504 square kilometers (6,086,681 square miles) and the population at about 23,722,771 The territory was divided administratively as follows

SIBERIA ADMINISTRATIVE UNITS		
	Area (sq km)	Population
Far Eastern Area	2,846,323	1,805,837
Yakutsk Aut S S R	3,769,000	236,728
Buriat Mongol Aut S S R	419,000	484,361
Siberian Area	4,028,615	8,667,871
Kazak Aut S S R	2,924,918	6,580,528
Kirghiz Aut S S R	246,000	997,441
Ural Area (Asiatic section)	1,510,628	5,006,000*
	15,764,504	21,722,771

\* Approximate figure

About 90 per cent of the population in 1929 was engaged in agriculture and stock raising Exploitation of the vast mineral and forest resources of the territory was only in the preliminary stages Siberia is one of the world's most important sources of furs Fishing is carried on to a considerable extent particularly in the Far Eastern Area It was estimated in 1927 that the total crop acreage was 7 per cent above the pre-war figure and that the wheat acreage had increased to 50 per cent of the total area, as compared with 45 per cent in 1923

Mining activities centred mainly in the Ural Area, the Siberian Area, and the Far Eastern Area The Ural Area has great non-ore reserves, the Kunznetsk Basin containing large deposits of high grade coal, iron, manganese, gold, copper, and other minerals Siberia's main transportation line is the Trans-Siberian Railway, which extends a distance of 4491 miles from Sverdlovsk, capital of the Ural Area, to Vladivostok on the Pacific coast In 1929 a 950 mile railway line linking Siberia and Turkestan was under construction at a total estimated cost of about \$113,500,000 There was an air line in operation between Yakutsk, capital of the Yakutsk Republic, and Irkutsk in 1929 See RUSSIA

**SIERRA LEONE, se-erra le-oh-neh** A British colony and protectorate on the west coast of Africa bounded by French Guinea on the north and Liberia on the southeast The approximate area of the colony is 4000 square miles and the population, according to the census of 1921, 85,163, of whom 1161 were Europeans The chief city is Freetown, with a population in 1921 of 14,142

The protectorate is situated between 6° and 10° N latitude and 10° and 14° W longitude, and its greatest extension inland is 180 miles Area, 27,000 square miles, population, according to the census of 1921 1,456,148, of whom 1,450,003 were natives The chief exports are palm kernels, kola nuts, palm oil, and ginger It is divided into three provinces, with a European commissioner at the head of each. The governor

and commander-in-chief of the colony is also governor of the protectorate. He is assisted by an executive and legislative council Governor and commander-in-chief in 1929, Brig Gen. Sir J. A. Byrne.

**SIFTON**, SIR CLIFFORD A Canadian statesman, died Apr 17, 1929, in New York City. He was born Mar 10, 1861, in the county of Middlesex, Ont., and was educated at Roys' College, Dundas, and at Victoria University, Coburg. Called to the Manitoba bar in 1882, he practiced in the city of Brandon, and in 1895 was created Queen's Counsel by Dominion patent. From 1888 to 1896, he served as a Liberal in the Manitoba Legislature for North Brandon, and, after 1891, was also Attorney-General of Manitoba and Minister of Education. During these years, he codified the civil laws of Manitoba and conducted

with the Dominion authorities re-schools of the province. In 1896 he became Minister of the Interior and Superintendent-General of Indian Affairs in the administration of Sir Wilfrid Laurier. He resigned in 1905 because he disapproved the educational clauses in the bills establishing the northwest provinces of Alberta and Saskatchewan. First elected to the House of Commons in 1896, he served until 1911, when he resigned on grounds of opposing the proposal for a reciprocal trade agreement with the United States.

**SILESIA**, si-le'sha. The term applied to (1) a province of Czechoslovakia, including the former Austrian crownland of Silesia and a small section of Germany ceded by the Versailles Treaty, area, 1708 square miles, estimated population Jan 1, 1927, 721,500, (2) a county of Poland, including 1241 square miles detached from German Upper Silesia following a plebiscite in 1921 and Teschen Silesia, detached from Austria, by the Versailles Treaty, total area, 1633 square miles, population at the census of 1921, 1,124,967, and (3) the two Prussian provinces of Lower Silesia and Upper Silesia, the respective areas of which on Apr 1, 1925, were 10,276 and 3746 square miles, respective populations on the same date, 2,988,511 and 1,299,144.

**SILK**. The 1929 raw-silk crop of the world was estimated to be the largest on record, as indicated in the accompanying table, with the pro-

duction of Japan, 72,366,000 pounds, considerably in excess of that of any other country. The Yokohama spot price of raw silk, which at the beginning of the year was 1365 yen, reached a maximum of 1420 yen on April 24, and then declined to as low as 1160 yen on December 26, at which time the New York 90-day exchange rate for 1 yen was \$0.4975, the lowest price quoted since the Japanese earthquake of 1923. The cause of the depression was an increased supply in the Yokohama and Kobe markets on account of the desire of dealers to obtain cash for their stocks, and lower prices in the New York market. The Japanese market also was in an unstable condition on account of the preparatory steps for lifting the gold embargo. In China the spot price for 14-16 Canton silks was the lowest on record, sales being reported late in December at \$3.20 a pound. The condition was largely due to weakness of the exchange on account of heavy stocks of silver on hand in China and an excess of supply of this metal throughout the world. The New York raw-silk market showed stability for the greater part of the year. Quotations averaged around \$5.10 per pound for the first quarter, advanced to \$5.25 on May 1 as a result of good trade conditions and depleted stocks, declined to \$4.75 about the middle of June in anticipation of the new crop in Japan, advanced to \$5.15 the later part of August and \$5.30 in the early part of September, and gradually declined after the stock market crash in October to \$4.55 at the end of the year.

**SILK, ARTIFICIAL**. See RAYON.

**SILVER**. World production of silver in 1929 was over 5,000,000 ounces—or about 2 per cent more than the 1928 output. Consumption, affected largely by conditions in the Orient, was evidently much smaller, for the price of the metal dropped from 57 cents an ounce early in the year to 46 cents an ounce at its close. Inasmuch as the rate of production of silver is determined largely by the scale of lead- and copper-mining operations, of which it is an important by-product, the fall in price made slight difference in the rate of production, with the exception of Mexican mines, many of which produce only silver. The table on page 755, compiled from government sources, indicates world production in 1929.

WORLD RAW SILK PRODUCTION, INCLUDING TUSSAH SILK  
(Compiled by the Statistical Bureau of the Silk Association of America)

	1928-1929 * Pounds	1927-28 Pounds	1926-27 Pounds	1925-26 Pounds	1924-25 Pounds	1923-24 Pounds

\* Estimated

<sup>b</sup> The total production of raw silk in China is an unknown quantity, therefore export figures have been used

<sup>c</sup> Excludes tussah silk

The domestic consumption of raw silk (including tussah) in China is estimated to be 52 per cent of the production. The exports from Canton and Shanghai during the season 1928-29 were 19,400,000, which would indicate a crop of approximately 41,000,000 pounds. The Japan crop was estimated at 87,500,000.

## WORLD SILVER PRODUCTION, 1929

Country	Ounces Produced	
	1928	1929
United States	56,149,000	60,857,000
Mexico	108,000,000	108,000,000
Canada	21,922,000	22,089,000
Peru	20,541,000	21,169,000
Australia	10,500,000	11,000,000
Elsewhere	40,888,000	40,441,000
Total	257,980,000	263,000,000

Saturation of the market, combined with unsettled conditions in China, was indubitably the reason for the fall in the price of the metal, a fall which was hastened by the failure to curtail production to the demand. Stocks on the Shanghai exchange had been very greatly increased and rumors of a reversion to gold standards did not help. The fluctuation of the market naturally decreased the purchasing power of India, China, and Mexico considerably.

The U S Bureau of the Mint, with the co-operation of the Bureau of Mines, prepared the following statement of the preliminary estimate of refinery production of silver in the United States during the calendar year 1929 based on arrivals at United States Mints and Assay Offices and at private refineries. This preliminary estimate indicated a production of 60,937,600 ounces, or an increase in silver output, as compared with 1928, of 2,475,093 ounces. The year of largest output, 1915, produced 74,061,075 ounces silver.

## ESTIMATED PRODUCTION OF SILVER IN THE UNITED STATES, 1929

States	Ounces	Value*
Alaska	459,346	\$ 245,285
Alabama	2	1
Arizona	6,036,942	3,223,727

Total	60,937,600	\$32,540,678

\* Value at 53 1/2¢ per ounce, the average New York price of bar silver.

**SIMMONS COLLEGE.** A nonsectarian college for women in Boston, Mass., founded in 1899. The enrollment on Nov. 1, 1929, was 1520. The faculty numbered 140. The productive funds of the institution amounted to \$3,209,551 and the income for the year was \$512,957. The library contained 45,841 volumes. President, Henry Lefavouri, Ph D., LL D.

**SIMON COMMISSION.** See INDIA, under HISTORY.

**SINCLAIR, HARRY F** See UNITED STATES, under JUDICIARY.

**SINGAPORE.** See STRAITS SETTLEMENTS.

**SINGING.** See MUSIC.

**SINTERING.** See METALLURGY.

**SKATING.** The only person to break more than one speed-skating mark in 1929 was Miss Loretta Neitzel who on February 3, at Minneapolis, set new records for the quarter-mile and the mile events. Her time for the first-named race was 0 30 3/4 while her time for the mile was 3 10 1/4. The only other woman who set a new record during the year was Miss Elsie Muller who defended her Middle Atlantic championship honors at Bear Mountain, N Y, January 10. Miss Muller skated the furlong in 0 22 Edward Seales set a record for the 220-yards on the same date, skating the distance four seconds faster than Miss Muller. Valentine Kulis took the laurels at the Lake Placid races in February by winning the 2-mile event in the world's record time, 5 35 1/4. Clas Thunberg, the Norwegian star, retained his European honors by doing marvelous work at Davos, Switzerland, in the middle of January.

The national figure skating championship test was held in New York City in February and the men's event went to R F Turner of Boston, while a Vinson of the same city carried off the honors in the women's events. The world's figure skating title test was held at Budapest and the men's title went to Gilles Grafstrom, while sixteen-year-old Sonja Henie, of Norway, took the women's crown for the third year in succession.

Jack Shea won the North American speed-skating title at Saanach Lake in February, followed by Bialis and Allen Potts in that order.

## SLAVIC LANGUAGES AND LITERATURE. See PHILOLOGY, MODERN.

**SLOSSON, LEWIN ELMER** An American chemist, author, and editor, died in Washington, D C, Oct. 15, 1929. He was born in Albany, Kan, June 7, 1865, and was graduated from the University of Kansas in 1890, receiving the Ph D degree from the University of Chicago in 1902. In 1891 he became head of the department of chemistry at the University of Wyoming and at the same time chemist at the Wyoming Agricultural Experiment Station. From 1903 to 1920, he was literary editor for the *Independent*, during which time (1912-20) he was also associate in the Columbia University School of Journalism. After 1921 he was director of *Science Service*, an agency in Washington for disseminating popular knowledge about scientific subjects. Dr Slosson was able to present scientific subjects in a lucid, popular manner. His *Creative Chemistry* (1919) became popular at once, and was adopted as a supplementary book in chemistry courses of many colleges and universities.

**SMALLMAN CHOIR.** See MUSIC.

**SMALLPOX AND VACCINATION.** Post-vaccinal encephalitis has been recognized since 1923 and can be traced as far back as 1912. Most of the cases have been reported in Holland and England with scattering examples in most of the other European countries. A recent inquest in Germany brought to light about 90 cases beginning in 1912, and Dr H G Huber reported 3 new cases in the *Deutsche medizinische Wochenschrift* for August 16, all following first vaccinations of very young children (under 3 years of age). One of the cases which developed 24 days after vaccination was of doubtful nature, for the maximum incubation period had been fixed at 15 days. All of the patients recovered. This study owes its importance to the fact that Dr. Huber, aided in the laboratory by

Professor Gildemeister, sought to establish a criterion for the same recognition of the disease—the inoculation of the rabbit cornea with the cerebrospinal fluid. The test was made in four cases, one in the practice of another colleague, and proved negative in all but the first, in which the puncture had been made as soon as the disease appeared in all of the negative cases, puncture was not made until about three weeks after vaccination, after there had been plenty of time for the virus to disappear from the spinal fluid.

**POST-VACCINAL ENCEPHALITIS IN THE UNITED STATES.** This new and rare sequel of vaccination was for some years confined to the continent of Europe, including Great Britain, and as far as known no case had been anywhere reported in the Western Hemisphere. In the *Journal of the American Medical Association* for April 27, however, we find a case reported without comment from East St. Louis, Ill., by Drs Fulham and Beykitch. This case ended fatally. The patient, a boy of 6 years, was vaccinated presumably with many other school children who had been exposed to smallpox, on December 1, and on December 8 the normal vesicle of vaccination had developed. On the 13th, the boy complained of headache and later of symptoms suggestive of meningitis. On the 17th, he was removed to the hospital and death took place on the following day. There was no rise of temperature until just before death. The complete picture of meningitis did not develop and the symptoms of muscular rigidity gave way to paralysis of the extremities. Mental lethargy passed into unconsciousness and coma. The boy seemed quite sound when vaccinated and no other case developed among the vaccinated. Autopsy did not extend to the brain.

**SMAREGLIA, ANTONIO.** A distinguished Italian composer, died in Grado, Austria, April 15, 1929. He was born in Pola, Istria, May 5, 1854. He studied in Vienna and Milan, and became an ardent champion of Wagner. He became totally blind, but continued his creative work, dictating his compositions, and even teaching composition at the Trieste Conservatory as late as 1921. His works consist of a symphonic poem, *Elencora*, and the operas *Preziosa* (Milan, 1870), *Bianca da Cerina* (Milan, 1882), *Re Nala* (Venice, 1887), *Il Vassallo di Szeged* (Vienna, 1889, New York, 1890), *Cornell Schut* (Vienna, 1892), rewritten as *Pattori flamenghi* (Trieste, 1924), *Azzea Trasfrane* (Trieste, 1895), *La Falcena* (Venice, 1897), *Orcana* (Milan, 1903), *Noite di San Salvatore* (Pola, 1907), and *L'Idraro* (Milan, 1914).

**SMARTT, THE RT HON SIR THOMAS WILLIAM.** A South African political leader, died April 17, 1929, in Cape Town, South Africa, at the age of 70. An Irishman by birth, he studied for the medical profession at the Royal colleges of Physicians and Surgeons of Ireland and first went to South Africa as a ship's surgeon. Settling there, he entered politics in 1894 when he entered the Cape Assembly as a member for Beaufort West. He was Colonial Secretary in the Sprigg Ministry in 1898, Commissioner of Public Works in 1900, and Commissioner of Crown Lands and Public Works in 1904. During 1921-24 he was Secretary for Agriculture in the Union of South Africa.

**SMELTING.** See **METALLURGY.**

**SMITH COLLEGE.** A nonsectarian college for women in Northampton, Mass., founded in

1871. The enrollment for the autumn of 1929 was 2067, including 80 graduate students, 18 noncollegiate students, and 39 juniors studying in France. The registration in the 1929 summer session was 151, schools in music, Italian, and social studies being conducted. There were 227 faculty members. The productive funds amounted to \$5,303,097, and the income from funds was \$284,864. The library contained 165,322 volumes. Two new dormitories were under construction in 1929. President, William Allan Neilson, Ph.D., LL.D., LL.D., Litt.D.

**SMITHSONIAN INSTITUTION.** An organization founded in 1846 according to the terms of the will of James Smithson of England, who, in 1826, bequeathed his property to the United States of America "to found at Washington, under the name of the Smithsonian Institution, an establishment for the increase and diffusion of knowledge among men." In receiving the property and accepting the trust, Congress determined that the Federal Government was without authority to administer the trust directly and, therefore, constituted an "establishment" whose statutory members are the President, the Vice President, the Chief Justice, and the heads of the executive departments. The affairs of the institution are administered by a board of regents, whose membership consists of the Vice President, the Chief Justice, three members of the Senate, and members of the House of Representatives, together with six other persons, other than members of Congress, two to be residents of the city of Washington and the other four of different States. The chancellor of the institution in 1929 was Chief Justice Taft.

The enterprises supported wholly by congressional appropriations but administered by the Smithsonian Institution include the National Museum, the National Gallery of Art, the Bureau of American Ethnology, the International Exchange Service, the National Zoological Park, the Astrophysical Observatory, and the U. S. Regional Bureau of the International Catalogue of Scientific Literature. It also administers the Freer Gallery of Art.

The unrestricted income of the institution, averaging about \$65,000, is derived from interest on its endowment funds, which in 1929 amounted to a little more than \$1,000,000. The institution also is charged by Congress with the disbursement of the government appropriations for the support of the bureaus under its administrative charge. Secretary, Dr. C. G. Abbot, assistant secretary, Dr. Alexander Wetmore.

**SMUTS.** See **BOTANY**, under *Pathology*.

**SNUFF.** See **TOBACCO**.

**SOCCER.** After more than a year of warfare which caused the American Soccer League to break away from the parent body, the United States Football Association, the leaders of the game, succeeded in settling up in October. This resulted in the formation of the Atlantic Coast Soccer League, which practically took the place of the old American league with almost the identical content. The Preston North End Football Club of England was the lone British team to visit the United States during 1929. The visitors won seven matches, tied two, and lost two. Hakoah, which joined together the leading

Jewish players in this country, captured the national challenge trophy by defeating the Madison Kennel Football Club of St. Louis in the finals, March 31 and April 7. Hakoah downed the New York Giants in the semi-finals while the Madison team had beaten the Sparta A. A. of Chicago. In the competition for the cup offered by the newly formed New York State Football Association, the New York Giants, after victories over Hakoah and Bethlehem, emerged as winners of the trophy. The national Amateur Cup was won by the Hakoah Football Club of Heidelberg, Pa., which defeated the First German Football Club of Newark in the final at Newark in April. In the college ranks Penn State achieved the best record.

**SOCIAL ECONOMICS.** See CHILD LABOR, COOPERATION, LABOR LEGISLATION, MATERNITY PROTECTION, MINIMUM WAGE, OLD-AGE PENSIONS, STRIKES AND LOCKOUTS, WOMEN IN INDUSTRY, ETC., also LITERATURE, ENGLISH AND AMERICAN.

**SOCIAL INSURANCE.** See MATERNITY PROTECTION, OLD-AGE PENSIONS, UNEMPLOYMENT, WELFARE WORK, WORKMEN'S COMPENSATION.

**SOCIALISM.** With the election of Socialist governments in Great Britain and Australia, the unusually high vote polled by Norman Thomas in New York's mayoralty campaign, and the efforts made by a group of intellectuals to create an American counterpart of the British Independent Labor movement, Socialism in 1929 became common currency again. While the term Socialism, as applied to European political parties is of frequent occurrence, the fact is that most of the European Socialist parties are really liberal organizations. In France, for instance, the Radical Socialist party is made up, for the most part, of small-town business men, artisans, and small farmers. Similarly, in Czechoslovakia (where elections were held in 1929), the Social Democrats in reality are a trade-union group and as conservative in their tendencies probably as is the American Federation of Labor. The National Socialists of the same country, headed by Edward Benes, are even less liberal than the trade unionists. Indeed, no so-called Socialist party in any country of Europe is socialist in the pure meaning of that term. The Communists are really Socialists. In other words, these groups are the only ones which adhere completely to the original Marxist programme. Even the Communist parties in Germany have in recent times been developing right tendencies. In fact, the only Socialist party in 1929 in control of a political government anywhere was in Russia. Now generally, and perhaps erroneously, the term Socialism was being applied in European politics could be seen in France, where there were four parties in the Chamber of Deputies which had the word Socialist in their title. These were the Republican Socialists, the French Republican Socialists, the Radical Socialists, and the United Socialist party. The fact is, the term Socialist was even employed by the Poincaré group which had called itself the *Gauche Sociale et Radicale* (the Social and Radical Left).

**GREAT BRITAIN.** The election of the Socialist Ramsay MacDonald government in Great Britain is described in greater detail under **GREAT BRITAIN, History.** The twenty-ninth annual conference of the Labor party which was held at Brighton, September 30-October 3, indicated that

the party had definitely purged itself of its Communist elements. In the absence of the Premier, who was on his historic trip to Washington in the interests of armament limitations, leadership at the conference was taken by Philip Snowden, Chancellor of the Exchequer, Arthur Henderson, Foreign Minister, and J. H. Thomas, Lord Privy-Seal.

**AUSTRALIA.** In October, the Australian general election substituted a Labor majority of a dozen in the Lower House of the Commonwealth Parliament for the same majority held by the Nationalists, returned by the election of last year. See **AUSTRALIA** under *History*. At the end of 1929, Labor controlled a majority of the votes in Southern Australia and Tasmania, up to the middle of the year, it was the dominant party in Queensland, and in the most important states of New South Wales and Victoria, it constituted the most powerful single party. See **LABOR ARBITRATION AND CONCILIATION**.

**UNITED STATES.** In the United States, the year saw a renewal of interest in the Socialist movement. In May, a group of intellectuals began to lay plans for the creation of an American counterpart of the British Independent Labor party. This group, calling itself the League for Independent Political Action, set forth its purpose as being "to carry on research, educational work, and agitation among the workers, both organized and unorganized, in industry and agriculture, in order to stimulate any existing and potential Labor organizations, as well as a progressive and realistic Labor spirit and activity in all its phases: trade union, political, and educational." The statement of principles attacked the tactics of the Communists and the A. F. of L. leaders. Of the American Federation of Labor, the manifesto said: "The situation has not been met by the present officials of the trade-union movement, largely dominated by the boss psychology of the national civic Federation."

The group set up the following basic principles for organization: (1) To educate workers to demand a complete programme of social insurance, (2) to extend the sphere of trade-union influence and effectiveness, particularly by the promotion of organization along industrial lines of the skilled, semi-skilled, and unskilled workers in basic industries, (3) to encourage uncensored working-class education, (4) to establish the fullest possible development of genuine farm and labor cooperatives, (5) definite political party action by labor in elections, (6) the establishment of a centralized research agency, in order to study the new problems of labor technique and industrialism, (7) the organization of the workers of the country for social and industrial justice.

Later in the year, the League elected Prof. John Dewey, of Columbia University, as its chairman and Howard Wyle Williams, as its executive secretary. Besides Professor Dewey, the members of the executive committee included such well-known names as Prof. Paul H. Douglas, W. E. B. Du Bois, Sherwood Eddy, Harry W. Laidler, James Meldon Johnson, Robert M. Lovett, James H. Maurer, A. H. Muesel, Joseph Schlossberg, Norman Thomas, E. C. Lindeman, Oswald G. Villard, and Baine G. Vladeck.

The Inter unusually large vote of Norman Thomas in the New York mayoralty campaign brought to the fore further efforts to strengthen

the Socialist movement in the country. Mr Thomas polled in the neighborhood of 170,000 votes, the heaviest Socialist vote ever recorded in a municipal election in New York. See *NEW YORK under Political and Other Events*

Norman Thomas and Morris Hillquit, leader of the Socialist party of the country, however, both rejected the creation of a liberal group in New York City that was not based upon Socialist principles. Both genuine third-party movement in New York work through the Socialist party and by the creation of a Socialist machinery. The New York Socialist party indicated the basis of action upon which it would operate when, late in November, it sent out a call for a conference of labor, liberal, and progressive groups to be held early in 1930 for the purpose of bringing into the 1930 New York State campaign an independent Coalition party. The Socialist party announcement said "We are prepared to cooperate in such a coalition on the basis of its acceptance of a programme of social control." In other words, the American Socialist movement insisted upon sticking steadfastly to its original Socialist doctrine, despite the fact that it knew as well as did the liberals that a nonpartisan movement might succeed in electing Norman Thomas as mayor of New York. These matters were further clarified in a two-day convention held in New York City, November 23-24. A programme for the party was adopted with the following leading principles: (1) The Socialist party is based upon a well-defined body of doctrine. Within these limits, it welcomes all men and women who accept its fundamental principles, without distinction of class, creed, or race, and is willing to accept the widest latitude of individual opinion. (2) The Socialist party does not claim a monopoly of progressive or labor politics and is willing to meet with any group that gives promise of uniting the workers and progressive citizens into a political party. Since, however, the Socialist party is the only political group in the country committed definitely to a programme of political reform, it believes the best interests of labor can be served by the continuance of the Socialist party organization. (3) In the city of New York, the Socialists will continue to cooperate with nonpartisan groups, with the understanding, however, that the Socialists will never abandon their fundamental doctrines or relinquish their distrust of the two dominant political parties. (4) The Socialist party is not committed to its name and will not hesitate to change it if any good reasons manifest themselves.

**COMMUNISTS** The American Communist movement was split wide open by the expulsion of Jay Lovestone, its undisputed leader, from the party. This action was taken by the Communist International in July. After having invited Lovestone, Gitlow, Wolfe, and Pepper to Moscow, the Comintern, after a lengthy review of the American situation, ruled that factionalism was disrupting the American Communist movement and that Lovestone's expulsion was the only guarantee of complete loyalty to Moscow leadership. The action of the Comintern against Lovestone and his followers appears to have been the culmination of six years of bickering in the local party. The factional quarrel reached a climax in March, 1929, at the annual conference of the Communist party. The convention apparently was a continuous ovation for

Lovestone, who appears to have controlled 105 out of 108 delegates in attendance. The dissenting vote was that of W. Z. Foster, former American trade-union official and organizer of the unsuccessful steel strike. With the removal of Lovestone, the American Communist movement appeared to be hopelessly divided. The leader accredited by Moscow was Foster, though the Lovestone group still claimed to have the adhesion of the majority of the Communists of the country.

**SOCIAL PROBLEMS, STUDY OF** See *UNIVERSITIES AND COLLEGES*

**SOCIAL PROGRESS, INTERNATIONAL ASSOCIATION FOR** This international Association, of which the Association for Labor Legislation is the American section, was created in 1925 by amalgamating three former allied organizations, the International Association for Labor Legislation, the International Social Insurance Committee and the International Association on Unemployment. The annual meeting was held in Zurich, September 19-21. The Association publishes a periodical, *L'Avenir du Travail*, edited by Dr. Stephane Bauer, at the international headquarters at Basel, Switzerland.

**SOIL EROSION.** See *AGRICULTURE, UNITED STATES DEPARTMENT OF.*

**SOILS.** Land reclamation, soil adaptation, soil erosion and moisture conservation, soil fertility, fertilizing value of minor soil constituents, soil reaction, and soil microbiology were among the topics receiving special consideration by soil investigators.

The trend in the United States toward more discriminating use of soils continued and the bringing of new land under cultivation was still being discouraged.

Many submarginal farms are found now throughout much of the Appalachian region from Maine to Georgia including the plateaus on the west, in the region known as the Highland Rim, in the Ozarks, and in some of the Western mountain areas. Some areas formerly adapted to commercial crop production have sunk below the economic margin chiefly through soil depletion or erosion. In extensive areas that have become submarginal gradual farm abandonment has been taking place. Marked interest has developed in the possibility of aiding the stabilization of agriculture by public purchases of submarginal farm lands with a view to their conversion to timber growing.

The soil survey continued to furnish a valuable basis for the selection and adaptation of soil types. Activity in soil survey, mapping, and adaptation continued to be world-wide. The United States retained the lead in such work and during the year the Department of Agriculture conducted soil-survey work in 72 separate areas distributed over 28 States. Detailed surveys aggregating 20,650 square miles and reconnaissance to the extent of 2010 square miles were covered during the year, bringing the total acreage for the detailed survey to almost 500,000,000 and

the reconnaissance survey to slightly over 383,000,000, according to the *Report of the Chief of the Bureau of Chemistry and Soils* for 1929.

Progress also was made in the classification of muck and peat soils. This classification was meeting a need for detailed information regarding these deposits which was valuable for industrial purposes as well as to agricultural interests. The system of classification as developed had been used in 18 counties in Michigan, three in Wisconsin, and one in Minnesota. A new interest in soil survey and mapping also developed in connection with reforestation in that they provide a basis of land classification which should precede all systematic plans for reforestation and the establishment of State and Federal forest areas.

Soil impairment by erosion continued to be recognized as one of the most important problems confronting American agriculture. The value of the plant-food materials removed by erosion and runoff from the cultivated and pasture lands of the United States every year was conservatively estimated by the Bureau of Chemistry and Soils to be in excess of \$2,000,000,000. An appropriation by Congress of \$160,000 for the study of soil erosion was evidence of the recognition of erosion as a national menace. Under this appropriation the U. S. Department of Agriculture undertook the development of a national programme for the control of soil erosion. The programme of work, and much of the results obtained to date are fully discussed in the *Report of Proceedings of the First Session of the Southwest Conference on Soil and Water Conservation* (College Station, Texas, 1929).

The demand continued for more accurate and specific information regarding the fertilizer requirements of crops on soils of known character, and soil fertility studies were being concentrated gradually in that direction, and considerably enlarged. The introduction of the newer concentrated fertilizers required some modification of this work. The evidence continued to accumulate that small applications of manganese salts have given striking effects under certain soil conditions over a considerable area of the United States, more particularly along the Atlantic and Gulf coastal plains. On other soil types, salts of copper, zinc, boron, and iodine, and of similarly less-abundant constituents of soils have given crop responses indicative of unusual functions in connection with crop growth and development, according to the Bureau of Chemistry and Soils. It also has been shown that the presence of manganese dioxide, for example, is characteristic of certain soil series.

The relation of soil reaction to crop production continued to receive much attention, with particular reference to its influence on the prevalence and severity of certain crop diseases. In this connection extensive investigations of cotton-rot rot were inaugurated for the purpose of correlating soil characteristics such as fertility and reaction with the prevalence of this disease. Some of the physiologically acid fertilizers and some nitrogen materials lessened the ravages of the rot rot on some of the less alkaline soil types during the year.

**BIBLIOGRAPHY.** Advances in the knowledge of the sciences of soil technology and fertility appear currently in *Soil Science* published in Baltimore, Md. Recent books on these subjects are *Agricultural Geology*, by F. V. Emerson (New York and London, 1928); *Grundsätze der Praktischen Bodenbearbeitung auf Bodenkundlicher Grundlage*, by O. Heuser (Berlin, 1928), and *Handbuch der Bodenlehre*, by E. Blanck (Berlin, 1929).

**SOLAR PHENOMENA.** See ASTRONOMY, PHYSICS.

**SOLAR RADIATION.** See GEOGRAPHICAL SOCIETY, NATIONAL, METEOROLOGY.

**SOMALIA.** See ITALIAN SOMALILAND.

**SOMALI COAST.** See FRENCH SOMALI COAST.

**SOMALILAND, ITALIAN.** See ITALIAN SOMALILAND.

**SOMALILAND, SO-MALI-LAND, PROTECTORATE.** A British territory on the African coast of the Gulf of Aden, bounded on the south, west, and north by Italian Somaliland, Abyssinia, and the French Somali Coast, respectively. Area about 68,000 square miles. Population estimated at 344,700, nearly all Mohammedan and entirely nomadic except on the coast where permanent settlements have been made. The chief town is Berbera, with about 30,000 inhabitants.

In 1927 imports totaled £427,516, exports, £353,575, revenue (1926-27), £90,568, expenditure (1926-27), £140,125, including a military grant-in-aid of £43,500. The government is under the British Colonial Office, which is represented by a local governor and commander-in-chief (Governor in 1929, Sir H. B. Kittermast, appointed Jan. 26, 1926).

**SONG RECITALS.** See MUSIC.

**SOUTH, UNIVERSITY OF THE.** A Protestant Episcopal institution for the higher education of men in Sewanee, Tenn., founded in 1857. The enrollment for the autumn term of 1929 was 306. The library contained 43,003 volumes. President, Benjamin Franklin Finney, LL.D.

**SOUTH AFRICA, UNION OF.** A self-governing dominion of the British Empire, comprising the provinces of the Cape of Good Hope, the Transvaal, Natal, and the Orange Free State, constituted a legislative union by the South African Act of September, 1909. Capital, Pretoria, seat of the Legislature, Cape Town.

**AREA AND POPULATION.** Total area, 472,347 square miles, divided as follows: Cape of Good Hope, 276,536; Natal, 35,284; Transvaal, 110,450; Orange Free State, 49,047. Total population, according to the census of 1921, 6,928,580, distributed as follows: Cape of Good Hope, 2,782,719; Natal, 1,429,398; Transvaal, 2,087,636; Orange Free State, 628,827. The total European population of the Union of South Africa, according to the final audit of the 1926 census, is shown in the following table:

CENSUS OF UNION OF SOUTH AFRICA FOR 1926

Province	Males	Females	Total	Per cent increase since 1921
Cape	357,583	348,551	706,137	8.53
Natal	81,170	77,746	158,916	16.13
Transvaal	313,733	294,849	608,582	11.98
Orange Free State	104,392	98,593	202,985	7.65
Total	856,918	819,742	1,676,660	10.34

The estimated total population in 1928 was 7,777,583, among whom there were 1,738,937 Europeans, 5,277,023 natives, 183,771 Asiatics, and 577,852 mixed and other colored persons. The principal cities, with their estimated populations in 1928 (the figures for 1921 in parentheses), are as follows: Johannesburg, 320,185 (288,131);

Cape Town, 252,955 (207,404); Durban, 110,971 (146,310); Pretoria, 74,282 (74,052); Port Elizabeth, 57,138 (46,094) The capitals of the respective provinces are Cape of Good Hope, Cape Town, Transvaal, Pretoria, Natal, Pietermaritzburg, Orange Free State, Bloemfontein (46,101 inhabitants in 1928) During the years from 1923 through 1927, births among the European population averaged 43,232 annually and deaths 15,804, an excess of 27,428 births In 1927 a total of 34,195 persons, including 30,438 Europeans, arrived in the dominion and 35,761, including 29,739 Europeans, departed

**Education** Under the South Africa Act, control of lower education is vested in the four provincial administrations In 1927, exclusive of private farm schools in Natal, there were 4665 schools for whites, with 336,459 pupils, and 3501 schools for Negroes and other colored persons, with 304,617 pupils, all of which were either state or state-aided schools Teachers numbered 23,121 and the expenditure by the government was £7,597,072 In the same year there were 268 private schools for whites with 18,839 pupils and 421 schools for colored children, with 19,455 students Teachers in both white and colored private schools totaled 1691 At the end of 1927 there were 6460 students enrolled in the 10 universities within the dominion

**Production** About 9,349,000 acres, or 3.1 per cent of the total area, was under cultivation in 1926, with some 6,061,000 acres devoted to cereals There were about 2,600,000 acres of forests The area and production of the chief crops in the crop year 1928-29 were as follows: Corn, 5,583,000 acres, 69,400,000 bushels; wheat, 985,000 acres, 6,930,000 bushels; oats, 630,000 acres, 7,598,000 bushels; potatoes, 4,735,000 bushels; barley, 944,000 bushels; cotton, 5,200,000 pounds Statistics of other leading crops for 1927-28 (figures for 1928-29 not available) were: Sugar cane, 112,000 acres, 2,154,000 short tons; tobacco, 23,750,000 pounds; tea, 3000 acres, 3,326,000 pounds; rice, Kaffir corn, citrus and deciduous fruits, grapes, and peanuts are other products

**Stock raising** is an important industry, the number of wool-producing sheep in the Union on June 30, 1928, being estimated at 35,978,000 In 1927 there were 40,110,000 sheep, 10,412,000 cattle, 7,947,000 goats, and 848,000 swine The wool clip for 1928 was 285,000,000 pounds, as compared with 273,000,000 pounds in the preceding year The production of mohair was 11,000,000 pounds Wool exports in 1929 (calendar year) totaled 218,880 bales The number of ostriches in the union decreased from 314,000 in 1918 to 104,000 in 1926 Mineral production during 1928 was valued at \$275,908,000, as compared with \$297,628,000 in 1927 The value of the output of the respective minerals was: Gold, \$211,013,000, diamonds, \$43,900,000, platinum, \$5,720,000, coal, 13,404,000 tons, valued at \$17,997,000, zinc, \$1,388,000, lead, \$438,000 Mineral production in 1929 showed substantial increases in gold, coal, and platinum over 1928 Gold production of the Transvaal in 1929 was valued at £44,259,778, as compared with £44,024,058 in 1928 The diamond-cutting industry in South Africa was developing under government sponsorship See DIAMONDS

In 1926-27 manufacturing industries employed 202,689 workers and 783,010 horse power, the total value of manufactured products for the year being \$475,153,000 and the value added by

manufacture, \$230,626,000 A measure for the establishment of a state-owned iron and steel plant was adopted by the government in 1928, and it was proposed to supply both the needs of the Union government and of the Rhodesian railways from this source

**Commerce** Foreign trade in 1928 resulted in an adverse balance of \$31,517,000, as compared with a favorable balance of \$1,009,000 in 1927 Imports increased to \$384,880,000 from \$360,051,000 in 1927, or 7 per cent, while exports fell off 2 per cent, from \$361,060,000 in 1927 to \$353,363,000 Of the total exports, 61.8 per cent went to the United Kingdom, 8.1 per cent to Germany, and 2.2 per cent to the United States, of the imports 43.3 per cent came from the United Kingdom, 17 per cent from the United States, and 0.3 per cent from Germany The gain in imports from the United States in 1928 totaled \$7,200,000, the largest gain for any country

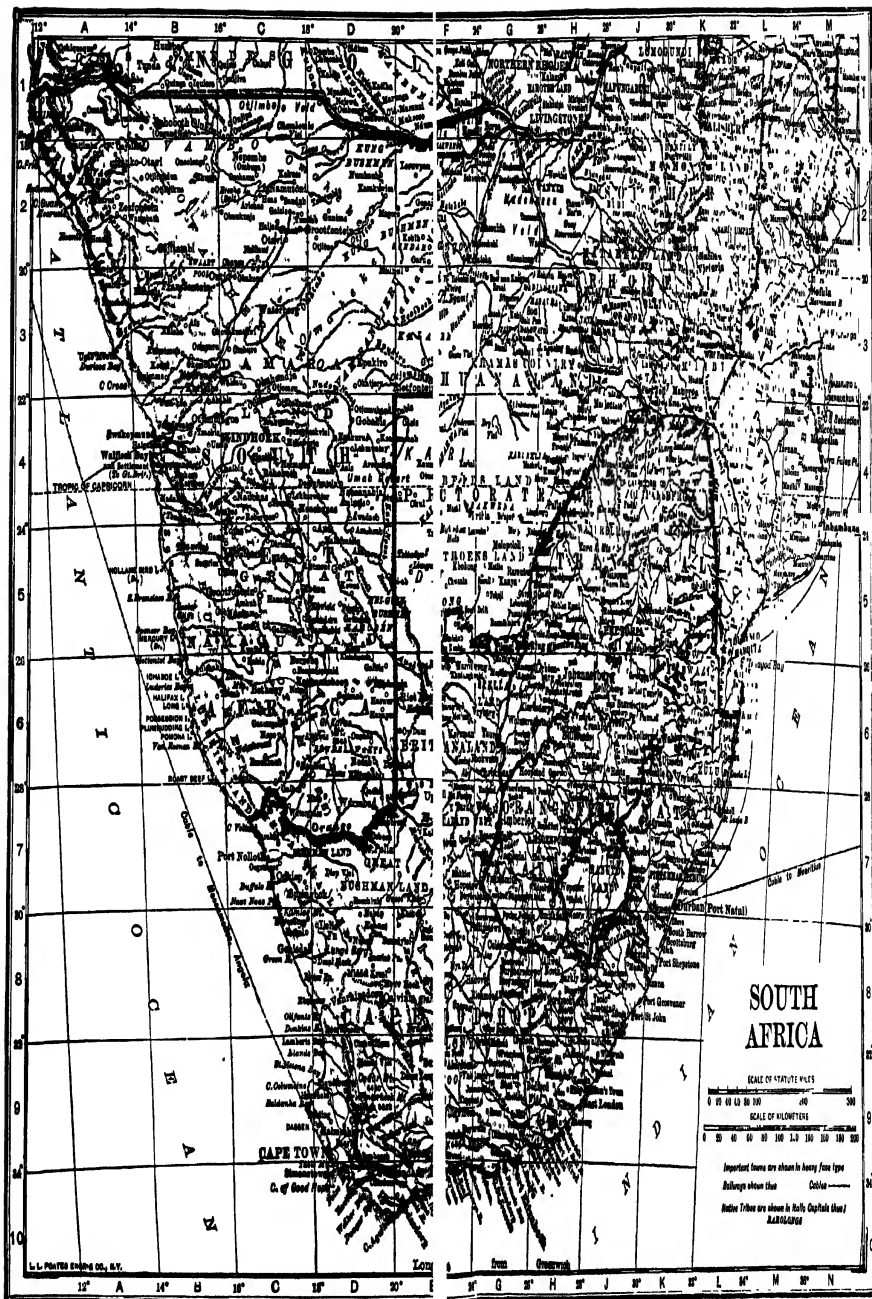

**Finance** Expenditures in the fiscal year ending Mar. 31, 1929, totaled £28,800,000, exclusive of the railways budget and the loan account, and revenues totaled £30,500,000, leaving an ordinary budget surplus for the fourth consecutive year Operating expenses of the railways and harbors totaled about £30,000,000 and were met wholly from receipts Expenditures from the loan account, from which sums are advanced for public works and capital outlays of the railways, averaged about £11,000,000 annually in 1928-29 and the years immediately preceding Actual receipts of the ordinary budget in 1927-28 totaled £30,094,000 and actual expenditures £28,304,000, in 1926-27 receipts totaled £28,577,000 and expenditures, £27,362,000 The total public debt on Mar. 31, 1929, amounted to £243,360,000 (\$1,181,000,000), as compared with £238,926,000 (\$1,162,733,000) on the same date the previous year

**Communications** Due to large increases in passenger and freight traffic, the gross earnings of the Union railways for the fiscal year ended Mar. 31, 1929, totaled £26,135,000, or 3 per cent more than in 1927-28 There were 12,830 miles of railway line in operation, which carried 83,000,000 passengers and 26,087,000 short tons of freight All except 400 miles of line is state-owned and operated

The governments of the Union of South Africa and of Rhodesia voted in 1928 to subsidize an imperial air service between Cape Town and Cairo to the annual extent of £80,000 and £10,000, respectively In 1927, there were 68,422 miles of highway within the Union Vessels entering the ports in 1928 totaled 1424 of 5,210,000 net registered tons, and vessels clearing totaled 1416 of 5,194,000 tons The cargo landed, aggregating 3,214,171 tons, constituted a record

**Government** The executive power is vested in the governor-general, appointed by the Crown, who acts through an executive council of ministers, each in charge of a department, and legislative power in a parliament, consisting of a senate of 40 members, 16 of whom are nominated by the governor-general, and 32 by the provinces (eight each), and a house of assembly of 135 members, distributed among the provinces as follows: Cape of Good Hope, 51, Transvaal, 50; Natal, 17, and Orange Free State, 17, the basis of suffrage being the same as that existing in each province at the time of the formation of the Union The Governor-General, Commander-in-Chief, and High Commissioner for the Union in 1929 was the Earl of Athlone and the Executive

Council was composed as follows: Prime Minister and Minister of Native Affairs, General J. B. M. Hertzog; Interior, Health, and Education, Dr. D. F. Malan; Mines and Industries, F. W. Beyers; Railways and Harbors, C. W. Malan; Finance, N. C. Havenga; Justice, T. J. de V. Kloos; Defense, Col. F. H. P. Creswell; Labor, T. Boydell; Agriculture, Gen. J. C. G. Kemp; Lands, P. G. W. Grobler; Posts and Telegraphs and Public Works, H. W. Sampson; Secretary to the Prime Minister and Secretary for External Affairs, Dr. H. D. J. Bodenstein.

### HISTORY

Developments which must exert a vital influence upon the course of events in South Africa, both within and without the Union, made the year 1929 one of the most momentous in the history of the South African confederation. Of these, the most important were the growing unrest among the natives, evidenced by riots and open threats of rebellion, and the widening of the breach between the British stock of the coastal regions and the Boers, who predominate inland.

THE NATIONALIST VICTORY. Both of these problems were accentuated by the Nationalist (Government) party's victory at the parliamentary elections of June 12. The Nationalist party—largely composed of Boers—increased its representation from 63 to 77, obtaining a majority over all other parties, whereas in the previous Parliament it had been forced to rely upon the support of the Labor party. The South African party, representing the British standpoint, although headed by General Jan Christiaan Smuts, a Boer, increased its membership in Parliament from 54 to 61, while the Labor party, which held the balance of power with 18 members in the previous Parliament, retained only eight members, three of whom refused their support to Col. F. H. Creswell, the Labor leader and Minister of Defense in the Hertzog cabinet. The disaster suffered by the Labor party and the creation of 14 new constituencies explained the gains made by both major parties. Of the aggregate vote of the four provinces, the South African party had an actual majority of nearly 20,000 over their Nationalist opponents, the larger parliamentary representation of the latter being due to the anomalous election system.

THE NATIVE PROBLEM. Imperial relationships and the native problem were the two main issues of the campaign. The question as to what policy the 1,700,000 whites of the Union should adopt toward the 5,300,000 native Negroes had become more acute since the Nationalist Prime Minister, General Hertzog, placed before Parliament in 1926 four important "native bills." One of these proposed to deprive the natives of Cape Province of the right to vote for ordinary members of Parliament, and in return to give natives throughout the Union the right to elect seven white members to the lower house of Parliament. Cape Province was the only one in which the franchise was given to all males, irrespective of race or color. The South African party, which stood for a settlement of the native problem at a National Convention and by mutual consent, opposed the government's measure, which failed by 43 votes to obtain the required two-thirds majority at a joint session of both houses of Parliament on Feb. 25, 1929. The government then dropped its other native bills pending the forthcoming elections.

IMPERIAL PREFERENCE. The Nationalist party originally stood for complete independence from Great Britain but ostensibly abandoned this demand following the Imperial Conference of 1926, at which South Africa and the other self-governing colonies were granted dominion status. The issue was revived, however, by the Nationalists' demand for a South African flag which did not contain the Union Jack, a proposal which aroused the angry opposition of the British element. A compromise effected in 1927 provided for the use of both a South African national flag and the Union Jack, but the official hoisting of the new flag in June, 1928, was accompanied by rioting in various sections of the Union, chiefly by natives and Asiatics, who saw in the Nationalist movement a menace to the continuation and extension of their existing rights. The imperial issue was brought to the fore again in September, 1928, when the government signed a commercial treaty with Germany, which, while reserving existing tariff concessions to British goods, gave Germany most-favored-nation treatment in regard to all concessions to be granted during the ensuing two years. The treaty was vigorously attacked by General Smuts and the South African party as a blow at the system of imperial preference. On Mar. 1, 1929, the House of Deputies ratified the treaty by a vote of 62 to 51, and Premier Hertzog announced that he would consider the treaty in effect without the approval of the Senate, in which the South African party then had a majority. The South African party, in the pre-election campaign, pledged itself to repeal the treaty immediately if it was returned to power, as well as to promote British immigration, extend the suffrage to women, amend the existing plan for state management and financing of the iron and steel industry, and to extend the boundaries of the Union to include the Rhodesias.

The results of the election showed that the stand taken by General Smuts on the issues of imperial preference and the native question had alienated a considerable number of Boers who had previously supported him. The vindication at the polls of the government's stand on both these issues was reinforced by the Senatorial election held September 6, at which the South African party's majority in the upper house was overthrown. Seventeen Nationalist and 15 South African party candidates were returned, and the government's right to nominate eight additional Senators to represent the native population insured its domination. The new cabinet formed following the election of June 12 was composed as follows: Prime Minister and Minister of External Affairs, Gen. J. B. Hertzog; Native Affairs, E. G. Jansen; Mines and Industries, F. W. Beyers; Railways and Harbors, C. W. Malan; Justice, O. Pirow; Interior, Public Health and Education, Dr. D. F. Malan; Public Works, Posts and Telegraphs, H. W. Sampson; Finance, N. C. Havenga; Labor, F. H. P. Creswell; Defense and Armaments, F. H. Creswell.

NATIVE UNREST. The Nationalist victory, on a platform demanding the preservation of the white man's domination, had seemingly natural repercussions among the natives, whose fears of white exploitation were played upon by alleged Communist agents and their converts among the tribesmen. In the Rand mining district, where some 30,000 native laborers were concentrated, there followed a series of riots and strikes and a

boycott of the beer halls and eating houses catering to the natives. Following the refusal of many to pay the poll tax of \$5 levied annually on all adult natives, 400 police rounded up thousands of native dock laborers in Durban on November 14 and arrested 600 who were unable to produce poll-tax receipts. Tear-gas bombs were thrown at one menacing concentration of natives. Communist and anti-white propaganda was said to have been printed in the principal native languages and broadcast among the tribes. In October Sir Edward Grigg, Governor of Kenya Colony, to the North of the Union, reported serious unrest and lawlessness among the tribes of that territory. The seriousness of the native problem, not only in the Union but in all South Africa, was stressed by General Smuts in a Rhodes lecture delivered at Oxford University on November 16. He urged the abandonment of the attempt to force the African into alien European moulds and an effort to foster the indigenous native culture. This had worked out successfully in Cape Province, where two-thirds of the natives managed their own local affairs under the supervision of white magistrates, he said.

**OTHER EVENTS** On November 5, the Union of South Africa entered into direct diplomatic relations with the United States for the first time when Eric Hendrik Louw presented his credentials as Minister to the United States to President Hoover. The trial in September of Professor du Plessis on a charge of heresy aroused much interest throughout the Union.

**SOUTH AMERICA.** See under the various South American countries. See also **EXPLORATIONS**.

**SOUTH AUSTRALIA.** One of the States of the Australian Commonwealth, comprising the central and southern part of the island continent, bounded by Central Australia on the north, by Western Australia on the west, and on the east by Victoria, New South Wales, and Queensland. Area, 380,070 square miles, population, according to the census of 1921, 495,336, estimated Mar. 31, 1929, 579,665, exclusive of 100,000 of whom the number is unknown. Capital and largest city, Adelaide, with a population (including suburbs), in 1929, of 330,217. In 1928 there were 11,408 births, 5147 deaths, and 4146 marriages. In the same year emigration from the province exceeded immigration by 2684.

Education is free, secular, and compulsory. In 1927 there were 1012 schools, primary, secondary, and vocational, with 80,513 pupils under instruction, in the 186 private schools there were 15,750 pupils enrolled. Higher education is provided by the University of Adelaide.

According to final government estimates, the wheat crop for 1928-29 totaled 26,826,004 bushels from 3,443,563 acres, as compared with 24,066,012 bushels from 2,941,360 acres in the previous year. Barley in 1927-28, 219,491 acres, 3,001,420 bushels; oats, 187,024 acres, 1,378,437 bushels. Hay and grapes are other leading products. Livestock in the State in 1927 included 7,200,000 sheep, 310,314 cattle, 224,027 horses, and 69,733 swine. The estimated wool production in 1928-29 was 75,250,000 pounds (78,369,918 in 1927-28). Mineral production in 1928 totaled £1,032,952 (£1,188,522 in 1927). The principal minerals are copper, iron, gypsum, salt, phosphate rock, and some gold, silver, and lead.

According to preliminary figures for the year

ending June 30, 1929, direct overseas imports were valued at £11,307,370 and direct overseas exports at £14,849,993, as compared with imports of £12,509,300 and exports of £18,030,143 in the previous year. The chief exports are wool, wheat, wheat-flour, minerals, meats, butter, honey, wine, fruits, hides and skins, tallow, leather, and manures. The revenue for the fiscal year 1927-28 totaled £11,346,903 and expenditure £11,621,834. The report issued in 1929 by a royal commission appointed to investigate the state's finances, showed deficits in the budget operations for every year from 1914-15 to 1927-28, aggregating £8,718,039. A further deficit was indicated for 1928-29. The public debt on June 30, 1928, totaled £90,612,402, which represented an increase of nearly 110 per cent since 1920. The length of railway lines in the state in 1928 totaled 3400 miles. A total of 144 vessels of 5,123,261 tons entered the ports in 1928-27.

The administration is under a governor appointed by the Crown, and an executive council; legislative power is vested in a council and the Assembly, the latter consisting of 40 members elected for three years. Governor in 1929, Brig.-Gen. Sir Alexander G. A. Hore-Ruthven, appointed May, 1928; Premier, Treasurer, and Minister of Railways, R. L. Butler.

**SOUTH CAROLINA.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,683,724. The estimated population on July 1, 1928, was 1,864,000. The capital is Columbia.

**AGRICULTURE.** The following table gives acreage, production, and value of the principal crops, in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Cotton	1929	2,188,000	845,000 *	\$69,290,000
	1928	2,861,000	726,000 "	66,792,000
Corn	1929	1,422,000	23,321,000	21,088,000
	1928	1,422,000	17,064,000	18,088,000
Tobacco	1929	138,000	82,902,000 *	13,279,000
	1928	148,000	82,298,000 "	10,451,000
Oats	1929	408,000	11,016,000	8,813,000
	1928	337,000	7,751,000	6,821,000
Potatoes	1929	22,000	2,354,000	3,296,000
	1928	36,000	4,068,000	2,614,000
Hay	1929	368,000	716,000 *	6,056,000
	1928	440,000	880,000 *	7,016,000
Sweet potatoes	1929	50,000	5,750,000	4,888,000
	1928	49,000	4,214,000	3,582,000
Wheat	1929	64,000	768,000	1,152,000
	1928	64,000	800,000	1,288,000

\* Bales    \* Pounds    \* Tons

**MINERAL PRODUCTION.** As in previous years the items of clay products and stone furnished much the greater part of the total value of the mineral product of 1927. The production of stone increased to 1,197,870 short tons for 1927, from 881,180 tons for 1926, in value, to \$1,992,558 for 1927, from \$1,505,869 for 1926. The value of clay products stood little changed, for 1927, at \$1,802,772, from \$1,869,420 for 1926. There was a considerable production of raw clay, which attained for 1927 the value of \$743,742. The total value of the mineral product of the State was \$4,251,137 for 1927; for 1926, \$3,077,209.

**FINANCE.** State expenditures in the year ended Dec. 31, 1928, as reported by the U. S. Department of Commerce, were for maintaining and operating governmental departments, \$14,051,691 (of which \$3,427,419 was for local education); for interest on debt, \$478,705, for improvements, \$13,841,609, total, \$30,372,005 (of which

\$18,529,453 was for highways, \$3,422,701 being for maintenance and \$15,106,752 for construction. Revenues were \$19,028,937. Of these, property and special taxes formed 26 4 per cent; departmental earnings and compensation to the State for officers' services, 7.7; sale of licenses, 56 0 (including gasoline taxation of \$3,286,900). The funded debt of December 31, 1928, \$38,475,122 outstanding or \$38,221,840 net of sinking funds, included \$32,837,368 for highways. On a property valuation of \$425,453,764 were levied State taxes of \$2,943,970.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 3743.35. There were built, in 1929, 57 miles of additional first track.

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and relating to operations of 1927, there were in the State, in 1927, 1059 manufacturing establishments. These employed 108,992 wage earners, whose wages for the year totaled \$74,477,866. Materials and supplies used in manufacture cost \$206,772,453. Manufactured products attained the total value of \$358,334,205.

**EDUCATION** With the introduction of higher training standards for teachers the requirement that teacher candidates must undergo examination in order to qualify was removed. In order to relieve counties of the burden of interest in the interval from the first of the year to the time of payment of State aid to the counties the practice was adopted of paying out one-half of the year's disbursements from State equalization fund in January. There were enrolled in the public schools of the State, in the academic year 1928-29, 248,682 white, and 217,809 colored, pupils, or 466,491 altogether. The average school session of the year was 173 days for whites and 114 days for the colored. Expenditure per capita of the enrolled was \$60.06 for white pupils and \$7.89 for colored, for the year. Expenditure for all public-school education totaled \$16,654,236. Salaries of teachers averaged, by the year, \$1678 for white men, \$930 for white women, \$390 for colored men and \$301 for colored women.

**CHARITIES AND CORRECTIONS** The central State authority over the greater part of the State's charitable and correctional institutions is exercised by the State Board of Public Welfare, which was created in 1920. A Child Placing Bureau aids needy children in divers ways. Under the State Board of Health are two institutions for tubercular patients, at State Park, the South Carolina Sanatorium (white) and the Palmetto Sanatorium (colored). The other chief State institutions are Industrial School for Boys, Industrial School for Girls, State Reformatory for Negro Boys, State Training School (for the feeble-minded), State Hospital, Confederate Infirmary, and State Penitentiary.

**LEGISLATION** The General Assembly of the State convened in regular biennial session on January 8 and adjourned on March 15. Its main achievement was to accomplish a complete change in the policy of the State with regard to the financing of road construction. What had been called the pay-as-you-go policy was given up in favor of rapid construction of a large aggregate mileage, by resort to a great bond issue. The bond measure as passed authorized the issue of State bonds to a total of \$65,000,000 of which not more than \$20,000,000 was to be put out in any one

year. The issue of these bonds was not to require the sanction of a referendum. The revenue of the State tax on gasoline, up to 5 cents a gallon, was devoted to the service of these obligations. Their proceeds were to meet the cost of the highway plans and the terms of their issue were to be proposed by the Highway Department. Owing to uncertainties as to legality and, in part, to dispute as to the preferable method, two alternative plans were provided, under one the State was to do its road building itself, and under the other two highway districts covering between them the entire State were to do the construction and to be reimbursed by the State. The tax gasoline was increased from 5 to 6 cents a gallon, in order that it might continue to supply the means of State distribution for local road maintenance.

A Farm Relief Act was passed, and a State Commission on Natural Resources was created. The Sunday-observance law of the State having been declared unconstitutional by its Supreme Court, a new law regulating employments and pursuits on Sunday was passed, but this law was vetoed by Governor Richards on the ground that it lacked constitutionality in the same respects as its predecessor, in creating discrimination among individuals. A bill for the enforcement of compulsory attendance at school was passed, but was vetoed.

**POLITICAL AND OTHER EVENTS** By a bridge over the Cooper River and Town Creek, 230 miles in length and costing about \$6,000,000, opened on August 8, Charleston was connected with the mainland by a direct land route for vehicles. The strikes prevalent in the textile mills of the North Carolina section of the Piedmont caused some labor troubles in South Carolina, but these were much less serious in duration and bitterness. The State Supreme Court sitting *en banc* ruled on October 13 that the \$65,000,000 road-bond measure of 1929 was valid under the State Constitution.

**OFFICERS** Governor, John G. Richards, Lieutenant-Governor, Thomas B. Butler, Secretary of State, W. P. Blackwell, Treasurer, J. H. Scarborough, Budget Secretary, Walter E. Duncan, Attorney-General, John M. Daniel, Comptroller-General, A. J. Beattie.

**JUDICIARY** Supreme Court, Chief Justice, R. C. Watts, Associate Justices, Thomas P. Cochran, John G. Stabler, Eugene S. Bleasie, Jesse F. Carter.

**SOUTH CAROLINA, UNIVERSITY OF** A non-sectarian State institution of higher education in Columbia, chartered in 1801 and opened in 1805. The enrollment for the autumn session of 1929 totaled 1562, of whom 1006 were men and 556, women. President, Davison McDowell Douglas, A. M., D. D., LL. D.

**SOUTH DAKOTA. POPULATION** The fourth State Census of South Dakota was taken as of May 1, 1925, and showed a total population of 681,260, of which 20,559 were Indians. Of this total, 347,579 were males and 313,122 were females. The Fourteenth Census of the United States, returned for South Dakota 636,547 on Jan. 1, 1920. The estimated population on July 1, 1928, was 704,000. The capital is Pierre.

**AGRICULTURE** The table on the following page gives the acreage, production, and value of the principal crops in 1928 and 1929.

**MINERAL PRODUCTION** The State produced in 1927 more gold than any other member of the Union with the sole exception of California. Ac-

Crop	Year	Acres	Prod. Bu	Value
Corn	1929	4,916,000	112,085,000	\$62,493,000
	1928	4,469,000	93,549,000	58,189,000
	1927	3,114,000	30,847,000	28,271,000
Wheat	1929	8,380,000	34,928,000	29,641,000
	1928	7,785,000	3,667,000*	29,183,000
	1927	3,193,000	2,919,000*	21,787,000
Oats	1929	2,259,000	64,982,000	21,890,000
	1928	2,191,000	59,211,000	19,540,000
	1927	2,016,000	37,396,000	16,783,000
Barley	1929	1,680,000	34,556,000	17,499,000
	1928	637,000	3,758,000	10,522,000
	1927	554,000	3,601,000	7,238,000
Potatoes	1929	87,000	4,422,000	5,085,000
	1928	87,000	6,030,000	2,412,000
	1927	186,000	2,046,000	1,555,000
Rye	1929	162,000	1,458,000	1,152,000
	1928			
	1927			

\* Tons

cording to the preliminary figures for 1928 the quantity of gold mined in that year very nearly equaled that for 1927, which in turn was much above that for 1926. The quantity of gold mined in 1928 was 320.112 fine ounces and that in 1927 322.681, the value, \$6,017,300 for 1928 and \$5,670,400 for 1927. The yield of 1927 formed somewhat less than 80 per cent of the total value of the State's mineral product of that year. A small amount of silver was mined as well, in value \$52,436 according to preliminary estimate for 1928. Stone alone of other mineral products attained a total value in excess of a half-million of dollars for 1927. The quantity of stone produced rose to 204,500 short tons for 1927, from 211,340 tons for 1926, the value was \$535,232 for 1927 and \$472,032 for 1926. Lithium, tungsten, and columbite minerals were mined in secondary quantities. The total mineral yield of the State for 1927, duplications eliminated, was \$8,463,592 for 1926, \$7,595,358.

Mines in South Dakota in 1929 produced \$6,523,000 in gold and 85,000 ounces of silver. The production of the Homestake mine, the main producing gold mine of the State and the largest single producer in the United States, was apparently slightly less than for 1928.

FINANCE. State expenditures in the year ended June 30, 1928, as reported by the U S Department of Commerce, were for maintaining and operating governmental departments, \$8,324,334 (of which \$1,597,103 was for local education), for conducting public-service enterprises \$500,468, for interest on debt, \$3,116,710, for improvements, \$3,881,952, total, \$15,921,472 (of which \$4,867,531 was for highways, \$1,545,684 being for maintenance and \$3,321,947 for construction). Revenues were \$17,999,970. Of these, property and special taxes formed 27 1 per cent; departmental earnings and compensation to the State for officers' services, 8 2; sale of licenses, 31 0 (including gasoline taxation of \$2,925,363). The funded State debt of June 30, 1928, was \$58,299,700 outstanding and \$13,384,458 net of sinking funds; it included \$47,500,000 for public-service enterprises and investments and \$4,709,700 for highways. On a property valuation of \$71,700,000,919 were levied in the year State taxes of \$4,440,576.

TRANSPORTATION. The total number of miles of railroad line under operation on Jan 1, 1929, was 4235 80. There were built, in 1929, 33 61 miles of additional first track.

MANUFACTURES. According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1928 and relating to the operations of 1927, there were in the State, in 1927, 472 manufacturing establishments. These

employed 5551 wage earners, whose wages for the year totaled \$6,785,893. Materials and supplies used in manufacture cost \$63,019,877. Manufactured products attained the combined value of \$83,001,103.

EDUCATION. The school population in 1928 was estimated at 209,101. There were enrolled in the public schools 164,427 pupils. Of these, 136,501 were in the elementary, and 27,926 in the high-school, grades. Expenditures for public-school education totaled \$18,274,766. The yearly salaries of the teachers averaged \$1193.

CHARITIES AND CORRECTIONS. The chief central administrative authority over the State institutions of care and custody is the State Board of Charities and Corrections, one of the three constitutional boards of the government. Another constitutional board, the State Pardon Board, composed of the presiding judge of the State Supreme Court, the Secretary of State, and the Attorney-General, exercises powers of pardon elsewhere vested in the Executive. A statutory Parole Department headed by a State parole officer conducts the parole system. There are separate commissions for the administration of child-welfare activities and for the care of the feeble-minded. The State eleemosynary and custodial institutions are School and Home for the Feeble-minded, Redfield; School for the Deaf, Sioux Falls, School for the Blind, Gary, State Training School, Plankinton, State Penitentiary, Sioux Falls, Tuberculosis Sanatorium, Custer, Hospital for the Insane, Yankton, Soldiers' Home, Hot Springs.

LEGISLATION. The State Legislature held its regular biennial session, adjourning on March 8. The usual general appropriation bill was passed and approved by Governor Bulow with the exception of an appropriation of \$20,000 for purposes of investigation. Acquisition of lands for Federal use as places for the protection of migratory birds, according to the provisions of the Federal Migratory Bird Act, was authorized.

POLITICAL AND OTHER EVENTS. A discovery of manganese ore of possible high mineral value was reported in October. The ore deposit was stated to be along the course of the Missouri River, and was reported from Oacoma. Lands to which one company had acquired leases were estimated to contain 100,000,000 tons or more of ore, and it was expected that if the deposit should justify hopes the State would be able to supply the Nation's manganese demand without need for importation.

OFFICERS. (Governor, W. J. Bulow, Lieutenant-Governor, J. T. Grigsby; Secretary of State, Gladys Pyle; Treasurer, A. J. Moodie, Auditor, William M. Dunn; Attorney-General, M. Q. Sharpe, Superintendent of Public Instruction, E. C. Giffen.

JUDICIARY. Supreme Court. Presiding Judge, N. D. Buch, Judges, Dwight Campbell, Samuel C. Polley, James Brown, Carl G. Sherwood.

SOUTH DAKOTA, UNIVERSITY of. A State institution of higher education in Vermilion, founded in 1882. The enrollment for the autumn term of 1929 was 1269 and for the summer session, 298. Herman G. James, J.D., Ph.D., succeeded Robert L. Slagle as president after the death of the latter Jan. 30, 1929.

SOUTH DAKOTA STATE COLLEGE. A State college, of agriculture and mechanic arts in Brookings, founded in 1882. The enrollment for the summer session and the autumn of 1929 was

1437, distributed as follows Agriculture, 130, engineering, 220; home economics, 106, pharmacy, 60, commercial science, 179, printing and rural journalism, 33; trades and industries, 5, general science, 211; special students in music, 25, graduate students, 22, secondary school of agriculture, 219; summer school, 220 The faculty, including experiment station and extension staff in agriculture and home economics, numbered 168 The library contained 35,000 bound volumes and 12,000 pamphlets President, Charles W. Pugsley, D Agr.

**SOUTHERN CALIFORNIA, UNIVERSITY OF** An institution of higher education for men and women in Los Angeles, Calif, founded in 1879 The enrollment for 1928-29, including summer session and extension classes, was 15,906 In the autumn of 1929, there were 500 members on the faculty The endowment was \$1,200,000, the income from tuition and fees, \$1,560,885, and other income, \$171,963 There were 110,000 volumes in the library, Mudd Hall of Philosophy was under construction in 1929 President, Rufus B. von Klein Smid, Sc D, J D

#### **SOUTH POLE See POLAR RESEARCH**

**SOUTHWEST AFRICA** A former German protectorate, administered since Dec 17, 1920, by the Union of South Africa under a mandate from the League of Nations, bounded on the north by Portuguese West Africa, on the west by the Atlantic Ocean, and on the south and southeast by the Cape Province of the Union, and on the remainder of the eastern boundary by the Bechuanaland Protectorate Capital, Windhoek, with a population of 4002 Europeans and 10,489 natives, area, 311,820 square miles, population, according to the census of 1926, 24,115 Europeans and about 234,790 natives Stock raising is the principal pursuit as agriculture is handicapped by the scarcity of water The principal mineral product is diamonds, others are copper, vanadium, marble, tin, gold, and silver Under the influence of expanding mineral and agricultural development, the foreign trade of Southwest Africa has shown a consistently upward tendency In 1927 imports were valued at \$2,490,816 and exports at \$3,475,561 The estimates for 1928-29 were Revenue, 1748,000, expenditure, £1,194,111, including £399,350 loan expenditure There are about 1361 miles of government-owned railway and 98 miles of privately-owned lines The head of the government is an administrator representing the Governor-General of the Union of South Africa, he has full power to legislate Administrator in 1929, A. J. Werth, appointed in April, 1926

#### **SOVIET SOCIALIST REPUBLICS OF RUSSIA. See RUSSIA**

#### **SPACE. See ASTRONOMY, PHYSICS**

**SPAIN.** A constitutional monarchy of southwestern Europe, occupying the greater part of the Iberian peninsula and separated from France by the Pyrenees. Capital Madrid, ruling sovereign in 1929, King Alfonso XIII

**AREA AND POPULATION.** Continental Spain has an area of 190,050 square miles, including the Balearic and Canary Islands and Spanish possessions on the north and west coasts of Africa, the total area is 194,800 square miles According to the census of 1920, the population was 21,959,086, as compared with 19,960,817 in 1910 In 1927 it was estimated at 22,444,166. The cities with over 150,000 inhabitants on Dec 31, 1927, were, Madrid, 808,366, Barcelona, 760,348, Va-

lencia, 267,346, Seville, 215,107; Málaga, 158,733, Zaragoza, 153,681, Murcia, 152,945 From 1923 to 1927, births averaged 652,033 annually and deaths, 430,711

**EDUCATION** The total school enrollment for 1925-26 included 2,468,279 primary students, 74,273 secondary students, and 31,562 university students, there being about 28,870 public schools and 5500 private schools

**PRODUCTION** Agriculture is the chief occupation of the people, there being 47,823,000 acres, or 38.3 per cent of the total area, under cultivation in 1925 Another 62,471,000 acres were devoted to pastures and forests The area and production of the principal crops in 1928 were Wheat, 10,672,000 acres, 129,591,000 bushels, rye, 1,536,000 acres, 21,407,000 bushels, barley, 4,450,000 and 81,743,000, oats, 1,956,000 and 35,610,000, corn, 1,143,000 and 23,877,000, rice, 113,000 and 13,865,000, potatoes, 802,000 and 104,718,000 The beet-sugar output totaled 214,000 metric tons, olive orchards, 4,347,000 acres, 53,595,000 gallons of olive oil, grapevines, 3,541,000 acres, 428,274,000 gallons of wine Oranges, almonds, and filberts are other crops The harvest was generally below average in 1928, particularly the olive, wheat, and other cereal crops, but these were unusually good in 1929, the wheat crop being estimated at 38,000,000 quintals (one quintal equals 220.46 pounds), and the olive-oil output at 400,000 metric tons Livestock in the country in 1926 included 3,688,000 cattle, 5,032,000 swine, 20,529,000 sheep, 4,749,000 goats, and 3,061,000 horses, mules, and asses

Mineral production in 1928 was valued at 1,718,291,000 pesetas (\$285,064,000), as compared with 1,414,233,000 pesetas (\$241,268,000) in 1927 The mineral production in 1928 in metric tons included coal and lignite, 6,547,000, coke, 612,435, pig iron, 619,796, copper (blister), 25,000, lead, 143,097, zinc, 13,962 In 1927 the production of pyrites was 3,603,000 metric tons, copper (regulus), 27,980, mercury, 2493, superphosphates, 864,316, cement, 1,453,000 Cotton goods, paper, glass, sugar, cork products, silk, and metallurgical products are the chief manufactured products of Spain The annual production of cork is valued at about 50,000,000 pesetas (\$7,000,000)

**COMMERCE** Spanish imports increased 16 per cent to 3,004,991,000 pesetas (\$579,963,000) in 1928, while exports increased to 2,183,478,000 pesetas (\$421,411,000) The unfavorable balance of trade (820,513,000 pesetas) was believed to be largely offset by tourist expenditures and emigrant remittances Larger imports of grain were caused by the partial failure of the cereal crops and there was a 9 per cent increase in raw-cotton imports Exports of iron ore, oranges, onions, and olive oil showed large increases Exports to the United States in 1929 were estimated at \$36,200,000, or 3 per cent more than in 1928

**FINANCE** Preliminary figures for 1929 placed the revenues at 3,725,600,000 pesetas and ordinary budget expenditures at 3,487,800,000 pesetas (average exchange value of the peseta in 1929 was \$0.1468) This represented an increase of 203,600,000 pesetas over receipts for 1928, when ordinary revenue, according to preliminary returns, totaled 3,522,000,000 pesetas and ordinary expenditures, 3,312,000,000 pesetas Total ordinary and extraordinary expenditures in 1928 amounted to 3,784,500,000 pesetas, leaving a deficit of 202,200,000 (\$43,500,000). The budgets for 1929 and

1930, as proposed in January, 1929, were identical, providing for ordinary and extraordinary expenditures of 3,524,300,000 pesetas and receipts of 3,329,800,000. The 1930 budget was simplified and altered later in 1929, however, the extraordinary being incorporated in the ordinary budget. The new provisional budget for 1930 called for revenues of 3,069,700,000 pesetas and total expenditures of 3,037,700,000. Estimates for expenditures were later revised downward. The absorption of the extraordinary budget was made possible by the steady increase in revenues during 1928 and 1929.

The public debt on Mar 31, 1929, stood at 19,272,700,000 pesetas (\$2,918,400,000), as compared with 18,810,800,000 pesetas (\$3,162,600,000) on Apr 12, 1928.

**COMMUNICATIONS.** In 1928 there were 9859 miles of railway line in Spain, all of which belonged to private companies and most of which was operated with the aid of guarantees or subventions obtained from the government. In 1928 the railroad carried 119,037,000 passengers and 42,121,000 metric tons of freight, earning gross receipts of 800,885,000 pesetas (\$153,691,000). Borings to determine the feasibility of a railway tunnel beneath the Straits of Gibraltar were made in 1929.

The Spanish merchant marine on June 30, 1928, totaled 884 vessels of 1,104,272 gross tons capacity, of which 1,137,813 gross tons were run by steam or other mechanical power. A government subvention of 15,500,000 pesetas for the establishment and trial flights of a dirigible air service between Seville and Buenos Aires was voted in 1929. The trial flights were to be completed by July 30, 1931.

**GOVERNMENT.** According to the constitution, executive power is vested in the King, who acts through a responsible ministry, and legislative power in the Cortes, or National Assembly, consisting of the Senate and Chamber of Deputies. Parliament was dissolved by royal decree, Sept 16, 1923, and the control of the government was in the hands of the dictator, Primo de Rivera. He established a National Assembly with very shadowy powers late in 1927. King Alfonso XIII succeeded to the throne on his birth, which occurred after the death of his father, on May 17, 1886. The civil government in 1929 was constituted as follows: President of the Council and Minister of Foreign Affairs, Gen. Miguel, Primo de Rivera, Justice and Worship, Galo Ponte, War, Gen. Julio Ardanaz, Marine, Rear Admiral Mateo Garcia de Los Reyes, Finance, Calvo Sotelo, Interior, Gen. Martinez Andulo, Public Instruction, M. Callego; Public Works, Count of Guadalquivir, Labor, M. Aunos, National Economy, Count of Los Andes.

#### HISTORY

The increasing restiveness of the urban population and of a powerful section of the army under the curbing although temperate rule of Gen. Miguel Primo de Rivera, and the growing estrangement between the dictator and King Alfonso were the significant developments in the political situation in Spain during 1929. At the beginning of the year, Primo de Rivera, apparently fully seated in power, issued a proclamation to the effect that the dictatorship would be "more precise and concrete than formerly and more strictly applied." Twelve months later his régime was generally conceded to be tottering to

its end and speculation was rife as to how soon he would be forced to hand his resignation to the King.

**ARTILLERY CORPS REVOLT.** Entirely dependent upon the support of the army, the dictatorship received its first blow late in January through an abortive revolutionary movement along the southern and eastern coast, which was largely inspired and conducted by officers of the Artillery Corps, with the aid of a few naval officers and of José Sanchez Gueira, a former Conservative Premier of Spain. Except in Ciudad Real, where insurgents were in control for one day, the conspiracy was discovered and suppressed before it had made appreciable headway. Sanchez Guerra was arrested and imprisoned along with 40 artillery officers, all units of the Artillery Corps in continental Spain were ordered disbanded, and other officers who took part in the conspiracy were forced to reside in isolated points designated by the government. The revolt was due principally to the discontent of Artillery Corps officers at the dictator's ruling that promotion should be on the basis of merit rather than of seniority, as formerly. It did not succeed because the bulk of the army remained loyal; but the loyalty of the army to the dictatorship depended primarily upon the attitude of the King. The revolt was followed by an increasingly strict censorship of the press, and this, together with the rising cost of living, attributed to the protective tariffs and monopolies fostered by the dictatorship, served to arouse the Spanish populace somewhat from its traditional indifference toward politics.

On March 6, in an interview with the French journalist, Jules Sauerwein, Primo de Rivera declared that by March, 1931, he would be ready to terminate the dictatorship as he believed that "the situation will have sufficiently evolved to permit the operation of a new and equitable Constitution." A few days later university students at Madrid and several other cities staged a protest strike against certain government measures, including the closing of the artillery school at Segovia, the arrest of students who had criticized the government, and the establishment of mixed tribunals of priests and professors. Ten persons were killed in riots in Madrid. A number of professors and university officials showed their sympathy with the students by resigning. The dictatorship responded by ordering the University of Madrid closed until October, 1930, and by imposing penalties upon students involved in strikes and riots. Later more universities were closed, but on May 29 practically all were allowed to reopen.

That Spanish opinion was not unanimously opposed to the Dictatorate was indicated by a demonstration of loyalty to Primo de Rivera held in Madrid April 14 by a throng said to number more than 90,000 persons, representing all parts of the country. The failure of the newspapers to give the desired space to accounts of the demonstration caused the dictator to establish a press bureau for the distribution to the press of statements "which the government regards as necessary for public information" and which the newspapers were obliged to publish in full.

**PROPOSED CONSTITUTION.** In July the draft of the new Constitution promised by Primo de Rivera was submitted to the hand-picked National Consultative Council by a commission of the assembly which had been at work on the matter for 20 months. In general the proposed

Constitution enhanced the power of the King at the expense of the Cortes, or National Assembly. It deprived the Cortes of its former power to modify the Constitution at any time, vested the right to initiate laws "in the King and the Cortes," instead of, as under the Constitution of 1876, "in the Cortes with the King," and reserved "to the exclusive initiative of the King and his responsible government" all laws involving foreign policy, treaties, national defense, constitutional reform, reduction of taxation, or an increase in the national expenditure. The Senate was replaced by a body comparable to the British Privy Council, but with the power to intervene in legislative matters. The proposed Constitution was vigorously opposed by a large section of the press, the labor organizations, and the republican and socialist elements. The meeting of the National Consultative Assembly at which the Constitution was to have been discussed, was ordered postponed to January, 1930.

SANCHEZ GUERRA CASE. In the meantime the case of Sanchez Guerra, the imprisoned former Premier, had gradually become the focal point of political interest. He was finally brought to trial in Valencia by court-martial on a charge of fomenting revolution, but the unpublished verdict, believed to have exonerated him, was rejected by General Gil Yuste, Military Governor of Valencia, on November 1. Inasmuch as King Alfonso had expressed the hope that amnesty would be granted, while Primo de Rivera declared himself in favor of punishing Sanchez Guerra "as an example," these maneuvers were generally regarded as tangible evidence of differences between the dictator and the King, long the subject of rumor. General Gil Yuste was known as one of Primo de Rivera's most loyal followers. The Supreme Army and Navy Council then met to seek a way out of the impasse, and on December 6 it was announced that Sanchez Guerra and a number of others accused of complicity in the revolt would again be brought to trial. The former Premier was released on parole pending trial. Although himself a Conservative, who had severely repressed radical demonstrations in 1917 while serving as Home Secretary, Sanchez Guerra's imprisonment was seized upon by all the elements antagonistic to the dictatorship as an issue offering possibilities for its overthrow. There were new demonstrations of sympathy among University of Madrid students on November 29 and in many Spanish cities, particularly following the announcement of the dictator on December 13 that there would be no national elections in 1930, as had been expected. The government promised, however, that the National Consultative Council would be abolished in September, 1930, and that in its place "a legislative and fiscal organism" more representative of the nation would be set up. The fortunes of the dictatorship still rested with the army and indirectly with the King, who controlled the army. It became increasingly apparent that the King considered General Primo de Rivera's usefulness at an end, and it was this circumstance which led observers to predict that the dictator's régime would not long survive the year.

One view of the situation was that Alfonso had continued to support Primo de Rivera, despite their differences, for fear that the question of responsibility for the Moroccan disasters which preceded the dictatorship would endanger his throne once it was allowed to come before the

National Assembly, but that increasing discontent in the army and the alarming character of the financial crisis had forced him to consider a different course of action.

OTHER EVENTS. Outside the realm of internal politics other events during 1929 were the opening of the international fair at Seville on May 9 and of the Barcelona exhibition on May 15, the signing on July 10 of a treaty with France providing for the arbitration of commercial disputes, and the announcement of General Primo de Rivera on November 20 that plans had been made by the Council of Ministers for an immediate increase in Spanish naval strength. Dowager Queen Maria Christina (q.v.) died in Madrid February 6. Spain assumed a more important rôle in the international control of Tangier under a new arrangement which went into effect early in the year. See PORTUGAL, under *History*, and EXPOSITIONS.

#### SPANISH-AMERICAN LITERATURES.

A reviewer in this field must labor under difficulties in receiving promptly literary works from Spanish-American authors. Therefore again it is necessary to remind our readers that the facts here printed must not be considered as exhaustive, nor must the omission of some of the countries be taken as evidence that they produced nothing in 1929. It means simply that, despite all efforts, the chronicler received nothing from those countries.—Before taking up the several countries, mention must be made of one book of a general nature. Alice Stone Blackwell, *Some Spanish-American Poets*, with an introduction and notes by Isaac Goldberg (it contains 207 poems, by 89 authors, representing nineteen countries—translations, with Spanish text on the opposite page).

ARGENTINA. The following items show that Argentina was well represented in several fields.—*Fotion*, Margarita F. Aisamasseva, *Jeremy, el bolshhevik* (good, but foreign to the Argentine spirit), Maria Alicia Dominguez, *El hermano ausente* (this young writer here fulfills the promise of her first books), J. P. Saez (hijo), *Cuentos de Paeto puna* (fine bit of archeological recreation of the gaucho), Manuel Gálvez, *Humastá* (poor novel of the Paraguayan War, in which he almost praises the Dictator López, whom he had criticized as bloodthirsty in his earlier and better novel, *Los Caminos de la Muerte*), Juana Manuela Gorriti, *El Tesoro de los Inuas* (*Leyenda histórica*), [*Facultad de Filosofía y Letras de la Universidad de Buenos Aires, Sección de Documentos, Serie 4a, Novelas Tomo I, Num. 6*], Carlos María Ocantos, *Fray Judas* (*Novelas Argentinas XX*), (the ex-diplomat has now completed his series of *Novelas Argentinas*, as originally planned), Enrique Larreta, *Zogobis* (definitive edition of a novel which created a great stir when first published, in 1928), and Hugo Wast (Gustavo Martínez Zubiria, whose family consists of eleven children and the two parents, all of whom were visiting Spain after a year's stay in Paris), *Lucia Miranda* (dealing with the Conquest of the Rio de la Plata).

*Essays*. Ramón Doll (young and vigorous writer), *Ensayos y Críticas*, Alcides Greca, *La Torre de los Ingleses* (*Crónicas de viajes*) (although excellent and interesting, it does not reach the heights he attained with his *Viento Norte*, a novel published two or three years previously), Enrique Méndez Calzada, *El Tonel de Diógenes*

(very witty and genial satire), Alberto Ghiraldo, *Angustlandia bárbara* (better documented than Araquistain's criticism, but still unjust), and Samuel D. Stesov, *Anga* (an immigrant writes his recollections of vagabondage, slavery, and wretchedness, and does it with consummate art).

*Drama* Julio Sánchez Cardell, *La montaña de las brujas* (a drama dealing with Argentina), and Vicente Martínez Cuitiño (one of Argentina's outstanding dramatists), *La emigrada* (story of a wife who, refusing to divorce her profligate and useless husband, emigrates and strives to make a career for herself, so as to support her daughter), and *El espectador, o la cuarta realidad* and *Noche de alma* (both very successfully performed in Madrid by the Argentine Companies of Rivera—de Rosas and Camila Quiroga, respectively).

*Poetry* Clementina I. Azlor, *Ritmos en el camino* (first book, but shows great promise in both form and inspiration), Arturo Capdevila, *Simbad* (exquisite romantic poems, composed in France, Spain, Portugal, and at sea), José Múrmol, *El poeta*, Luis Franco (a real poet, very much inspired by his master, Leopoldo Lugones, and even by Hesiod and yet an independent soul), *Los trabajos y los días. Geogicus* (exquisite), Rosa García Costa (dainty, spiritual, mystic), *Poesías Selección de La ronda de las horas, La simple canción, y Esencia*, Ricardo Tudela (considered by some critics the best lyric writer in Argentina), *El insulano de la soledad* (poems in prose), Marcos Fingerit, *Antena* (juvenile and simple), and Fernández Moreno (a young author, who in 14 years published 14 volumes of verse in easy, fluent style, but who has not yet become great), *Décimas*.

*Biography* Alberto Pulcos, *Sarmiento* (excellent biography), and *La vida y la obra de Ricardo Montero-Sanc 1853-1927* (a volume of tributes by great scholars to their comrade, collected and published by his son).

*Anniversaries* The fourth anniversary of the death of the humanist, José Ingenieros, was celebrated with an even greater intensity of feeling than that which marked the previous anniversaries. Ricardo Rojas, Rector of the Universidad Nacional de Buenos Aires, was honored on the occasion of the quarter-centenary of his becoming an author: several scholars of note composed a book entitled *Obra de Rojas*.

*Victology* Argentina suffered three very severe losses through death: Roberto Cassaux (the great actor), Arturo Costa Álvarez (author of the important works *Nuestra lengua*, *Nuestro preceptivo literario*, and *El castellano en la Argentina*), and Paul Groussac (84 years old, National Librarian and Hispanist, expatriated Frenchman, who became blind in 1925, and in whose honor an extraordinary number of *Nosotras* for July was wholly devoted to tributes to him by eminent personages who treated him as novelist, dramatist, musical critic, historian, and scholar).

*CHILE* The Chilean Academy lost four of its members through death: Vicente Reyes, Joaquín Díaz García, Enrique Neirameau y Morán (author and statesman), and Francisco A. Concha Castillo (poet of elegant style). To fill the vacancies thus created, the Chilean Academy elected José Alfonso, General Francisco J. Díaz, Roberto Peragallo, and the poet Samuel A. Lillo, who had already taken possession of his chair, by reading his entrance discourse on *Envidia y la*

*Araucana*. Two other writers must be mentioned: J. Fernández Pesquero (a Spaniard who has long lived in various countries of the Americas and has settled in Chile, and who has already won fame through his *Alma araucana*, 1913, and his very beautiful *La patria del indiano*, 1915), *Entre las nieves de Patagonia*, and Julio Vicuña Cifuentes (the genial folk-loreist, who is now turning to prosody), *Estudios de métrica española* and *Epítome de versificación castellana*. The *Revista de Chile* published a special double number to commemorate the centenary of the arrival in Chile of the Venezuelan poet and grammarian, Andrés Bello.

*COLOMBIA* Colombia continued her excellent practice of publishing official editions of the works of the great writers of Colombia. This time it is M. A. Caro, *Obras poéticas* (edición oficial). A. Andrade Cisquino published *Suarez, Humanista*. A. Gómez Restrepo, the genial and scholarly Secretary of the Colombian Academy and now Colombia's Minister to Italy, published an exquisite volume *Cantos de Giacomo Leopardi, traducidos en verso castellano*.

*CUBA* Within the year several studies appeared from the pen of the poet José Manuel Carbonell [y Rivero], President of the National Academy of Arts and Letters: *Juan Clemente Zenca, poeta y mártir*, *Pedro Angel Castillón, poeta y rebelde*, and *Los Poetas Cubanos y el Ideal de Independencia* (all three of them important individual studies of the revolutionary period), and *Evolución de la Cultura Cubana (Recopilación dirigida, prologada, y anotada Edison oficial)*, 18 vols. (very important—treating *Poesía Lírica*, *Poesía Revolucionaria*, *Oratoria*, *Prosa*, *Ciencia*, and *Bellas Artes*). There was also Domingo Méndez Capote, *El Pacto del Zanjón* (exposition of the exact nature of this historic incident, which closed the Cuban rebellion of 1898). For folk-lore, mention should be made of M. Martínez Molea, *Contribución al Folk-lore Vocabulario* (spirituano, reñanes, frases proverbiales, dichos y dichosachos usados en Sancti-Spiritus, tomo vii, Alfonso Hernández Catá, *El Ángel de Sodoma* (in this novel, the author of such works as *Los Frutos Ácidos*, *La casa de firmas*, and *Prólogo González*, marks out new paths in Hispanic letters).

*Neurology* The Cuban National Academy of Arts and Letters lost two of its most distinguished members through death: Miguel de Carrión, renowned author of such masterly works as *El milagro* and *Las honradas*, and Fernando Figueredo y Socarrás, illustrious writer and statesman.

*ECUADOR* The following works have come to our attention: Carlos Bolívar Sevilla, *Don Quijote en la Gloria*; and César Augusto Velarde, *Sacha* (a novel). Two members elect were received into the Academy: Gustavo Lemos and Julio Tobai.

*MEXICO* The materials that have come to hand are interesting, although more evasive than belletristic. *Essays* Guillermo Jiménez, *Cuaderno de notas* (essays on literary subjects); Alfonso Reyes, *Fuga de Navidad* (very delicate); José Vasconcelos (in collaboration with Miguel Alemán Robles, Manuel Puga y Aca, and José Juan Tablada), *México y España* (an earnest effort at a better understanding between the two countries); B. Ortiz de Montellano, *Red*, and S. G. Vázquez, *Las locuras de Vasconcelos* (an attack on José Vasconcelos, ex-Rector of the University

of Mexico and ex-Minister of Public Instruction)

*Poetry* Solón de Mel (author's name is Guillermo de Luzuriaga), *La sinfonia del sol* (pictorial-pantheistic poems), Genaro Estrada (Assistant Minister of Foreign Affairs, well-known critic, novelist, and poet), *Escalera* (Tooata y Fuga) (a volume of poems that surpasses his *Crucero*, mentioned last year), Carlos Pellicer (poet, author of *Hora y Voz*), *Camino* (alien to Góngora, Mallarmé and Valéry, his poems breathe the new rhythms of jazz, but lack the authentic sentimentality of the blues), and *Antología de la Poesía Mexicana Moderna* (ed., Jorge Cuesta).

*Erudition* Sor Juana Inés de la Cruz, *Respuestas a Sor Filotea de la Cruz* (crit. ed., E. Abreu Gómez), and *Obras escogidas* (ed., with prologue, by Manuel Toussaint, in *Clásicos Mexicanos*), Carlos González Peña (one of a group of Mexican editors who toured the States in 1918 and wrote thereafter *La vida tumultuosa*), *Historia de la literatura mexicana, desde sus orígenes hasta nuestros días*, Irving A. Leonard, *Don Carlos de Sigüenza y Góngora—A Mexican Savant of the Seventeenth Century*, Lesley Byrd Simpson, *The Ecomienda in New Spain*, R. Gracia Granados, *Por qué y cómo cayó Porfirio Díaz*, Ezequiel Padilla, *En la Tribuna de la Revolución*, Moisés Sáenz, *México. An Appraisal and a Forecast*, and José Vasconcelos, *Tratado de metafísica*. Carlos Pereyra, historian and polygraph, assumed editorship of the *Biblioteca Histórica Ibero-Americana* and, for its first volume, decided upon a new edition of the *Biografía de Don Juan de Zumárraga*, *Primer Obispo y Arzobispo de México*, by Joaquín García Icazbalceta (son of a family of great historians). *The Index de Documentos de Nueva España, existentes en el Archivo de Indias de Sevilla*, 2 vols., is invaluable for the history of Mexico.

*Fiction* Catalina d'Erzill, author of several dramas (*Cumbres de nieve*, *Esos hombres*, *La razón de la culpa*), and a novel (*La immaculada*), published a volume of short stories *Apostrofada mente*.

*Academy* To fill the chair left vacant by the death of Juan B. Delgado (academician, poet, and diplomat), the Academy elected Genaro Fernández MacGregor, novelist, critic, jurisconsult, and diplomat.

*Nicaragua* There was one election to the Academy, the member becoming *ipso facto* corresponding member of the Spanish Royal Academy, the poet Azarias Pallais. The member-elect, J. Andrés Utecho, took possession of his seat.

*Peru* The Academy by a unanimous vote elected as its Director the President of the Republic, Augusto B. Leguía, and it received into membership the member-elect, Enrique Oyanguren, notable man of letters, statesman, and diplomat. Victor Andrés Belandier, scholar, diplomat, academician and professor in San Marcos University, published in *Cultura Ecuatolana* an important study on *La Federación de los Andes—Holtir nacionalista*, which it was hoped would appear soon in book form. José Carlos Mariátegui, in his 7 *ensayos de interpretación de la nacionalidad peruana*, gives a picture of the economic, religious, political, educational, and artistic life of Peru. As vol. 2 of his *Biblioteca Histórica Ibero-Americana*, Carlos Pereyra (of Mexico) published an *Antología de los Comentaristas Reales del Inca Garcilaso de la Vega*, edited by José de la Riva Agüero (although not

addressed to scholars, it will be found useful by them because of its complete index to the entire work).

*Uruguay* The Ministry of Public Instruction established several prizes in arts and letters. The winners whose subjects concern us are (1) for the best work of poetry, Elbio Finelli Alzauri, *Kais honda*, (2) for the best novel, Manuel de Castro, *Historia de un pequeño funcionario*, (3) for the best collection of short stories, Artino Silveiro Silva, *Cuentos simples*, (4) for the printing of the best two books (one in prose and the other in verse), the former to María Paulina Medeiros de García, for *El posadero que hospedaba viejas ideas sin cobrarles nada*, and the latter to Ramón M. Díaz, for *Prosa de estrellas*. Pedro Leandro Ipuche (author of *Jubilo y miedo*), *Kumbo desnudo* (both books have been highly praised), Homero Martínez Albín, *Cantico de mi expresividad*, Jerónimo Zoloci, *Realización de la seriedad—Ensayos sobre la psicología de Fray Luis de León*, and Julio Verdié, *Adólcio cielo*,—four important works. Although Daniel Elías died in 1928, there appeared a posthumous volume of creditable verse, *Las alegrías del sol*, which shows that the author had not yet reached his possibilities. The *Asociación Cultura* was to publish also the remaining works another volume of verse (*Los arrobos de la tarde*), and a volume of prose works and speeches.

*Venezuela* Rufino Blanco Fombona again attracted attention with an important series of essays, *El modernismo y los poetas modernistas*, and the volume *Diario de mi vida (1904-1905)*. A. J. Calcaño Herrera, author of *Veinte de juventud*, fulfilled critical prophecy concerning his talent with *Hojas de brasa* (really exquisite verse). J. A. Ramos Sucre gave us *El cielo de esmalte* and *Las formas del fuego* (symbolistic works more attentive to beauty of style than value of content), and M. Toro Ramirez, *El Gallo Pelón* and *La Señorita Bien* (two novels in one volume) by the most productive of the younger Venezuelan novelists, whose work promised much for the future).

The National Academy of History elected to membership Mario Briceño Jaeger, a young but outstanding historian who has specialized in the Colonial Period and the War of Independence. The Venezuelan Academy (affiliated with the Royal Spanish Academy of the Language) elected to membership José Manuel Núñez to fill the chair of Lisandro Alvarado, who died a few days after handing to the publishers the manuscript of his *Glosarios del bajo español en Venezuela*, upon which he

for twenty years  
**SPANISH EXPOSITIONS** See EXPOSITIONS  
**SPANISH LITERATURE**

For the fourth year in succession, the dramatic output in 1929 seemed to run ahead of that of the other branches and for a second year in succession erudition seemed to outstrip fiction. There were several outstanding tributes. In Badalona the people placed a plaque on the birthplace of the Catalan actor Enrique Borrás, the Spanish Societies of Uruguay placed in the Teatro de la Princesa a plaque in honor of María Guerrero (see 1928 YEAR BOOK), and the Centro de Hijos de Madrid placed a similar plaque in the Teatro Español.

*Drama* Some of the older generation again gave delight to their followers. J. Benavente, *Vidas cruzadas*, the Álvarez Quintero brothers, *Los duendes de Sevilla*, and *El niño me retrata*, E. Marquina, *San Jerónimo y el cuervo* (treating

semi-historically the days of the Comuneros de Castilla), *Salvadora* (rural drama), and in collaboration with G. Martínez Sierra, *El camino de la felicidad* (a kind of new *Little Red Riding Hood*, applied to a moral struggle); G. Martínez Sierra, *Seamos feos* (one of his most beautiful plays), and *Triángulo* (disconcerting but excellent); L. Fernández de Ardevin, *Cuento de aldea: comedia en verso*, *Un caballero y dos damas* (prose), and in collaboration with a young writer, Valentín de Pedro, *La santa*, Pedro Muñoz Seca, *El alfiler*, *¡Pégame, Luciano!*, and in collaboration with Pérez Fernández, *El sofá, la radio, el peque y la hija de Palomeque* and *¡Qué tienen en la mirada!*, Linares Rivas, *Hilos de araña* (forceful drama of everyday life), and *El pájaro en alas* (tragedy of a highly cultured and wealthy village lass, who lacked the initiative to break away); J. I. Luca de Tena, *Las hogueras de San Juan* (far beyond his earlier efforts); Cipriano Rivas Cherif, *El sueño de la razón* and *Pepita Jiménez* (reverent staging of Juan Valera's great novel), E. de Alvear, *Lo que nos da la vida*, Luis de Vargas, *Sesenta pesetas*, Valentín Andrés, *Tarari* (in which inmates of an insane asylum rebel and take possession of their keepers).

The following also may be noted: José López Rubio and Eduardo Ugarte, *De la noche a la mañana* (won A B C prize for beginners and acclaimed as something really new in comedy); A. Insúa and T. Borrás, *Una mano suave*, Francisco de Viu (capable young writer), *Lo improvisado*, F. Santander and J. Vela (young writers), *La casa de Luján*, F. Oliver, *Ilan matado a don Juan*, C. M. Baena, *Levántate, Magdalena*, J. M. Segarra, *Judit*, Adelina Aparici y Osorio, *La discolor* (first play, promises much), and Nicolás Jordán de Urries (new author), *Veces de sociedad*.

FICTION. Again there was a goodly representation by well-known writers. A. Palacio Valdés, *A cara o cruz*, F. Zamacois, *Los vivos muertos* (sequel to his *Las raíces*), José Más (celebrated for series of novels on Sevilla, now treats of Galicia and fisher-folk), *La Costa de la muerte*, J. M. Carretero ("El Caballero Andaz"), *La venenosa*, *El ángel de la tracción*, Ricardo León, *La voz de desconsuelo*, and *Las niñas de mis ojos*, G. Díaz-Caneja, *El misterio del hotel* (clean and delightfully funny), José Toral, *La odisea de Pedrín-Historia de un año*, "Azorín", *Blanco en azul*-*Cuentos*, and *Félix Vargas: Elopeya* (his master-piece to date), V. Blasco Ibáñez, *En busca del Gran Kan* (*Crucifóbico Colón*), A. Insúa, *El barco embrujado*, R. del Valle-Inclán, *Tira mi dueño*, P. Matu, *La reconquista*, R. Gómez de la Serna, *El ducho del átomo*, Pío Baroja, *Memoorias de un hombre de acción: La senda dolorosa*, *Humano enigma*, and *El nocturno del Hermano Beltrán*, Concha Espina, *El Príncipe del cantar* (attractive short stories), and *La Virgen prudente* (strong plea for the modern woman, but not quite equal to her previous work), J. M. de Acosta, *El Morbo* (study of disease from spiritual as well as physical point of view), A. de Hoyos y Vinent, *Sacerdocio*, and Felix Urabayen, *Centauros del Pireneo* and *Serenata Urrica a la vieja ciudad* (his third book on Toledo).

The following also will be found of interest: Jaidiel Ponceña, *Amor se escribe en hache*, and *Esperame en Siberia, vida mía!*, J. Bruno, *El burión*, Salvador González Anaya, *Lo oración de la tarde*, Luis de Oteyza, *El diablo blanco*, Emilio Neila, *La bien nacida*, A. Robles (young novelist) *Novia partido por 2*, Luisa Carnés,

*Peregrinos de Calvario* (first novel of a young girl of artistic ability); and Carmen G. Maurino, *No tenía corazón* (*novela premiada en el concurso de "Lecturas,"* and first work of a young Asturian lady of society).

POETRY. Some of the best of Spanish verse appears in the drama. Of nondramatic verse, the following are of worth: J. M. Luelmo, *Imocel* (very Gongoristic); F. García Lorca, *Primer romancero gitano* (1924-1927), R. Alberti, *Sobre los ángeles*, J. Guillén, *Cántico* (miracle of intellectual imagery), and E. de Mesa, *La posada y el camino* (exquisite).

ERUDITION. Among the most interesting works of erudition were the following: M. Méndez Bejarano, *Poetas españoles que vivieron en América*, M. Fria Lagom, *Concha Espina y sus críticos*, J. M. Salaverría, *Sevilla y el andalucismo*, and *Joyola* (study of the man, not the saint); J. Pérez Yáñez, *Cada mujer educada es una escuela creada*, Américo Castro, *Santa Teresa y otros ensayos*, E. Gutiérrez-Gamero, *La España que fué* (continuation of his *Mis primeros ochenta años*), Angel Dotor, *Don Quijote y el Cid*, Calderón, *El médico prodigioso* (ed. J. Izedes), *The Comedia y polista* (ed. P. F. Douglass), *Un texto árabe occidental de la Leyenda de Alejandro* (ed. et. E. García Gómez), V. Fernández Llera, *Gramática y Vocabulario del Nuevo Jugo*, A. M. Alcover y Sureda (and others), *Diccionario Catalán-Valenciano-Baleár* (fascicles 7-8), M. García Blanco, *Mateo Alemán y la novela picaresca alemana*, C. P. Wagner, *El libro del caballero Zifar* (Part 1), L. Pfandl, *Geschichte der Spanischen Nationalliteratur in ihrer Blütezeit*, J. Bickermann, *Don Quijote und Faust—Die Helden und die Werk*, Gerhard Moldenhauer, *Die Legende von Barlaam und Josephat auf der Iberischen Halbinsel*, Cervantes (*Obras completas*) *Don Quijote* etc. . . . tomo 1 (ed. Schevill and Bonilla y San Martín), Marqués de Villa-Urrutia, *El General Serrano, duque de la Torre*; Juan Valea, *Obras Completas*, tomo 50, and Dorothy Schons, *Apuntes y Documentos Nuevos para la Biografía de Juan Ruiz de Alarcón y Mendoza*.

The most outstanding three productions of the year were R. Méndez Pidal, *La España del Cid*, tomo 1, and *Flor nueva de romances viejos*, and Conde de Romanones, *Notas de una vida*, tomo 1 (1886-1901), his life until he became Minister, and tomo 11 (1901-1912), his six Ministries.

Of a slightly different type of erudition are J. Ortega y Gasset, *Kant. 1724-1924—reflexiones de un centenario*, J. de Camba, *La casa de Luculo, o el arte de comer—Nueva fisiología del gusto*, José Pla, *La misión internacional de la raza hispánica*, A. Palacio Valdés *Testamento literario* (important); E. Gómez de Baquero, *Nacionalismo e Hispanismo*, F. Cambó, *Las Dictaduras*, E. R. Tarduchy, *Psicología del Dictador*; J. Pemartín, *Los valores históricos en la dictadura española*, and Teófilo Ortega, *La Muerte es vida*.

ROYAL ACADEMY. Under the reorganization of its membership, the Academy received four new members for the provincial linguistic interests: Gallegan, two—Armando Cotarelo y Villedor, professor at the University of Santiago de Compostela and member of the Real Academia Gallega, and Ramón Cabanillas, philologist and poet; Valencian, the lexicographer, Fray Luis Fullana; and Basque, Resurrección María Az-

cue. The Academy continued its publication of important works: *Poesías de Fray Luis de León* (con las notas inéditas de M. Menéndez y Pelayo), tomo i; *Obras completas de Lope de Vega*, tomo xi, *Obras de Lope de Vega*, tomo vi of the *Obras dramáticas*, and *Poesías dramáticas valencianas del siglo XVII*, tomos i and ii. It continued also its photographic reprints of rare books the unique copy of the princeps edition of the Spanish translation of *Fabulas de Esopo*, 1497-1499 and the *Cancionero de Juan del*, 1490.

The following prizes were awarded: Premio nacional de literatura en 1928, José Montero Alonso, "El Debate" Prize, for short story, José D. de Quijano, *Madreista huasteca*, Mariano de Cavia Prize for journalism for 1928, José Cuartero, the Academy's Prize for the centenary of Camoens, the Portuguese scholar Marques Braga, *Luis Camoens—Poesías y obras dramáticas castellanas*, the Piquer Prize (drama), Joaquín Montaner, *El estudiante de Vich*, Fastenrath Prize (dramas), Eusebio de Gorbea, *Los que no perdona*, mentioned last year, and Fastenrath Prize (novels) Antonio Porras, *El centro de las almas*.

**NECROLOGY.** The following deaths occurred: Conde de López Múñoz, octogenarian statesman, academician, poet, and at his death president of the Asociación de Escritores y Artistas, Torcuato Luca de Tena, founder (1891) of *Blanco y Negro*, and (1903) of the daily *A B C*, R. Foulché-Delbos, great French—Hispanist, founder (1894) of the *Revue Hispanique* and editor thereof until his death, "Andemio," Eduardo Gómez de Baquero, academician and eritic, and one distinguished corresponding member of the Academy from the provinces Luis Montoto.

**SPENCER, SIR (WALTER) BALDWIN.** An English ethnologist and educator, died in Ushant, Argentina, July 14, 1929. He was born in Stretford, Lancashire, in 1800, and was educated at Owens College, Manchester, and at Exeter College, Oxford. He was professor of biology at the University of Melbourne from 1887 to 1919, after which he became emeritus professor. As zoologist he accompanied W. A. Hoin's scientific expedition into Central Australia in 1894, when he met F. J. Gillen, with whom he collaborated in making investigations among the tribes of Australia. They studied the tribes in Alice Springs and Lake Eyre districts of Central Australia in 1890-98, and in 1901-02 they extended their course northward and eastward. Sir Baldwin alone conducted investigations among the peoples of Melville and Bathurst Islands. The results of these sympathetic studies of the tribes of Australia are recorded in his published works.

**SPIRITUALISM.** See PSYCHOLOGICAL RESEARCH.

**SPIRITUALIST ASSOCIATION, NATIONAL.** An organization maintaining the religious belief that the spirit world forms a counterpart of the world of common experience. Spiritualism originated as a doctrine in the writings of Andrew Jackson Davis in 1845.

In 1929 there were 22 State associations, as well as many local societies in territory outside the State organizations. The churches numbered approximately 650, with a membership of more than 45,000. The general activities are carried on

through four bureaus: Progressive Ilyceums (Sunday schools), the bureau of phenomenal evidence, the bureau of propaganda, and the bureau of education. The organization conducts the Morris Pratt Institute, Whitewater, Wis., and issues the periodicals *Progressive Thinker*, *Banner of Life*, *Reason*, and *The National Spiritualist Officers* in 1929 were President, Joseph P. Whitwell, St. Paul, Minn., secretary, the Rev. Harry P. Strack, Washington, D. C., treasurer, Frank Joseph, Chicago, Ill. Headquarters are in Washington, D. C.

**STAINLESS STEEL.** See METALLURGY.

**STANFORD UNIVERSITY.** A nonsectarian institution for the higher education of men and women in Palo Alto, Calif., founded in 1891 in memory of Leland Stanford, Jr. The enrollment for the autumn quarter of 1929 was 3535, and for the summer quarter, 1405. The faculty numbered 525. The productive funds of the university amounted to \$29,941,345, and the budget income for the year, including fees, was \$2,928,000. Gifts received during the year included the following: For research and scholarships, \$243,160, special funds, \$3118, new buildings, \$2574, endowment, \$282,249. The library contained 500,000 volumes (including the Hoover War Library). Acting president, Robert Eckles Swain, Ph.D., executive head of the chemistry department, who was appointed to serve during the leave of absence of Ray Lyman Wilbur.

**STATE INSURANCE.** See WORKMAN'S COMPENSATION.

**STATE TAXES.** See TAXATION.

**STATISTICAL ASSOCIATION, AMERICAN.** An organization founded in Boston in 1830 to foster an interest in statistics and to promote scientific methods of collecting and interpreting statistical data. Among the committees maintained during 1929, to improve both public and private statistical work, were: The joint advisory committee on the census, composed of six members, three of whom are appointed by the association, to advise the directors of the census on important questions of statistical policy, the committee on governmental labor statistics, to standardize statistics on employment hours and earnings in the various States and in the Dominion of Canada, and the committee on institutional statistics. The committee on social statistics was appointed to improve statistical work in social organizations, and the committee on the Encyclopedia of the Social Sciences was engaged as an advisory and sponsoring body along with nine other societies, in the preparation of that work.

The various association chapters meet from time to time in the leading cities of the United States. The ninety-first annual meeting was held in Washington Dec. 27-30, 1929. The officers of the association for 1929 were: President, Edwin B. Wilson, vice presidents, Mordecai Ezekiel, Ralph G. Hurlin, Francis Walker, counselors, Robert E. Chaddock, R. H. Coats, F. Leslie Hay-

ford; secretary-treasurer, Willford I. King; editor, Frank Alexander Ross. The official publication is the *Journal of the American Statistical Association*, a quarterly. Headquarters are in the Commerce Building of New York University, 230 Wooster Street, New York City. See **STATISTICS**. Statistical data are employed extensively in the economic and social reviews

to be found in this volume. The reader is referred to the following subjects for statistics bearing on industry, immigration, trade unions, marriage and divorce, births and deaths, unemployment and financial operations: **CHILD LABOR**, **OLD-AGE PENSIONS**, **WOMEN IN INDUSTRY**, **CO-OPERATION**, **STRIKES**, **WORKMEN'S COMPENSATION**, **CRIME**, **TRADE UNIONS**, **IMMIGRATION**, **MARRIAGE AND DIVORCE**, **UNEMPLOYMENT**, **FINANCE**, **AGRICULTURE**. Below are presented statistics on the cost of living and wages.

**INDEX NUMBERS OF THE COST OF LIVING** The U. S. Bureau of Labor Statistics established that the cost of living in the United States increased 0.1 per cent as between December, 1928 and December, 1929. From December, 1928, to December, 1929, food prices increased 2.2 per cent, clothing decreased 1.4 per cent, rents decreased 4 per cent; fuel and light decreased 2.6 per cent; house furnishings decreased 2 per cent; and miscellaneous items increased 0.8 per cent. The above table presents the index figures for the cost of living from the average for 1913 to December, 1929, by the groups of items above discussed. It will be observed that rents showed the smallest increase over the whole period, with the costs of food next. In 1929, prices of house-furnishing goods continued to remain high. It should be said here that the data for these cost-of-living studies were obtained from examinations of prices in the following 32 cities of the

**INDEX NUMBERS OF WAGES** In the 1928 YEAR BOOK reference was made to the work of the International Labor Office in publishing figures of real wages for a number of the industrial countries of the world. During 1929 the scope of these data was extended. The list of workers was augmented to include those engaged in electrical installation, electric power distribution, transportation, the food industry, and workers employed by local authorities, in addition to the workers originally included, viz., those employed in the building, engineering, furniture, printing and bookbinding industries. The commodity budget also was enlarged to include additional food items, fuel, light, and soap. The table that follows gives the index numbers of real wages in a group of countries. Two series are presented, the first listing indexes for food only and the second for food, fuel, light, and soap.

The following has been the method employed in the calculation of the indexes. For each town there is calculated an unweighted average of the wages of all the types of workers studied and these averages are combined into a general average to stand for the country being considered. The number of times the average wage in each country will purchase the international budget is then ascertained, the resulting figures being converted into indexes on the basis of Great Britain as 100. Further, account is taken of the prices of the commodities included in the budget as

well as of the average quantities consumed by the workers and their families. The cost of the budget in dollars is figured at the current rates of exchange. An examination of the table below indicates that the highest level of wages is to be found in the United States with the countries next in order being the following: Australia, Denmark, and Sweden.

cost-of-living indexes to the indexes of actual earnings (not average earnings). An examination of the summary figures presented below shows that real wages of American factory workers showed no significant changes in the period 1890-1915. There was a gain during the period of the War, and a temporary setback as a result of the business collapse of 1921. In the years following,

INDEX NUMBERS OF COMPARATIVE REAL WAGES IN THE LARGE TOWNS OF DIFFERENT COUNTRIES, GENERALLY IN JUNE-JULY, 1929  
[Great Britain=100]

Country	Number	Towns covered Names	General average index numbers	
			Based on food, on light, and soap	Based on food, fuel, on light, and soap
United States	10	Baltimore, Boston, Chicago, Denver, Los Angeles, New Orleans, New York, Philadelphia, St. Louis, San Francisco	187	191
Australia	2	Melbourne, Sydney	146	144
Denmark	1	Copenhagen	103	104
Sweden	3	Göteborg, Malmö, Stockholm	102	101
Great Britain	7	Birmingham, Bristol, Glasgow, Leeds, London, Manchester, Newcastle	100	100
Irish Free State	3	Cork, Dublin, Dundalk	100	98
Netherlands	4	Amsterdam, The Hague, Rotterdam, Utrecht	86	85
France	4	Lyons, Marseilles, Paris, Toulouse	54	53
Spain	4	Barcelona, Bilbao, Madrid, Valencia	47	45
Austria	1	Graz, Linz, Vienna	46	45
Estonia	2	Tallinn, Tartu	42	41
Portugal	1	Lisbon	35	32

There was published during the year, as *Census Monograph Ten*, by the Bureau of the Census, one of the most significant studies of wages that has been prepared in recent years. This was the volume *Earnings of Factory Workers, 1890 to 1927*, the work of Paul F. Brissenden. Basing his

TABLE I ESTIMATES OF REAL EARNINGS—UNITED STATES, ALL INDUSTRIES COMBINED

Year	Actual money earnings	Index of cost of living 1914 = 100	Purchasing power of money earned in 1914
1899	\$ 446	0 74	\$601
1900	449	76	591
1901	471	78	604

1925	1,402	1 70	825
1926	1,436	1 71	830
1927	1,373	1 71	805

work on studies of the official quinquennial and biennial censuses of manufactures, made by the Census Bureau, Mr. Brissenden has gone beyond the ordinary tables of wage averages and has presented estimates for every year since 1890 of the actual per-capita earnings of factory workers. Perhaps the most important piece of work done in this study is the presentation of earnings in terms of purchasing power through the application of

however, real wages have continued to mount, going much beyond the levels ever attained in the pre-war period. Table I presents Mr. Brissenden's estimates of actual money earnings and the conversion of these earnings into real earnings on the basis of the 1914 dollar. Table II presents the index numbers for the same data.

LABOR TURNOVER. Beginning in August, the *Monthly Labor Review* began to present monthly statistics on labor turnover in the manufacturing industries. Previously similar data had been collected by the Metropolitan Life Insurance Co. and had been published in the *Review* every quarter. The October, 1929, figures covered 400 fac-

TABLE II INDEX NUMBERS OF EMPLOYMENT, MONEY EARNINGS, THE COST OF LIVING, AND REAL WAGES IN THE UNITED STATES, ALL INDUSTRIES, EACH YEAR 1899-1927

Year	Employment	Index numbers of—		
		Money earnings, actual	The cost of living	Real earnings
1899	106	77	74	105

1927	106	238	171	140

ories with nearly 700,000 employees. The table that follows presents the data for labor turnover on a monthly basis. The rates are stated as percentages of the number on the pay roll. The following explanation may be quoted from the *Monthly Labor Review* to make plain the use of "net turnover rate"

It is self-evident that a growing plant has an accession rate higher than the separation rate, or it would not be growing. A declining plant has a separation rate greater than the accession rate. The turnover rate is the rate necessary to keep the plant going on the volume of business that it may have for the time being. The net turnover rate, therefore, is the same as the accession rate in a declining force and the same as the separation rate in a plant having an increasing force. The net turnover rate is designated as such at the end of the tables.

AVERAGE LABOR TURNOVER RATES IN SELECTED AMERICAN FACTORIES  
[The rate is per 100 employees on the pay roll. The monthly rate is the rate for the calendar month]

AMERICAN STATISTICAL ASSOCIATION The ninety-first annual meeting of this society was held at Washington, D. C., December 27-30, 1929. The deliberations of the society centered in the following topics: Business Statistics, Appraisal of Economic Forecasts, Business in 1929; Forecasts for 1930; Prohibition; Evaluation of Securities; Price Analysis and Forecasting; Plans and Problems of the United States Census; Economics of Consumption; Biology, A Decade After the War; Population Outlook for the United States.

The *Journal of the American Statistical Association* continued to publish articles of high rank concerned with the technology of statistics and the development of statistical method in a variety of fields. Some of the outstanding discussions in the numbers of the year were "The Problem of Prosperity," by Carl Snyder; "Statistics and Economics," by E. M. Burns; "Measurement of the Demand for Food," by Faith M. Williams, and the "Need for an Index for Social Data," by Mary Johnston.

PROGRESS OF THE CENSUS The act providing for the fifteenth decennial census was signed by President Hoover on June 18. The census of population and agriculture was ordered to be taken on the first day of April, 1930. The chief cause for the delay in the enactment of the census law was due to the provisions of the bill applying to the apportionment of representatives in the Lower House of Congress.

The census machinery was to be directed by William M. Stewart, director of the Census, Leon E. Trusdell, Chief Statistician for Population, William L. Austin, Chief Statistician for Agriculture, Robert J. McFall, Chief Statistician for Distribution. The census of manufactures was to

be under the direction of E. Dana Durand, Statistical Assistant to the Secretary of Commerce. See CENSUS.

STEAMBOAT INSPECTION SERVICE, UNITED STATES See SAFETY AT SEA.

STEAM BOILERS. See BOILERS, STEAM.

STEAM ENGINE. No important progress was to be noted in this field, most of the advances being scored under STEAM TURBINES, as discussed below.

STEAM TURBINES. Several large steam turbines announced during 1928 went into operation during 1929. These included the 208,000-kilowatt three-cylinder unit at the State Lane Station, near Chicago, the 165,000-kilowatt cross-compound unit at the Hell Gate Station,

New York, and the 160,000-kilowatt tandem-compound unit at East River Station, New York. The latter has a single generator, with double winding. The latter's under turbine in operation is a 7,000-horsepower machine at the Charles B. Huntley Station at Buffalo. This soon was to be superseded by an 80,000-kilowatt single-cylinder unit on order for the same company.

All these large units operate at moderate steam pressures, 375 to 600 pounds, but the fact that there were eleven steam turbines on order to operate at 1200 to 1400 pounds, in addition to several in service, was an indication of the trend toward high pressures in the United States.

During the year a new type of turbine made its appearance, namely, the steerable-compound in which the high-pressure unit is mounted on top of the low-pressure unit. The object of this arrangement is to save floor space. Five such units were building at the end of the year. Two of these, each of 25,000-kilowatts, were going into the New South Amboy Station of the New Jersey Central Power & Light Company, two of 50,000-kilowatts were to be installed in Station A of the Pacific & Electric Company at San Francisco and one of 110,000-kilowatt was on order for the Rouge Plant of the Ford Motor Company at Detroit. These units all were to operate at 1200 to 1400 pounds pressure.

The use of high-pressure turbines, with not confined to central stations as several were in operation or on order for industrial power plants. One of the most interesting of these was a 1400-pound unit being built for the Dow Chemical Company, located at Midland, Mich. This was designed to exhaust at 360 pounds. More and more steam turbines of the extraction type were

being installed in industrial plants, to operate at initial pressures around 400 pounds and bleed steam for process at one or more intermediate pressures. Many of these machines were being equipped with automatic control to maintain the proper balance between load, back pressure, and extraction steam demand.

The first turbine with a welded plate-steel casing made its appearance during 1929. This was a 100-kilowatt machine for auxiliary drive at the East River Station, New York. Another departure during the year was the appearance of the first all-welded plate condenser. This was installed in connection with a 30,000-kilowatt turbine at the Fair Shoals plant of the Broad River Power Company.

**STEEL, FIORA ANNIE.** An English novelist died in Minchinhampton, England, Apr. 12, 1929. She was born in Harrow, Apr. 2, 1847, the second daughter of George Webster, sheriff-clerk of Forfarshire. In 1867 she married a Bengal civilian and went to live in India until 1889. There she was for a time provincial inspector of government and aided schools in Punjab and a member of the Educational Committee. She published with Lieutenant-Colonel Richard Temple a collection of Punjab folk tales, *Wide-a-Wake Stories* (1884), and in 1887 *Complete Indian Cook and Housekeeper*. On her return to England, Mrs. Steel continued to write interestingly and with accuracy of life in India. Her books written in England include *The Law of the Threshold* (1924), *The Curse of Ece* (1928), setting forth her views on social problems.

**STELLAR EVOLUTION.** See ASTRONOMY.

**STEVENS INSTITUTE OF TECHNOLOGY.** A college of engineering in Hoboken, N. J., founded in 1870. The enrollment for the autumn of 1929 was 444 and for the summer session of that year, 76. There were 62 members on the teaching staff. The productive funds amounted to \$3,000,000, and the income for 1928-29, including fees from students, was \$348,000. President, Harvey Nathaniel Davis, Ph.D.

**STIRLING, REAR ADMIRAL YATES, U. S. N. Ret.,** died May 5, 1929, in Baltimore, Md., where he was born May 6, 1843. He was graduated from the U. S. Naval Academy in 1863, and during the Civil War, 1863-65, served on the *Shenandoah* in the North Atlantic Blockading Squadron, participating in both attacks on Fort Fisher. Promoted through the grades, he was made commander in 1880, captain in 1884, and rear admiral in 1902. He commanded the *Newark* in 1895-96, the *Lancaster* in 1896-97, and, from 1898 to 1900, served as a member of the Light-house Board. He was commandant of the Naval Station at San Juan, P. R., in 1900-02 and of the Navy Yard at Puget Sound in 1902-03. In 1902-03, also, he commanded the Philippine Squadron of the Asiatic Fleet, the Cruiser Squadron in 1904, and in 1904-05 he was commander-in-chief of the Fleet. He retired in 1905.

**STONE, MELVILLE ELIJAH.** An American journalist and former general manager for the As-

sociated Press, died Feb. 15, 1929, in New York City. He was born Aug. 22, 1848, in Hudson, Ill. Educated in the schools of Chicago, he became a reporter for the *Chicago Tribune* in 1864. From 1868 to 1871, he managed a foundry and machine shop, but, when the shop was burned, he turned again to journalism. He edited several Chicago dailies during 1871-74, and in 1875, with two partners, he established the *Chicago Daily News*. The interest of the partners he later sold to Victor F. Lawson, with whom he also founded in 1881 the *Chicago Morning News* (which became the *Chicago Record*). In 1888, because of failing health, he sold his interest in the papers to Mr. Lawson, and spent three years traveling in Europe. On his return to Chicago, he became in 1892 president of the Globe National Bank, remaining in this position until the bank's consolidation with the Continental National Bank in 1898. He became in 1893 general manager of the Associated Press, with headquarters in New York City, and after 1921 he was counselor for the organization. Mr. Stone became director at a time when the Associated Press (then the Western Associated Press) was one of several similar associations. His autobiography, *Fifty Years a Journalist* (1921), is a record of an interesting career.

**STONY POINT BATTLE ANNIVERSARY.** See CELEBRATIONS.

**STOREY, MOORFIELD.** An American lawyer, died Oct. 24, 1929, in Lincoln, Mass. He was born Mar. 19, 1845, and was graduated from Harvard University in 1866, studying at the law school there the following year. During 1867-69 he was private secretary to Charles Sumner, after which he was admitted to the bar and began the practice of law in Boston. From 1873 to 1879, he edited the *American Law Review*. Mr. Storey in 1896 was president of the American Bar Association, after 1905 president of the Anti-Imperialist League, and after 1910 president of the National Association for the Advancement of Colored People. He wrote *Politics as a Duty and as a Career* (1889), *Life of Charles Sumner* (Statesman Series, 1900), *What Shall We Do With Our Dependences* (1903), *Ebenezer Rockwood Hoar, a Memoir* (with E. W. Emerson, 1911); *The Reform of Legal Procedure* (Storr's Lectures at Yale Law School, 1911), *The Democratic Party and Philippine Independence* (1915), *The Negro Question* (1918), *Problems of Today* (Godkin Lectures at Harvard College, 1920).

**STRADIVARIUS QUARTET.** See MUSIC.

**STRAITS SETTLEMENTS.** A British Crown colony in Malaysia, consisting of Singapore, Penang (with Province Wellesley and the Dindings), and Malacca. The area is approximately 1600 square miles, population, according to the census of 1921, 883,769, estimated in 1928, 1,005,635. The estimates for the various parts in 1927 were as follows: Singapore, 217 square miles, with 538,077 inhabitants; Penang (with Province Wellesley and Dindings), 280 square miles, with 333,063 inhabitants; Malacca, 720 square miles, with 188,828 inhabitants. In 1926 there were 359,262 immigrants from China and 156,132 from southern India. The movement of population in 1927 was Births, 37,233, deaths, 35,561. The seat of the government is Singapore.

In 1927 there were 282 schools (all government aided), with an enrollment of 43,217 and an average attendance of 40,249. The chief interest is commerce, mostly transit trade (the ports are free from customs duties). The chief cities are Singapore, which had a population of 350,355 in 1921, and Penang, with a population of 123,009 in 1921.

The trade of the Straits Settlements in 1927, including intercolonial trade with other parts of British Malaya, was as follows: Singapore, imports £108,567,365, exports, £92,354,925, Penang, £36,635,268 and £33,781,282, Malacca, £4,337,110 and £5,067,908; Labuan, £228,304 and £341,392, Christmas Islands, £230,231 and £243,597, Dindings, £137,562 and £342,210.

The budget for 1928 estimated receipts at 32,916,000 Straits dollars (\$18,690,000) and expenditures at 38,951,000 (\$21,164,000), conversions to United States currency being made at par. In 1927 the actual receipts totaled 37,602,000 Straits dollars (\$21,350,000) and expenditures 39,253,000 (\$22,288,000). Large expenditure was made on public works during 1928 and a 5½ per cent loan floated in 1928 was retired. The public debt on Dec. 31, 1927, amounted to \$124,846,000 (United States currency). In 1927, 8082 vessels of 13,625,000 net registered tons entered, and 8982 of 13,634,000 tons cleared, the port of Singapore.

The administration is under a governor, aided by an executive council of official members, and a legislative council of official and unofficial members, the latter being nominated or selected by the chambers of commerce of Singapore and Penang. Governor in 1929, Sir Hugh Clifford, who is also High Commissioner for the Federated Malay States and Brunei, and British Agent for North Borneo and Sarawak. Under the administration of the Straits Settlements are the Christmas Islands, annexed in 1900, Cocos, or Keeling Islands, annexed in 1903, and the colony of Lintin, annexed Jan. 1, 1907. See CHRISTMAS ISLANDS, and LABUAN.

#### STRATIGRAPHY. See GEOLOGY

**STRATON, THE REV. DR. JOHN ROACH** An American Baptist clergyman, died at Clifton Springs, N. Y., Oct. 29, 1929. He was born in Evansville, Ind., Apr. 6, 1875. Ordained in the Baptist ministry in 1900, he served as pastor in Chicago (1905-07), in Baltimore (1908-13), in Norfolk, Va. (1913-17), and at the Cavalry Church in New York City after 1918. In 1906 he received the D.D. degree from Shurtleff College in Illinois. He was a noted Fundamentalist, arguing the question of Fundamentalism with Modernist leaders. His debates with Dr. Charles Francis Potter were followed with interest by both schools of thought. He also lectured and wrote in the interest of the Anti-Saloon League. In 1927 he conducted faith-healing services at Cavalry Church and brought upon himself bitter attacks from clergymen of his own and other denominations.

**STREETS.** See ROADS AND PAVEMENTS, CITY PLANNING.

**STRESEMANN, GUSTAV** A German statesman, died Oct. 3, 1929, in Berlin, where he was born May 10, 1878. He was educated at the universities of Berlin and Leipzig. In 1907 he was elected to the Reichstag, at which time he was

general manager of a union of manufacturers, having long been an industrial leader. He became Chancellor in 1923, but the cabinet which he formed fell the same year. He was appointed Foreign Minister in the new cabinet formed by Dr. Wilhelm Marx, and held this position in all succeeding ministries until his death. Herr Stresemann, leader of the German People's party, had many political opponents and met with bitter opposition; but he was, nevertheless, recognized as Germany's greatest post-war statesman. It was he who effected the security pact with France, negotiated the Locarno Treaty, and gained Germany's entrance into the League of Nations on an equal footing with the Allied nations. In 1929 he obtained a promise of the evacuation of the Rhine by the Allied troops. He was one of the greatest of the European peace promoters, working for the adoption of the Dawes Plan in 1924 and for the Young Plan in 1929. In 1926 he shared the Nobel Peace Prize with Aristide Briand. His death, brought on by overwork, occurred the day after he had prevented a crisis in the Reichstag over the unemployment-insurance law.

**STRIKES AND LOCKOUTS.** The final figures compiled by the U. S. Bureau of Labor Statistics for the year 1928 showed that the number of disputes beginning in that year was materially less than that for any of the other years since 1916. On the basis of 1916 as one hundred, the index figures for disputes as computed by the Bureau was as follows:

	Relative number of disputes		Relative number of disputes
1916	100	1921	43
1917	117	1924	33
1918	88	1925	34
1919	96	1926	27
1920	90	1927	19
1921	61	1928	17
1922	29		

The table that follows presents the strike history for the period January, 1928-June, 1929.

Month	Number of disputes	Number of workers involved in disputes			
1928	Begin-ning effect in month	In effect at end of month	Begin-ning in month	In effect at end of month	Number of lost man days during month
January	48	63	18,850	81,880	2,128,028
February	52	58	33,441	103,496	2,145,342
March	41	47	7,459	76,069	2,291,337

1929					
January	45	34	14,727	39,484	949,693
February	48	34	20,184	40,385	921,583
March	77	42	14,052	41,321	1,094,161
April	103	52	30,180	52,292	1,429,046
May	68	73	26,220	58,959	1,578,929
June	69	71	19,702	54,584	1,526,627

During the year 1928, the Bureau of Labor Statistics compilations showed that nearly one-third of all the industrial disputes occurred in the eight cities of New York, Boston, Philadel-

phia, Fall River, Lynn, Chicago, Cleveland, and Paterson.

The following were the conclusions of 656 of these strikes in the year 1928. Two hundred and seventy-two ended in favor of the employers, 197 ended in favor of the workers; 160 ended in compromises, 3 terminated with the employees retaining, pending arbitration, 14 were jurisdictional and protest strikes, 10 were not reported. In 1928 the total duration in days of these 656 industrial disputes was 17,997 making an average of 27 days per strike. Since 1921, the trend has been generally in a downward direction. In the earlier year, there was a total of 1258 strikes lasting 64,231 days, with an average of 51 days per strike. Only in 1927, was the strike history more favorable than the record of 1928. In that year, there were 669 disputes with a total loss of work of 15,865 days.

The researches of the Bureau of Labor Statistics showed that settlement by arbitration was meeting with increasing favor. Of the 656 disputes involving 402,706 workers ending in 1928, 130 or 20 per cent of the total were settled by arbitration.

**GREAT BRITAIN.** The history of Great Britain and Northern Ireland for 1928 showed a less favorable situation. In the year, a total of 302 labor disputes involved 124,000 workers with a total of 1,388,000 days lost. It will be observed that, while the number of workers on strike was considerably smaller than in the United States, the total number of days lost was almost ten times as great. Nevertheless, the total number of strikes, 302, was smaller than for any other year in the recent history of Great Britain, and the aggregate number of days lost, 1,388,000, was the lowest ever recorded by the Ministry of Labor. The chief industries affected by the industrial disputes were coal mining and textile.

**NEW YORK GARMENT INDUSTRY.** On July 2, a strike called by the International Ladies' Garment Workers' Union in New York City brought out 30,000 cloak and suit workers in the entire trade. The strike was called against the inside manufacturers, the contractors, and the jobbers for the purpose of improving conditions in the industry and the winning of a new agreement. Union demands included a five-dollar wage increase, reestablishment of the unemployment insurance fund, a 40-hour week, a modification of the rights after discharge. Actually, the union aimed at the breaking down of the sweating system which, as a result of internal disorganization, had raised its head in the industry in recent years. On July 11, 10 days later, a settlement of the difficulties was reached between the union and the Industrial Council, the leading employers' organization. The union withdrew its demand for an increase, however, it won its chief point, that of the organization of a joint control commission for the purpose of maintaining shop standards and agreements and to discourage the manufacture of garments in non-union shops. It was generally agreed by both sides that one of the elements of danger in the situation was the expansion of chain-store consumption. At its annual convention in December, in Cleveland, the International Ladies' Garment Workers' Union announced that it planned to call a similar organization strike in the ladies' dress industry. It was expected, too, that the union would seek the establishment of the week-work

basis instead of the prevailing piece-work payment scheme. In the same month, a group of prominent retail-store distributors pledged their support to the maintenance of decent working conditions in the industry.

**NEW ORLEANS STREET-CAR WORKERS.** On July 1, began a bitter and long-drawn-out dispute in that city, which involved approximately 1500 street-railway workers on strike against the local street-traction company. The men went out for wage increases, and the union. The strike was and violence largely due to the fact that the companies sought to run the cars manned by strike-breakers. It was reported that a number of street cars was burned by the strikers and their sympathizers. On September 5, following conferences of President Green of the American Federation of Labor and representatives of the local car men and the public service company, an announcement was made to the effect that an agreement had been reached. The car men, however,

on September 11, voted to reject the agreement on the score that the company had refused to indicate that it would take back the strikers. In the middle of the month, it was apparent that the strike had been lost.

**BUILDING TRADES, MISSOURI.** On May 1, there began in St. Louis a strike of building-trade employees which affected a total of 4200 workers who succeeded in tying up seriously building operations in that city. The chief cause for the strike was a demand for increased wages. After six weeks of idleness, compromises were effected, resulting in the creation of new wage scales.

**CANADA.** Canada's history for the year 1928 continued to show the same decline that has been the trend in recent years. During 1928, 101 disputes between capital and labor involved only 18,239 workers, as compared with 22,683 in 1927 and 24,142 in 1926. The peak of Canadian labor disputes was reached in 1919, when 38,988 workers were on strike during the year. In 1928, 726 employers were affected and the total time lost in working days was 238,132.

**SOUTHERN TEXTILE AREA.** In March and continuing intermittent strikes during the year, involving only small units, but waged bitterly on both sides, industrial warfare broke out in the Southern textile area, that paradise of American capital "where labor was cheap, American, and contented." The lightning struck now in Tennessee, now in Georgia, again and again in South Carolina, and in North Carolina. In Elizabethton, Tenn., first in March and then in April, the workers in the rayon mills went out on strike in protest against the stretch-out system, for a shorter working week and for the new wage scale.

The newly-formed local established in Elizabethton, the Textile Workers' Union, affiliated with the A. F. of L. in Elizabethton, a new wage scale was won. Under it, women workers were to receive 18 cents per hour for the first three weeks, 20 cents for the next three weeks; with a maximum rate of 24 cents for the most efficient. Thus for a 60-hour week, a maximum of \$14.40 could be hoped for, but the mill owners refused to recognize the union and the later strike of April did not succeed in checking the discharge of workers active in the organization of the Elizabethton local. In March, too, a series of strikes broke out in the South Carolina mill towns of Ware Shoals, Pelzer, and Greenville. The stretch-out system, under which a sin-

gle worker was expected to operate practically twice as many machines as heretofore, without higher pay or a shorter working day, was the cause for the walkout. The workers, unorganized and without the aid of the A. F. of L., were quickly defeated.

Gastonia and Marion, N. C., were the scenes of bloody conflict and the wretched story of Southern white labor in these two Southern mill towns aroused the whole nation and compelled the A. F. of L. at its annual convention to pledge all its strength and resources to force unionization with an improvement of working conditions. In Marion, in September, the 650 workers in one of the mills had struck, under the guidance of A. F. of L. organizers. It was established that the workers were receiving an average of \$14 a week, were working from 10 to 12 hours a day and were being denied the right to unionize. In fact, the leading cause of the strike was the discharge of 15 workers who were active in trade-union activity. The local authorities at once came to the assistance of the mill owners and furnished deputy sheriffs to police the mill grounds to prevent molestation of the strike-breakers. On October 2, there was a clash between the sheriff and his deputies and a strike picket parade with the result that six strikers, all men and all American-born, were killed. The sheriff and 17 others, of whom 11 were deputies, were held for the grand jury. Governor O. Max Gardner promised an investigation and the Communist Trade Union, the National Textile Workers Union, took advantage of the situation to carry its propaganda into the disaffected areas. Before the month had ended, the strikers had been defeated and the mills were resuming operations. In November, two of the strike leaders were found guilty of rioting and sent to jail. It was not so easy, however, to hold anybody accountable for the slaying of the strikers. First, the indictment against the sheriff was dismissed, then, on December 21, a jury of mountaineers brought in a verdict of not guilty against the eight deputy sheriffs who were finally brought to trial.

In Gastonia, the sequel of the strike was somewhat the same. Here, in April, the workers went out on strike in the Loray Mill of the Manville-Jenckes Company, a Rhode Island corporation. The workers were being organized by the National Textile Workers Union, the Communist organization. On June 7, in resisting a raid on the strike headquarters, strike leaders fired into the attacking group with the result that Police Chief Aderholt was killed. Immediately, 15 men and women were arrested for the murder. Because of local hostility, a change of venue was granted the defendants and after an original mistrial and a change in the indictment from first- to second-degree murder, on October 21 seven men were found guilty of the murder as charged. It was apparent that every precaution had not been taken to insure fairness.

North Carolina justice was not so swift in bringing to trial the murderer of Ella May Wiggins, a striking mill worker and the mother of five children, who was killed on September 14, when a mob fired into a truckload of strikers on their way to a meeting. Nine minor bosses in the Loray Mill at Gastonia were arrested in connection with the murder, but on October 24 the grand jury reported its inability to bring in an indictment because of "insufficient evi-

dence." Though the presiding judge refused to dismiss the nine defendants, local sentiment predicted an end of the matter. Meanwhile, the strike in the Loray Mill had been lost. In November, a special presiding judge, appointed by the Governor, sought again to obtain indictments for the murder of Mrs. Wiggins. The end of the year saw no action taken.

**STRYKER, MELANCTHON WOOLSEY** An American clergyman and former college president, died Dec. 6, 1929, in Rome, N. Y. He was born in Vernon, N. Y., Jan. 7, 1851, and was graduated in 1872 from Hamilton College and in 1876 from Auburn Theological Seminary. Ordained in the Presbyterian ministry in 1876, he served as pastor from that time until 1892, successively in Auburn and Ithaca, N. Y., in Holyoke, Mass., and in Chicago, Ill. From 1892 to 1917, Dr. Stryker was president of Hamilton College. He was a student of hymnology and the author of hymns and poems. He published *Song of Miriam* (1888); *Three Addresses on Lincoln* (1917); *Vesper Bells*, verse (1910), *Christian Prayers*, a hymnal (1920); *Lincoln's Land*, and *Other Verses* (1921); *Ethics in Outline* (1923), *Embers*, collected verse (1926).

**SUDAN, ANGLIO-EGYPTIAN** A territory in the Nile region of Africa, extending south from Egypt and Libya to British East Africa and the Belgian Congo, bounded on the east by the Red Sea, Eritrea, and Abyssinia, and on the west by French Equatorial Africa, under British authority. Area estimated at 1,008,100 square miles, population in 1928 estimated at 6,469,041. Capital Khartum, with a population of 31,965, other cities, Omdurman, 79,238, Khartum North, 92,982, with adjacent rural district.

Most of the world's supply of gum arabic and ivory comes from the Anglo-Egyptian Sudan. In 1927 gum-arabic exports totaled 21,239 tons valued at ££680,887 (one pound Egyptian = equal to \$4.983). Cotton is a leading crop, there being 216,544 acres under cultivation in 1927, the crop from which (1927-28) was estimated at 110,000 bales (averaging 278 pounds). Much of the cotton area is irrigated. Sesame, groundnuts, senna leaves and pods, dates, hides and skins, gold, and salt are other products, in addition to such cereals as dura (great millet) and dukhn (bulrush millet).

Imports in 1927 totaled ££6,155,344 and exports, excluding re-exports, ££4,956,090. Most of the trade was carried on with Great Britain and Egypt. The budget estimates for 1928 balanced at ££5,978,000. In 1927 actual revenues totaled ££5,929,945 and expenditures ££5,550,480. The figures do not include the revenue and expenditure for local provincial services, which in 1927 amounted to ££157,174 and ££143,673 respectively. In 1928 there were 1802 miles of railway line open to traffic and a section of 135 miles was under construction from Kassala to Gharaf. The navigable tributaries of the Nile are served by government steamers. Under a convention signed

at Cairo, Jan. 19, 1899, the region south of the 22d parallel is administered by a governor-general appointed by the Egyptian government with the assent of Great Britain. The Sudan has been divided into 15 provinces, each under a governor. Since 1910 the governor-general has been assisted by a council. Governor-General in 1929, Sir John L. Maffey.

**SUEZ CANAL.** The reports for 1928 of the Compagnie Universelle du Canal Maritime de Suez and the preliminary reports for 1929 showed unprecedented activity during these years, both in number of passages of ships and in the movement of merchandise. In 1929, it was estimated that 6274 ships with a net tonnage of 33,466,014 passed through the canal, as compared with 6084 ships with a net tonnage of 31,905,902 in 1928, and 5545 ships with a net tonnage of 28,962,000 in 1927. The movement of merchandise in 1929 was 34,516,000 gross tons; in 1928, 32,622,000 gross tons, and in 1927, 29,524,000 gross tons. Total transit and navigation receipts in 1928 amounted to 222,396,000 gold francs, exceeding those of 1927 by 13,710,163 gold francs in spite of a reduction of 25 centimes per ton which went into effect Apr. 1, 1928.

The five principal flags represented in canal traffic—British, Dutch, German, French, and Italian—exceeded their previous high records. The accompanying table gives the number of transits and net tonnage by nationality for the year ending Dec. 31, 1928.

SUEZ CANAL TRAFFIC, 1928

Country	No of Transits	Net Tonnage
Great Britain	3,393	18,124,074
The Netherlands	617	1,329,628
Germany	611	3,300,618
France	359	1,926,269
Italy	362	1,649,793
Japan	158	940,070
United States	123	729,351
Norway	149	686,749
Denmark	71	163,928
Sweden	66	307,316
Greece	90	280,011
Belgium	40	160,057
Russia	20	67,821
Spain	6	17,801
Egypt	8	13,586
Finland	2	7,769
Uruguay	2	3,226
Turkey	2	2,658
Portugal	2	2,593
Czechoslovakia	1	1,844
Siam	1	1,119
Total	6,084	31,905,902

**SUGAR.** Estimates published by Willett and Gray placed the world's production of sugar in 1929 at 30,001,000 short tons, of which 19,725,000 tons were cane sugar and 9,120,000 tons beet sugar. The yields in short tons of cane sugar for the more important producing countries were estimated as follows: Cuba, 5,488,000 tons, Java, 3,250,000 tons, British India, 2,988,000 tons, Formosa and Japan, 991,000 tons, Hawaii, 913,000 tons, Philippine Islands, 812,000 tons, Porto Rico, 762,000 tons; and Dominican Republic, 420,000 tons. It was further estimated that South America produced 1,776,000 tons, Africa, 783,000 tons, and Australia and Fiji, 764,000 tons.

Cane-sugar production in the United States, which is limited to Louisiana, was forecast by the Department of Agriculture at 208,000 short tons compared with 132,000 short tons the year before. The 1929 area of sugar cane in Louisiana was placed at 173,000 acres against 115,000 acres

in 1928. The value of the entire Louisiana cane crop was estimated to be \$12,779,000 as compared with \$10,021,000 the preceding year. The price of cane in 1929 was \$3.76 per ton and in 1928, \$3.87 per ton. The production of sugar-cane sirup in the Southern States was estimated at 23,458,000 gallons, or 15 per cent greater than the 1928 production of 20,401,000 gallons. The increase was largely due to a larger acreage. The December 1 price was 75.4 cents per gallon in 1929 and 77.6 cents the year preceding and on this basis the total farm value was \$17,691,000 and \$15,835,000 for the two years, respectively.

Estimates for 1929 by the International Sugar Association of Vienna as reported by the International Institute of Agriculture placed the European production of raw sugar from sugar beets at 5,769,131 short tons, about 80,000 tons less than the production in 1928. The production of sugar beets for the year was estimated at 35,495,490 short tons. The leading countries and their yields were as follows: Germany, 2,032,370 tons; Czechoslovakia, 1,087,346 tons; Poland, 936,000 tons; and Italy, 470,000 tons. The Soviet Republics, which are not included in the above estimates, produce annually about 10,000,000 tons of sugar beets and according to a preliminary estimate produced 1,353,000 tons of sugar in 1928. In Europe, 614 beet-sugar factories operated in 1929 against 643 in 1928.

The Department of Agriculture estimated the production of sugar beets by the United States in 1929 at 7,672,000 tons and the beet-sugar production at 1,041,000 tons, an increase of 571,000 tons of beets and a decrease of 20,000 tons of sugar as compared with 1928. The December 1 farm price was \$10.70 per ton and the farm value of the crop \$57,079,000 in 1928 and \$11 and \$50,477,000, respectively, the year before. The average yield per acre was 107 tons. Colorado produced 2,880,000 tons of sugar beets, Nebraska, 1,062,000 tons, W. 65,000 tons, Utah, 564,000 tons, and 544,000 tons.

It was estimated that in 1929 the United States produced 1,706,000 pounds of maple sugar and 2,595,000 gallons of maple sirup. The bulk of this production was supplied by Vermont, New York, and Ohio, Vermont leading with 906,000 pounds of sugar and 1,083,000 gallons of sirup. See CHEMISTRY, INDUSTRIAL.

#### SUICIDE. See CRIME

**SUISUN BAY BRIDGE.** See BRIDGES

**SULLIVAN EXPEDITION.** SESQUICENTENNIAL CELEBRATION OF See CELEBRATIONS

**SULPHUR.** Production, shipments, and exports of sulphur reached new levels in 1929, according to the U. S. Bureau of Mines. Sulphur production amounted to 2,362,389 long tons in 1929, compared with 1,981,873 tons in 1928, and 2,111,618 tons in 1927, the previous record year. Shipments totaled 2,437,238 tons valued at about \$43,800,000, compared with 2,082,924 tons valued at about \$37,500,000 in 1928, the previous record year. In 1929 production was continued in Texas at Gulf, Matagorda County, by the Texas Gulf Sulphur Co.; at Bryan and Hoskins Mounds, Freepport, Brazoria County, by the Freeport Sulphur Company at Benavides, Duval County, by the Duval Texas Sulphur; and at Wharton, Wharton County, by the Union Sulphur Company. A new operation on Boling Dome at Newgulf, Wharton County, Texas, was started by the Texas Gulf Sulphur Company during the latter part of March, 1929.

No production or shipments of sulphur were made in Louisiana in 1929. The final shipments of sulphur from the stockpile at Sulphur, Calcasieu Parish, La., were made in 1928. Over 99 per cent of the United States production and shipments of sulphur came from Texas.

Stocks of sulphur on hand at the mines decreased nearly 100,000 tons, following a decrease of approximately 100,000 tons in 1928, and were about 1,900,000 tons on December 31. The average quoted price for sulphur as reported by the trade journals was unchanged at \$18 a ton for open mines throughout the year. Open prices were \$1 to \$3 a ton higher, and prices for sulphur exported were given as \$22 a ton for Atlantic ports.

Exports of sulphur or brimstone from the United States totaled 865,183 tons valued at \$17,028,813, compared with 685,051 tons valued at \$14,345,075 in 1928, and 789,274 tons valued at \$16,254,227 in 1927, the previous record year.

The world production of sulphur in 1928 was estimated at 2,413,000 metric tons, the equivalent of 2,374,302 long tons. Of this amount, 1,949,000 metric tons (1,981,873 long tons) were produced in the United States. Outside the United States the chief source of supply was Sicily which was reported to have produced, in 1928, 215,280 metric tons of sulphur, as compared with 231,440 metric tons in 1927. The production of continental Italy, chiefly Romagna, was given as 80,827 metric tons making the total estimated production of Italy 296,107 metric tons, a slight decrease from that of 1927. Japan produced 66,619 metric tons of sulphur in 1928, Spain, 15,000 metric tons; Chile, 10,000 metric tons, and China, 5600 metric tons. In Chile enormous deposits were reported newly discovered at Putana Volcano in the Province of Antofagasta, near the Bolivian frontier.

**SUMATRA.** See DUTCH EAST INDIES.

**SUN.** See ASTRONOMY.

**SUNDAY-SCHOOL UNION, AMERICAN.** A volunteer association composed of members of different Protestant denominations, whose object is to establish and maintain Sunday schools and to publish and circulate moral and religious publications. It was established in 1817 as the Sunday and Adult School Union. Through the contributions of individuals, churches, and Sunday schools, it sustains missionaries and supports its general work, which is carried on by 13 districts. In the year ending Feb. 28, 1929, 673 schools were organized and 516 schools re-organized, with a total of 3835 teachers and 35,719 pupils. There were 168 young people's societies established, 150 preaching stations opened; 28 churches of various denominations organized, and 12 churches built. The income for the year was \$582,903, expenditures amounted to \$578,501. The officers in 1929 were President, E. Clarence Miller, vice presidents, James M. Snyder, Barton F. Blake, and Robert L. Latimer; treasurer and recording secretary, John H. Talley; secretary of missions, G. P. Williams; editor of publications, James McConaughy. National headquarters are at 1816 Chestnut Street, Philadelphia.

**SUPERPHOSPHATE.** See FERTILIZERS.

**SURGEONS, AMERICAN COLLEGE OF A** (college or guild (not a teaching institution), organized in 1913 by some 500 surgeons of North America representing every branch of surgery.

The object of the college is "to elevate the standard of surgery, to provide a method of granting fellowships in the organization, and to educate the public and the profession to understand that the practice of surgery calls for special training, and that the surgeon elected to fellowship in this college has had such training and is properly qualified to practice surgery."

The membership in 1929 was more than 9000 and included prominent surgeons of the United States, Canada, and the Latin-American countries. The activities of the college are financed from initiation fees and yearly dues of the fellows, augmented by outside contributions. The college, in 1929, owned property valued at \$1,600,000 and had an endowment fund of more than \$800,000.

In 1917 a hospital standardization programme was initiated, which set definite professional requirements as to organization, diagnostic facilities, and methods of procedure and which provided for a careful annual survey of all hospitals with 25 beds and over. There were 2865 hospitals of 25 beds or over on the college's visiting list in 1929, and of these, 1969 were fully or conditionally approved.

The college maintains a library and department of literary research to further the standardization of literature on surgery and closely allied subjects and to encourage the wider reading and study of scientific material. The official journal is *Surgery, Gynecology and Obstetrics*. Officers for 1929-30 were: President, Dr. Merritt W. J. Smith, D. C. S. A., Washington, D. C.; Vice President, Dr. J. C. Miller, New Orleans; Vice Presidents, Dr. W. W. Pearson, Des Moines, and Dr. Perry C. Goldsmith, Toronto; Treasurer, Dr. Frederic A. Besley, Waukegan, Ill.; Dr. Franklin H. Martin was director general of the college and Dr. Malcolm T. MacEachern and Dr. Bowman C. Crowell, associate directors. Headquarters are at 40 East Erie Street, Chicago.

**SURGERY.** Dr. L. H. McKimie of Colorado Springs attempts to give a forecast of surgical activity in the *Journal of the American Medical Association* for April 6. He limits himself to a few provinces only, the first of which is operations by incompetent surgeon. This is in line with the statement made not long ago by Dr. Wm. J. Mayo that the surgeon of the future will limit himself to a narrow and specialized line of operation, which naturally will widen the gulf between the expert and the incompetent. To secure better surgical training, the private purse of the student will no longer prove adequate and we must have State aid or endowment by philanthropy. Young men must be selected for their fitness and in some way made independent of ordinary financial considerations. A special qualification may be necessary, for membership in the American College of Surgeons is hardly sufficient for the future. It is also difficult to conceive of master surgeons who are not affiliated with the great universities or general hospitals. The better class of extramural surgeons should gravitate to these institutions until a standardized *modus vivendi* comes to pass. Nothing must happen which will drive superior men from a career in surgery, for the great surgeon has usually been a man of high character and ability as well as attainments.

**SURINAM.** See DUTCH GUIANA.

**SUVIANA DAM.** See DAMS.

**SVALBARD.** An arctic archipelago in the Eastern Hemisphere, area 25,000 square miles, formerly known as Spitzbergen. It comprises all lands between 10 and 35 degrees east longitude and between 74 and 81 degrees north latitude. By the Treaty of Paris, Feb. 9, 1920, it was placed under the full and absolute sovereignty of Norway. The principal islands are West Spitzbergen, usually called Spitzbergen, Northeast Land, Barents Island, Edge Island, Wiche Islands, Hope Island, and Prince Charles Foreland. Norway assumed control in 1925 and has appointed a governor, who lives at Green Harbor with a small staff. There are six mining camps inhabited the year round. The largest, Longyearbyen in Advent Bay, has 529 inhabitants. As all industries are conducted on Spitzbergen, they are treated under West Spitzbergen.

**SWARTHMORE COLLEGE.** A nonsectarian institution for the higher education of men and women in Swarthmore, Pa., founded in 1864 by the Society of Friends. The 1929 enrollment was 576 full-time students, of whom 289 were men and 287, women. The teaching staff numbered 75. The endowment and productive funds amounted to \$4,000,000. The library contained 68,000 volumes. In addition, the Friends Historical Library had a collection of 8500 volumes and original manuscript-record books of 40 Friends' meetings. President, Frank Aydelotte, LL D.

**SWAZILAND,** swa'ze-land. A British protectorate in North Africa, situated north of Zululand, at the southeastern corner of the Transvaal. Formerly under the South African Republic, it is now controlled by the British government acting through a high commissioner of the Union of South Africa. Area, 6704.6 square miles, population at the census of 1921, 112,638, of whom 2235 were Europeans. Capital, Mbabane. The chief agricultural products are corn (the staple product), tobacco, millet, various vegetables, peanuts, and cotton. The mineral resources are considered rich, but are undeveloped. The revenue for 1927-28 was £90,706 and the expenditure £103,681. There is a customs union with the Union of South Africa. The South Africa Act of 1909 included Swaziland as one of the territories which, on an address from the South African Houses of Parliament, might be transferred to the government of the Union. In September, 1929, it was announced that General Hertzog, Premier of the Union, was anxious to secure the inclusion of Swaziland during the life of his government. The transfer was said to be opposed by the native Swazis and by most of the Europeans in the territory. Local administration is under a resident commissioner. Resident Commissioner in 1929, T. Ainsworth Dickson.

**SWEDEN.** A constitutional kingdom in the extreme northwestern part of Europe, occupying the eastern and larger part of the Scandinavian peninsula. Capital, Stockholm, reigning sovereign in 1929, King Gustaf V.

**AREA AND POPULATION.** The total area of Sweden is 173,154 square miles, the population, according to the census of 1920, was 5,904,489, estimated in 1928, 6,105,190. The population per square mile in 1928 was 38.5. Births averaged 102,803 annually from 1924 through 1928, and deaths, 72,926, leaving an annual excess of births of 29,897. During the same period emigrants averaged 12,387 annually and immigrants 5536. The bulk of the emigrants went to the United States. Cities with more than 100,000 inhabitants

in 1928 were Stockholm, 474,094, Goteborg, 235,994, and Malmo, 118,535.

**EDUCATION.** Elementary education is free and compulsory between the ages of 7 and 14. In 1927 there were in the elementary schools, 26,847 teachers and 600,696 pupils. In the same year there were 77 public secondary schools, with 27,899 pupils, 563 people's high schools with 3581 pupils, two high and seven elementary technical schools with about 2900 pupils, military, navigation, agricultural, veterinary, and other special schools. There are two universities.

**PRODUCTION.** About half of the population is engaged in agriculture and half in commerce and industry. In 1926, 9,254,000 acres, or 9.1 per cent of the total area, was under cultivation, 2,280,000 acres were permanent meadows, and 60,704,000 acres were devoted to forests and pasture land. The total value of field crops in 1928 was placed at 1,152,861,000 crowns (\$308,968,000), including wheat, \$25,174,000, oats, \$49,889,000, potatoes, \$30,231,000, hay, \$89,561,000. The area and production of the chief crops was: Wheat, 575,000 acres, 19,470,000 bushels, rye, 686,000 and 17,161,000, barley, 273,000 and 5,572,000, oats, 1,810,000 and 87,516,000, mixed grain, 565,000 acres and 474,000 metric tons, potatoes, 337,000 acres and 65,884,000 bushels, sugar beets, 105,000 acres and 1,024,000 metric tons, beet sugar, 161,000 metric tons, hay, 3,336,000 acres and 4,793,000 metric tons, forage roots, 209,000 acres and 2,895,000 metric tons. Most crops showed a marked improvement over 1927.

Swedish industry and commerce maintained a high level of activity during 1929 and the latter part of 1928, after strikes in the iron, wood-pulp, and paper industries in the first half of 1928 had slowed up production. In 1929, railroad car loadings, shipping, bank clearings, foreign trade, employment, industrial output, and building activity all reached the highest levels since the World War. The mining industry in Sweden has been important for centuries. The annual production of Lappland iron ore averaged 7,000,000 tons, at which rate it would require more than 150 years to exhaust the known deposits. Another rich mining area in the Skellefte River region in Sweden proper was being developed in 1929, the ores containing gold, silver, copper, arsenic, zinc, lead, and copper pyrites. A smelting plant for the treatment of the ore was under construction at Ronnskai, on the Gulf of Bothnia. Besides the iron and steel industry, shipbuilding, and the production of machinery, wood pulp and paper, lumber, and matches are the leading industries.

The 1928 output of major industrial products included Pig iron, 396,092 metric tons, steel ingots, 576,170 metric tons, cement, 468,000 metric tons, rough lumber, 208,224,000 cubic feet, planed lumber, 57,000,000 cubic feet, wood pulp, 1,631,000 metric tons, cardboard and paper, 580,000 tons, flour-mill products, 607,000 tons, matches, 48,700 tons. Yugoslavia, Latvia, Estonia, Hungary, and Rumania were added in 1928 to the countries in which the Swedish Match Trust has secured a monopoly for the sale of matches through the extension of long-term loans to the respective countries. The production of electrical energy increased from 3,517,000,000 kilowatt-hours in 1924 to 4,410,000,000 in 1928. Of the 1928 total, 1,541,000,000 kilowatt-hours were produced by government power stations and 346,000,000 by municipal stations.

**COMMERCE** The volume of foreign trade in 1929 was the highest since 1920. The value of exports, according to preliminary figures, totaled 1,808,000,000 crowns, as compared with 1,575,000,000 crowns in 1928, while imports increased to 1,772,000,000 crowns, as compared with 1,708,000,000 crowns in 1928. The estimated favorable balance of trade was 30,000,000 crowns, or about 4,000,000 crowns higher than in 1927, when the export surplus was unusually large.

**FINANCE** For the fiscal year ending June 30, 1930, the budget as approved by the Riksdag (Parliament) balanced at 779,509,000 crowns, as compared with the closed account for 1928-29 totaling 808,200,000 crowns. The approved budget for 1928-29 balanced at 744,746,000 crowns, including ordinary receipts of 689,668,000 crowns, extraordinary receipts of 55,078,000 crowns, ordinary expenditures of 658,525,000 crowns, and extraordinary expenditures of 86,221,000 crowns. There was a net surplus of 10,000,000 crowns as a result of financial operations of the government in 1927-28, and accordingly income and property taxes were considerably reduced in 1928-29.

The total public debt as of Jan. 1, 1929, stood at 1,836,900,000 crowns (\$492,289,000), 80 per cent of which was held in Sweden. At the end of 1929 the national debt amounted to 1,799,000,000 crowns, a reduction of 37,000,000 crowns during the year. Average exchange value of the krona, or crown, was \$0.2680 in 1928 and \$0.2678 in 1929.

**COMMUNICATIONS** At the end of 1928 there were 10,378 miles of railway line, of which 4015 miles were state owned and 6363 miles privately owned. In 1927, all railroads carried 66,313,000 passengers and 41,161,000 metric tons of freight, earning gross receipts of 344,062,000 crowns, (\$82,243,000). Planes of the civil air lines in 1928 flew 208,854 miles, carrying 14,948 passengers and 233,361 pounds of mail and goods. In 1929 there was a decided increase in the use of air lines. There were 13,140 miles of government-owned telegraph line and 1,026,554 miles of government-owned telephone wire in 1927. The merchant marine on June 30, 1928, consisted of 1383 vessels of 1,447,470 gross tons capacity. A total of 20,992 vessels of 16,894,000 net registered tons entered and 30,049 vessels of 15,989,000 tons cleared Swedish ports during 1928.

**GOVERNMENT** Executive power is vested in the King, who acts through a responsible ministry known as the Council of State, at the head of which is the Minister of State, or Premier. Legislative power rests in a Diet (Riksdag) of two chambers, of which the Upper has 150 members elected by the legislatures of the provinces, the Lower Chamber consists of 230 members elected for four years by universal suffrage. King Gustaf V was born June 16, 1858, and ascended the throne on the death of his father, Oscar II, Dec. 8, 1927. The cabinet (Conservative) appointed Oct. 2, 1928, was constituted as follows: Premier, Admiral Landman; Foreign Affairs, Ernst Trygger; Justice, Georg Bismark; Defence, Harald Mahnberg; Social Affairs, Sven Lubeck; Communications, Theodor Borell; Finance, Nils Wohlin; Education and Ecclesiastical Affairs, Claes Landskog; Agriculture, J. B. Johansson; Commerce, Vilhelm Lundvik; Ministers without Portfolio, August Beskow and Nils Vult von Steyern.

**HISTORY.** Interest in Swedish affairs during 1929 centred in the difficulties of the Lindman

Ministry, whose policies repeatedly brought it into conflict with a majority of the Riksdag. The question of providing state aid for the depositors of a number of savings banks which closed in the Spring caused the defeat of the cabinet in June. Only the weakness of the Social Democratic party, which lost ground in the elections in the Fall of 1928, prevented the formation of a new ministry. As it was, the Lindman cabinet was obliged to dismiss Minister of Finance Wohlin, to whose vacillating policy the failure of the banks was attributed by the Opposition. He was replaced by P. A. Dahl. Other problems which disturbed the political calm during the year were in some respects identical with the issues confronting the American Congress. They included farm relief, regulation of the liquor traffic, religious instruction in the schools, and military preparedness.

The debate over the bank failures was marked by a threat against the throne by Opposition deputies. When the cabinet affirmed its confidence in M. Wohlin following its defeat upon the bank issue, a Liberal deputy declared that if the King retained a government repudiated by the Riksdag "the people of Sweden would say the last word, no matter what happens." Relief of the depositors on a much larger scale than contemplated by the government was finally provided for by the Riksdag. The favorable action of the Minister for Ecclesiastical Affairs upon a petition requesting the reintroduction into the schools of the system of religious instruction in effect previous to 1927, precipitated another storm which had not been dissipated at the close of the year. The Left groups in the Riksdag overruled the Conservative parties in their demand for increased agricultural tariffs, particularly on sugar. The agitation for the further reduction of military expenses, strengthened by recent steps in that direction taken by Denmark (see DENMARK, under *History*), resulted in the refusal of the Budget Commission of the Riksdag to accept an increase of about 4,000,000 crowns in the military budget demanded by the government. An indirect proposal for the abolition of land and naval armaments was rejected by both houses of the Riksdag, however.

An event which furthered amicable relations between Sweden and Norway was the wedding of Crown Prince Olaf of Norway and Princess Martha, daughter of Prince Carl and niece of King Gustaf of Sweden, in Oslo on March 21. Other developments during the year were the ratification of the Kellogg-Briand Pact and of an all-inclusive arbitration treaty with France, a split in the Swedish Communist party, with the majority of the Communists rejecting the authority of the executive committee of the Third International at Moscow, the consummation of an agreement governing production and foreign sales of the Swedish, Norwegian, and Finnish pulp and paper industries, and the establishment of closer relations with the Baltic republics of Lithuania, Latvia, and Estonia, evidenced by visits to Sweden of the Latvian and Estonian Presidents and a return visit to both countries by King Gustaf.

**SWEDENBORGIANS.** See NEW JERUSALEM, CHURCH OF THE.

**SWEDISH LITERATURE.** See SCANDINAVIAN LITERATURE.

**SWIMMING.** The American swimmers continued in 1929 to break world, national, col-

legiate, and scholastic records. Forty-seven new standards for men and women were established in the A. A. U. competition, with Eleanor Holm of the Women's Swimming Association of New York City heading the list with six new marks for back stroke and medley swimming to her credit. George Kojac, swimming for the Boys' Club of New York City, led the men with five international dorsal records. The New York Athletic Club and the Women's Swimming Association attained the highest aggregate tallies for the national A. A. U. indoor and outdoor senior championships, winning respectively, 55 and 76 points. The victory of the W. S. A. was more impressive as the points scored by the star, Martha Norelius, were forfeited because of a technical violation of the A. A. U. code. Miss Norelius then turned professional and won the \$10,000 prize in the Wrigley marathon at Toronto in September. Two other champions dropped their amateur status, Johnny Weissmuller and Ethel Lackie, and Weissmuller's loss was reflected in the scarcity of individual free-style records for men shattered. Walter Laufer of Chicago, contributed the only new mark, 1:25 for 150 yards in a 75-foot pool.

Laufer and Miss Albina Osipowich, of Worcester, Mass., were the year's rating sprinters. The former retained the fastest times for 100 yards and 220 yards when he won the national fixtures in 0 51% and 2 12% in a 75-foot pool. Miss Osipowich brought down the international long-course standards for 100 meters, and 220 yards to 1 08% and 2 41%. The former mark for the 100 meters also was equaled or bettered during the year by the Misses Eleanor Garrati, of San Rafael, Monta Morgan of San Francisco, and Helene Madison of Seattle.

Other swimmers who featured the year with excellent performances were Clarence Gable of Honolulu, Miss Josephine McKim of Balboa, Canal Zone, Raymond Ruddy of the New York A. C., George Kojac, Miss Ethel McGary of the Women's S. A., Walter Spence of Philadelphia, Miss Agnes Geaghty, of the W. S. A. Michigan University swimmers reaped the lion's share of the laurels at the national collegiate championships held in March, no Yale men taking part, and the swimming team titles of the Eastern, Conference, and Pacific Coast Leagues were captured respectively by Yale, Northwestern, and Stanford, and the water polo honors by Yale, Illinois, and Stanford. Walter Medvell of Evander Childs High School of New York City, Fred Basset of De Witt Clinton High and the lads from Highland Park High School of Detroit were the outstanding interscholastic stars of the year.

#### SWINE. See LIVESTOCK

**SWITZERLAND.** A federated republic in the centre of Europe, bounded by Germany on the north, France on the west, Italy on the south, and Austria on the east. Capital, Berne.

**AREA AND POPULATION.** The area of Switzerland is 15,940 square miles, population, according to the census of 1920, 3,880,320, estimated in 1928, 4,018,000. In 1927 the estimated population of the principal cities was as follows: Zurich, 215,460; Basel, 141,650; Geneva, 126,700; Berne, 108,020. Births during the years 1924 to 1928 averaged 71,466 annually and deaths, 48,116, the excess of births being 23,348. German is the language of 70.9 per cent of the people, French of 21.2 per cent, Italian of 6.2 per cent, and

Romansch of 1.1 per cent. Dialects of the various languages spoken in Switzerland are numerous.

**EDUCATION.** School attendance is compulsory from 6 to 15 years of age. According to the school statistics for 1926-27, there were 4408 primary schools, with 16,818 teachers and 482,688 pupils, 599 secondary schools, with 25,250 boys and 24,034 girls, and 2353 teachers, 101 lower middle schools with 8413 boys and 5120 girls, and 826 teachers. The seven universities of Switzerland, at Basel, Zurich, Berne, Geneva, Lausanne, Fribourg, and Neuchatel, are organized on the model of those of Germany. In 1927-28 the total number of students in attendance at these universities was 6550 and the members of the teaching staffs numbered 988.

**PRODUCTION.** In 1928 there were in Switzerland 1,250,000 acres of arable land, or about 12 per cent of the total area, 4,143,000 acres of permanent meadow and pasture, 36,000 acres of trees, shrubs, and bushes, 2,225,000 acres of forests, 247,000 acres of uncultivated land, and 2,301,000 acres of unproductive land. In the same year there were 1,587,000 cattle, 635,000 swine, 169,000 sheep, 287,000 goats, and 139,000 horses. Dairying and cattle raising are the principal agricultural occupations.

In 1928 the total value of agricultural and livestock production was 1,460,180,000 francs (\$282,386,000), as compared with 1,395,400,000 (\$268,760,000) in 1927. The area and production of the leading crops in 1928 were as follows: Wheat (including mixed grains and spelt), 174,000 acres and 5,963,000 bushels, rye, 49,000 acres and 1,705,000 bushels, barley, 16,000 and 565,000, oats, 51,000 and 2,880,000, potatoes, 118,000 and 25,279,000, grapevines, 35,000 acres and 17,435,000 gallons of wine. Good crops in 1928 and 1929, together with Federal subsidies, improved the condition of the farmers, but the large crops resulted in price declines toward the end of 1929. In 1927 butter production totaled 28,000,000 pounds and cheese 144,600,000 pounds.

**Mining** in Switzerland is confined to the production of salt, iron ore, and manganese ore. There are numerous industries, the number of factories in 1927 being 8163. Machinery, textiles, watches, chemicals, aluminum, chocolate and other foodstuffs are the principal products. Industrial and commercial conditions were highly favorable in 1928 and 1929. The number of registered unemployed workers at the end of 1928 was only 10,668. There were 360,350 persons employed in manufacturing industries in 1927 and the motive machinery had 1,338,797 horse power.

**COMMERCE.** Total Swiss imports in 1929 were valued at 2,783,848,000 francs, and exports at 2,134,436,000 francs, as compared with imports of 2,653,734,000 francs and exports of 2,114,234,000 francs in 1928. The adverse trade balance increased to 649,412,000 francs from 539,500,000 francs in 1928.

Imports from the United States in 1929 totaled 291,179,000 francs, as against 243,859,000 francs in 1928, or an increase of 19 per cent, while imports from Germany increased 12 per cent and those from the United Kingdom declined by 35 per cent. Swiss exports to the United States in 1929 amounted to 207,566,000 francs, or 6 per cent more than in 1928, exports to France gained by 16 per cent and those to Germany and

the United Kingdom declined by 8 and 7 per cent, respectively.

**FINANCE** The first surplus in administrative accounts since 1913 was provided for in the Federal budget for 1929, which estimated revenues at 352,800,000 francs and expenditures at 350,800,000 francs. Both figures represented substantial increases over the comparative figures of 322,200,000 francs and 331,500,000 francs in the estimates for 1928. The cumulative net deficit of the Federal government was estimated in 1929 at 1,435,700,000 francs, a reduction of 30-100,000 francs during the year. The net deficit would be less, except for the fact that after 1928 the income from customs revenue on tobacco was applied to the accumulation of a special fund for social insurance, which had reached 60,000,000 francs at the end of 1928.

In the 1929 budget most of the expense items showed only slight increases, but subventions were increased by about 10,000,000 francs, including 4,800,000 francs for the relief of agriculture and 3,300,000 francs for work on water courses and similar improvements. Heavier duties on barley, malt, beer, and automobiles and a much higher return from stamp taxes were expected to more than offset the 10,000,000-franc increase in the expenditure budget over the budget for 1928.

The Federal budget for 1930 estimated an increase in expenditures over 1929 of 32,000,000 francs, but receipts were expected to provide a small surplus. After 20 years of successive deficits, the combined cantonal accounts for 1928 showed a surplus, with only two cantons recording a deficit. The total general debt at the end of 1927 was 2,184,142,000 francs (\$421,539,000), of which 2,059,933,000 francs represented the funded debt. The funded railway debt, which was separate, amounted to 2,675,975,000 francs (\$516,463,000) and the floating railway debt to 53,903,000 francs (\$10,403,000), making a total general and railway debt of 4,914,020,000 francs (\$948,405,000). The unit of currency is the Swiss franc, with a par value of \$0.1930 in United States currency.

**COMMUNICATIONS** There were about 3374 miles of railway line in Switzerland in 1928, of which 1828 miles were owned and operated by the Federal government. In 1928 the Federal Railways earned gross revenues of 420,100,000 francs (about \$84,020,000), as compared with operating expenses of 268,500,000 francs (about \$53,700,000), and carried 120,000,000 passengers and 19,000,000 metric tons of freight. About 67 per cent of the Federal system was electrified. In 1927 there were 21,920 miles of telegraph wire and 642,649 miles of telephone wire.

**GOVERNMENT** Both executive and legislative powers are vested in the Parliament of two chambers, the Council of State and the National Council, the first having 44 members elected by the cantons, two for each canton, the second has 198 members elected directly by the people. The two chambers united form the Federal Assembly, which is the supreme organ of government and exercises the chief executive authority to the President, whose seven members are elected for three years. The seven members of the Federal Council act as ministers for the departments of the government. The chief magistrates are the President of the Confederation and the Vice President of the Council, and are elected by the Federal Assembly for one year. President in 1929,

Dr. Robert Haab, Vice President of the Council, Karl Schleuer.

**HISTORY** Jean Marie Musy, a lawyer of Fribourg, was elected President of Switzerland for 1930 by the Federal Assembly on Dec. 12, 1929, receiving a majority of 89 votes. The election of a President causes little interest in the country, as his power is restricted to one vote in the Federal Council for one year. A bill to permit local option in regulating the sale of hard liquor was overwhelmingly defeated in all of the 24 Swiss cantons at a plebiscite on May 12. Communist demonstrations and disorders engaged the attention of the police on several occasions during the year. Forces of Federal and cantonal troops were concentrated in Basel on March 24 to preserve order during anti-Fascist demonstrations made by Communists. There were 26 arrests.

#### **SYMPHONY ORCHESTRA.** See Music

**SYPHILIS.** Of extreme interest is the result of a follow-up to the present time of more than 2000 syphilitic subjects who received no specific treatment of their disease in the Copenhagen Clinic for Skin and Venereal diseases during 1891-1910. These patients were therefore as good as untreated and only such syphilitics as were actually suffering from their disease were given the regulation mercury and iodide of potassium. The number of cases which could be traced to 1927 was 471 and of this number 164 were dead with a record of 40 autopsies, in but 10 of which were there evidences of syphilis. The number investigated clinically was 307, of whom 228 had been infected from 10 to 40 years previously. Of this number, 157 seemed in perfect health and only 39 gave a positive Wassermann. But 13 known cases of paresis developed in the entire 2181 patients, thus apparently discrediting the claim that paresis is due largely to insufficient treatment. Locomotor ataxia developed in 128 per cent of the 471 patients followed up. Aortitis and other affections of the blood vessels were comparatively common or at least 175 per cent of all patients clinically investigated presented them. Early neurosyphilis bore no relationship to paresis and tabes, and the patients with the latter affections showed skin eruptions. Nearly every modern claim seems to have been refuted by the above figures.

**NEW DATA ON CONGENITAL SYPHILIS.** Professor Erich Hoffmann of Bonn, one of the great authorities on syphilis, read a paper on the congenital form before the German Dermatological Society on August 10 (see *Munchener medizinische Wochenschrift*, September 6, p. 1531) in which he showed the errors in some of our former conceptions of the disease. The virus of the disease does not attack the germ plasma of the fetus and cause physical degeneracy, but the spirochetes pass through the placenta from the mother to the fetus and thus the latter does not become infected until a certain definite period of development. Early abortion does not occur more frequently among syphilitic than any other group of mothers. It is only in the latter half of pregnancy that miscarriage, premature birth, and stillbirth point to the likelihood of syphilis. If the placenta in such cases is heavier than usual, there is additional cause for suspicion. Superinfection can occur and the child may show evidences both of congenital and acquired syphilis. For diagnosis, we must look for spirochetes in the umbilical cord, in airtight blisters, etc., must take a Wassermann, and a radio-

gram of the bones. After pregnancy is certain, we must first try to sterilize the mother and repeat the measures in the latter half of gestation, and finally give the newborn intensive treatment with salvasan and bismuth.

**SERODIAGNOSIS** Dr E Castens of Bremen City Hospital discusses very thoroughly the Kahn or American method of diagnosis of syphilis, contrasting it chiefly with the Wassermann. It is of course an accepted fact that some syphilitics will react negatively, even to the most delicate and dependable tests. No test should ever be depended on to the exclusion of all others, but cases arise in which the Wassermann techniques cannot be carried out owing to the exigencies of the occasion and in these exceptional cases we may feel justified in employing the Kahn test alone. The latter is superior to all of the numerous flocculation tests which have been introduced during the past twenty years and as a rule whenever we are in doubt as to the outcome of the Wassermann, the Kahn test should decide the matter, making allowance for the few cases which do not respond to any test. The author has made over 3000 blood tests in which both reactions were tested, the majority being in persons free from syphilis. About 1 per cent of this large group gave a weakly positive reaction, that is, a false diagnosis of syphilis. In the group of known syphilitics, the Kahn test was shown to be more dependable than the Wassermann although both failed to disclose the presence of the disease in some cases and the Kahn test was sometimes positive when syphilis was later shown to be absent.

**SYRACUSE UNIVERSITY** A non-sectarian institution of higher learning for men and women in Syracuse, N. Y., founded in 1870. The 1929 autumn enrollment was 5471, the extension-school enrollment was 2283, and the summer-session enrollment was 1765. The faculty numbered about 525 for the year 1928-29. The productive funds of the university amounted to \$3,648,821, while the income for the year was \$1,916,249. The library contained 186,000 volumes and more than 75,000 pamphlets. Chancellor, Charles Wesley Flint, D.D., J.L.D.

**SYRIA** Traditionally, the region lying between the Syrian Desert and the Euphrates River on the east and the Mediterranean on the west, and between the Taurus Mountains in the north and Egypt on the south. Formerly a province of the Turkish Empire, it was in 1920 recognized as an independent state under a mandatory power, the mandate being bestowed upon France. Capital, Damascus.

Syria, under the mandate, is bounded by the Mediterranean on the west, by Palestine and Trans-Jordan on the south, by Iraq on the east, and by Turkey on the north. Since Jan. 1, 1925, the country has comprised four territories: the Syrian Republic, Greater Lebanon, and the territories of the Alawites and of the Jebel Druze. The total area of the mandated region has been placed at 60,000 square miles, and the population in 1926 at 2,046,857, mostly Arabic-speaking, and of the Summe Mohammedan faith. The chief towns are Damascus, 170,000, Aleppo, 140,000, Beirut, 80,000, Homs, 60,000, Hama, 35,000. There were in 1927, 552 public elementary schools with 38,873 pupils.

**PRODUCTION** The bulk of the population of Syria is engaged in agriculture and livestock breeding, the total area under crops being about

7719 square miles. Wheat, barley, maize, olives, fruit, silk cocoons, cotton, sesame, and tobacco are the principal crops, while hemp, sugar cane, chick-peas, lentils, and beans are also raised. Drought and damage from locusts reduced the crop yields in 1928 below those for 1927, the cereal crop being only one-fourth of the normal consumption. The cotton crop was estimated at 1200 metric tons, and the yield of silk cocoons at 3350 metric tons. Growing exports of wool indicate the importance of sheep raising. Iron and lignite are the only minerals mined on a commercial scale, although there are indications of petroleum, phosphates, lead, copper, antimony, nickel, and chlorine. Gypsum is widely distributed. The small-scale industries produce mainly flour, oil, soap, silk thread, wine, and tobacco products. The textile and tanning industries are gradually developing.

**COMMERCE** The value of imports in 1928 increased slightly to \$51,782,000 from \$50,308,000 in 1927, while the value of exports declined to \$20,950,000 from \$21,486,000 in the previous year, leaving an adverse balance of trade of \$30,802,000, as compared with \$28,822,000 in 1927. The large unfavorable balance is partly offset by remittances from abroad, tourist expenditures, transit revenue and the outlays of foreign philanthropic institutions.

**FINANCE** According to preliminary returns for 1928, receipts totaled 21,630,000 Syrian-Lebanese paper pounds (\$16,943,300) and expenditures 18,177,000 (\$14,232,600). The estimated receipts and expenditures for the year 1928 balanced at 19,021,300 Syrian-Lebanese paper pounds (\$14,893,700). In the 1929 budget, receipts and expenditures were calculated to balance at 19,253,030 Syrian-Lebanese paper pounds (\$15,075,100). For the Syrian Republic alone, preliminary figures for 1928 showed receipts for \$9,356,800 and expenditures of \$7,790,800. The estimated 1929 budget balanced at \$8,816,200. A new Syrian silver currency, intended to replace the Syrian-Lebanese paper money notes, was decreed by the French High Commissioner in May, 1929.

**COMMUNICATIONS** In 1928 there were about 500 miles of railway in Syria, 2240 miles of macadam highways, and 2754 miles of dirt and gravel roads. The use of motor transport was rapidly extending, particularly over the trans-desert route from Beirut to Bagdad. In 1928, 918 steam and 2859 sailing vessels of 1,923,593 aggregate tons visited Syrian ports.

**GOVERNMENT** Executive power is vested in the French High Commissioner, although the five territories exercise a certain amount of autonomy. A provisional government of the Syrian Republic was formed at Damascus in February, 1928, and a new constitution was submitted to France for approval. The capital of the Lebanese Republic, also known as Greater Lebanon, is Beirut. High Commissioner in 1929, Henri Ponsot, appointed Oct. 12, 1926.

**HISTORY** The attempt to reconcile Syrian nationalism with French imperialism in the proposed new constitution for the Syrian Republic continued unsuccessful throughout 1929. The constitution, as drafted by the Constituent Assembly, provided for the establishment of an independent and sovereign republic, with full control of foreign affairs, finance, police, and the army. It was proposed that after the constitution became effective, Syria would make a treaty with France defining the supervisory jurisdiction of the latter

country as the mandatory power. The French High Commissioner refused to approve the constitution in this form, however, and in January, 1929, proposed the insertion of reservations continuing France's control of Syrian foreign relations, public security, and defense. His suggestion was in turn rejected by the Assembly and on February 5 M. Ponsot ordered the adjournment of the Assembly *sine die*. Minor points of friction between the Syrian Nationalists and the High Commissioner were the decisions to transfer the Syrian parts of the Hejaz Railway to a French Company, and the establishment of the Bank of Syria as a French corporation. The Nationalists also insisted upon the inclusion in the constitution of a clause reserving the right of protest against the present boundaries of the country. The British asserted that the Mandates Commission of the League of Nations would not accept this proposal. Toward the end of 1929 there was a revival of the proposal sponsored by a number of leading sheiks for establishing a monarchical form of government.

The Assembly of Greater Lebanon on March 27 reelected Charles Debbas as President for a three-year term. Soon afterward the French High Commissioner decreed radical changes in the Lebanese constitution, increasing the term of the President to six years and greatly augmenting his powers. As parliamentary government in the Republic had become largely the tool of selfish personal interests, there was little protest against the change on the part of the people. The election of new members to the Lebanese Assembly in June was attended by bloodshed and evidence of bribery.

In the same month another decree of the High Commissioner set up a ministry in the Jebel Druse, with Frenchmen in the positions of responsibility. The apparent intent was to separate the region from the remainder of Syria.

**TACNA-ARICA DISPUTE.** See CHILE, under *History*, *ARBITRATION*, *INTERNATIONAL*.

**TADZHIKISTAN.** An autonomous Soviet republic in Central Asia, which, in October, 1929, became a constituent member of the Union of Socialist Soviet Republics. Occupying in part the high Pamir plateau to the north of the Hindu Kush Mountain range, it is bounded by Afghanistan on the south, China on the east, and Uzbekistan and Feighana on the west and north. The area is estimated at 52,110 square miles and the population at 824,000, most of whom are Mohammedans. Capital, Stalinsk, formerly known as Dyushanbe, or Bushanbey. The western part of Tadjikistan supplies the Soviet Union with a large part of its cotton, the crop in 1929 being double that of pre-war times. Agriculture and the raising of livestock are the chief occupations of the people. The silk industry is developing. Gold, oil, and coal are produced by primitive methods. In 1929 a railroad was being constructed to link the capital with the Soviet Railway system, and an air line was in operation between Stalinsk and Tashkent. See RUSSIA and EARTHQUAKES.

**TAFT, CHARLES PHELPS.** An American editor, died Dec. 31, 1929, in Cincinnati, Ohio, where he was born Dec. 21, 1843. He was graduated from Yale in 1864, and he also studied at Berlin and Paris. Admitted to the Ohio bar in 1866, he practiced law in Cincinnati from 1869 to 1879. In that year he bought controlling interest in the Cincinnati *Times*, which the following year he consolidated with the *Star* and he edited the

*Times-Star* until his death. In 1871 he became a member of the Ohio House of Representatives. In 1895-97 he was a member of Congress from the first Ohio district, in 1904 he was presidential elector-at-large from Ohio, and in 1908 delegate-at-large from Ohio to the Republican National Convention. Mr. Taft was the half brother of William Howard Taft, former President of the United States and Chief Justice of the Supreme Court of the United States.

**TAGGART, THOMAS.** An American politician, died Mar. 6, 1929, in Indianapolis, Ind. He was born in County Monaghan, Ireland, Nov. 17, 1856, and was brought to America by his parents in 1861, settling first at Xenia, Ohio. In 1872 he went to Indianapolis and after working at a lunch counter established a small hotel, later becoming proprietor of the Grand Hotel at Indianapolis, and acquiring a major interest in the resort hotel at French Lick Springs, Ind. A Democrat, he entered politics in 1886 as the successful candidate for auditor of Marion Co., Ind., an office lucrative in fees and usually held by a Republican. This spectacular victory marked the beginning of his long leadership of the Democratic party in Indiana. He was reelected to the auditorship of Marion County, in 1890, served as mayor of Indianapolis from 1895 to 1901, and was appointed to the U. S. Senate in 1916 to fill the vacancy caused by the death of Senator Shively. He was chairman of the Democratic State Committee of Indiana in 1892-94, district chairman of the 7th Congressional District for 12 years, and a member of the Democratic National Committee from Indiana from 1900 to 1916 (chairman in 1904-08).

**TAHITI.** See OCEANIA, FRENCH ESTABLISHMENTS IN.

**TAIWAN, U'wan'.** Official Japanese name for Formosa. See FORMOSA.

**TALKING PICTURES.** See MOVING PICTURES.

**TANAKA, BARON GI-ICHI.** A Japanese statesman and former army officer, died Sept. 29, 1929. He was born in 1863 at Yamaguchi. In 1886 he was a sub-lieutenant in the Japanese army, and was graduated from the Staff College in 1898. From 1910 to 1913, he was director of the Military Affairs Bureau, and in 1913 he was dispatched abroad. He was given the rank of lieutenant-general and vice chief of the General Staff of the Japanese army in 1915. In 1920 he was created a baron and made a general in the army, from which he retired the following year. Baron Tanaka became, in 1925, leader of the Seiyukai party, which represents landowner interests. As head of that party, having previously served in the cabinet as Minister of War, he became Prime Minister and Minister of Foreign Affairs in April, 1927. With his cabinet, he resigned the Premiership in July of 1929, but retained leadership of the Seiyukai, at that time the leading Opposition party.

**TANGANYIKA** (tan'gan-yä'ka) **TERRITORY.** A territory under British mandate, comprising the portion of German East Africa assigned to Great Britain after the conquest of the country by British and Belgian soldiers during the World War. Area, about 373,500 square miles. The native population (mainly of mixed Bantu race) was estimated at 4,885,000 in 1928 (4,107,000 at census of 1921), Europeans numbered 5300 (2447 in 1921), and Asiatics, 24,000 (14,991). Capital, Dar-es-Salaam, with a population

of 25,000. The capital and Tanga are the chief seaports.

The forest resources of Tanganyika in 1927 were given at a total of 2,713,700 acres. Of this figure, 2,564,700 acres were reserved forest, 114,000 unreserved. The chief agricultural products are cereals, coffee, manioc, peas and beans, groundnuts, oil products, sweet potatoes and other vegetables, fruits (chiefly bananas), and coffee. Sisal and cotton production also are important industries. The output of cotton in the 1927-28 season was estimated at 6,330,000 pounds. The principal minerals are coal, gold, mica, graphite, iron and copper ores, cobalt, and nickel, and are largely undeveloped. The imports in 1928 were valued at £3,737,000; domestic exports, £3,817,000. Revenue in 1927-28 totaled £1,904,107 and expenditures, £1,707,198. The estimates for 1928-29 were Revenue, £1,842,490, expenditure, £1,832,828.

The head of the administration is a governor, who is aided by a nominated executive council. Since Oct. 1, 1926, there has been a legislative council consisting of 13 official members and not more than 10 non-official members. Governor and Commander-in-Chief in 1929, D. J. Jardine, appointed January, 1929. See KENYA.

**TANTEUXENITE.** See MINERALOGY.

**TARIFFS.** See LEAGUE OF NATIONS, also under UNITED STATES.

**TASMANIA.** A state of the Australian Commonwealth, consisting of the island of that name and several small islands. Area, including the island of Macquarie (170 square miles) 26,211 square miles. Population, according to the census of 1921, 213,780, estimated on June 30, 1929, 212,512. In 1928, there were 4691 births, 2132 deaths, and an excess of 1858 emigrants over immigrants, making a net increase of 701. Capital, Hobart, with a population including suburbs (Jan. 1, 1929), of 56,696. The population of Launceston, including suburbs, in 1928, was 28,400.

The net value of " " and pastoral products in 1926-27 was £4,811,000, of manufactures £3,593,000, and of mining products (1928), £1,404,448. Direct overseas imports in 1928-29 were valued at £1,707,395 and exports at £2,705,976. Total imports (1926-27), £9,406,273, total exports, £9,437,371. Wool, minerals, fruit, timber, grain, potatoes, hops, bark, and hides and skins are the principal exports. Revenue (1927-28), £2,962,687, expenditure, £2,867,605, public debt (June 30, 1929), \$116,625,000. In 1928-29 there was a budget deficit of \$475,000. The total registered shipping in 1927 was 178 vessels of 13,115 tons. In 1929 there were 654 miles of government-owned railway lines open to traffic.

The administration is under a governor, who acts through a responsible ministry, and the legislative power is vested in a Parliament of two Houses, the Legislative Council of 18 members, elected on the basis of property qualification, and the House of Assembly of 30 members, elected for three years by universal suffrage, including women, and with proportional representation. Governor in 1929, Sir James O'Grady, Prime Minister and Treasurer, J. C. McPhee.

**TAUBMANN, OTTO.** A German composer, died in Berlin, July 5, 1929. He was born in Hamburg, Mar. 8, 1859. Abandoning a commercial career, he entered the Dresden Conservatory, where his teachers were Wüllner, Nicodé, and Rischbieter. During 1886-89 he was director of

the Conservatory in Wiesbaden, in 1891-92, opera conductor in Petrograd, and during 1892-95 conductor of the Capellmeisterei in Ludwigshafen. He then settled in Berlin as musical critic for the *Borsen-Courier* and professor of composition at the Staatliche Hochschule für Musik. The sensational success of *Eine deutsche Messe* at its Berlin performance, in 1910, won him general recognition as one of the foremost composers of great choral works. His other compositions in this field are *Tauwetter*, *Nangerweihe*, *Siegmar und Helma*, *Kampf und Friede*, and *Psalm XIII*. He wrote also male choruses, *Symphony in A minor*, and an opera, *Portia* (Frankfurt, 1916).

**TAXATION.** Important changes were made during the years 1928-29 in State legislation, as well as alterations, either actual or prospective, in Federal tax legislation, which may be regarded as of fundamental importance. State legislatures were in session in 1929 to the number of 43, and not only were alterations of importance made in law, but there was apparent indication that legislative bodies were likely to go considerably further in changing taxation in the early future than has been true in the past. Perhaps the outstanding event which sustains this general opinion was the fact that large appropriations were made by several States, and provisions for investigation and discussion on a less extensive scale were undertaken in several others, with a view to elaborate analysis of tax problems in the future. In addition, important changes of tax administration were made by several, among them the creation of a Board of Assessment and Review in Iowa holding office six years, and consisting of three members, and the establishment of a separate tax department in Kansas, while in Nebraska and Oregon, segregation and broadening of tax powers of administration were arranged. For Moreover other administrative modifications of relatively minor nature have been undertaken in a number of States.

Important changes of taxation were made in several European countries, but no material progress has been effected toward international action designed to relieve double taxation along promised lines, although here and there individual States have taken preliminary steps in that direction.

**STATE INCOME TAXES.** New income tax laws were passed by Arkansas, Georgia, and Tennessee, the latter two States making the experiment for the first time. For the fourth time Oregon passed an income tax law, which was to be subjected to popular referendum. The Arkansas tax runs from 1 to 5 per cent on incomes ranging from \$3000 to \$25,000 and provision is made for the reduction of the general property tax rate by one-tenth of one mill for every \$60,000 income furnished by the income tax. The Georgia income tax has fixed rates, which are to be one-third of Federal income tax rates, while a gross income tax is imposed upon business varying according to the kind of business undertaken. In Kansas a constitutional amendment was before the voters, and if passed would authorize an income tax. In North Dakota, nonresidents were to be subjected to the same income tax as residents. The special Massachusetts Committee on Taxation, recommended important income tax changes. These were held unconstitutional by the State. However, the State provided that those who became residents of Massachusetts were liable

to income tax in proportion to the number of months of the fiscal year of which they have been so resident. New York raised exemptions to \$2500 for individuals, and \$4000 for married persons. Taxes have been imposed by California upon the income of banks, and corporations and on intangibles, which although described as bank taxes, are really income taxes.

**STATE INHERITANCE TAXES** Inheritance tax changes were partly . . . during 1929 and were found in . . . Washington, North Carolina, Idaho, and West Virginia. In the first two of these States, rates were reduced, and in the last three they were increased. A revision of income "brackets" was made in West Virginia.

Complete revision of inheritance taxes, took place in Connecticut, Maryland, and Rhode Island. The new Connecticut law substantially follows the plan recommended by the National Tax Association. Reciprocity of tax relationships was materially extended during 1929 taking in 14 additional States, Arkansas, Idaho, Indiana, Iowa, Michigan, Missouri, New Mexico, North Carolina, South Carolina, Texas, Washington, West Virginia, Wisconsin, and Wyoming. During the year, the States of Iowa, Maryland, Michigan, and Nebraska, provided for taking advantage of the Federal income tax inheritance credit. Exemption from inheritance taxation in the case of insurance policy proceeds, has been provided in Colorado and Pennsylvania.

**STATE CONSTITUTIONAL AMENDMENTS** Reference already has been made to one or two constitutional amendments, affecting income taxation, but in addition, some important decisions were rendered. The United States Supreme Court in *Macaulum Co. v. Commonwealth of Massachusetts*, held invalid the Massachusetts statute levying an excise tax on corporations, the amount to be measured by all sums of interest received, including interest from tax-exempt securities. The court in *Flint v. Stone-Tracy* also permitted the measuring of the excise tax on banks, by including income from tax-exempt securities. This was thought to open the question whether the present income tax is unconstitutional as in its application to banks. Constitutional amendments permitting the classification of incomes were pending in North Carolina and Washington.

**SPECIAL TAXES** Among the special taxes which were widely under discussion during the year 1929, were those on transportation. Rates of taxation on motor vehicles were reduced in Vermont, Connecticut, and Oregon, while Maine and Wyoming levied a new excise tax similar to that of Massachusetts. South Dakota imposed a new 3 per cent tax, based on original purchase price. A constitutional amendment was imposed in Florida to eliminate the ad valorem tax on automobiles. Montana changed the basis of registration on pleasure cars from horse power to weight. Nebraska exempted fees on farm trucks in excess of \$8. Twenty-one States increased the gasoline tax, and New York has imposed it for the first time. The Massachusetts tax on gasoline, passed in 1928, went into operation Jan. 1, 1929, the Illinois tax on Aug. 1, 1929. Difficulty in collecting the tax was experienced in most States, and the expense of collection was increased. Taxes on motor busses were increased by a number of States, and in . . . . . Service Commission, with a tax ranging from one-fourth to

three-quarters of one cent per mile travel. In Oregon, the \$4 per passenger tax on commercial carriers, outside of municipalities was repealed. The New Jersey excise tax on motor busses operating under interstate commerce was held unconstitutional. Arkansas imposed a tax of \$5 on automobiles sold in the State.

**DIRECT TAXATION** In Vermont the poll tax was increased from \$1 per head to \$2.50, while in Oregon, a flat direct rate of \$5 per acre, and a yield tax of 12½ per cent was imposed on forest land. In Idaho, the Forestry law, exempting a forest tract for a period of ten years, from taxation, was repealed, while in new reforestation districts, a rate of \$1 per acre was imposed, and when timber is cut a tax is laid of 12½ per cent of market value.

**STATE TAX COMMISSIONS** Reference already has been made to changes in Tax Administration, and to provisions for further investigation of the tax situation. A few words, however, as to the result of tax commission work may be added. New Jersey in 1928 appointed a special body to investigate the taxation of tangible personal property, but it did not report, and it was given another year in which to complete its work. In Iowa, a tax commission was directed to ascertain what would be done to eliminate the direct property tax, and another in Kansas was appointed to codify the State tax law.

**FEDERAL TAX RECEIPTS** During the year 1929 Federal receipts were (ordinary) \$4,033,250,225 as against \$4,042,348,156 in 1928, while expenditures were in 1929, \$3,848,463,190, as against expenditures in 1928 of \$3,643,519,875. Income tax receipts included in the foregoing, were \$2,331,000,000 as against \$2,174,000,000 in 1928, while miscellaneous internal revenue was \$621,000,000, as against \$607,000,000. Proceeds from government-owned securities, other than foreign obligations, were \$22,500,000, or \$151,000,000 smaller than in the preceding year.

Corporation taxes, which had been inclined to suffer a year earlier, were helped by the large corporate earnings accompanying a year of general prosperity. Income taxes paid by individuals were enlarged by stock market profits, which gave rise to large payments to the government and particularly tended to increase the number of high income recipients. The following table shows the distribution of revenue from income tax, as between corporations and individuals during the past two years as compared with earlier periods.

	Corporation Per cent	Individual Per cent
1922	47	53
1927	58	42
1928	59	41
1929	53	48

The same factors which had tended to keep corporation returns at a relatively high level in 1927 and 1928, were still operative in 1929, but the effect of large market and other profits in enhancing individual incomes made the change of proportion as compared with 1922 less extreme and less obvious than before. It was also a notable fact, as in former years, that a large number of corporations had no net income subject to taxation. The . . . . . of such reports in 1928 had been 45 and in 1929 it was 40, the reduction being the outcome of a year of exceptional prosperity in business. Inspection of the

## SUBMARINE TELEGRAPHY

detailed returns by classes of income, however, shows the tendency of the smaller corporations to decline, relatively, in income. The figures were somewhat distorted in 1927 and 1929 by the introduction of a new classification of "inactive corporations" which reported "no net income" and hence were formerly classed with the active corporations reporting no net income. Including them, the percentage without net income would be 45.

Concentration of income taxes paid by individuals continued, the figures for 1929 showing that of 4,050,959 returns, 1,574,091 were completely exempted as non-taxable, while 1,539,918 paid \$11,516,480 out of a total tax of \$1,142,259,780. It thus appears that 3,113,000 out of 4,050,000 or 76.5 per cent income-reporting recipients paid about 1 per cent of the entire tax, the other one-quarter or so of the recipients paying 99 per cent of the government's receipts. Numerically, there was no reason to change former estimates that from 98 to 99 per cent of all income recipients in the country were relieved of Federal income taxation entirely. This trend toward a high concentration and highly preferential quality in Federal income taxation, still further was enhanced by the Congressional Act of December, 1929, in which fresh reductions in taxes on incomes under \$5000 were made, the higher brackets, however, remaining unchanged.

**TELEGRAPHY.** By the end of 1929 the telegraph companies of the United States had installed 6000 new printing telegraph systems on the telegraph lines and 3000 on the telephone lines, so that 75 per cent of the messages of the Western Union Telegraph Company were sent by printing telegraphs. The messages are received either on a tape which is cut and pasted on blanks, or in the form of printed pages. These devices send at the rate of 368 characters per minute and are mostly of the start-stop systems. The telegraph systems in 1929 were using 60,000 miles of copper wire, of which about 10,000 were installed during the year.

The Western Union showed an increase of business of about \$5,000,000, or 4 per cent, while the International Telephone and Telegraph Company had grown so that its assets were \$390,000,000, and its earnings were at the rate of about \$100,000,000 per year. This company had grown so rapidly by the acquisition of other organizations that a comparison of its earnings from year to year had no meaning.

The new transatlantic cable of the Western Union Company, which was constructed with "Mu" metal instead of permalloy, showed impressive results as it could operate at a speed of more than 2000 letters per minute. The Western Union also opened its direct cable to Berlin.

The cable companies were encouraging the use of their facilities by offering special rates for messages sent outside of rush hours; thus one

can send a "week-end" cable of 100 words from New York to London for \$3, and special off-peak messages to Manila at the rate of \$140 for 10 words.

On November 18 a violent undersea earthquake off the New England Coast interrupted 10 of the 21 transatlantic cables, and the companies had some hurried and most difficult work in repairing them. It appeared that many of these cables had been covered for hundreds of miles by earth as a result of a landslide, and the cable repair ships had a most difficult time in raising the cables when found. It required months to repair all of them.

A notable repair undertaking was in connection with the high-speed cable of the Western Union Company laid in 1926. This was broken in two places 956 miles from Hammels, L I, and 327 miles from Bay Roberts, N F. By means of resistance measurement with the galvanometer the break in the cable was placed approximately and the cable repair ship, aided by the Sonic depth finder and other instruments, was able to determine on the ocean floor the position of the failure. A Lucas deep-sea cutting grapple was dropped to the bottom and dragged at right angles to the cable until it was hooked. The cable was cut and the end brought to the surface where it was attached to a buoy to mark the spot and the other end of the cable and the breaks were located. New cable was spliced at these points, and eventually communication was restored.

In December the Western Union started actual work on the installation of the new high-speed stock ticker which was designed to print 500 characters per minute and was to cost \$4,500,000 to install.

**TEL. EL-AMARNA.** See ARCHAEOLOGY

**TELEPHONY.** Estimates compiled shortly before the end of 1929 indicate that, on December 31, there were about 20,250,000 telephones in service in the United States, connected by more than 75,000,000 miles of telephone wire. About 4,350,000, or considerably more than 20 per cent of the total, were dial telephones. Telephone plant and facilities in the United States represented an investment at that date of approximately \$4,200,000,000. The operating telephone companies in the United States at the end of the year had more than 425,000 employees. The Bell Telephone Laboratories, Inc., employed 5600 persons in the furtherance of scientific research covering all phases of electrical communication for the development of the telephone art.

Telephone traffic showed a further increase during 1929, with an average of about 82,000,000 completed conversations per day, of which approximately 3,400,000 were toll conversations.

The use of the telephone for long-distance calls had been substantially stimulated by successive reductions in rates and improvement in the speed and quality of the service. Four substantial decreases in toll and long-distance telephone rates had been made in the United States during three and a half years. The third of these reductions became effective Feb. 1, 1929, and represented an estimated annual saving to the public of \$5,000,000. A fourth reduction, which was to take effect on Jan. 1, 1930, indicated an annual saving to American telephone users of an additional \$5,000,000. The speed of service had been improved by the completion at the end of 1929 of about 95 per cent of all toll and

long-distance calls, while the person making the call remained at the telephone, as against 90 per cent completed in this way at the beginning of 1928, and 70 per cent so handled in the year 1928.

The range of telephone service available to the American public was further extended during 1929 to include Luxemburg, Belfast in Northern Ireland, Dublin in the Irish Free State, the Isle of Man, Milan, Turin, and Genoa in Italy, all of Czechoslovakia (where only Prague had been reached before) and all of Austria (where service had theretofore been limited to Vienna). The transatlantic radio telephone at the end of 1929 connected the United States, Cuba, Ontario, Quebec, and important cities elsewhere in Canada and in Mexico, with practically all of western Europe and with one point in Africa—Centa, Spanish Morocco. Approximately 29,450,000 telephones, about 85 per cent of all the telephones in the world, could be reached from any Bell System telephone. The transatlantic service, which had previously been available only during certain hours, was placed on a 24-hour basis on Sept. 10, 1929. The long-wave and short-wave transatlantic radio-telephone channels, which were placed in operation in 1927 and 1928, respectively, were supplemented by two additional short-wave circuits opened during 1929, and radio-telephone service between the United States and Argentina was planned for early in 1930.

In December, 1929, ship-to-shore telephone service which had previously been only experimental, was opened for public use between the United States and the steamship *Lerathan*, the largest vessel flying the American flag, for such periods as the ship may be within range.

Two-way telephone communication between an ordinary Bell telephone and a flying airplane also was demonstrated during the year, but this remained on an experimental basis. The use of the telephone typewriter in the transmission of weather reports and other information along the routes of commercial airways was further extended in 1929.

Long-distance telephone lines continued to play an important part in the linking of radio stations for chain broadcasting, notably on the occasion of President Hoover's inauguration. This service was supplemented by special telephotograph facilities which transmitted pictures of the President by wire to the eight strategic cities throughout the country at which telephotograph service is regularly maintained, whence they were rushed to newspapers in surrounding territories. Television in color was experimentally demonstrated during 1929 by the Bell Telephone Laboratories, but no commercial application of television had been made up to the end of the year.

**TELESCOPES.** See ASTRONOMY.

**TELEVISION.** See PHYSICS.

**TEMPLE UNIVERSITY.** An institution for the higher education of men and women in Philadelphia, Pa., founded in 1884. The 1929 autumn enrollment was 10,283. There were 569 members on the faculty. The income for the year totaled \$1,485,245. The library contained 47,874 volumes. In 1929 Unit 2 of Conwell Hall, a 12-story building, was completed at a cost of \$500,000, and construction was begun of a medical school building to cost more than \$1,000,000. President, Charles E. Beury, LL.D.

**TENNESSEE. POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,337,885. The estimated population on July 1, 1928, was 2,502,000. The capital is Nashville.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod. Bu.	Value
Corn	1929	2,944,000	73,600,000	\$67,712,000
	1928	2,915,000	66,842,000	56,842,000
Cotton	1929	1,120,000	515,000	42,488,000
	1928	1,107,000	428,000	38,520,000
Hay	1929	1,520,000	1,986,000	34,464,000
	1928	1,321,000	1,750,000	29,287,000
Tobacco	1929	129,800	102,664,000	17,761,000
	1928	109,600	80,775,000	17,124,000
Wheat	1929	405,000	3,645,000	4,811,000
	1928	422,000	3,714,000	5,311,000
Potatoes	1929	39,000	3,585,000	4,840,000
	1928	43,000	4,086,000	3,677,000
Sweet potatoes	1929	44,000	4,400,000	4,180,000
	1928	41,000	3,895,000	3,700,000
Oats	1929	197,000	3,546,000	2,199,000
	1928	188,000	4,042,000	2,425,000

\* Bales    † Tons    ‡ Pounds

**MINERAL PRODUCTION.** Of the many sources contributing to the mineral industry of the State, the mining of coal is the greatest. In 1927 the value of the year's yield of coal made up more than one-fourth of the value of the total mineral product. The quantity of coal mined fell slightly to 5,610,000 short tons for 1928, from 5,783,367 tons for 1927. The value of coal mined in 1928 was \$9,694,000; of that mined in 1927, \$10,645,000. A relatively small part of the coal mined went into the making of coke, which, however, was on the increase. There was some return to the former predominance of the beehive system of coking in 1928. Coke production for 1928 was to the quantity of 113,134 short tons in by-product ovens and 145,000 tons in beehive ovens, the latter's product thus prevailing, as against 122,312 tons of by-product and 104,808 of beehive coke for 1927. The by-product coke of 1928 had a value of \$606,938, the beehive coke of that year, an approximate value of \$750,000. The value of the coke produced in 1927 was by-product, \$612,000, beehive, \$538,821. The manufacture of Portland cement was active in 1928, the shipments of the factories rising to 4,634,280 barrels, from 4,343,337 barrels for 1927; in value, the shipments of 1928 reached \$6,322,213, being less than that of 1927, which attained \$6,580,732. Clay products declined to \$3,728,380 for 1927, from \$5,105,827 for 1928. In the production of metals, iron held a minor but fairly stable position. There were mined in 1928, 128,478 long tons of iron ore, of which the value was \$286,524, as against 121,220 tons mined in 1927, valued at \$274,620. Shipments of pig iron from blast furnaces rose to 102,718 long tons for 1928, from 87,971 tons for 1927; in value, to \$1,920,901 for 1928, from \$1,911,380 for 1927. The two copper smelters in Tennessee, which handled ores not wholly of origin within the State, reported a marked increase of yield for 1928 over 1927, in 1927 the copper mined in Tennessee attained the quantity of 14,840,596 pounds and the value of \$1,957,217. The production of zinc was 10,400 short tons, or \$1,331,200, for 1927. The production of lime was estimated at 181,000 short tons for 1928, not far from the 181,385 tons of 1927; in value, \$1,113,000 (estimated) for 1928 and \$1,206,326

for 1927 Exclusive of pig iron and certain duplications, the value of the mineral product of the State was \$37,874,981 for 1927, \$39,296,668 for 1926

**FINANCE** State expenditures in the year ended June 30, 1928, as reported by the Federal Department of Commerce, were for maintenance and operation of governmental departments, \$20,356,372 (of which \$5,437,255 was aid to local education); for interest on debt, \$1,012,938, for permanent improvements, \$14,211,954; total, \$36,081,264 (of which \$19,005,820 was for highways, \$6,781,328 being for maintenance and \$12,824,492 for construction) Revenues were \$30,425,319 Of these, property and special taxes formed 15.5 per cent, departmental earnings and sums earned through the services of officers, 7.9, sales of licenses and taxation of gasoline, 47.2 Taxable property was valued at \$1,811,561,313, State taxes levied thereon totaled \$3,623,123 Funded State debt was \$22,371,026, gross and net

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 4007.54 There were built, in 1929, 2.50 miles of additional first track

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the U. S. Department of Commerce in 1929 and dealing with operations of 1927, there were in the State, in 1927, 2098 manufacturing establishments These employed 114,968 wage earners, whose wages for the year totaled \$101,187,840 Materials and supplies used in production cost \$351,436,325 Manufactured products combined attained the value of \$614,040,524

**EDUCATION** Appropriations of the Legislative session of 1929 for schools were \$9,909,341 for the ensuing two year period and exceeded by more than \$1,500,000 the receipts from corresponding appropriations during the biennium preceding The number of persons of school age in 1928 was estimated as 601,407 They were actually enrolled in the public schools of the State in that year, however, 676,421 pupils Of these, 610,914 were in elementary, and 65,477 in high-school grades The expenditures of 1928 for public-school education totaled \$24,501,171 Salaries of teachers in the public schools of Tennessee averaged \$827 a year

**CHARITIES AND CORRECTIONS** The administration of the State institutions of care and custody is under the authority of the Department of State Institutions, which also includes the Welfare Division, occupied with the supervision of child-care and maternity homes, county institutions, almshouses, jails, and workhouses

**LEGISLATION** The sixty-sixth General Assembly of the State held a regular biennial session of 75 days, adjourning April 14 It passed appropriations to the total of \$31,518,039 It failed, however, to pass a necessary revenue bill and to abolish the State property levy in consonance with Governor Horton's previous pledge, leaving these matters to a later special session It provided for an extension of the State highway building programme by authorizing the issue of so called short-term notes to the total of \$25,000,000 for that purpose The note issue was designed to maintain the tradition of building highways out of income, while at the same time providing resources for more rapid construction than the immediate revenues would allow. A sinking fund for meeting the notes was provided in a separate

measure Both bills were to become law without submission to a referendum. A bond issue of \$1,000,000 was authorized for the purpose of improvements at the Tennessee Polytechnic Institute at Cookeville The State cigarette tax was increased and an income tax was adopted This, however, applied only to income derived from stocks and bonds not taxed ad valorem The rate of its levy was 5 per cent on such income In order to make the tax apply to securities generally, the Income-tax Act abolished the direct tax on notes, bonds, interest-bearing obligations, and certain classes of stock shares The legal department of the State was reorganized A recodification commission was created Malt and carbonic gas were subjected to special taxes The sales tax on gasoline was increased These increases and the new taxes were expected to raise the total yearly revenue by about \$4,700,000 All bus companies in Tennessee were made subject to the control of the Railroads and Public Utilities Commission and required to obtain of it certificates of convenience and necessity, the measure to this effect was passed over Governor Horton's veto

A special session called by Governor Horton passed in December measures authorizing the Highway Department to issue \$10,000,000 of short-term notes and to extend \$3,200,000 of notes maturing in 1930, so as to bring the resources of the department for highway work in 1930 up to \$35,000,000 Likewise, the session passed several measures to increase the tax revenue and avoid a State deficit, among these, the increase of the tax on cigarettes from 2 to 4 cents, and the increase of the tax on estates to the 80 per cent of the Federal inheritance tax that the Federal law undertook to return to States requiring it

**POLITICAL AND OTHER EVENTS** Tennessee, like North Carolina, was subject to considerable disorder and economic difficulty by reason of textile strikes in the course of the year Some 5000 workers of two rayon manufactories at Elizabethton started a strike in March, which lasted into September The National Guard was called out to protect the mills Two of the organizers were seized and driven out of town on April 4 In May, the strikers resorted to picketing to prevent the reopening of the plants, and some 250 of them were arrested on charges of intimidation The Elizabethton strike was organized by the United Textile Workers, affiliated with the American Federation of Labor

The State Income Tax Act of 1929 was declared unconstitutional on June 5 by a Chancery Court decision, but on appeal, the State Supreme Court reversed this decision and upheld the validity of the law with regard to its doing away with the ad valorem taxation of notes, bonds, and interest-bearing securities The State, however, found difficulty in selling short-term notes, required for keeping up its programme of highway construction until such time as the legislation of 1929 should begin to bring in revenue for carrying on construction upon the basis of current payment The State Public Utilities Commission settled a rivalry of interests seeking to develop hydroelectric power on the south fork of the Holston River by granting on June 17 a permit to the American Cyanamid Company to proceed with a \$35,000,000 project. A municipal airport was opened at Memphis on June 14. The annexation of four suburbs by Chattanooga, voted in

March, added an estimated 28,000 to the population of the city.

**OFFICERS** Governor, Henry H. Horton, Treasurer, John F. Nolen, Comptroller, Edgar J. Graham, Secretary of State, Ernest Haston; Auditor, P. H. Williams, Attorney-General, L. D. Smith, Commissioner of Education, P. L. Harned.

**JUDICIARY** Supreme Court Chief Justice, Grafton Green; Associate Justices, A. W. Chambliss, Colin P. McKinney, W. H. Swiggert, William L. Cook.

**TENNESSEE, UNIVERSITY OF** A State institution of higher education, nonsectarian and coeducational, in Knoxville, with colleges of medicine and dentistry and schools of pharmacy and nursing in Memphis, and a junior college in Martin, founded in 1794. The total enrollment was 5024 students in 1929. The faculty numbered 413. The endowment funds of the university amounted to \$420,755, the income for the year 1928-29 was \$2,430,236. There were 103,442 bound volumes in the libraries. President, Harcourt A. Morgan, LL.D.

**TENNIS.** The end of the year 1929 still found France leading the lawn tennis world in the men's classes, while the United States ruled the women's ranks, mainly because of the excellent play of Miss Helen Wills. France retained possession of the Davis Cup, emblematic of the world's title by defeating the United States 3 to 2 in July in Paris in the final challenge round. Henri Cochet was the star of the French victory, beating both William T. Tilden, 2nd, and George M. Lott, Jr., in the singles. Jean Borotra gave France the needed point of victory when he vanquished Lott in the other single match after having been downed by Lott on the first day of play. The other United States point came in the doubles when Wilmer Allison and John Van Ryn scored a notable and clean-cut triumph over Cochet and Borotra.

Cochet also won the all-England championship singles at Wimbledon in June, and Mrs. Maude Holcroft-Watson and Mrs. L. R. C. Michel won the Wimbledon women's doubles honors. Van Ryn and Allison brought the Wimbledon doubles title to the United States, and Miss Wills and Francis T. Hunter annexed the mixed doubles title there. None of the French aces competed in the quest for the national singles crown in September at Forest Hills, N. Y., and it was won for the seventh time by Tilden. The doubles title, contested at Boston, was garnered by a new combination, Lott and John Hope Doeg. Allison and Van Ryn, who had performed so brilliantly all season, were eliminated in an early round. Miss Betty Nuthall of England paired with Lott to capture the national mixed doubles crown.

René La Coste won the French championship defeating Borotra in the final, while Lacoste and Borotra conquered Cochet and Bugnion in the doubles event. The American girls made a clean sweep of the matches they played in, defeating England in the Wightman Cup contest 4 to 3. Miss Wills downed Miss Helen Jacobs, of Berkeley, California, in the final round of the Wimbledon singles, and won the United States championship by defeating Englishwoman, Mrs. Maude in the final.

Miss Sarah Palfrey, Boston schoolgirl, Frank Shields of New York, Gregory Mangin of Georgetown University, and W. Barry Wood, also of New York and Harvard all-around athlete, were

some of the younger players who gave exceptional promise as being able to contest with the French on even terms in a few years.

Jack Wright of Canada captured the Canadian singles title, Emmett Parr of Chicago, the national clay courts men's singles, Jean Borotra of France, the national indoor singles crown, Tilden and Hunter, the national indoor doubles title, Berkeley Bell, of the University of Texas, the intercollegiate championship, and Ben Gottschalk and Arthur Kussman of Occidental, the intercollegiate doubles title.

Karel Kozeluh of Czechoslovakia captured the national professional singles tourney at Forest Hills in September, while he teamed with Vincent Richards, of the United States to take the doubles title. There was much talk of an "open" tournament being held in 1930, in which amateur players would not lose their status if they competed against the professionals.

**TEXAS POPULATION.** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 4,663,228. The estimated population on July 1, 1928, was 5,487,000. The capital is Austin.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Cotton	1929	17,872,000	3,950,000	\$116,000,000
	1928	17,741,000	5,106,000	416,775,000
Corn	1929	4,533,000	86,127,000	73,208,000
	1928	4,722,000	99,162,000	77,746,000
Wheat	1929	2,520,000	37,800,000	19,680,000
	1928	2,016,000	22,176,000	24,794,000
Grain sorghum	1929	2,760,000	46,920,000	32,844,000
	1928	2,780,000	69,000,000	41,400,000
Oats	1929	1,682,000	47,096,000	20,419,000
	1928	1,402,000	35,751,000	18,211,000
Hay	1929	899,000	990,000	12,552,000
	1928	856,000	941,000	11,881,000
Sweet potatoes	1929	104,000	7,884,000	7,753,000
	1928	109,000	8,284,000	8,284,000
Rice	1929	171,000	7,524,000	7,298,000
	1928	184,000	8,086,000	7,124,000
Potatoes	1929	31,000	2,393,000	3,590,000
	1928	39,000	2,690,000	2,690,000
Barley	1929	203,000	5,075,000	3,146,000
	1928	156,000	3,276,000	2,391,000

\* Bales    \* Tons

**MINERAL PRODUCTION.** In spite of the adverse effect of heavy production on price evident in the petroleum industry in 1927, the State's yield of petroleum again increased in 1928, rising to 256,888,000 barrels for that year, from 217,389,000 barrels for 1927. The total value of the year's product of petroleum rose but slightly, to \$249,800,000 (estimated) for 1928, from \$248,550,000 for 1927. Next in magnitude, the production of natural gas, for 1927, the latest year for which this had been reported, attained the value of 254,063,000 M cubic feet and the value of \$424,800, for 1926 the quantity was 175,392,000 M feet and the value, \$28,165,000. Gasoline was made from natural gas to the quantity of 331,000,000 gallons in 1928 and of 320,723,000 in 1927, and to the value of \$22,905,000 in 1928 (estimated) and \$18,347,000 in 1927. The cement industry of the State shipped in 1928, 6,231,083 barrels of Portland cement, valued at \$10,938,646, in 1927, 5,092,350 and \$10,232,908. The production of gypsum was for 1927, 508,382 short tons, valued at \$4,003,456, for 1927, 533,150 and \$4,120,400. Coal production, which encountered the competi-

tion of cheap petroleum, fell off to 1,182,034 short tons for 1928, from 1,326,385 tons for 1927, for 1928 the value of the product was \$1,589,000 and for 1927 it was \$1,998,000.

**MINES** In Texas produced in 1929, in terms of recovered metals, some \$28,000 in gold, 1,050,000 ounces of silver, 1,000,000 pounds of lead, and 400,000 pounds of copper.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 16,771.05. There were built, in 1929, 158.82 miles of additional first track.

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the U. S. Department of Commerce in 1929 and dealing with operations of 1927, there were in the State, in 1927, 4005 manufacturing establishments. These employed 116,763 wage earners, whose wages for the year totaled \$130,408,661. Materials and supplies used in production cost \$842,927,286. Manufactured products combined attained the value of \$1,206,579,962.

**EDUCATION** The age for free-school education was extended to include those between the ages of 6 and 21 years, it had previously covered the period from 7 to 21. The central educational authority of the State was altered by the creation of a Board of Education of nine appointive members, replacing the former board of ex-officio members. The Legislature appropriated \$2,000,000 as an equalization fund and \$100,000 a year to guarantee payment of tuition in high schools for students from rural districts. The number of persons of school age in the State in 1928 was given as 1,163,293. There were enrolled in the public schools, in the academic year 1927-28, 1,370,080 pupils. Of these, 587,783 were in common schools and 782,297, in independent district schools. Expenditures for public school education in the year 1926-27 totaled \$51,653,612. Salaries of teachers in 1927-28 averaged \$1010 a year, superintendents, supervisors, and principals included.

**CHARITIES AND CORRECTIONS** The State Board of Control, a statutory body created in 1925, manages some 17 institutions maintained by the State for the care of custody of individuals. The average total population of the inmates of these institutions for the year ending Aug. 31, 1928, was 12,987.

**LEGISLATION** Four consecutive sessions of the Forty-first Legislature were held. The first was the regular biennial session, convening in January. At its close on March 15, because of the failure of major bills, Governor Moody called a special session to convene on April 22. At its adjournment, and for like reason, he called a second special session, which met on June 3, a third special session met on July 2 and ended July 21. The enactments of the regular session included constitutional amendments to increase the bench of the State Supreme Court to nine members and to raise the salary of the governor to \$10,000 a year, both later defeated at a referendum. The statute governing marriage was amended so as to require that both intending parties to a marriage give written notice of intention at least three days before the issue of the marriage certificate and that the man furnish a satisfactory certificate of health from a physician. A bill, virtually to regulate membership in the Democratic party, by giving its executive committee power to determine the qualifications of all persons for voting in the Democratic pri-

maries, was passed, largely through the votes of the stalwarts who had condemned the "Hoover-crut" decisions of 1928, Governor Moody vetoed the measure.

The special-session legislation included enactment of an increase in the State tax on gasoline from 3 to 4 cents. An act for the relocation of the prisons was passed, it created a prison-centralization commission to work out a plan of a new and centralized system of prisons, to be submitted to the next Legislature. The maximum legal speed for motor vehicles was increased to 45 miles an hour. A measure designed to provide a means of enforcing payment from defaulting cities was enacted. Credit unions were placed under the supervision of the State Banking Department. State bank directors were required to possess at least \$1000 of their bank's capital stock. The cash surrender value of life-insurance policies was exempted from liability for debt. The benefits of the law protecting posted land were withdrawn from landowners charging in excess of 25 cents an acre for their hunting privileges.

**POLITICAL AND OTHER EVENTS** An approach to the settlement of the boundary dispute of Texas with Oklahoma, respecting the eastern border of the Panhandle, was made by the submission of a report on the subject, on July 15, by a commissioner appointed by the United States Supreme Court to survey the line. This report found a number of discrepancies in the existing line, as based on the 100th meridian and while granting some accession to Oklahoma at certain points, found for Texas to the extent of some 28,500 acres previously under the jurisdiction of Oklahoma.

An effort on the part of authorities at Laredo to arrest ex-President Calles of Mexico on his passage through the city at the beginning of December, on criminal charges connected with treatment of a Mexican insurgent at the border, brought a reprisal in the closing of the Mexican customs opposite Laredo, thus putting an end to the city's border trade. Dallas annexed the independent municipality of Lashon on July 12, thus adding an estimated 10,000 to its population.

The boom town of Borger, in Hutchinson County, continued to be the scene of lawlessness and was placed under State control by act of Governor Moody on September 29, after the murder of the district attorney. The mayor was arrested by Rangers and State troops took charge of the town. The discovery of petroleum near Van and West Saline, in western Texas in the course of the summer, brought into existence new boom towns at these places, with populations of several thousands each. A natural-gas field in Bee County, near Pettus, was discovered in May. Investigation by the State concerning the Buffalo Cave, near L., revealed that it led into an extensive system of caverns, possibly as great as the recently discovered Carlsbad caverns of New Mexico.

**OFFICERS** Governor, Dan Moody, Lieutenant-governor, Barry Miller, Secretary of State, Jane Y. McCallum, Treasurer, W. Gregory Hatcher, Comptroller, S. H. Tenell, Attorney-General, Claud Pollard (resigned and was succeeded by Robert Lee Bobbitt).

**JUDICIARY** Supreme Court, Chief Justice, C. M. Cuerton, Associate Justices, T. B. Greenwood, William Pierson.

**TEXAS, UNIVERSITY OF** A State institution of higher education in Austin, with a medical branch at Galveston and a college of mines and metallurgy at El Paso. For the autumn term of 1929, the enrollment totaled 6238 and for the summer session, 3449. There were 439 members on the faculty, an increase of seven over 1928. The endowment resources of the institution amounted to \$12,000,000 and the income from legislative appropriation, fees, and income from endowment was estimated at \$3,709,949. The library contained 419,499 volumes. President, Harry Yandell Benedict, Ph.D., LL.D.

**TEXAS FEVER.** See **VETERINARY MEDICINE**

**TEXAS TECHNOLOGICAL COLLEGE.** A State coeducational institution in Lubbock, Tex., opened in 1925. The enrollment for the summer session of 1929 was 1298 students and for the autumn of 1929, 2052 students. The faculty numbered 127 members. The appropriations for the year 1929-30 amounted to \$567,650. There were 20,000 volumes in the library. President, Paul Whitfield Horn, M.A., LL.D.

**TEXTILE INDUSTRY.** The American textile industry during 1929 was marked by a greater consumption of wool than in any year since 1923. Cotton consumption, on the other hand, though greater than in 1928, was less than in 1927, the year of greatest previous consumption. There was a larger consumption of silk in 1929 than in any previous year, while the rayon industry showed a continued growth. These leading industries are discussed under their respective heads elsewhere in the **YEAR BOOK**.

**NEW MILL CONSTRUCTION.** According to the *Textile World* (New York) in an annual review, 550 concerns in the United States erected, enlarged, or improved their plants in 1929, as compared with 533 in 1928. The largest construction was of knitting mills, which numbered 194. These were followed by 142 cotton mills, 74 woolen and worsted mills, 52 silk mills, 18 rayon mills, and 50 dyehouses and finishing plants. Pennsylvania led all the other States, with 99 mills built or enlarged during the year. North Carolina was next with 87 mills, New Jersey with 45, Massachusetts with 43, South Carolina with 37, New York with 30, Georgia with 20, Alabama, Rhode Island, and Tennessee with 21, Virginia with 18, Connecticut with 12, Wisconsin with 10, Maine and Ohio with 5 each, Indiana, Mississippi, Texas, and Washington with 3 each, California, Illinois, Maine, Michigan, and New Hampshire with 2 each, and Arkansas, Iowa, Kansas, Oregon, and West Virginia with 1 each.

Knitting-mill construction in 1929 remained about on a par with the previous 12 months. In Pennsylvania 57 knitting establishments were built or expanded, in North Carolina, 35, in New York, 18, in Tennessee, 13, in Massachusetts, 10; in New Jersey, 8, in Alabama, 6, in Georgia and Wisconsin, 5 each, in Virginia, 4, in Maryland, 3, and in California, Indiana, Michigan, Iowa, New Hampshire, Ohio, Oregon, South Carolina, and Washington, 1 each. Cotton-mill construction, on the other hand, showed an appreciable gain over 1928, especially in the South. North Carolina led with 40 new plants, units, and improvements, being followed by South Carolina with 32, Georgia with 19, Alabama with 14, Massachusetts with 13, and Pennsylvania with 12.

Among the woolen mills erected and enlarged during the year were 18 in Massachusetts, 12 in

Pennsylvania, 6 in New Jersey, 5 each in Wisconsin and Connecticut, 4 in Virginia, and from 1 to 3 each in Illinois, Indiana, Maine, New Hampshire, New York, North Carolina, Ohio, South Carolina, Tennessee, and Washington. Silk-mill construction fell off somewhat during 1929, while the increased expansion in the manufacture of rayon led to the erection or improvement of 18 plants. Pennsylvania showed the largest increase in silk-mill construction with 13 mills built or expanded. New York and New Jersey had 5 mills each; Connecticut, North Carolina, and Virginia, 4 each, Massachusetts, 2, and Rhode Island and Tennessee, 1 each. Virginia ranked highest in rayon-mill construction with 4 mills. New York, North Carolina, Ohio, and Pennsylvania reported 2 mills each, and Georgia, Maryland, Rhode Island, and West Virginia 1 each.

**THEATRE.** Theatre seasons do not run by the calendar in that each completed year sees both the months of one season and the opening of another adding records to its achievements, with the hot-weather hiatus dividing them.

The division was a bit more conspicuous in 1929 than usual because the concluding months of the 1928-29 season found the American theatre at a particularly low ebb in fortune and popularity, which the opening months of the 1929-30 season helped in considerable degree to correct.

Thus a reference to the records goes to show that although it was in January, 1929, that Elmer Rice's vivid drama, *Street Scene*, was produced, later to be awarded the Pulitzer Prize as being "the original American play performed in New York that shall best represent the educational value and power of the stage," but there were also produced that same month no less than twenty-two plays that failed of popular success and critical endorsement. Twenty-two failures out of twenty-six plays produced.

There was one other palpable hit, the Schwab and De Silva musical comedy, *Follow Thru*, a quasi-success won by a smartly sophisticated satire by S. N. Behrman called *Serena Blandish*, and a second musical comedy, *Lady Fingers*, adapted from Owen Davis's farce comedy, *Easy Come, Easy Go*, by the comedian, Eddie Buzzell, for his own use, which managed to hold on for 132 performances.

Yet not all the plays that failed that first month of 1929 were as impossible as entertainment as the statement might seem to indicate. One of them, for instance, was *The Guinea Pig*, written by the Preston Sturges who was later to win the following season's palm with *Strictly Dishonorable*. Another was the play *Vermont*. A. E. Thomas's honest but theatrical study of what the bootleg industry was doing to character in upper New England. It was Mr. Thomas's hope and belief that in this play he had exposed the effect of rum running and bribery on the type of American citizens, but there was no audience-response to *Vermont* and it lasted but 14 performances.

It was in January also that Maxwell Anderson's *Gypsy* was produced to meet a divided reception in the press, later to spurt prominently

"THE KINGDOM OF GOD"

THEL LARRYMORE AS SISTER GRACIA

TWO PLAYS OF 1929

toward success only to falter finally and be retired after 40-odd performances. During half of these, the heroine died in expiation of having lived a muddled life, while during the other half she was permitted to live and continue her pursuit of a happiness that should mean serenity and contentment to her. Having been cursed with a gypsy heart she was one who moved from husband to lover, and on to other lovers, with high motives but a weak will.

Another failure of this particular period was that of a comedy written by Lewis Beach who gave considerable promise some years back, first with a one-act play called *The Clod* and later with a " " " " drama called *The Goose Hangs High*, earliest younger-generation studies and a success of its season. The new Beach play was called *Merry Andrew* and detailed amusingly the unhappiness of a small-town dingy who is affectionately forced by a doting family to give up business in his early old age. He all but dies of boredom, drives everybody frantic in their effort to keep him interested, and is finally made happy again when his wife and daughter secretly buy back his old drug-store business for him. Despite excellent performances by Walter Connolly and Elsie Shannon, the comedy was withdrawn after a few weeks.

It was experiences such as these that gave the producers pause. When plays had what play reviewers were pleased to speak of as popular story values, were well cast and well played, and still could arouse little or no interest, the showmen were free to confess that something must indeed be happening.

Blaiche Yulka started February with a revival of Ibsen's *Hedda Gabler*, following her previous Ibsen success with *The Wild Duck*. Earl Carroll, having recovered from one thing and another, came forward with an elaborately produced music play called *Fioretta*, which he and his backers hoped would do something toward replacing a demand for jazz scores with one for music of a little better quality. Two newcomers, George Bagby and G. Romilly, wrote the music for *Fiorita* to a libretto furnished by Mr. Carroll, and the cast was studded with the names of Leon Erroll, Fannie Bruce, Lionel Atwill, and other stage celebrities. The piece held on for 111 performances but was generally accepted as a sort of overinflated failure.

The Theatre Guild, having enjoyed an unprecedented and quite unexpected success with Eugene O'Neill's nine-act *Strange Interlude* the season before, approached the production of the same author's *Dynamo* with high hope. *Dynamo*, it was explained, was to be the first of a dramatic trilogy that might, the playwright thought, clarify man's thought in his search for a satisfying religion and an understandable God. The play seemed to have a contrary effect, serving to muddle more completely such convictions as its audiences had acquired. A struggle primarily between a fundamentalist father and a son who becomes an atheist, it ended with the son's declared acceptance of electricity as the great generative force of the world.

*Dynamo* struggled hopelessly against a rising tide of controversy and attack, and when so many of the Theatre Guild subscribers as were interested had been taken care of in the first six weeks' run, it was withdrawn, a costly but interesting failure.

Rachel Crothers, who had not been particularly

active of recent months, came forward about this time with a social comedy called *Let Us Be Gay*, fashioned along the lines happily followed by Philip Barry with *Holdau*. Her story of a divorced pair who meet at a house party, neither knowing the other is to be there and the fact of their marriage unknown to the other guests, pleased the smart crowd and played through the season and the succeeding summer at the Little Theatre.

Mary Ellis, having deserted opera for good following her first success in *Rose Marie* and her later dramatic successes co-featured with Basil Sydney, appeared again with Mr. Sydney in a fluffy but amusing A. A. Milne comedy, *Meet the Prince*. The Ellis-Sydney popularity and a modest pay roll carried the comedy through 96 performances. Then the stars called it a season, got married and went to Europe on a honeymoon.

From this point on the season meandered a little disgustedly toward its close. There was an interesting experiment at the Provincetown Playhouse in Greenwich Village which brought forth a new playwright, Virgil Geddes, and an interesting first play, *The Earth Between*. Aarons and Freedley produced a piece called *Spring Is Here*, which boasted the first musical comedy book ever written by Owen Davis, dramatist and one-time Pulitzer Prize winner with the drama *Lebound*, and someone thought it would be amusing to revive Dion Boucicault's *The Octoroon*, which it was, even though it did not pay.

And then, on the 22d of March, Gilbert Miller and Maurice Browne produced *Journeys End* at the Henry Miller Theatre. Suddenly, out of a muddled sky, there sprang a revived interest in the living theatre. The humming typewriters of discouraged critics of the drama sang the praises of the new play. Crowds again besieged a box office (or the nearest broker) and all was again well along the Rialto. At least for a short distance along the Rialto.

A few weeks later, as the newly awakened interest began again to subside, another play of English authorship, John Drinkwater's comedy farce, *Bird in Hand*, was brought over and thus, too, caught the fancy of the crowd and was a cheering adventure.

Mrs. Fiske revived Harry James Smith's *Miss Bumpsted-Leigh* successfully, Jane Cowl won what might graciously be termed a *succès d'estime* with a revival of the Stephen Phillips *Paolo and Francesca*, Sir Guy Standing appearing as the Giovanni and Philip Merivale as Paolo, and the Theatre Guild suffered a failure with a slightly dated younger-generation play written by Bruce Gould and Beatrice Blackmar and called *Man's Estate*. A few weeks later the Guild partly recovered a slipping prestige with the production of *Camel Through the Needle's Eye*, a Philip Moeller dramatization of the Hungarian original written by Frantisek Langer.

But there was nothing much to arouse the cheering section of the theatre's defenders in any of these events. Not yet in Ethel Barrymore's addition of Zoe Akens's adaptation of Lili Hartvany's *The Love Duel* to her earlier production of Sieria's *The Kingdom of God* as a second foundation stone in the repertory she hoped to establish. A goodly number of the intelligent minority (who unfortunately go mostly on passes) were properly thrilled by an actors' revival of Anton Chekhov's *The Sea Gull*, which had not

previously been done in English in America. Leo Bulgakov directed the revival and it was probably because of its success at special matinees that Eva Le Gallienne decided to make the play a feature of her following season at the Civic Repertory Theatre.

Early in May, Walter Hartwig directed the annual Little Theatre Tournament in which twenty amateur and semi-professional groups contest through the week for the honor of winning four cash prizes, a banner, and a small cup known as the Belasco trophy. The tournament this year was held in the Waldorf Theatre and attracted more than the usual attention. There were no foreign entrants, as there had been the two previous years. (The Androssan and Saltcoats Players of Saltcoat, Scotland, won in 1928 and the Welwyn Garden City Players of Welwyn Garden City, England, in 1927.) But competing troupes were sent from as far west as Denver and as far south as St. Augustine, Fla.

At the conclusion of the tournament, prizes were awarded the Gardens Players of Forest Hills Gardens, L. I.; the Guild Play Shop of Denver, Colo.; the Amnston Little Theatre of Amnston, Ala.; and the Sunnyside Playhouse of Sunnyside, L. I., the Belasco trophy going to the Forest Hills group for its competent revival of James M. Barrie's *Shall We Join the Ladies?*

The first half of the theatre year was then brought to a close in early June by the Players' club revival of Langdon Mitchell's *Bucky Sharp*, one of those annual all-star affairs that stimulate the interest of older playgoers, the blood pressure of the older players, and the interest of so many of the younger group as are drafted for the performance. This particular revival enlisted in principal roles the services of Mary Ellis and Basil Sydney, Patricia Collinge, Cecilia Loftus, Ida Mullen, James T. Powers, Donald Brian, Fraser Coulter, A. G. Andrews, Bruce Burnesfather, the artist, and literally hundreds of others.

In early July, on the night of the 1st to be specific, Earl Carroll produced a revue called *Earl Carroll's Sketch Book*, to distinguish it, no doubt, from his *Varieties* of other years.

On July 2, Florenz Ziegfeld, who was indulging another period of abandoning an annual *Follies* production, produced a musical comedy called *Show Girl*, at his opera house in Sixth Avenue. It proved the first Ziegfeld money failure in five years, partly because it was too expensively staged and cast—the principals including the favorite night-club trio, Clayton, Jackson, and DuMonte, and Ruby Keeler-Jolson—and partly because it was not particularly enlivening entertainment. The experts found this a little difficult to explain seeing that the book from which it was taken by William Anthony McGuire was written by J. P. McEvoy and that George Gershwin was responsible for the score.

David Belasco struck oil in August. He had suffered the worst defeat of his recent career when *Alma* and Lenore Ulric cost him financial losses of some \$250,000, the season before. Now he produced a funny little comedy called *A Wise Child*, written by a practically unknown playwright, Laurence E. Johnson, and scored an overnight success with it. John Murray Anderson, coming back to play production from years devoted to a school for acting and the training of units for moving-picture houses, offered a revue called *Almanack* to considerable printed applause but not to consistent profits.

The last week in August, George Cohan may be said to have definitely opened the new season with a production of his own melodrama called *Gambling*. Both Mr. Cohan, who returned to the stage to play the principal part—that of a gambling man who runs down the murderer of his adopted daughter and meets romance on the way—and his play were acclaimed and ran on through the holidays. Arthur Hammerstein, representing another of the leading American stage families, followed Mr. Cohan's lead with the production of a musical comedy of the better and bigger variety called *Sweet Adeline*. This one, written by Oscar Hammerstein 2d, staged by Reginald Hammerstein, and boasting a score by Jerome Kern, began in a beer garden in Hoboken back in the nineties, and came no farther forward than 1906.

Now the new plays began to pile in quite as though periods of depression in the theatre were unknown. There were thirty-three plays newly produced or revived in repertory in September, thirty-four more in October and an additional thirty-four in November. Miss Le Gallienne added Chekhov's *The Sea Gull* to the Civic Repertory Theatre plays on September 16, thus getting things started in Fourteenth Street, and the *Star*'s hit uptown was a comedy by Preston Sturges called *Strictly Dishonorable*. It was Sturges' second play, his *The Gunner* having been noted, having been a cut-rate success the season before. *Strictly Dishonorable* recites the adventure of a naive Southern girl who finds herself deserted in a New York speakeasy by a hot-headed Jerseyite to whom she has become engaged. It is midnight and the young woman has no money. Betrayed by a convivial judge and offered the freedom of the apartment of a handsome opera singer whose intentions, he confesses, are strictly dishonorable, the heroine decides to chance the adventure and suffers no greater harm than comes of a bruised vanity. Muriel Kirkland, an actress of little previous experience, scored a personal success in the rôle of the girl, as did an Italian actor named Tullio Carminati in that of the singer.

Successes and near successes the next few weeks included another of George White's *Scandals*, with Mr. White taking some little part in the proceedings—a mystery play, *Subway Express*, by Eva Kay Flint and Martha Madison, in which the entire action, murder and all, takes place in a single car of a subway train, Moncton Hoffe's *Many Waters*, an importation from London that brought Ernest Truex home after many months and several hits abroad, *Candlelight*, adapted by P. G. Wodehouse from the German of Siegfried Geyer, which introduced Gertrude Lawrence, the English musical comedy star, as a straight comedienne, and *The Criminal Code*, a sombre drama of prison life which was credited with an excellent chance of winning the Pulitzer Prize. Elmer Rice, hoping to prove again that his judgment in plays was superior to that of most, produced a comedy of his own writing and staging called *See Naples and Die*, but it proved a failure and the author went back to nursing his still successful *Street Scene*.

The Theatre Guild, starting as bravely as may be with two new members added to its chief acting group, Alice Brady and Otto Kruger, came a cropper with its first two plays. Leonhard Frank's *Karl and Anna*, adapted by Ruth Langner, and Romain Rolland's *Game of Love and*

*Death*, translated by Eleanor Stimson Brooks. The spirits of its six directors picked up a bit a little later when a Soviet drama, *Red Rust* produced by the younger associates of the Guild (now become a Theatre Guild studio, after the Moscow Art pattern) proved at least a play that threatened to build into a success, and when Alfred Lunt and Lynn Fontanne, the chief favorites of the first acting company, came back to the home theatre with S. N. Behrman's *Meteor* and achieved at least a personal triumph of familiar proportions, the season looked much brighter than it had looked before.

The Messrs Shubert, hopeful, yet fearful, that a revival of Victor Herbert operas might not win favor, financed such a revival at the Jolson Theatre under the auspices of an organization known as the Jolson Theatre Musical Comedy Company. Greatly to their surprise (and delight), the venture proved a success. The first revival was that of *Sweethearts*, with the prima donna who had first sung it to success, the lovely Christie MacDonald, sitting demurely in a stage box. A few weeks later *Mlle Modiste* followed with Fritz Scheff again singing the rôle of Fifi which she had made her own, and again scoring a personal triumph with it. After that came *Naughty Marietta* and *The Fortune Teller*, with Alice Nielsen present and smiling sweetly. By this time, thanks to the new interest in the old operas and a succession of cleverly organized theatre parties, the venture was commercially profitable. Now De Koven's *Robin Hood* was revived, and Lehár's *Merry Widow* and again Heiber's *Babes in Toyland* for the holidays. *Mlle Modiste*, with Mme Scheff was taken touring, *Robin Hood* was given two extra weeks at the Casino and *Babes in Toyland* an extra week at the Jolson.

In early October the second " smash hit," as the profession classifies them, was scored with Ring Lardner and George Kaufman's *June Moon*, a brightly amusing satire of the Tin Pan Alley that houses and stimulates the song-writing game. Thanks to a happily chosen cast, headed by Norman Foster, including a popular pianist of Broadway, Harry Rosenthal, and clever direction by Mr. Kaufman, *June Moon* promised to shine on indefinitely.

Now came a series of misadventures common to every theatre season. A new organization hoping to grow into at least a baby Theatre Guild, called the Theatre Assembly, started with a drama called *Tolly*, which did not amount to much, and followed with another, *A Lodge*, which amounted to less. Arthur Hopkins produced Alexander Woollcott's first play, in the writing of which the well-known critic had George Kaufman as collaborator. *Channel Road* was the title and De Maupassant's *Boul de Ruis* the inspiration. It was, experts agreed, an excellently written drama (albeit a bit overwritten,) and well produced, but the general public would not follow the lead of the special public that liked it. Vincent Youmans spent something like \$300,000 on a musical play called *Great Day* and then closed it up. George Kelly came home after a year or two abroad and brought a drama called *Maggie the Magnificent* with him. Great expectations were again dashed to earth when *Maggie* failed quickly and, many mistimed, unreasonably *Abraham Lincoln* was revived by William Harris, Jr., and lived but a week. The newly organized Irish Theatre produced Sean O'Casey's *The Silver*

*Tasse* and that failed. Those who liked the play did not like the company's somewhat clouded speech, and those who liked the company cared not for the play.

But there were compensating adventures in playgoing, too. Mrs. Fiske, supported by that other veteran, Wilton Lackaye, was affectionately welcomed in *Ladies of the Jury*, a comedy written by Fred Ballard (who once wrote a Harvard Five play called *Believe Me, Antipope*), a finely imaginative drama, *Beckley Square*, was brought over from London and produced at the Lyceum by Gilbert Miller and Leslie Howard. This play was written by John Balderston, an American for many years London correspondent of the New York Morning World, and had been successfully produced abroad. It relates with a charming delicacy the adventure of one Peter Standish, a New Yorker of today, who, visiting his ancestral home in Beckley Square, London, projects himself back into the eighteenth century and sees himself as the first Peter Standish of his line.

A day later a second London success, Noel Coward's *Bitter Sweet* was offered in Mr. Ziegfeld's theatre by Mr. Ziegfeld and Arch Selwyn in association with the London producer, Charles B. Cochran. Because of the presence in the cast of Evelyn Laye, one of London's loveliest prima donnas, *Bitter Sweet* overcame definite native dislike, due, apparently, to its lack of snapp.

The Provincetown Players, having moved up from MacDougal Street to the Garrick Theatre, the cradle of the Theatre Guild, and having started bravely but unsuccessfully with Michael Gold's play, *Pieria*, turned to a seriously and well-written drama called *Winter Bound*, by Thomas Dickenson, which the reviewers proceeded to sneer out of the theatre by reading into it a suggestion of lesbianism neither text nor action justified.

William Gillette, restless at 74, accepted George Tyler's invitation to revive *Sherlock Holmes*, and did so with great éclat and pronounced financial success at the New Amsterdam Theatre. The veteran was introduced the opening night by President Nicholas Murray Butler of Columbia University and presented with a souvenir of the occasion by William Lyon Phelps of Yale at the end of the performance.

Pleasant events followed. Frank Craven reappeared as a protesting husband in *Salt Water*, by Dan Jarrett, the Warner Brothers put some of their movie profits into the production of *Fifty Million Frenchmen* under the direction of Ray Goetz, the book being by Lew Fields's son, Herbert, and the music by Cole Porter, a new firm of producers, Bobby Connelly, dance director, and Arthur Swanston, song writer, produced a musical comedy for Jack Donohue called *Sons o' Guns*, which proved enormously popular, although clean as a whistle should be, the Shuberts duplicated without imitating the seduction scene of *Strictly Dishonorable* in a comedy by Elmer Harris called *Young Sinners*, and Charles Hopkins, at 49th St., imported another A. A. Milne murder mystery comedy, *Michael and Mary*, which threatened to prove as popular as the same author's *The Perfect Alibi*.

Finally the year slipped toward its close with repeated reports from the field that the legitimate theatre was slowly dying, a statement it would be easier to believe if it were not so difficult to obtain seats to anything anyone really

wanted to see. The play producers, disturbed by the failure of both the weak and the not-so-weak plays, took steps to curb the speculators by agreeing not to sell them seats in blocks after March 1.

In December, Walter Hampden revived a new version of *Kuchelru*, which proved to be the Bulwer-Lytton original tightened up by Arthur Goodrich. Lee Shubert brought Philip Merivale and *Death Takes a Holiday* to town. Grace George offered *The First Mrs. Fraser*, a brightly written marital comedy by St. John Ervine, the English drama critic, and Arch Selwyn imported another Cochran revue, *Wake Up and Dream*, with Jack Buchanan as its star. Miss George's public received both her and the Ervine play with a warmth approaching enthusiasm. Mr. Hampden was moderately successful, the English revue drew in the usual societyish that greets most English revues, and *Death Takes a Holiday*, welcomed courteously by the press, but suspiciously by the public, later became widely popular.

The English theatre season was moderately eventful. Though the production of R. C. Sheriff's famous war play, *Journey's End*, by the Stage Society in London in December, 1928, technically places that play in that year, its transfer to the commercial theatre by Maurice Browne early in 1929, its importation to America by Mr. Browne and Gilbert Miller in March of that year, and its later reproduction in practically every theatre centre in Europe made it the most outstanding play of the year in Europe. This play's success in Europe, as well as in America, continued and seemed likely to go on for several seasons to come. Another play with a war-time background that met with some London success but failed later in America was Sean O'Casey's *The Silver Tassie*. The fact that the American performances were undertaken by the newly organized and partly amateur Irish Theatre of New York may have helped to do with the play's failure in the U. S. A.

George Bernard Shaw came audaciously forward with a play showing a British King in conflict with his ministry a hundred years or more from now and achieved an admitted success with "audiences ready to be amused by preposterous nonsense," as one of his critics described it. The reviewers were generally pained by Mr. Shaw's success.

John Galsworthy enjoyed his usual success of late with another of his episodic studies of character reactions called *The Roof*. The Stage Society, a little proud of its success with *Journey's End*, also placed to its credit introductions of other successful plays, notably those of Norman MacOwen's *The Infinite Shoeblick*, Patrick Hamilton's gruesome "murder for art's sake" drama, *Rope*, and *The Lady With a Lamp*. The number of plays that came to the West End theatres in London from both provincial and suburban houses, as well as stage society premieres, caused comment and gave courage to the younger writers who for years fought the West End tradition unsuccessfully.

William Somerset Maugham had the gratifying experience of seeing his serious drama, *The Sacred Flame*, succeed in London despite the condemnation of the Bishop of London. This story of a mother's promise to an invalid son that she would help him shuffle off his mortal coil once his life should become intolerable, ran for seven months, thanks to the indorsement of

the intelligent minority. It was unfortunately a quick failure in New York.

**Bibliography.** Published works on the theatre, of greatest significance include a bulky but highly informative volume, *The Theatre*, by Sheldon Cheney, *Footlights Across America*, in which Kenneth Macgowan traces the somewhat amazing expansion of the Little Theatre movement, Ashley H. Thorndike's *English Comedy*, Andrew Malone's *Irish Drama, 1896-1928*, Roy Mitchell's *Creative Theatre*, and Pierre DuCharme's *The Italian Comedy*. That current history of the theatre in America, Burns Mantle's *The Best Plays*, reached its tenth anniversary volume, and a sketchy biographical review of the outstanding American playwrights of contemporary interest was contained in the same writer's *American Playwrights of Today*.

See also FRENCH LITERATURE, GERMAN LITERATURE, ITALIAN LITERATURE, SCANDINAVIAN LITERATURE, SPANISH-AMERICAN LITERATURE, and SPANISH LITERATURE for discussion of dramatics and theatrical activities in other countries.

**THEOSOPHICAL MOVEMENT.** The Theosophical Movement, having the whole of nature for its object and conceiving itself with evolution in all its aspects, physical, intellectual, and spiritual, has been found in all times and among all peoples. It is moral, ethical, spiritual, universal, invisible save in effect, and continuous. It is to be discerned wherever thought has struggled to be free, wherever spiritual ideas, as opposed to forms and dogmatism, have been promulgated. All the truths uttered by the great seers, sages, poets, and writers, existing in every land and extending back from modern times into the prehistoric past, are a part of Theosophy and have their place in the Theosophical Movement.

The basic propositions of Theosophy, which is the body of truth underlying the religious and philosophies of the world, are (1) an impersonal divine principle, inseparable in its essence but symbolized for finite intelligence by absolute, abstract space and absolute, ceaseless motion, (2) the universally operative law of action and reaction, whose action is seen in the ebb and flow of tides, the succession of seasons, and the alternation between sleeping and waking, and life and death, and (3) the identity of all souls with the universal Oversoul, all pursuing their way toward ultimate perfection through evolution on earth, in which each reaps the exact harvest of his sowing.

**THEOSOPHICAL SOCIETY, AMERICAN.** The American division of the Theosophical Society, a world-wide organization founded in 1875 by Mme. Helena P. Blavatsky and Col. Henry S. Olcott. World headquarters were later established at Adyar, India. In 1929 branches existed in 43 nations, on five continents. The American Theosophical Society, which was known formerly as the American Section of the Theosophical Society, had, in 1929, 257 local lodges. The president of the society was L. W. Rogers. The headquarters are in Wheaton, Ill.

**THESSALY.** See GREECE under *History*.  
**THOMPSON, SIR EDWARD MAUNDE.** A British palaeographer, died Sept. 14, 1929, in Mayfield, Sussex. He was born May 4, 1840, in Jamaica, the West Indies, and was educated at Rugby and at University College, Oxford. Appointed an assistant in the British Museum in 1861, he became in 1878 Egerton Librarian and Keeper of the Manuscripts. Sir Edward was called to the

Middle Temple in 1867, but did not practice law. From 1888 to 1900, he was director and principal librarian of the British Museum. He was a corresponding member of the Institute of France and of the Royal Prussian Academy of Sciences, and he was one of the original members of the British Academy founded in 1902, becoming its president in 1907.

**THRACE**. See GREECE under *History*

**THUCHOLITE**. See MINERALOGY.

**THURINGIA**. A federated state of the German Republic, created at the end of 1919, consisting of the following states of the former German Empire: Eisenach, Gotha, Reuss, Saxe-Altenburg, Saxe-Meiningen, and Saxe-Weimar, with Schwartzburg-Rudolstadt and Schwartzburg-Sonderhausen. Area, 4669 square miles, population, according to the census of 1925, 1,607,339. Capital, Weimar, with a population in 1925, of 45,957. Other large towns with their populations at that date were Gera, 81,402, Jena, 52,649, Gotha, 45,780, Eisenach, 43,385. Governmental power is vested in the Diet, which acts through a state council. President of the state council in 1929, Dr. Leuthensen. In the elections held in January, 1927, the following parties were returned: Conservative bloc, 19, Socialists, 18, Communists, 8, and all other parties, 11.

**TIBET**, ti-bet' or tibet'. A region extending eastward from the Pamirs to the border of China, between the Himalaya and Kwei-lun Mountains, nominally under the suzerainty of China. Area, estimated at 463,200 square miles, population, variously given at 1,500,000 to 6,000,000, the probable figure being about 2,000,000. Capital, Lhasa, with a population of 15,000 to 20,000. Lamaism is the prevailing religion. The chief pursuits are pastoral and the animals raised include sheep, yak, buffaloes, pigs, and camels. Of the minerals, gold, borax, and salt are mined to some extent. Trade is chiefly with India and China. The head of the government is the Dalai Lama, who is appointed by a regent appointed from ranks of the Tibetan lamas and assisted by five regents. *See* CHINA.

**TIDAL THEORY**. See ASTRONOMY.

**TIKHVINITE**. See CHEMISTRY, under *Mineralogical Chemistry*.

**TIMBER**. See FORESTRY.

**TIME**. See ASTRONOMY, PHYSICS.

**TIN**. Progress made in the technology of tin probably was responsible for the phenomenon of steadily increasing production and lower prices. In 1929 world output was about 190,000 long tons, compared with 178,000 long tons in 1928 and the price averaged 45 cents a pound on the New York market, compared with 50 cents a pound in 1928. At the close of the year, the price was only 38 cents a pound. The descent of 7 cents a pound occurred entirely in the last four months of the year, and reflected largely the curtailed demand from automobile manufacturers in the United States. Efforts to check the falling price were repeatedly made by the British Tin Producers' Association, but the lack of co-operation from Bolivian, Dutch East Indies, and Chinese-owned Malayan mines proved a formidable stumbling block. Costs in the Malayan tin fields, which were the most important, had been reduced greatly by the adoption of dredging and other modern electrically-operated equipment. These lowered costs were probably the basic reason for the decreasing prices. Malayan

output increased about 5000 tons to 67,000 tons. Production in Bolivia was about 43,000 tons and in the Dutch East Indies, about 34,000 tons.

**TINGLEY**, ting'li, KATHERINE. An American humanitarian and Theosophist, died in Visingsö, Sweden, July 11, 1929. She was born July 6, 1852, in Newburyport, Mass., the daughter of James P. Westcott, and was educated in the public schools and by private tutors. In 1889 she was married to P. B. Tingley. Having an interest in humanitarian work, she went to New York City and established the Emergency Relief Organization and the Do-Good Mission. She also founded in 1897 the International Brotherhood League for humanitarian work. In New York, she became associated with the Theosophical Society, and on the death of W. Q. Judge in 1896, she succeeded him as head of the Theosophists. In 1898 she became leader and official head for life of the Universal Brotherhood and Theosophical Society. She conducted theosophical crusades around the world in 1896-97, and again in 1903-04. During the Spanish-American War, she organized relief corps in New York and established at Montauk Point, L. I., emergency hospitals for returning soldiers, later doing the same work in Cuba. Moving the headquarters of the Theosophical Society from New York to Point Loma, Calif., in 1900, she established there the Raja Yoga Academy, a School of Antiquity, and a home for orphan children. She also acquired educational sites at San Juan Hill, Cuba, at Visingsö, Sweden, and at Fleet, Hampshire, England. In 1924 she established a summer school for children at Visingsö and in 1925 organized seven new Theosophical centres in Europe. Under her leadership, the Theosophist Movement spread around the world and gained many converts. She was often engaged in law suits with relatives of deceased members who had willed large sums of money to the society. She edited the *Theosophical Path* in Point Loma and directed the publication of theosophical magazines in Holland, Germany, and Sweden.

**TOBACCO**. The production of tobacco in the United States in 1929 was reported to be 1,500,891,000 pounds, an increase of 9 per cent over the previous year. The larger total acreage, 2,016,400 as compared with 1,894,100 in 1928, combined with an increase in the average acre yield, accounted for the larger production. Notable increases in acreage and production in 1929 were made in the bright flue-cured, burley, dark-fired, and dark air-cured districts. Although the average price per pound was 19 cents, a decrease of 1.2 cents from 1928, the total farm value in 1929 amounted to \$285,583,000, about \$8,000,000 more than in 1928. States producing more than 100,000 pounds were North Carolina, 1,100,000 pounds, Kentucky, 361,845,000, Virginia, 118,320,000, Tennessee, 102,664,000, Georgia, 89,870,000, South Carolina, 82,992,000, Pennsylvania, 47,601,000, Wisconsin, 45,140,000, Ohio, 39,782,000, Connecticut, 27,636,000, and Maryland, 25,600,000 pounds.

The world tobacco production, as reported in November, 1929, by the International Institute of Agriculture, with available statistics, amounted to 1,741,671,000 pounds as compared with 1,625,213,000 pounds in 1928. The United States provided about 85 per cent of the world crop and was followed by Japan with an estimated production of 138,065,000 pounds, Bulgaria, about 55,050,000, and Canada, 29,786,000 pounds. The

Canadian crop was expected to be about 12,000,000 pounds less than in 1928.

Collections from internal revenue taxes on tobacco in the United States for the fiscal year 1929, as reported by the Commissioner of Internal Revenue, continued their steady upward trend, reaching a new high level of \$434,444,543 21, an increase of \$37,994,502 18 over 1928. Receipts from taxes on small cigarettes accounted for 78.71 per cent of the total tobacco taxes, establishing another record, \$341,951,551 22, or an increase of \$40,198,962 88 over the previous year. The taxes collected on chewing and smoking tobacco declined to \$61,159,178 09 in 1929 from \$62,774,542 43 in 1928, on snuff, to \$7,126,008 09 in 1929 from \$7,461,351 00 in 1928, and on large cigars to \$22,548,567 59 in 1929, a decrease of \$330,807 34 from the previous year.

The prominent position of the tobacco industry was shown by the fact that in the calendar year 1928 nearly 109 billions of cigarettes weighing 3 pounds or less per thousand were manufactured, an increase of about 9 per cent over 1927. This was also evident in the estimated per-capita consumption of 940 cigarettes during the fiscal year 1929.

Leaf tobacco exported from the United States during the fiscal year 1929 totaled 557,899,000 pounds and during the 12 months ending December, 1929, 553,415,450 pounds. Exports of flue-cured tobacco, now constituting nearly three-fourths of the American leaf-tobacco exports, increased 26 per cent over the previous year, almost wholly because of shipments to China during the latter half of 1928, in anticipation of higher tariff duties. The total exports of this class in the 1929-30 season were expected to exceed the 414,000,000 pounds exported in 1928-29.

**TOBAGO.** A West Indian island, included administratively in Trinidad See TRINIDAD.

**TOGO,** tō'gō, or TOGO-LAND A former German protectorate in West Africa, after the World War, divided between Great Britain and France as mandated territory of the League of Nations, situated between Dahomey and the Gold Coast. Total area, 33,700 square miles, total population estimated at 747,000, of whom 418 were Europeans. Hamitic tribes make up the population of the North, while in the South the chief stock is the Ewe. To France was allotted about two-thirds of the total area, namely, 21,200 square miles, including all the coast. The British part bordering the Gold Coast has an area of 12,600 square miles, with a population, according to the census of 1921, of 188,265.

In French Togo, in 1927 the imports were valued at 100,715,688 francs, exports, 82,242,712 francs. The local budget for 1927 balanced at 33,478,000 francs. From Lomé, the seat of the government, there are railway connections with Aného, Palime, and Atakpame, with a total length of 204 miles. In 1927, 382 vessels cleared from the two ports of Lomé and Aného.

**TOLEDO,** UNIVERSITY OF THE CITY OF An institution of higher education in Toledo, Ohio, founded in 1872. The enrollment for the autumn of 1929 totaled 2165, including 1044 day students and 1121 late afternoon and evening students. President, Henry John Doermann, Ed D.

**TOLEDO MUSEUM OF ART.** See ART EXHIBITIONS, ART MUSEUM.

**TOLL BRIDGES.** See BRIDGES.

**TOMBS, ANCIENT.** See ARCHAEOLOGY.

**TONGA or FRIENDLY ISLANDS.** Three groups of islands, together with small, outlying islands, to the east of Fiji in the Pacific Ocean, between 15° and 23° 30' S latitude and 173° and 177° W longitude since May 19, 1900, a protectorate of Great Britain. Total area, approximately 385 square miles, population, estimated in 1920, 25,918 Tongans, 365 other Pacific islanders, 530 Europeans, and 234 half-castes, total, 27,048. Capital, Nukualofa. The government is under the High Commissioner of the Western Pacific, who acts by the advice of the local ruler and a legislative assembly of 23, seven of whom are elected by the people. Queen in 1929, Salote, who succeeded Apr 12, 1928, High Commissioner for the Western Pacific, Sir Eyre Hutson.

**TONGKING,** tōn'kēn A French protectorate, constituting the northern chief division of the colony of French Indo-China, situated south of the Chinese provinces of Kwangsi and Yunnan. Area, 40,530 square miles, population in 1926, 7,401,912, of whom 9143 were Europeans, exclusive of military forces. The chief city is Hanoi, which is the capital of French Indo-China, with a population of 103,235 in 1926. Imports in 1927, 805,815,128 piastres, exports, 573,198,000 piastres (one piastre exchanged for \$0.5025 in 1927). The local budget for 1928 balanced at 18,200,670 piastres. The government is under a resident superior, who in turn is under the Government-General of French Indo-China. See FRENCH INDO-CHINA.

**TORONTO, UNIVERSITY OF** An institution of higher education in Toronto, Ont., Canada, founded in 1827 and supported by the provincial government. The 1929 autumn enrollment was 6617. The faculty numbered 712 members. The total expenditure for the year 1928-29 for salaries and maintenance was \$2,415,809. Total benefactions received during the year amounted to \$505,056. The library contained 230,463 volumes and 83,541 pamphlets. President, Sir Robert A. Falconer, K C M G, D Litt, LL D, D D, D C L.

**TOUT,** tout, THOMAS FREDERICK An English historian, educator, and authority on medieval life, died Oct 23, 1929, in London, where he was born Sept 28, 1855. He was educated at St Olave's School, Southwark, and at Balliol College, Oxford. He was a fellow at Pembroke, Oxford, from 1883 to 1890, and after 1891 was also professor of history at St David's College, Lampeter. In 1890 he was appointed professor of history at Manchester University, remaining in the post until his retirement in 1925. He was a Ford's lecturer in English History at Oxford University in 1912-13, and a Merivale lecturer at Cornell University in 1927. His books on medieval history include "Edward the First" (*Twelve English Statesmen*, 1893), *The Empire and the Papacy* (1898), "History of England, 1216-1377" (*Longman's Political History of England*, vol III in 1905), joint edition with Prof H. Johnstone of *Select Trials of the Judges and Ministers, 1289-92* (Camden Series, Royal Historical Society, 1900), *The Place of the Reign of Edward II in English History* (1914), *Chapters in the Administrative History of Medieval England* (vols I and II, in 1920, vols III and IV, 1928, vol V, 1929), *France and England, Their Relations in the Middle Ages and Now* (1922).

**TRADE UNIONS.** *The Monthly Labor Review* of July, 1929, published the accompanying table to show the number of organized workers in various countries of the world on Jan 1, 1925, and again on Jan 1, 1928

NUMBER OF ORGANIZED WORKERS IN VARIOUS COUNTRIES, JAN 1, 1925, AND JAN 1, 1928

Country	Total membership 1925	1928
Argentina	120,000	164,874
Australia	729,155	911,652
Austria	1,044,068	961,550
Belgium	726,126	762,886
Bolivia		5,000
Brazil	104,000	22,562
British Guiana		1,071
Bulgaria	49,803	2,485
Canada	201,981	209,282
Ceylon		40,000
Chile	162,000	204,000
China	300,000	2,800,000
Colombia		11,400
Costa Rica		250,000
Cuba	100,000	250,000
Czechoslovakia	1,669,456	1,600,897
Denmark	306,158	309,885
Dutch East Indies	60,000	21,021
Egypt	12,000	60,000
Estonia	30,000	14,331
Finland	47,312	75,846
France	1,068,046	1,218,250
Germany	6,900,000	8,217,923
Great Britain	5,511,000	4,908,000
Greece	50,680	98,470
Guatemala		3,000
Holland	517,914	407,665
Honduras		6,000
Hungary	267,885	185,737
Iceland	4,000	4,540
India	195,800	300,000
Ireland	148,501	111,921
Italy	2,214,520	2,768,730
Japan	230,000	316,906

Paraguay		8,000
Peru	25,000	25,000
Philippines		67,000
Poland	539,089	577,581
Porto Rico		18,000
Portugal	36,000	40,000
Rumania	46,861	46,611
Russia	6,604,654	10,238,000
Salvador		10,000
South Africa	27,670	82,660
South West Africa		600
Spain	451,578	262,000
Sweden	451,650	529,974
Switzerland	261,713	254,822
Uruguay		28,484
United States	3,606,738	4,241,542
Yugoslavia	64,000	57,717
Total	36,062,711	46,106,060

**NATIONAL WOMEN'S TRADE UNION LEAGUE**  
The eleventh convention of this organization was held in Washington, D C, May 6-11. For the most part, the discussions concerned themselves with the conditions of labor in the new industrial centers of the South

The recommendations and resolutions adopted by the League included the following (1) That

support be given to a national policy for the elimination from industry of children up to 16 years of age, for agitation for a shorter work-day, for the five-day week, and for indorsement of the theory of higher wages as a preventive of unemployment (2) For the investigation of the Tennessee textile industry by the United States Senate (3) For cooperation with other organizations engaged in workers' education (4) A demand for the use of union labor on shoes in order to . . . the manufacture of American-made shoes M - 1; Schneiderman of New York was reelected president, and Miss Elizabeth Christman of Chicago, secretary-treasurer; Miss Raymond Robbins was unanimously elected honorary president

**MOND CONFERENCES.** The 1928 YEAR BOOK referred to the efforts, largely as a result of the activities of Lord Melchett (Sir Alfred Mond), to set up machinery for the purpose of bringing together in amicable relations the capital and labor of Great Britain In 1928 a continuing body for conference and discussion had been formed by a group of employers in conjunction with representatives of the Trades Union Congress This group invited the two important employers' . . . the country to sit with them, b . . .

In April, 1929, however, a further conference was held, made up of representatives of the Trades Union Congress and of these two employer organizations The conference ended in the adoption of a resolution to appoint a committee to examine the best methods "for consultation and cooperation between the three organizations"

**BRITISH TRADES UNION CONGRESS.** The British Trades Union Congress met at Belfast, Ireland, September 2, with 600 delegates assembled to listen to the opening presidential address of Ben Tillett The affiliated membership of the Congress continued to show a decline, the total reported being 3,600,000 members, as compared with the more than 4,000,000 reported at Edinburgh in 1927 It was expected, however, that the readmission of the Seamen's Union would increase the strength of the Trades Union Congress by about 60,000

**CANADIAN TRADES AND LABOR CONGRESS** The forty-fourth annual meeting of this body was held at St John, New Brunswick, August 26-30, more than 500 delegates being in attendance The paid-up membership represented, at the close of the fiscal year 1929, a total of 126,638, an increase of 7395 over the preceding year The Congress adopted, among others, the following resolutions: The enactment of legislation for the further protection of workers, particularly against spray painting, and the protection of workers employed in the erection and the operation of hoisting machinery, the institution on all railways of a regular weekly pay-day, and the approving of the six-hour day and the five-day week for all miners of Canada, the further development of Federal and provincial employment services, the passage by the Federal government of sickness and unemployment insurance measures Tom Moore was reelected president of the Congress, and Regma, Saskatchewan, was chosen as the city of the convention for 1930

**SOUTH AFRICA** In the Union of South Africa in 1928, there were 87 registered trade-union associations with a total membership of 64,844, as compared with 47 nonregistered associations,

with a total membership of 49,672. In 1927 the figures for the registered trade unions were 83 with a membership of 58,356, and for the non-registered, 26, with a membership of 155,204.

**QUEENSLAND, AUSTRALIA.** In the light of the success of the Labor party in Australia, it is interesting to observe the programme of Australian trade-unions' groups. The following is a list of the immediate demands adopted at its fifth annual session by the Queensland Trade Union Council in October, 1928: (1) the immediate abolition of the 44-hour week; (2) the establishment of a basic wage equal to £5 10s. weekly, plus an amount equivalent to the average yearly increase in the productivity of the workers since the creation of this standard; (3) the abolition of all piece work; (4) the engagement of all labor through unions; (5) the repeal of the State and Federal Arbitration Acts; (6) the immediate socialization of all banking and insurance; (7) the socialization of medical services.

**JAPAN.** At the close of 1928, the total number of workers engaged in industrial activity in this country was 4,824,780. Of these, one-third were female. In 1928, 308,000 workers were members of 501 trade unions, an increase of 60 per cent over 1923. Thus, only 6 per cent of the workers of the country had trade-union affiliations. It is important to note that, of the 308,900 trade-unionsists, only 4 per cent were women.

**TRANS-JORDAN.** An Arab territory in Asia Minor, under British protection as a part of the Palestine Mandate, although governed by a local Arab administration under Amir Abdullah Ibn Hussein, elder brother of King Feisal of Iraq. It is bounded on the north by Syria, on the west by Palestine, on the south by the Gulf of Akaba and the Hejaz, and on the southeast and east by Iraq. The area is uncertain, the partly nomadic population is estimated at 260,000, of whom 220,000 are Arab Moslems, 30,000 Arab Christians, and 10,000 Caucasian elements. Capital, Amman.

Occupying a barren and partly desert area, the country has a limited future, although the region to the west of the Hejaz Railway line is potentially of high agricultural value. Police and military forces are under British officers and the Royal Air Force maintains headquarters for both Trans-Jordan and Palestine at Amman. A surfaced road connects Amman with Jerusalem and unsurfaced highways link the capital with the chief towns of the country. The British High Commissioner for Palestine is also (since 1928) High Commissioner for Trans-Jordan under a separate commission. A British Resident is the High Commissioner's agent in Amman. Resident in 1929, Lieut.-Col. C. H. F. Cox.

**HISTORY.** The legislative assembly instituted in accordance with the terms of the treaty signed between Great Britain and Trans-Jordan, Jan. 20, 1928, was officially opened Nov. 2, 1929, by Amir Abdullah. The Amir in his address voiced the hope of the country for complete independence. Protests against the limitations upon the

national sovereignty imposed by the treaty continued during the year. The nationalistic movement in Trans-Jordan was stimulated during the year by the Jewish-Arab riots in Palestine and agitation increased for the formation of a federated Arab state, with Trans-Jordan as a constituent unit.

**TRICHINOSIS.** McDonald and Waddell report one of the largest epidemics of this infection which has ever occurred in the United States (*Jl. Am. Med. Assn.*, February 9). The cases developed in and near Albany with 43 known victims, 13 of them studied by the authors in the Albany Hospital and Albany Medical School.

**TRIESTE.** Tri-est. A former crownland of Austria, occupied by Italy after the World War, and retained by Italy under the peace settlement, including the port of Trieste and surrounding regions. Area, 47 square miles; population, at the census of Dec. 1, 1921, 283,655, estimated June 30, 1928, 252,517.

**TRINIDAD.** A West Indian island north of the mouth of the Orinoco River, constituting, with Tobago, a British colony. Area of Trinidad, 1802 square miles, of Tobago, 114, total population, according to the census of 1921, 365,913, estimated in 1928, 391,705, of whom 342,523 were on the island of Trinidad. Capital, Port of Spain, with a population in 1926 of 65,916. The white population is chiefly made up of French, British, Spanish, and Portuguese. Trinidad ranks second as an oil producer in the British Empire, the output in 1928 reaching 7,750,000 barrels of crude oil. Petroleum exports in 1928 totaled 6,363,000 barrels, as against 4,438,000 in 1927. Asphalt exports, 152,000 tons. In 1927 total imports were valued at £5,082,871, exports, £6,018,861, revenue, £1,086,053, expenditure, £1,497,024, public debt, £3,281,854. The colony of Trinidad is under a governor who is aided by an executive council and a legislative council. Governor in 1929, Sir Horace Archer Byatt, who was succeeded in December, 1929, by Sir Alfred Claud Hollis.

**TRINITY COLLEGE.** An institution for the higher education of men in Hartford, Conn., founded by members of the Protestant Episcopal Church in 1823 as Washington College and changed to Trinity College in 1845. For the autumn term of 1929, the enrollment was 302. There were approximately 100,000 volumes and 40,000 pamphlets in the library. President, Remsen B. Ogilby, Litt. D., LL. D.

**TRINITY COLLEGE, OF DUKE UNIVERSITY.** See **DUKE UNIVERSITY.**

**TRIPARTITE CLAIMS COMMISSION.** See **ARBITRATION, INTERNATIONAL.**

**TRIPOLITANIA.** An Italian territory on the north coast of Africa, until 1919 a part of Italian Libya. In that year, for administrative purposes, Libya was divided into Tripolitania and

Cyrenaica. Area, estimated at 900,000 square miles; population, according to the census of 1921, about 550,000 natives, and 20,716 Europeans, of whom 18,093 were Italians. Colonization by Italians was proceeding rapidly in 1929. In 1927 production totaled 40,250 kilos, valued at 3,513,200 lire. Imports in 1927 were valued at 246,056,377 lire, exports, 24,259,201 lire, estimated colonial revenues for 1928-29, 73,300,000 lire, state contribution, 150,419,250 lire, civil expenditure, 56,163,000 lire, military expenditure, 167,556,250 lire. The chief means of transportation is along caravan routes to the interior. There are also about 138 miles of railway. Tripoli, with a population of approximately 60,000, is the capital. Governor in 1929, Marshal Pietro Badoglio, appointed December, 1928. See CYRENAICA.

**TRUE**, ALFRED CHARLES. An American agriculturist, died Apr. 23, 1929, in Washington, D. C. He was born June 5, 1863, at Middletown, Conn., and was graduated from Wesleyan University in 1873, studying at Harvard University in 1882-84. From 1875 to 1882, he was instructor at the State Normal School in Westfield, Mass., and during 1884-88, at Wesleyan University. He entered the U. S. Department of Agriculture as editor in the Office of Experiment Stations, becoming assistant director in 1891, and director in 1893. In this office, he conducted agricultural investigations in Alaska, Hawaii, Porto Rico, and Guam, and made surveys of agricultural education, food and nutrition, irrigation and drainage throughout the United States. He was dean of the first graduate school of agriculture in the United States held at Ohio State University in 1902, and later of several similar schools in other States. From 1915 to 1923, he was director of the States Relations Service in the Department of Agriculture and after 1923, counselor to the Secretary of Agriculture on States relations. In 1923 he began the preparation of a series of publications on the history of education and research in agriculture. He contributed to the *NEW INTERNATIONAL ENCYCLOPEDIA* and, with Dr. Edwin West Allen (qv), organized and directed the agricultural department of the *NEW INTERNATIONAL YEAR BOOK* from its foundation in 1899.

**TRUST COMPANIES**. See BANKS and BANKING.

**TUBERCULOSIS**. On July 3, the distinguished Berlin surgeon, Prof. F. Sauerbruch, read a paper before the Berlin Medical Society on the treatment of certain forms of tuberculosis by the so-called Geison-Hiermannsdorfer salt-free or salt-poor diet as carried out at the Geison Sanatorium. He stated in his address that remarkable results had been secured in certain local forms of tuberculosis, notably lesions of the bones and joints and the skin disease known as "lupus." Results here were quite uniformly favorable and limited to the diet. In the case of pulmonary consumption, no such sweeping optimistic statements were made, although Sauerbruch did affirm that certain sufferers from this affection had derived much benefit from the diet.

**CHANGING VIEWS ON THE STAGES OF PULMONARY CONSUMPTION**. For many years, consumption was divided into three stages of which the

first was an infiltration of one of the apices of the lung. Dr. O. Wild of St. Gallen, Switzerland, calls attention to the radical departure in our outlook on the disease, through which this lesion is regarded as a late stage, even though the patient may have no symptoms and appear in perfect health. The actual first stage is a very small focus in the apex without tendency to diffuse itself save through the lymphatic glands, successive claims of the latter undergoing engorgement. In certain cases, the bacilli enter the circulation through the small veins and then the second stage appears. The toxin of the bacillus may bring about an immunity through the formation of anti-substances, but at the same time some of the tissues may develop an allergy or special sensitiveness and be rapidly attacked by the bacilli. These two antagonistic processes may even exist side by side although mostly one predominates.

**THE ACTUAL VIRUS OF TUBERCULOSIS**. Apparently, it is not the bacilli of Koch nor its excretions which are responsible for the formation of the tubercles which are at the bottom of tuberculous diseases, but some of the chemical substances which can be recovered in bulk from large aggregations of the bacilli. Dr. Florence Sabin of the Rockefeller Institute has recently isolated a germ-free fat similar in composition to ordinary food fats which is able unaided to cause the formation of tubercles. Dr. R. J. Anderson of Yale has isolated from the bacilli a sugar which is harmless to the sound individual but poisonous to the sufferer in the grip of tuberculosis. Injected into a tuberculous animal, it causes death in a few hours. As a result of these finds, Yale professors have sought to obtain these fats and sugars in large quantities and several manufacturing drug houses have made use of large amounts of cultured bacilli for the purpose. Thus far, it has been shown that different species of bacilli manufacture specific forms of sugar, this applying to human, bovine, and fowl tuberculosis. The research has been extended to other microorganisms, such as the pneumococcus, and of the several forms each gives rise to its own specific sugar. So significant is this discovery that it threatens seriously to revolutionize much of our knowledge of biology and disease.

**TUBERCULOSIS, ANIMAL**. See VETERINARY MEDICINE.

**TUFFIER**, THÉODORE. A French surgeon, died Oct. 27, 1929. He was born Mar. 26, 1857, at Bellême, in Orne, and was educated in medicine at the University of Paris. He was surgeon in l'Hôpital de la Cité du Midi, Paris. Dr. Tuffier held membership in the honorary medical societies of many countries.

**TUFTS COLLEGE**. A nonsectarian institution for the higher education of men and women in Medford, Mass., founded in 1852. The registration for the autumn term of 1929 was 1892. There were 390 members on the faculty. The productive funds of the college amounted to \$8,177,011, and the income for the year was \$893,700. The library contained 95,000 volumes. President, John Albert Cousens, LL.D.

**TUKE**, HENRY SCOTT. An English artist, died Mar. 13, 1929, in Falmouth. He was born in York, June 12, 1858, and was educated at a private school, Weston-super-Mare. Following this, he studied at the Slade School, spent one year in Italy, and two years in Paris at the studio of J. P. Laurens. He first exhibited his work at

the Royal Academy in 1879. For the most part, he painted pictures of sea life, portraits, and figures in the nude. In 1900 he was elected an associate in the Royal Academy and in 1914 was given full membership. He became a member of the Royal Society of Painters in Water Colors in 1904.

**TULANE UNIVERSITY OF LOUISIANA.** THE An institution of higher education in New Orleans, founded in 1834. Although the professional schools are coeducational, there is a separate undergraduate department for women. The total enrollment for the autumn of 1929 was 3109. The faculty numbered 416. The productive funds of the university for the fiscal year ending Aug. 31, 1929, amounted to \$10,214,025, the income for the year to \$1,253,014, and gifts and bequests to \$1,370,713. The library contained 134,280 volumes. The construction of the new medical clinic, estimated to cost \$1,250,000, was begun July 11, 1929. President, Albert Bledsoe Dinwiddie, Ph.D., LL.D.

**TULAREMIA.** This malady is sometimes spoken of as a purely American disease first isolated and formulated by native physicians, but the statement is erroneous for its existence was recognized in Japan quite independently. Recently, according to an editorial in the *Journal of the American Medical Association* for August 31, 1929, evidence begins to point to the possibility that the disease is of world-wide incidence.

**TULAREMIA IN MINNESOTA.** Hanson and Green report nine cases of this malady from Minnesota, several others having been previously published. The disease goes back only to 1924, as far as the State is concerned and the case first reported ended fatally. The focus of infection is the area south of Itasca State Park. The diagnosis in two cases was in doubt, the agglutination test being negative. Two of the patients were infected as a result of dressing rabbits while the others were thought to have received the disease from insect bites as no other form of transmission seemed possible. This includes the two doubtful cases, in which, by the way, wood-tick bite could be proved. It is evident that more than one disease may be comprised under the term "wood-tick fever." In two cases, it seemed reasonable to accuse the deer fly. See **VETERINARY MEDICINE**.

**TUNGSTEN.** Curtailment of production by Chinese mines to maintain and, if possible, increase tungsten prices, successfully accomplished its aim in 1929. Price of tungsten concentrate in China was advanced from \$3 per unit to \$8 per unit during the year. The tungsten unit consists of the percentage of metal contained in the concentrate. Thus concentrate containing 60 per cent tungsten would sell for \$480 a short ton with the price at \$8. In the New York market, prices are about \$8 higher per unit because of the tariff of 50 cents a pound on metal contained in imported concentrate. At the end of the year, Chinese mines were exporting only 250 tons of concentrate a month, although in 1928 production was 6600 tons. Totals for world production in 1929 were not available, but it was probably slightly lower than in 1928, when about 13,000 tons of concentrate was produced. Mines in the United States, Burma, and South America took advantage of the higher prices to increase their output. See **METALLURGY**.

**TUNIS.** A French protectorate in North Africa, known as the Regency of Tunis, situated on the Mediterranean coast east of Algeria,

bounded on the south by the Sahara and Libyan deserts. The area is estimated at 48,300 square miles; population at the census of 1926, 2,159,708. The total European population was 173,281, composed of 71,020 civilian French, 89,210 Italians, 8396 Maltese, 517 Spaniards, 646 Greeks, and 3488 other foreigners. The total native population was 1,986,427, of whom 1,932,184 were Arabs and Bedouins, and 54,243 Jews. The capital is the City of Tunis, with a population in 1926 of 185,996, other towns are Sfax, 27,723, and Bizerta, 20,593.

Agriculture, the primary industry, is carried on mostly on large estates. Oranges and other citrus fruits are grown in the northeastern part of the country, olive trees in the Sahel region, dates in the southern oases, and cereals in the fertile valleys of the north, while the central table lands are devoted mainly to stock raising. Of the total area in 1928, 7,282,500 acres were under cultivation, and there were 2,550,000 acres of cork and pine forests, 68,490 acres of vineyards (production in 1928, 20,145,136 gallons of wine), and 11,435,000 acres of pasture land.

Avoiding to provisional figures, the total foreign trade in 1928 amounted to 3,294,300,000 francs, as against 2,798,300,000 francs in the previous year, imports totaling 1,937,328,000 francs and exports 1,356,987,000. Despite a decline in the average prices of wheat and wine, the value of exports increased 30 per cent and of imports 10.5 per cent over 1927. Imports in 1927 were valued at 1,771,629,439 francs and exports at 1,026,673,482 francs. France and Algeria supplied 71 per cent of the imports in 1928. Algeria, Italy, the United Kingdom, Malta, the Netherlands, and the United States were other leading customers and sources of imports. Revenue for 1928 totaled 439,542,956 francs, and expenditure 439,430,489 francs. Up to 1927 the French administration had constructed 1258 miles of railroads and 3290 miles of good highways in the country. A total of 9435 vessels entered the ports of the Regency in 1927.

The government is under the direct supervision of a French Minister Resident-General, acting on behalf of the French Foreign Office, and a Ministry of 11 department heads, eight of whom are French and three Tunisian. The Resident-General is also Minister of Foreign Affairs. The nominal ruler in 1929 was *Si* Ahmad Bey, who succeeded to the throne Feb. 11, 1929. French Resident-General, M. Manceron, appointed Jan. 2, 1929.

**TUNNELS.** With the opening of the longest (almost 8 miles) American work, the Cascade Tunnel on the Great Northern Railroad, on January 12, a new record was established in tunneling which will probably hold for a number of years. See 1928 YEAR BOOK. During 1929 attention has centered on subaqueous works for vehicular traffic rather than land tunnels, which offers another instance of the effect of the motor car on engineering construction.

**NEW YORK.** Mayor Walker proposed vehicular tunnels under 38th Street from Tenth Avenue across mid-town Manhattan to Long Island City with a branch exit to Brooklyn. At the same time the New York and New Jersey Tunnel Commission proposed a second Hudson River vehicular tube—their first work, the Holland Tunnel, having shown remarkable traffic growth and returns. A Narrows tunnel also was proposed as the joint effort of the engineers of the Department of Plant and Structures and the Board of Transport-

tation of New York City. The plans submitted advise twin vehicular tubes from the foot of 97th Street, Brooklyn, to a point on Staten Island just north of Fort Wadsworth. The proposed tubes would be 31 feet in diameter under the Narrows, a distance of 4700 feet, and would be built either by shield or in a trench. The approaches would be shield-driven. Provisions for ventilation, etc., were similar to those of the Holland Tube.

**TAMPA, FLORIDA** A vehicular tunnel to cost \$6,500,000 was proposed for Tampa. The underwater section, under Tampa Bay, was to be 4155 feet long, and with approaches the total length of the work would reach 7 miles.

**CHANNEL TUNNEL** The British government again expressed an interest in this long-proposed undertaking and during the year appointed a commission "to conduct an impartial inquiry into its economic aspects." French assent to the proposal seemed assured.

**LARGEST UNDERWATER TUNNEL** Work was begun in 1925 on a preliminary or exploratory tunnel driven under the River Mersey between Liverpool and Birkenhead on what was to be the largest underwater tube in the world. The tunnel was to have a total length of 2.16 miles with 5204 feet, just short of a mile, between the shafts from which the underwater section was to be built. The entire tunnel is in sandstone but will be lined throughout with the usual cast-iron rings sealed with cement grout both inside and out. When it is remembered that the railroad tunnel built under the Mersey in 1879-86 was one of the notable engineering achievements of its day and a comparison of its brick-lined section, of 26 feet interior width, is made with the huge circular cross-section of 46½ feet inside diameter of the new work, there is evident a clear demonstration of engineering advance in recent years. The new tunnel to be completed in 1932, has a roadway 3½ feet wide resting on a concrete construction at about the center of the section. Below, space is provided for two large air ducts for ventilation and a space for street cars. The cost of the work estimated at \$25,000,000 was being met by a grant of \$12,000,000 by the British government, by funds provided by the city and by loans secured by toll charges to run for 25 years.

**DETROIT-CANADA VEHICULAR TUNNEL** This work, described in the 1924 YEAR BOOK, was generally hailed as the third great tunnel of its type to be built in America—the two predecessors being the Holland Tunnel in New York and the Oakland Estuary Tube in California. As construction progressed on the new tunnel, various changes and differences developed which marked perhaps new trends in tunnel technique. The river portions of the tube were being built by sinking structural steel tunnel sections in a dredged trench and then lining and encasing these forms with concrete. These subaqueous sections are made in number, the first being 220 feet long and the remainder each 248 feet. The steel shell of ¼-inch plates is 31 feet in diameter and is lined inside with 18 inches of reinforced concrete. After being placed, they were encased with tremie concrete. At 12-foot intervals along the shell octagonal-shaped diaphragms were placed outside and at right angles to the tunnel tube. These diaphragms supported the outside timber forms for the tremie concrete and the outside section of the tube is therefore octagonal.

**WATERVILLE HYDROELECTRIC DEVELOPMENT.** No better illustration could be found of the importance of tunnel operations in modern hydroelectric practice than this 6½-mile bore on the Pigeon River development near Waterville, N. C. The main tunnel is 14 feet in diameter and is unusual in that the grade is not uniform, indeed a vertical shaft 552 feet deep connects the two levels of the tunnel.

**EAST RIVER SUBWAY, NEW YORK.** The rapid progress made in the construction of the twin 18-foot diameter tubes of the Fulton Street crossing, under the East River, again showed how well perfected the shield and air method had become. In one of these tubes a new average record of 17½ feet of progress per day through sand and clay was attained.

**TURBINES, STEAM** See STEAM TURBINES.

**TURBINES, WATER** See WATER POWER.

**TURKEY** A republic since Oct. 29, 1923, formerly the Ottoman Empire, occupying a portion of the Balkan peninsula—Turkey in Europe—and a large part of Asia Minor with contiguous territory—Turkey in Asia Capital, Ankara (formerly Angora).

**AREA AND POPULATION** The area of the present Republic of Turkey is estimated at approximately 494,538 square miles. The first general census in history, taken in October, 1927, showed 13,660,275 inhabitants, of which 6,584,474 were males and 7,075,801 females. The population of the principal cities in 1927, including suburbs, was: Istanbul (Constantinople), 699,869; Izmir (Symrna), 190,291; Balikesir (Karas), 134,617; Bursa (Bursa), 127,130; Ordu, 113,004; Adana, 108,957; Ankara (Angora), 107,641.

**EDUCATION** In 1926-27 there were 417,500 children in the primary schools and 12,700 in the secondary schools. In 1925-26 the attendance at higher schools and universities was 3524.

**PRODUCTION** Primarily an agricultural country, the economic condition of Turkey is determined almost entirely by the amount and quality of the agricultural products available for export. A succession of poor crops resulted in a continuation of economic depression from 1927 through 1929, and in December of the latter year led to a serious financial crisis. The estimated production of the leading crops in 1928, with the comparative figures for 1927 in parentheses, was as follows: Wheat, 611,000 metric tons (1,333,000); tobacco, 79,365,000 pounds (148,384,000); raisins, 99,207,000 pounds (105,821,000); figs, 63,933,000 pounds (62,831,000); wool, 11,365,000 pounds (11,300,000); mohair, 4500 metric tons (3700); cotton, 85,000 bales (105,000); valonia 45,000 metric tons (42,000); barley, 900,000 metric tons (629,280); corn, 417,090 metric tons (129,560); millet, 51,290 metric tons (78,120); rice, 20,640 metric tons (10,080); potatoes, 19,580 metric tons (20,740).

Turkey's important mineral resources remain largely undeveloped, chiefly due to the lack of transportation facilities. Mineral production in 1926 (the latest figures available) was as follows: Coal, 1,222,387 metric tons; emery, 6000 tons; chrome, 6445 tons; borax, 18,360 tons; argil (clay), 57,650 tons; mercurium, 323 cases; mercury, 161 flasks; lead, 17,670 tons; copper, 7530 tons. The relatively unimportant manufacturing industries include textile mills, sugar factories, fig and raisin-packing establishments, cotton ginneries, and carpet factories. In 1927 there were in all 65,245 manufacturing plants,

employing 256,855 workers. Exports of carpets, nearly half of which went to the United States, were valued at \$2,271,140 in 1928 and \$2,276,910 in 1927 (including reexports of Persian and other carpets). A protective tariff, levying high duties on goods which Turkey can produce, became effective, Oct. 1, 1929.

**COMMERCE.** Official Turkish statistics have shown a continuous adverse balance of foreign trade for more than 20 years. In 1927 imports were reported to total \$108,490,000 and exports \$81,302,000, while for the first six months of 1928 (the latest figures available) imports totaled \$57,568,000 and exports \$44,327,000, as compared with imports of \$56,147,000 and exports of \$39,054,000 during the same period in 1927. In 1929, however, the Turkish customs statistics were declared unreliable by M. Jacquart, a Belgian employed by the Turkish government to supervise the census.

In 1926 Italy furnished 15.8 per cent of the general imports, followed by the United Kingdom with 14.1 per cent, Germany with 13.8 per cent, France with 13.6 per cent, and the United States with 8.5 per cent. In the same year Italy purchased 27.8 per cent of the exports; the United States, 13.3 per cent, Germany, 12.6, France, 12.3, and the United Kingdom, 11.4.

**FINANCE.** Although general economic conditions have failed to improve, budget estimates have continued to show a steady expansion. The budget for the fiscal year ending May 31, 1930, anticipated receipts of 220,298,000 Turkish pounds (\$107,351,000 converted at the January, 1929, exchange rate of \$0.4873) and expenditures of 220,297,000 (\$107,351,000). For 1928-29, receipts and expenditures were estimated at 207,173,000 and 207,169,000 Turkish pounds respectively. The budget for 1930-31 totaled 222,334,330 Turkish pounds, of which 25 per cent was to be used for national defense, 25 per cent for education, public health, and social service, 15 per cent for public works, and 14 per cent for the service of the debt. The new tariff which went into effect Oct. 1, 1929, was expected to produce the increased revenues anticipated in the budgets.

At the close of the World War the public debt of the Ottoman Empire was 121,684,000 Turkish pounds gold (\$548,618,000). Turkey's share in the debt was fixed at 107,528,000 Turkish pounds gold (\$473,123,000) under an agreement reached with the bond holders in June, 1928 and ratified by the National Assembly Dec. 1, 1928.

A crisis in Turkish exchange developed late in 1929 when the exchange value of the paper Turkish pound fell to \$0.44 on December 1, as compared with an average of \$0.5085 for 1928 and of \$0.6133 for 1927. The decline was attributed partly to the heavy imports in anticipation of the new tariff which became effective October 1, and to the failure of a number of the leading export crops, which reduced normal receipts of foreign currencies. The government intervened on December 4 by releasing £10,000 (sterling) on the Istanbul (Constantinople) bourse, prohibiting speculation, and restricting the sale of exchange to those persons who presented documentary evidence of their need for it.

**COMMUNICATIONS.** In May, 1929, the length of railway lines in operation in Turkey was placed at 3240 miles, with an additional 795 miles under construction. In January, 1929, the National Assembly ratified the agreement for the purchase of the Anatolian Railway (see 1928 YEAR BOOK).

A law passed by the National Assembly in 1929 authorized a loan of \$115,200,000 for railway and irrigation construction over a period of 10 years, of which \$67,200,000 was set aside for railway development. The government's public-works programme included the construction of a modern port at Mersina in the Cilician district.

**GOVERNMENT.** As a result of the revision of the constitution in April, 1924, the Turkish state was declared to be a republic, the religion, Islam, the official language, Turkish, and the capital, Angora (changed in 1929 to Ankara). The Assembly was to be elected every four years. While, according to Article 7, the Assembly exercises the executive power through the President elected by itself and through the council of ministers chosen by him, there is a proviso that the Assembly may at any time control the actions of the government. President in 1929, Mustapha Kemal Pasha. The cabinet was constituted as follows: President of the Council, Ismet Pasha; Interior, Shukri Kaya Bey; Finance, Sarajoglu Shukri Bey; Public Works, Rejeb Bey; Foreign Affairs, Dr. Tewfik Rushdi Bey; Justice, Mahmud Essad Bey; Public Instruction, Wasif Bey; Public Health, Dr. Refik Bey; Agriculture and Commerce, Rahim Bey; Defense and Marine, Mustapha Abdul Halik Bey.

#### HISTORY

The "westernization" of Turkey in accordance with the nationalistic views of President Mustapha Kemal proceeded steadily, and for the most part peacefully, in 1929, despite the difficulties imposed by the economic depression and the foreign exchange crisis late in the year (see above under *Finance*). There were some evidences of restiveness at Mustapha Kemal's attempt to destroy the old social structure and to convert Turkey into a strictly secular republic. A number of clergymen, soldiers, and others were tried at Bursa in February on a charge of plotting to overthrow the government and to establish a régime in which the Moslem religion would again be predominant. Four were condemned to death, and seven others received prison sentences ranging from six months to four years. In July, 24 Turks convicted of carrying on Communist propaganda were sentenced to prison for from one and one-half to four and one-half years. Objections raised to the adoption of the Latin, in place of the Arabic, alphabet and to other innovations decreed by the government were treated with scant consideration by government officials, although the sales of newspapers printed in the new alphabet were reported to have declined 50 per cent.

**INTERNAL PROGRESS.** Active opposition to the government's programme, however, was a minor obstacle compared with the indifference and inertia of the masses of the population. Apparently despairing of converting Turkey overnight into a modern state, the Nationalist leaders concentrated their efforts more and more on the education of children along democratic lines, while religious observances, though not forbidden, were actively discouraged. By 1929 Islam had virtually disappeared as the national religion, according to a competent British observer. Nationalism found further expression in the substitution of Turkish names for existing names of numerous cities and localities, such as Istanbul for Constantinople, the exclusion of more foreigners from various professions and businesses,

and the announcement by government authorities that Turkish women were soon to be granted the franchise. The new tariff bill, effective October 1, was intended to help make the country self-sustaining. It increased the duties on all imports by an average of 25 per cent. A modern penal code, based on the German code and including among its provisions the abolition of imprisonment for debt, became effective August 20. The study of Latin, Greek, and English was reported to have been substituted for the study of Arabic and Persian in the schools.

The government's determination to effect the economic rehabilitation of the country was stressed by Mustafa Kemal in his address, broadcast, by radio, at the opening of Parliament on November 1. Labor legislation, mine and forest laws, railway construction, land grants to farmers, and the creation of a national bank were the outstanding items in the government's immediate programme which he recommended for consideration. Direct election of members of the National Assembly, and the changing of the day of rest from Friday, as fixed by the Moslem religion, to Sunday were other proposals. The establishment of a national bank, with a capitalization of 50,000,000 Turkish pounds, was immediately authorized by Parliament. A great fire swept Ankara (Angora) on July 19, destroying 500 homes and leaving 2000 homeless. It was not unwelcome to the government, however, as it greatly facilitated plans for the rebuilding of the most unsightly part of the city.

**FOREIGN RELATIONS.** The signing at Ankara June 22 of a general agreement settling points of difficulty between Turkey and France, the adoption of a naval building programme which seemed destined to result in an armament competition with Greece, and evidences of a trend in Turkish government circles toward friendly relations with Great Britain and away from the Soviet Union, were the outstanding developments in the field of Turkish foreign relations during the year. In the treaty with France, Turkey was reported to have seemed a favorable revision of the proposed Turkish-Syrian frontier line and an agreement that the Mersina-Adana railway was to be transferred promptly to the Turkish government.

In October Turkish authorities greeted with elaborate ceremonies a strong British squadron which paid a visit to Istanbul. The admiral of the fleet accompanied the British Ambassador to Ankara, where a lengthy conversation with Mustafa Kemal took place. The growing coolness toward Russia was attributed to the government's resentment at Communist propaganda in Turkey. Nevertheless, a provisional treaty of commerce was signed with the Soviet government in December. The treaty of neutrality and conciliation, signed between Turkey and Italy in May, 1928, was examined with interest by Greece and other interested powers when it was registered with the League of Nations on October 17. The treaty aroused some apprehension in France and among her Balkan allies. It was held by some to contain provisions in conflict with the Covenant of the League of Nations. Indications were not lacking during the year that Turkey was ready to join the League of Nations, if given assurances of a semi-permanent seat on the Council. The hope that Turkey's membership in the League would serve to weaken Soviet influence in that country apparently caused some of the

League members seriously to consider the proposal.

**TURNER, EDWARD RAYMOND** American historian and educator, died Dec. 31, 1929, in Baltimore, Md., where he was born May 28, 1881, and was graduated from St. John's College in 1904, receiving the Ph.D. degree from The Johns Hopkins University in 1910. He was an associate in history at Bryn Mawr College in 1910-11, professor of European history at the University of Michigan during 1911-24, professor of English history at Yale University in 1924-25, and after 1925 professor of European history at The Johns Hopkins University. He wrote *The Negro in Pennsylvania* (1910), *The New Market Campaign* (1912), *Ireland and England* (1919), *Europe, 1789-1920* (1920), *Europe since 1870* (1921, 1927), *Europe, 1450-1789* (1923); *Europe since 1789* (1924), *The Privy Council of England in the 17th and 18th Centuries* (2 vols., 1927, 1928).

**TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE** A nonsectarian normal and industrial school for the higher education of Negro men and women in Tuskegee, Ala., founded in 1881 by Booker T. Washington. The institute gave regular and systematic instruction during the year to a total of 3414 persons. There were 274 members on the faculty, of whom 150 were men and 124 women. The endowment amounted to \$7,772,106 and the income for the year, to \$552,694. There were 40,000 volumes in the library. President, Robert Russa Moton, LL.D. **TUTUILA** See SAMOA.

**TWINES** See ZOOTOLOGY.

**TYLER, JAMES MAXON** An American biologist and author, died April 12, 1929, in Amherst, Mass., where he was born May 18, 1851. He was graduated from Amherst College in 1873, and during 1876-79 studied at the universities of Göttingen and Leipzig. He became an instructor in biology at Amherst College in 1879 and in 1882 was made Stone professor of biology. After 1917 he was emeritus professor.

**TYPHOID FEVER.** The subject of oral immunization with typhoid vaccine is not really new, for a quarter-century ago Sir Almroth Wright tested it on seven patients, but the preponderance of negative results dissuaded him and others from a further trial. Some years later, Besiedka took up the subject anew, but the World War interrupted his research and it was not until 1922 that he sought to immunize two parallel series of military students who had been exposed to infection using respectively the usual method of injection of vaccine and administration by the mouth. The protection was as good—really somewhat better—with the latter form of immunization. Since that time it has been tested in a few other localities—one for example is the city of Opatowitz in Czechoslovakia—with apparently favorable results. Recently in the United States, the method has been tested by Hoffstadt and Thompson (*American Journal of Hygiene*, January, 1929).

**TYPHUS FEVER.** Dr. Kenneth F. Macey of the U. S. Public Health Service strives to give autonomy to a special form of typhus which may have been derived originally from the classic malady of the Old World, but which differs from the latter in not being house-borne and in having a very low death rate. It is endemic in certain Southern States, namely, Georgia, Alabama, North Carolina, Virginia, and Florida, and is presumably identical with Mexican typhus or

tabardillo There is no mention of the mild form of typhus originally found by Brill in New York City, but inferentially it should be the same affection.

**TYSON, LAWRENCE DAVIS** A United States Senator and former army officer, died Aug. 24, 1929, in Stafford, Pa. He was born in Greenville, N. C., July 4, 1861, and was graduated from the U. S. Military Academy in 1883. He was second lieutenant in the 9th Infantry in 1883-89, and a first lieutenant during 1889-91. From 1891 to 1895, he was professor of military science and tactics at the University of Tennessee. Admitted to the bar in 1895, he resigned from the army the following year and began the practice of law in Knoxville, Tenn. At the time of the Spanish-American War, he was commissioned colonel of the 6th U. S. Volunteer Infantry, serving in Porto Rico. In the World War, he served as brigadier-general of the 59th Brigade of the 30th Division, and was awarded the Distinguished Service Medal. He was elected United States Senator from Tennessee for the term 1925-31.

**UBANGI-SHARI.** See FRENCH EQUATORIAL AFRICA.

**UGANDA, GO-gan'da, PROTECTORATE.** A protectorate of Great Britain in East Africa, lying north of Tanganyika and Lake Victoria and south of the Anglo-Egyptian Sudan. For administrative purposes it is divided into four provinces, namely, Eastern Province, Northern Province, Western Province, and Buganda Area, 94,204 square miles, population, estimated in December, 1927, at 3,157,008, 1,111,270 natives, 11,464 Asiatics, and 771,170.

The chief product is cotton, which is grown almost entirely by the natives. Imports for consumption into the customs union of Kenya and Uganda, exclusive of government stores and construction materials, totaled 18,748,000 in 1928, while exports of domestic products amounted to 16,662,000, of which raw cotton from Uganda, estimated at 140,000 bales was valued at £2,486,000. Revenues of Uganda, in 1927 totaled £1,292,306 and expenditure £1,430,976. The public debt in the same year was £1,107,595. The protectorate is directly under the British government, represented by a governor and commander-in-chief, but the native rulers are supported in the management of their own subjects. Governor and commander-in-chief in 1929, Sir W. F. Gowers. See KENYA.

**UKRAINE.** A region in southwestern Russia known officially as the Ukrainian Socialist Soviet Republic, and "declared July 6, 1923) a constituent part of the Socialist Soviet Republics, including the autonomous Moldavian Socialist Soviet Republic (formed in September, 1924). Area, 174,367 square miles, population, in 1926, 20,020,304. Capital, Kiev, with a population, in 1926, of 513,789. Ukrainian industries are among the most important in the Soviet Union, the republic producing 75 per cent of the total Russian coal output, 70 per cent of the pig iron, 85 per cent of the sugar, 50 per cent of the steel, and 95 per cent of the manganese ores. The budget in 1926-27 was 274,000,000 rubles (par value of ruble is \$0.515). There were 10,130 miles of railways in Ukraine at the end of 1925 and about 2500 miles were reported under construction. At the head of the administration is a council of people's commissars. See RUSSIA.

**UMANGITE.** See CHEMISTRY, under *Mineralogical Chemistry*.

**UNDERWOOD, OSCAR W. (JUNIOR)** An American statesman, died in Woodlawn, Va., Jan. 25, 1929. Born in Louisville, Ky., May 6, 1862, he studied law at the University of Virginia. Admitted to the bar in 1884, he practiced at Birmingham, Ala., also having been interested in the mining industries of that district. He was made chairman of the Democratic executive committee of the ninth Alabama district in 1892, and he was also chairman of the committee which adopted the Alabama Constitution. Elected to the Federal House of Representatives in 1894, he served continuously until 1915.

Although the Representative of a manufacturing district, he stood consistently for a revenue tariff, and as chairman of the Ways and Means Committee, 1911, became Democratic leader of the House. Mr. Underwood led the fight for Canadian reciprocity and he framed a series of tariff measures revising separately various schedules of the Payne-Aldrich Law. His skill in leadership brought him wide notice, so that as a candidate for the presidential nomination at the Baltimore Convention in 1912, he ranked third, receiving at one time 130 votes.

In 1913 Mr. Underwood was largely responsible for the important Underwood-Simmons Tariff Act. He was elected United States Senator in 1914, having defeated Richmond P. Hobson in the primary election by more than 20,000 votes. Becoming Democratic leader of the Senate in April, 1920, he took an active part in important legislation, including the Federal Reserve Act and the war-time appropriation bills, and he tried to gain ratification for the Versailles Treaty. He served as an American delegate to the Conference for the Limitation of Arms at Washington, 1921-22. Mr. Underwood was again an unsuccessful candidate for the presidential nomination in 1920 and 1924. After his retirement in March, 1927, he was appointed by President Coolidge to the International Commission between France and the United States, Sept. 12, 1927, and to the Pan-American Conference at Havana in 1928.

**UNDERWRITING.** See INSURANCE.

**UNDULANT FEVER.** See MALTA FEVER, VETERINARY MEDICINE.

**UNEMPLOYMENT.** It will be recalled (see 1928 YEAR BOOK) that the question of unemployment had agitated the United States, as well as Europe, for some time and that considerable public and official attention was paid to the matter. On May 3, 1928, the United States Senate authorized the Senate Committee on Education and Labor to make an "inventory of the causes of unemployment and the various methods of relief. On February 25, 1929, Senator Coughlin, for the committee, submitted a report. The following were the general findings of the committee:

(1) It was imperative that private industry recognize its responsibility in order to aid the stabilization of employment. It was the duty of the Government to aid such endeavors in every way through the sponsoring of national conferences, through the publication of information and through publicity efforts among employers. (2) Insurance plans against unemployment should be confined to the industry itself. In other words, the committee saw no necessity and no place for Federal interference. Public insurance schemes, when and it considered, belonged in the province of State legislation. (3) It was the duty of the States and municipalities to build up efficient unemployment exchanges. As for the Federal Gov-

onment, its proper place was the coordination of the work of the States in order to make possible the exchange of information and the rapid movement of unemployed persons from one section of the country to another. (4) The existing U. S. Employment Service should be reorganized and every employee should be placed under the Civil Service. (5) Efforts should be made to provide an efficient system of obtaining statistics of unemployment. The committee recommended that the Bureau of the Census in 1930 take steps to ascertain the number of unemployed persons as of a certain date. (6) The Government should adopt legislation for the purpose of providing a system of planning public works in order to furnish a reserve against unemployment in times of depression. Similar programmes were recommended to the attention of States and municipalities.

**PROSPERITY RESERVE.** On Apr. 23, 1929, Senator Jones re-introduced his bill for the purpose of creating a prosperity reserve by the expansion of public works during periods of unemployment. This bill provides that, in addition to the amounts usually appropriated, the Government set aside: (1) The sum of \$75,000,000 to be used in the aiding of the States in the construction of rural post roads, (2) the sum of \$50,000,000 for the maintenance of existing river and harbor works, and such other projects desirable in the interests of commerce and navigation, (3) a sum of \$10,400,000 for work on flood control, (4) the sum of \$15,000,000 for public building. Such a reserve fund had been in operation in Great Britain since December, 1920. From 1925 to 1928, the size of government aid was curtailed with the result that the schemes underwritten fell sharply. From June, 1925, to June, 1926, 1240 such schemes, involving a cost of £17,500,000, were approved, from June, 1926, to June, 1927, 63 schemes, involving a cost of £792,000, were approved. In the year June, 1927, to June, 1928, 28 schemes, involving a cost of £319,000, were approved. In November, 1928, however, the policy was changed again, with the announcement that the Government was prepared to offer further assistance. The proviso made was that such assistance would be rendered on the condition that at least 50 per cent of the men employed on the jobs were brought from the areas of heavy unemployment. The result of this change in policy was that, between Nov. 9, 1928, and June 10, 1929, 657 new public-works schemes were submitted, of which 320 were approved at an estimated cost of £5,550,000. Employment was to be given for 224,916 man-months.

**EUROPE.** The International Labor Office reported an increase of unemployment in eight of 18 European countries in December, 1928, as compared with December, 1927. In Germany, 16.7 per cent of the trade-unionists were wholly unemployed in 1928, as compared with 12.9 per cent in 1927. In 1928, 1,702,000 persons were in receipt of unemployment benefits as compared with 1,188,000 in 1927. In the United Kingdom, 11.2 per cent of the compulsorily insured persons were unemployed in 1928, as compared with 9.8 per cent in 1927. In 1928 the number of insured persons out of work in the United Kingdom was 1,333,611. In the Scandinavian countries, where the number of trade-unionists unemployed was not so great in December, 1927, the percentages of the unemployed among trade-unionists was still very large. Thus, in Denmark, 25 per cent of the trade-unionists were out of work and over

17 per cent in both Norway and Sweden. In Italy, in December, 1928, 363,000 persons were registered as being wholly unemployed.

In 11 of 18 European countries, unemployment figures were lower in 1929 than for the corresponding period in 1928. In Denmark, Norway, Great Britain, and Northern Ireland, there were sizable reductions, however, increases were to be found in Czechoslovakia, Estonia, Finland, Germany, Hungary, Latvia, and Sweden.

**GREAT BRITAIN.** In the British Parliament, it was expected that the chief centre of attack of the Opposition would be on the Labor government's unemployment policy which, up to the end of 1929, had borne no fruit. Mr. Thomas's first announcement to the House in November showed an impressive list of public works contemplated or already under way. In fact, on the latter, the plans called for the expenditure of \$200,000,000, almost the whole of which was to go out in wages. It was estimated that Mr. Thomas's whole programme indicated the employment of about 150,000 men for a solid year. See **GREAT BRITAIN**, under *History*.

**GERMANY.** That unemployment had been on the increase in Germany over the winter of 1928-29 was indicated by the figures collected by the central office of the State Employment Service and Unemployment Insurance. The following number of persons was in receipt of unemployment relief on the date specified: Dec. 31, 1928, 1,702,342, Jan. 15, 1929, 2,046,209, Jan. 31, 1929, 2,287,872, Feb. 15, 1929, 2,375,823, Feb. 28, 1929, 2,400,760, Mar. 5, 1929, 2,424,667.

See **LATVIA** and **IRISH FREE STATE**, under *Production*; **GERMANY**, under *Industry*.

**UNION COLLEGE.** A nonsectarian college for men in Schenectady, N. Y., founded in 1765. The 1929 enrollment of regular students totaled 819. The faculty numbered 80. The amount of endowment and income for the year was more than \$3,000,000. The library contained 75,000 volumes. President, Frank Parker Dav, LL.D.

**UNION OF SOUTH AFRICA.** See **SOUTH AFRICA**.

**UNITARIAN CHURCH.** Unitarianism, as a type of belief, is ancient. The Unitarian Church in the United States developed as a modification of Congregationalism in New England, which led to the formation of the American Unitarian Association in 1825. This association is the executive organization of the Unitarian churches to-day.

The one hundred and fourth annual meeting of the American Unitarian Association was held at Tremont Temple, Boston, May 21, 1929. On Jan. 1, 1929 the denomination had 415 churches, 375 of which were active. The Unitarian constituency was reported to number 128,181. There were 3223 Sunday-school officers and teachers and 20,720 pupils. Receipts for current church activities, as presented in the treasurer's statement for 1929, amounted to \$400,236. Denominational publications are the *Christian Register* (weekly), the *Beacon* (weekly), and the *Unitarian Word and Work* (monthly). The officers of the association in 1929 were: President, the Rev. Louis C. Cornish, D.D., secretary, Parker E. Mareau, treasurer, Henry H. Fuller. Headquarters are at 25 Beacon Street, Boston.

**UNITAS FRATRUM.** See **MORAVIANS**.

**UNITED BRETHREN IN CHRIST.** A denomination which resulted from the religious awakening of Philip William Otterbein, Martin

Boehm, and their coworkers. Formally organized in Frederick County, Md., in 1800, its theology is Arminian, while its beliefs are those of the earlier evangelical denominations.

The church is divided into 34 annual conferences, including those in China, Japan, the Philippines, Porto Rico, and West Africa. In 1929 there were 1688 charges, 2973 organized churches, 1855 active ministers, 403,708 church members, 2784 Sunday schools with an enrollment of 426,899, including teachers and officers. The amount raised by the church for all purposes in 1929 was \$6,553,880. Conference missionary appropriations amounted to \$106,989 and general home missionary appropriations to \$207,287, a gain of \$21,988 in the latter item. The valuation of church buildings was estimated at \$30,821,637. The church maintains numerous educational institutions.

The General Conference of the Church of the United Brethren in Christ met in its quadrennial session in Lancaster, Pa., May 19, 1929. After due consideration of the plan of union with the United Brethren Church in the United States, the General Synod of North America, and the United Brethren in Christ, the general conference gave approval to the general plan and appointed a committee of 20 to consider other aspects of the union. The Board of Bishops in 1929 included Bishop H. H. Fout of Indianapolis, Ind. (northwest district), Bishop A. R. Clippinger of Dayton, Ohio (central district), Bishop A. B. Statton of Kansas City, Mo. (southwest district), Bishop G. D. Batdorf of Harrisburg, Pa. (east district), and Bishop I. D. Warner of Portland, Ore. (Pacific district).

**UNITED CHURCH OF CANADA.** See CANADA.

**UNITED MINE WORKERS.** See STRIKES AND LOCKOUTS.

**UNITED PRESBYTERIAN CHURCH** See PRESBYTERIAN CHURCH, UNITED.

**UNITED STATES. AREA AND POPULATION**

The area of the United States, exclusive of Alaska, is 3,026,789 square miles. The area of the non-contiguous lands, which include Alaska, Guam, and certain Pacific islands, Hawaii, the Panama Canal Zone, the Philippine Islands, Porto Rico, American Samoa, and the Virgin Islands (American), is 711,582 square miles, making a total area of 3,738,371 square miles. The estimated population of the United States on July 1, 1928, was 120,013,000. The population, according to the census of 1920 was 106,418,175. This does not include the population of the territorial possessions, which is given in separate articles on each.

**AGRICULTURE.** The results of the year 1929 in the cultivation and harvesting of crops, as reviewed by the crop-reporting board of the Department of Agriculture in December, were marked by a moderate gain in the total value of the year's crops, as compared with those of 1928, and likewise by the relatively slight alteration in the quantities and values of most of the chief crops (potatoes excepted), as compared with those of the year previous. The aggregate farm value of the 50 leading crops was estimated at \$8,580,526,000, and consequently as exceeding by about \$85,000,000 the aggregate value for 1928. The proportion of this excess, about 1 per

cent of the total of 1928, was slight, but more than made up the deficiency of the 1928 total over that for 1927. The production of corn in 1929 was below that of 1928 both in quantity and in farm value; that of winter wheat was approximately the same for both years, as to quantity, but a trifle higher as to value for 1929, the production of spring wheat was again small, owing to the renewed setback of unfavorable weather in the course of the growing season, but the value to the farmer, though far below the figures of 1924, 1925, and 1927, was a trifle above that of 1928. Less oats were produced, as to quantity, but the estimated value of the product of 1929 exceeded that of 1928. Cotton was produced in excess of the crop of 1928 and at estimated prices was cheaper to such a point as to total less in farm value. The estimates, the value of the hay considerably surpassed that of the cotton crop and exceeded the value of the hay of 1928 by about \$109,000,000. The most remarkable improvement in farm value was in that of the potatoes grown in 1929, which exceeded by about \$219,000,000 that of the 1928 crop. Better hay and potato crops offset the unfavorable grain and cotton crops.

The total production of farm crops and value based on December 1, or seasonal prices, as reported by the Department of Agriculture, follows (production in bushels except where otherwise stated).

	Crop	Production Value
Corn	2,622,189,000	\$2,018,134,000
Winter wheat	578,336,000	616,128,000
Durum wheat	52,180,000	46,217,000
Other spring wheat	175,762,000	178,576,000
All wheat	806,508,000	840,921,000
Oats	118,654,000	518,446,000
Barley	307,105,000	168,807,000
Rye	40,629,000	35,371,000
Buckwheat	11,505,000	11,341,000
Flaxseed	40,217,000	39,346,000
Grain sorghums	100,845,000	71,617,000
Cotton, bales	14,919,000	1,225,012,000
Cottonseed, tons	6,610,000	201,096,000
Hay, tame, tons	101,715,000	1,214,256,000
Hay, wild, tons	12,924,000	104,707,000
All hay, tons	114,639,000	1,349,053,000
Clover seed	3,157,000	21,922,000
Sweet clover seed	961,800	1,395,000
Alfalfa seed	717,800	7,692,000
Timothy seed	1,407,200	3,110,000
Soy beans	18,146,000	33,979,000
Cowpeas	10,149,000	21,142,000
Velvet beans, tons	838,000	
Peanuts, pounds	1,360,277,000	49,217,000
Beans, dry edible	19,337,000	72,601,000
Potatoes	357,451,000	469,707,000
Sweet potatoes	84,661,000	80,015,000
Tobacco, pounds	1,500,891,000	285,581,000
Sugar beets, tons	7,672,000	57,679,000
Sugar cane (except for syrup), tons	3,040,000	11,523,000
Cane sirup, gals	27,458,000	62,705,000
Sorghum sirup, gals	26,181,000	24,126,000
Broom corn, tons	43,800	5,719,000
Hops, pounds	33,220,000	3,788,000
Apples, tons	139,754,000	181,107,000
Apples, commercial, barrels	28,973,000	168,281,000
Peaches	45,998,000	62,705,000
Pears	20,903,000	29,952,000
Grapes, tons	2,032,417	59,387,000
Oranges, boxes	33,100,000	120,525,000
Grapefruit (Fla.), boxes	6,500,000	19,825,000
Lemons (Calif.), boxes	5,900,000	22,120,000
Cranberries, bbls	541,500	7,088,000
Pecans, pounds	27,658,000	4,120,000

**INDUSTRY AND COMMERCE** Activity in both industry and commerce in the course of nine months of 1929 was considerably above that for the corresponding periods of 1928. In the closing three months of 1929, it fell increasingly below the corresponding months of 1928, both for the chief divisions of business activity severally and for sections of the United States, separately considered. This decline, the sharpest in a number of years, was the most striking feature of business and industrial operation for the year. It was associated with the catastrophic fall of October and November in the prices of speculative stock shares, but whether mainly as a result of the latter or rather as one of its latent causes, estimates disagreed. See **BUSINESS REVIEW**, **FINANCIAL REVIEW**.

A long-established indicator of economic activity, the weekly totals of freight-car loadings published by the American Railway Association, yielded 52,789,789 revenue freight-car loadings for the calendar year 1929, a considerable increase over the 51,589,887 of 1928, as well as over the total for 1927. More than the entire year's increase was made in the first nine months. For the last three months, decreases in loadings from those for 1928 cut down the year's total increase by some 250,000 loadings, almost half the loss being scored in December. Another indicator, the *Electric World's* incomplete total of electric consumption among manufacturing plants, bore out the above indications, it marked a decrease of 8.6 per cent for December, 1929, from December, 1928, while the consumption for the entire year 1929 exceeded that for 1928 by 6.6 per cent. A third indicator, the *Annalist's* computation of index percentages of industrial activity, scored for December, 1929, the figure of 90.1 (preliminary), the lowest point subsequent to August, 1924.

Among the influences aggravating the business let down in the closing months of 1929 distress caused by the collapse of the speculative market in stocks was the most conspicuous. Another influence of earlier application but of generally accepted force was the high level of interest rates that had for some months prevailed, not as the result of speculative collapse, which they preceded, but because of credit sought for the strenuous backing of the upward course of speculative securities previous to their tumble. A third influence frequently cited but less demonstrable was the abnormally high rate of consumption in the earlier part of the year among the population of the country.

It could not be said that anything resembling price inflation in commodities occurred to disturb the course of trade. The general level of wholesale prices for all commodities, whether agricultural or industrial, raw or partly manufactured materials or finished products, averaged, for 1929, according to the Federal Bureau of Labor Statistics, 96.5 per cent of that for the year 1926, it was lower than the level for 1927, which had been 97.7 per cent of the 1926 figure. In December, 1929, after the business let down had gained headway, the average of wholesale prices was 94.2, for November, 1929, it was 94.4. Changes in the general monthly price average were at no time of the year conspicuous.

With regard to the distribution of the changes in business activity, both excess of activity in the earlier part of the year and its fall at the close were especially marked in the automobile in-

dustry. The *Annalist's* index of automobile production by months placed it at 115.5 per cent of the norm as late as October and at but 51.5 (preliminary) for December. No other major branch of manufacturing showed a like fall. The production of steel ingots, the steel industry being closely associated with automobile production, fell from 104.5 per cent for October to 78.4 for December. In so far as the steel and automobile industries were localized in the area between Pittsburgh and the Great Lakes, the regional distribution of business rise and fall during the year showed particularly great fluctuation in this area, but save as certain industries were localized, the fluctuations of production were fairly evenly felt throughout the country. As to automobiles, the Department of Commerce reported that the monthly production, after reaching the remarkable high of 621,910 for April and running as high as 498,628 for August, sank to 119,950 for December, or barely half the output for December, 1928.

Wholesale distribution was exceedingly active in the early part of the year and contrastively below recent totals in the closing months. Dry goods, men's clothing, shoes, and furniture, for the country as a whole, made some of the most conspicuous recessions. In retail trade, the department stores in New York and some other cities and the mail-order merchants continued to do good business up to the end of the year. Mercantile failures in the course of the year were not numerous. Dun's insolvency index placed them at the yearly ratio of 103.5 to every 10,000 firms in business, as compared with 108.4 for 1928 and 119.4 for 1922. Trade depression, however, was admittedly still recent when the year 1929 ended.

The extent of employment in manufactures was greater, according to the Federal Bureau of Labor Statistics, by 3.9 per cent for the entire year 1929 than for 1928, although for the month of December, employment was 3.8 lower for 1929 than for 1928. The heaviest of the numerous reductions in employment in the closing period of 1929 were in the piano, radio apparatus, automobile, tire, millwork, brick and cement industries. The employment situation was favorably affected by the fact that the year was relatively free of major labor troubles, save in the Southern cotton mills. See **UNEMPLOYMENT**, **STRIKES AND LOCKOUTS**.

**FOREIGN TRADE** Both the exports and the imports of the United States attained higher totals for 1929 than for 1928. As the imports of merchandise increased to a greater extent in point of total value than did the exports, the balance of trade in favor of the United States was distinctly lower for 1929. The domestic exports, as reported by the Federal Department of Commerce, totaled \$5,157,409,000 for 1929, and \$5,030,099,000 for 1928. Those for 1929 thus exhibited an increase of \$127,310,000 over those of 1928. The imports of 1929 totaled \$4,400,126,000, those of 1928, \$4,091,444,000. Thus, the imports of 1929 exceeded by \$308,682,000. The balance of domestic exports over imports attained \$757,283,000 for 1929, the corresponding balance for 1928 was \$938,655,000. The total of all exports from the United States in 1929, somewhat higher than that of those of domestic origin alone, was \$5,248,483,000.

Exports by months in 1929 fell behind those of corresponding months in 1928 in May, October,

November, and December. In all other months, an excess occurred. Imports of 1929 exceeded those of 1928, month for month, in every case save for December. Uncertainties as to tariff legislation at Washington extended through a great part of the year and tended to expedite imports in certain cases where there might appear some risk that consignments if made later would be unfavorably affected as to duties.

In the movement of gold in foreign trade, 1929 resembled 1926 and several preceding years, rather than 1928, in which year the United States had exported \$391,863,000 more of gold than it imported, despite the attractiveness of high rates of interest in the New York market, or than in 1927, when gold imports and exports nearly balanced. The amount of the gold exported in 1929 was \$116,583,000, that of the gold imported, \$291,649,000, and the balance of gold importations, \$175,066,000.

**SHIPPING** For statistics and other information in respect to the shipping of the United States during the year, see articles SHIPPING and SHIP-BUILDING.

**RAILWAYS** See separate articles on RAILWAYS and RAILWAY ACCIDENTS.

**MANUFACTURES** All the leading manufacturing industries are discussed under separate articles, such as AUTOMOBILES, BOOTS AND SHOES, IRON AND STEEL, PAPER, RUBBER, SILK, TEXTILE MANUFACTURING, ELECTRICAL INDUSTRIES, etc. For engineering works, see BRIDGES, CANALS, PORTS AND HARBORS, SHIPBUILDING, etc. See also CHEMISTRY, INDUSTRIAL.

**MINERAL PRODUCTION** The article MINERAL PRODUCTION AND RESOURCES gives the latest available official figures for mineral production in the United States. The more important minerals mined in the United States are treated in separate articles. There are also paragraphs on mineral production in the articles on the individual States.

**FINANCE** For a discussion of Federal finances in 1929 see the article PUBLIC FINANCE.

See the articles EDUCATION in THE UNITED STATES and UNIVERSITIES AND COLLEGES. Separate articles on the most important universities and colleges also are given under their respective titles. Sections on education are included in the articles on the several States.

**PENSIONS** As reported by the Commissioner of Pensions for the fiscal year 1928-29, the disbursements for pensions for that year were \$229,889,986. Of this amount, \$57,095,811 was paid to Civil War veterans; \$86,474,400 to Civil War widows; \$65,202,617 to Spanish War veterans; and \$11,383,880 to Spanish War widows. In the year, the payments to veterans of the war with Spain exceeded, for the first time, those made to veterans of the Civil War. To pensioners receiving domiciliary care in Soldiers' Homes, \$5,991,902 was paid, and \$1,338,995 was paid to pensioners residing in foreign countries.

The disbursements on account of Civil War service were \$143,594,089, a decrease of \$5,074,886 from the previous year's total. On account of Spanish War service, \$76,845,704 was paid, an increase of \$6,171,285 over 1928.

Pensioners at the close of the fiscal year numbered 477,915, as against 491,194 on June 30, 1928. Of the pensioners, 59,945 were Civil War veterans; 181,235, Civil War widows; 178,804, Spanish War veterans; 28,643, Spanish War widows; 5574, Indian war veterans; 4000, Indian

war widows; 730, widows of soldiers who served in the war with Mexico. On June 30, 1929, there were yet 11 widows of soldiers who served in the War of 1812 on the roll, and one soldier who served in the war with Mexico. This veteran, Owen Thomas Edgar, died Sept. 3, 1929, at the age of 98.

**PATENTS** The number of applications for patents made to the Commissioner of Patents in the fiscal year ending June 30, 1929, was slightly lower than in the high year, 1928, but was none the less remarkably high. There were received 92,029 applications for patents on inventions or on designs and for issuances of patents. The applications for registration of trade-marks, labels or prints numbered 22,567. The applications for patents on inventions alone numbered 87,039, as against 88,482 for 1928 and 84,511 for 1927. The Patent Office granted, in the fiscal year 1929, 43,617 letters patent for inventions.

Post Office Postmaster General Walter F. Brown in his first annual report represented the reductions in certain of the postal rates that had gone into effect on July 1, 1928, as having occasioned a loss of receipts in the course of the fiscal year ensuing, to the total of \$21,527,896. He reckoned that the decreased rate on post cards had reduced receipts from that source by \$1,497,000, the reduced rates on second-class matter had cost \$6,708,896, the lower charges on bulk mailings of third-class matter had resulted in another cut of \$12,200,000, in receipts, and the lower rates, for long trips on fourth-class mail had been accountable for a loss of \$2,160,000. Allowance was made in these estimates for the considerable increase in volume that had resulted from the reduction of the postal card rate. The lower parcel-post rates for distant zones were reported not to have induced any appreciable growth of business. The pound rate for mailings of third-class matter in bulk had brought about an enormous increase in the habit at large post offices of mailing under permit or with pre-cancelled stamps, but the mailings by other methods had suffered so heavily as to cause the Postmaster General to account more than one-half of the entire loss in one year's operation under reduced rates to this class of reduction alone.

**FINANCE** The yearly postal deficit made an upward bound to \$85,461,176 for the fiscal year 1929, as against \$32,121,096 for the fiscal year 1928. The chief occasions of this rise in the excess of expenditure over revenue, apart from the losses of receipts arising from the reduced postal rates already mentioned, were increased payments to railroads for transporting mails, the Interstate Commerce Commission had ordered these increases at the beginning of the fiscal year. For the year ending June 30, 1929, revenues from all sources attained \$696,947,578, and thus exceeded those of the year previous by \$3,313,656. Expenditures of the fiscal year totaled \$782,343,648, payments to the railroads on some claims for past fiscal years included, and a relatively small loss by fire, burglary, etc., of \$65,106 excluded. The deficit as adjusted to a basis of accrued obligations of the fiscal year yet, instead of discharged obligations, was yet greater, being \$86,309,514.

**POSTAGE** Although revenue as a whole for 1929 exceeded that for 1928, the receipts from the sale of stamps for postage and allied special services fell to \$575,439,022 for 1929, from \$576,-

437,171 for 1928. This change reflected, mainly, the shift away from postage purchases occasioned by the new postal rates. Postage paid in money on matter carrying no stamps totaled \$91,553,907, for the fiscal year 1929. All postage paid totaled \$619,200,697, which was 88.85 per cent of the total revenue. Postage paid came to \$6.05 for each individual of the population.

**Air Mail.** Growth of the air-mail service took the form of increase in poundage carried and miles flown, as well as that of the establishment of new routes. Six routes established in the course of the fiscal year were: No. 10, from Cleveland to Louisville, via Akron, Columbus, Cincinnati, etc.; No. 27, Bay City to Chicago, via Saginaw, Lansing, South Bend, etc., with spurs reaching Detroit, Cleveland, and other Michigan and Ohio points; No. 25, Atlanta to Miami, via Macon and Jacksonville, with a spur to Tampa; No. 28, St. Louis to Omaha, via Kansas City; No. 29, New Orleans to Houston, via Beaumont; No. 30, Chicago to Atlanta, via Evansville, Nashville, Chattanooga, etc., with a spur to St. Louis. All these were contract air-mail lines. Expenditures of the air-mail service for the fiscal year were \$11,207,357. Service miles to the total of 10,212,511 were flown. On the combined flights, 5,635,680 pounds of mail and equipment were carried. See **AERONAUTICS**.

**Rural Mail Service.** Although 145 new rural mail routes were created, a much greater number, 593, were discontinued, so that the number of rural routes in operation fell by 448 for the fiscal year, or to 43,840 by June 30, 1929. In virtually all cases where routes ceased to be operated separately, they were consolidated with other routes or, as in a few cases, supplanted by city delivery systems. The extension of 7906 routes benefited 124,869 families, and on 142 routes, reaching 19,134 families, service was increased from twice weekly to six days a week. At the end of the fiscal year, the routes reached 6,831,000 families, or an estimated 24,812,000 persons. The length of all routes combined was 1,316,420 miles. Carriers numbered 43,724 at the close of the fiscal year, or 444 fewer than at its start. The appropriation for rural mail service for the fiscal year was \$106,000,000.

**Mail Matter.** First-class domestic mail handled in the fiscal year reached the total weight of 4,471,038 pounds, it numbered 17,169,597,132 pieces, and it paid postage of \$365,470,919, or nearly 54 per cent of the year's entire postal revenue. Second-class mail attained 1,621,249,604 pounds, consisted of 4,833,738,538 pieces, and paid postage of \$29,873,081. Third-class mail weighed 351,371,318 pounds, consisted of 1,311,112,570 pieces, and paid \$61,807,798. Fourth-class, or parcel-post, matter weighed, in all 4,062,610,693 pounds, was made up of 770,397,277 pieces, and paid postage of \$122,178,482. It contributed somewhat over 60 per cent of the total weight of mail matter handled. The foreign mail originating in the United States and outgoing included 350,193,480 pieces, making 80,560,437 pounds, and paying postage of \$16,986,723.

#### JUDICIARY

**The O'Fallon Case.** The United States Supreme Court in 1929 disposed of a number of actions of importance to the country as a whole. One of the most important of these was the action of the St. Louis & O'Fallon Railway Co. against the Interstate Commerce Commission over the latter's

method of attaining the valuation of the company's property for the purpose of determining the statutory fair return to which companies might lay claim. Although the railroad was one of the minor lines, it involved were those that had been at issue between the Commission and many of the greater railroad systems for years. The action, on which a Federal statutory court had previously passed, came before the Supreme Court on appeal.

The Supreme Court decided substantially in accordance with the court of original jurisdiction on the main point at issue, the question whether the commission had given proper weight to the cost of reproduction as a basis in determining the value of railroad property. The Supreme Court held that due consideration to cost of reproduction was required under the law by which the Commission held its authority to fix valuations for the purpose in question, and that the Commission had in this case failed to give such due consideration. The Court did not, however, lay down the rule that valuation should be reached solely by the employment of the standard of cost of reproduction, but insisted only that this standard receive "due" consideration. Five justices supported the decision, three dissented, and one did not take part. Justice McReynolds wrote the majority decision, which was rendered on May 30. See **RAILWAYS**.

**Interborough Fare Case.** The tendency of public utilities, when at odds with State rate-making bodies, to carry their contentions before Federal courts in the effort to find by this means a detour past the difficulties of litigation within State jurisdictions, had for some time been in progress in some States, when the Interborough Rapid Transit Company of New York City endeavored by this means to break the provisions by which it was restricted to the 5-cent fare. Its action having secured a favorable decision from a Federal statutory court on May 10, 1928, the Transit Commission and the City of New York appealed from the grant of an injunction against the Commission's interfering with the company's applying a 7-cent fare. The United States Supreme Court rendered a decision on this appeal on Apr. 8, 1929, whereby it vacated the injunction and indicated that the inferior court had acted prematurely in dealing with the matter before the resources of action in the courts of the State of New York had been exhausted.

**The Pocket Veto.** In the Okanogan Indian case, the United States Supreme Court took the ground, in a decision rendered on May 27, that the failure of the President either to sign or to return to Congress within 10 days (Sundays excepted) a measure passed and sent to him by Congress left the measure inoperative as a law, provided Congress were not in session to receive a veto communication, and even though the adjournment of Congress was merely between sessions and not at the termination of a two-year term of Congress. The issue related to Article I, Section 7, of the Constitution, as to which the contention had been advanced that it applied only to the termination of a Congress. Bills previously had perished between sessions by the failure of the President to act upon them, but the contention had, oddly, never before been carried through the courts.

**Other Decisions.** The Supreme Court decided adversely to the Chicago Sanitary District on January 14, in the action of several of the States

bordering on the Great Lakes to prevent this body's diverting from Lake Michigan, for the purpose of flushing away the refuse of the City of Chicago, an amount of water in excess of the 4167 cubic feet a second allowed it by the permit of the Federal Secretary of War. The opinion, written by Chief Justice Taft, was unanimously supported by the Court. It maintained that Chicago had too long neglected to provide for its health by erecting proper plants for sewage disposal, and was not entitled to the permit on the decision on the score of sanitary conditions.

In the matter of the application of Rosika Schwimmer, a widely known Hungarian woman pacifist, for American citizenship, the Supreme Court on May 27 upheld an inferior court's refusal to grant naturalization papers. The Supreme Court took the ground that the applicant for citizenship in this case had stated that she would not take up arms personally for the defense of the United States, and that the Constitution required this as a duty of citizens.

**The Oil Cases.** The first criminal conviction to come of the several prosecutions brought by the government in the Federal courts against those charged with bribery in the matter of the leases of Naval Petroleum Reserve lands by Secretary of the Interior Albert Bacon Fall in 1921 was secured against Fall himself in the Supreme Court of the District of Columbia on October 24. In spite of testimony of Edward L. Dooney, who controlled the interests benefiting from the Elk Hills lease, that his payment of \$100,000 to Secretary Fall while the negotiations for the lease were in progress had been naught but a friendly loan, the jury found Fall guilty of accepting a bribe, and he was sentenced to a year in prison and a fine of \$100,000. The case was appealed.

Harry F. Sinclair, the oil operator chiefly concerned in the leasing of the Teapot Dome Naval Petroleum Reserve, another of the Fall leases, was committed to prison in the District of Columbia, but not for the bribery of Fall, with which he had been charged. He was convicted on two charges, one of contempt of the Senate, which occurred when he refused to answer the Senate committee investigating the leasing scandals, the second charge was that of having, through persons in his employ, followed and kept watch upon jurors sitting in his trial for conspiracy. The former charge had been fought through the courts for years and had finally been sustained. Sinclair went to jail on May 6, served terms on the two convictions concurrently, and remained in prison until November 20.

**VETERANS' BUREAU.** As reported by the Director, Frank T. Hines, the Veterans' Bureau, charged with the administration of compensation for war service, had received 1,130,870 claims for adjusted compensation up to the end of the fiscal year 1929. There had been adjudication of all claims except 9883, and of the claims adjudicated, 560,919 had been allowed. Veterans receiving compensation on June 30, 1929, numbered 266,498, and beneficiaries of veterans who had died, 88,529. Current payments to these veterans and beneficiaries were running at the rate of about \$16,000,000 a month. The total that had been paid such persons on account of compensation from the United States government since the Compensation Act went into force and up to the end of the fiscal year 1929 was \$1,438,751,901.

The hospital activities of the Veterans' Bu-

reau continued in 1929 on a vast scale. There were under treatment in the hospital system of the Veterans' Bureau on July 1, 1929, 27,784 patients, as against 25,899 a year earlier. The Bureau was at that time utilizing 96 hospitals owned or controlled by the Federal government, and of these the Bureau itself controlled 49.

The number of those carrying Government life insurance, administered by the Veterans' Bureau, on July 1, 1929, was reported as 649,837, all ex-service men or women. One of the Bureau's functions was to advance loans on the security of adjusted service certificates; the total of such loans made up to the end of the fiscal year was \$133,653,489, and the borrowers, past or still indebted, numbered 1,429,946.

The disbursements of the Veterans' Bureau from the beginning of its operation up to June 30, 1929, totaled \$4,773,858,880. This was partly offset by receipts of \$883,991,425 from insurance premiums and deductions from pay allotments. Of the disbursements, \$1,438,751,901 had gone to compensation payments; \$1,333,311,544, to term insurance payments; \$644,993,468, to vocational training of veterans, and \$351,070,920, to hospital and medical service.

**ARMY AND NAVY.** The Army and Navy are treated separately in the articles MILITARY PROGRESS and NAVAL PROGRESS. See also article on AERONAUTICS.

**DIPLOMATIC SERVICE.** Several changes occurred during the year in the personnel of the American diplomatic service. Leland Harrison, who had been Minister to Sweden, succeeded Ulysses Grant-Smith as Minister to Uruguay, while another change in South America was the appointment of George T. Sumner, former Minister to Honduras, as Minister to Venezuela to succeed Willis C. Cook. Walter K. Edge was appointed Ambassador to France to fill the vacancy caused by the death of Myron T. Herrick. Charles G. Dawes succeeded Alanson B. Houghton as Ambassador to the Court of St. James's, and John W. Garrett was appointed Ambassador to Italy to succeed Henry P. Fletcher. Harry F. Guggenheim succeeded Noble B. Judah as Ambassador to Cuba, and Gerrit John Diekenus was appointed Minister to the Netherlands on the retirement of Richard M. Tobin.

The following list gives the names of the diplomatic representatives from and to the United States in 1929.

#### EMBASSIES AND LEGATIONS OF THE UNITED STATES

Albania—Charles C. Hart, minister  
Argentina—Robert Woods Bliss, ambassador  
Australia—John D. White, Washington, minister  
Austria—H. S. Gibson, ambassador (Also minister to the League of Nations)  
Bolivia—Evan E. Acheson, minister  
Brazil—Edwin W. Paoli, minister  
Canada—Philippe, minister  
Chile—William S. Culbertson, ambassador  
China—Nelson T. Johnson, minister  
Colombia—Jefferson Caffery, minister  
Costa Rica—H. F. Arthur Schoenfeld, minister  
Cuba—Harry F. Guggenheim, ambassador  
Czechoslovakia—Lewis Einstein, minister  
Denmark—H. Percival Dodge, minister  
Dominican Republic—Charles B. Curtis, minister  
Ecuador—Gerhard A. Bading, minister  
Egypt—Franklin Mott Gunther, minister  
Estonia—Frederick W. B. Coleman, minister (Also to Latvia and Lithuania)  
Ethiopia (Abyssinia)—Addison E. Southard, minister resident and consul general  
Finland—Alfred J. Pearson, minister  
France—Walter K. Edge, ambassador  
Germany—Jacob Gould Schurman, ambassador

accordingly remain in office without need of re-appointment. Some effort was later made in the Senate to controvert the point. It had the backing of some of Secretary Mellon's active though relatively not numerous antagonists in the Senate, despite them, no action questioning the right of the two Cabinet members to hold over was taken.

President Hoover, having given a campaign pledge to call Congress in special session that it might legislate for the relief of the farmers, proceeded to act in accordance with that promise. He summoned Congress to meet in special session on April 15, in a proclamation that asserted the need of "legislation to effect further agricultural relief and legislation for limited changes in the tariff." His subsequent position with regard to the farm relief measure was clearly expressed both in the recommendations contained in his message to the special session and in subsequent published statements. He made it plain that he wished a measure to pass which would create a farm board with wide discretion and credit powers, and he eventually obtained the creation of such a board. Against the scheme to grant the exporters a rebate on farm products shipped from the country, in the form of the so-called export debenture, he set his explicit disapproval.

On the matter of tariff revision, his course was less definite. While his message of April 16 called for the enactment of "an effective tariff on agricultural products," it suggested also "the necessity for some limited changes in the schedules" on other than agricultural products and that of administrative changes. The opinion was offered that "the test of necessity for revision is, in the main, whether there has been a substantial slackening of activity in an industry." Thereafter he made no public move or statement to clarify or emphasize his own tariff position, until September 24. He then issued a formal public statement in which he maintained the need of continuing the process of tariff revision by Executive order upon recommendation of the Tariff Commission, but he did not express any views as to the merits of the particular tariff rates over which the Senate had been engaged in contention.

President Hoover's dealings with legislative problems were renewed when, on December 3, he sent in his message to the first regular session of the Congress. In this message, he urged prompt action toward the settlement of the new tariff rates, for the prevention of business uncertainty. The message recommended cutting the tax on incomes of 1929 by 1 per cent on the normal rates for personal incomes and by 1 per cent for corporate incomes, as warranted by the Treasury's estimates of revenue and expenditure. The peculiar cogency of this recommendation lay in the occurrence of an exceptionally severe fall in the stock markets, which had occurred in October and November, and in the prospect that lighter taxation would work to rescue the country from a sequel in the form of economic depression. The message announced, with regard to the business situation, that the President had instituted voluntary measures of cooperation between the Administration and business leaders and institutions in order to "make certain that fundamental businesses of the country should continue as usual."

The initial operations of the new Farm Loan Board were hailed as "the most extensive action for strengthening the agricultural industry ever

taken by any government." The President stated that he would submit to the Senate for its ratification a protocol of adherence to the Permanent Court of International Justice under the Root reservations. He was accelerating and enlarging the Federal building programme for the District of Columbia. He condemned the system of granting Federal petroleum concessions on public lands by the system of oil permits, of which he had suspended the issue. Reorganization of the Federal Radio Commission into a permanent body, its members not to be longer chosen by geographic zones, was urged. The passage of banks in some great centres from National to State charter was indicated as weakening the National Bank system and calling for legislative attention. The need better to organize the system of administering justice was again submitted.

One of the characteristics of President Hoover's methods appeared in the opening months of his administration, in the creation of advisory and investigative bodies in large number. One of these, appointed under a law enacted by the Seventieth Congress, was the National Law Enforcement Commission (having as its chairman George W. Wickersham and among its members Newton D. Baker and Roscoe Pound, the latter executive secretary), which met in May to conduct a prolonged study of the whole field of law enforcement. Prohibition included. The President called the National Child Conference on July 1, to be financed by private contribution. The governors of States affected were brought together by him at Colorado Springs in June in a conference on oil conservation. He appointed a commission on conservation of the public domain. Upon the occurrence of the stock-market crashes of October and November, he made new resort to this favored form of organization. Meetings of leaders of business were summoned to take steps for maintaining the normal pace of the country's economic activities. Industrialists were thus won to declarations in favor of maintaining wages, and heads of railroads and of States made known, jointly, their intentions to proceed with programmes of physical improvements. He next promoted a more formal conference of some 400 business leaders, which met in Washington December 5, for the general purpose of taking measures to stabilize the business situation and for the particular purpose of setting up a permanent organization or continuing economic council to act between the organized business world and the Government, as represented by the Department of Commerce.

FOREIGN RELATIONS. Henry L. Stimson, appointed Secretary of State to succeed Frank B. Kellogg, resigned his post as Governor-General of the Philippine Islands and left Manila somewhat before the end of the Coolidge term. He reached Washington and took office there on March 28. The first foreign problem with which he had to deal was the *Im Alone* case, a matter of the sinking of a Canadian vessel, so named, in the Gulf of Mexico, by a U. S. Coast Guard vessel, as to which the Canadian Government had made representations. The settlement of the case, by mutual agreement of April 25, was left to arbitration. A number of foreign governments presented protests against the proposed tariff changes, as prejudicial to the business of their nationals exporting to the United States. These protests were forwarded to the Finance Commit-

tee of the Senate on June 13. See CANADA, under *History*.

**World Court** The plan previously formulated by Elihu Root to enable the United States to enter the jurisdiction of the Permanent Court of International Justice was submitted to the Council of the League of Nations, which approved it on June 12 and forwarded it to the governments of the nations adhering to the Court. These later approved it. President Hoover refrained from acting on the plan during the special session, but the protocol providing the adherence of the United States, on December 9, was signed for the United States, by its chargé d'affaires at Berne, and was then sent to the Senate for its ratification. See **World Court**.

**Visit of Prime Minister MacDonald** Prime Minister Ramsay MacDonald of Great Britain, announcing his purpose to be the promotion of understanding between his country and the United States, made an official visit to Washington in October. He was the guest of President Hoover at the latter's summer home on the Lapidary near the capital, on October 5, and later at Washington. Beside the formation of a personal contact with the President, the visit led to Mr. MacDonald's addressing Congress and speaking briefly at New York and elsewhere.

The subject of naval limitation was not formally taken up, but an understanding on the subject was reached that made it possible for the British Government, in the course of the Prime Minister's visit, to issue on October 8 an invitation to the governments of France, Italy, and Japan to a five-power naval conference for the reduction of naval armaments, to be held in London, starting in the third week of January, 1930, the United States Government concurring in the invitation. The United States was active thereafter in direct discussions with some of the governments concerned, as to the direction that the work of the conference would take. See **GREAT BRITAIN**, under *History*.

**Kellogg Treaty and Russia** The Kellogg-Briand Treaty which had been executed in 1928, was proclaimed as in force by President Hoover on July 24, the requisite ratifications having been made. Acting under this treaty Secretary Stimson addressed to Russia and likewise to China on December 2, a communication setting forth the views of the United States as to the hostilities in Manchuria, expressing the concern of the United States over the conflict there, and calling attention to the agreement of both the opposed governments, under the treaty, to resort to pacific settlement of disputes. The communication was not a signed note, as formal diplomatic relations with Russia had not been resumed. The Russian copy was forwarded by the French Government. An unconciliatory reply was sent by the Soviet Government. See **RUSSIA**, under *History*.

**Latin America** A force of some 1600 Marines was maintained throughout the year in Nicaragua at the request of the Nicaraguan Government. In Haiti, the military control exercised by the United States with the aid of 700 Marines encountered difficulty with an insurrectionary mob at Aux Cayes on December 6 and a reinforcement of Marines was dispatched, but was diverted from Haiti some days later on subsequent report that disorders had ended. In the course of the Mexican insurrection in progress early in 1929, the United States followed its earlier policy

of placing an embargo on arms consigned to all Mexican recipients except the Government. See **NICARAGUA**, **HAITI**, and **MEXICO**.

**IMMIGRATION** By proclamation of March 22, President Hoover put in force the national-origins quota provided in the Immigration Act of 1924. This provision had been repeatedly postponed by Congress, but the outgoing session of the Seventieth Congress had failed to suspend it further. The proclamation required that, to start with July 1, 1929, immigrants from any foreign country subject to quota restriction should be admitted only in the proportion of one yearly to every 150,000 of the inhabitants of the United States, according to the Census of 1920 who had the same national origin, as determined in a table included in the proclamation. See **IMMIGRATION**.

**OIL CONSERVATION** The Federal Departments carried out an order of President Hoover to issue no further permits for oil exploitation on public land. This policy was well received in some States, as likely to diminish overproduction of petroleum, but was protested by the governors of Wyoming, Colorado, and Utah.

**INTERSTATE COMMERCE COMMISSION** See **RAILWAYS**. See also separate articles: **PUBLIC LANDS**, **INDIANS**, and **NATIONAL PARKS**.

#### CONGRESS

**SEVENTIETH CONGRESS, SECOND SESSION** The short session, so called, of the outgoing Congress was resumed at the end of the holidays, on Jan. 3, 1928. A clash of interests in part opposite, as to precedence for the ratification of the Paris Treaty for the Prevention of War or for the bill to provide 15 new cruisers, both awaiting the attention of the Senate, was settled by an agreement under which Senator Hale of Maine first presented the cruiser bill, after which Senator Borah of Idaho, chairman of the Committee on Foreign Relations, brought up the matter of ratification, which took the right of way. In the consideration of the treaty, a group of some 25 Senators made a fight for a qualifying declaration, or reservation, on the part of the Senate, to be included in the ratifying resolution, in order to maintain explicitly the Monroe Doctrine, the right of the United States to take measures of self-defense and the freedom of the Government from obligation to punish any foreign violator of the treaty.

In order to satisfy this group, Borah and his fellow members of the Committee on Foreign Relations wrote into the report of the committee on the treaty the assertion that they understood the stipulations proposed to be in accordance with a proper interpretation of the treaty text, and that they had no intention to modify the treaty itself or to effete any reservations. On January 15, the Senate accordingly voted ratification of the treaty by 85 to 1, Blaine of Wisconsin casting the adverse vote. Copper of Kansas presented on February 11 a Senate resolution for taking definite measures to enforce world peace. Its discussion was postponed to a later session.

**Cruiser Bill** Debate on the cruiser bill began, in the Senate, on January 16. Swanson of Virginia supported the bill on the ground that it would help render the U. S. Navy equal to Great Britain. Borah offered an amendment to record Congress as favoring recodification of the laws of war at sea. Norris of Nebraska offered an amendment proposing a new conference with the British Government for cruiser limitation and

allowing suspension of the construction of cruisers during such negotiation President Coolidge made it known that he opposed the clause of the bill setting the time at which construction of cruisers should begin. Two amendments of Harrison of Mississippi, one to allow postponement of constructing the last cruiser until Jan. 1, 1932, or by a year, and to put back all construction dates by a year, were defeated on February 4. Reed of Missouri proposed an amendment requesting the President to treat with other nations for protection of neutrals and freedom of the seas. The bill was passed by the Senate on February 5, with the Reed amendment, to which had been united the proposal of Borah. The Norris amendment was rejected.

The House adopted the bill as submitted by the Senate, passing it on February 7 without roll call. President Coolidge, who had opposed the time limit on cruiser construction, nevertheless signed the measure on February 13. In its final form, it required that 15 cruisers and an airplane carrier be built, the last vessels to be laid down by July 1, 1931, and the cruisers to be of 10,000 tons. The authorized cost was \$274,000,000. Cruisers were to be laid down at the rate of five a year. Every odd-numbered vessel in the order of construction was to be built in a government navy yard, but it was not specified that the rest should be built in private yards, and in consequence a move inspired by resentment to later discoveries of shipyard lobby activities was started to deprive private yards of this construction.

**Prohibition Enforcement.** The Jones-Stalker Law, an amendment of the Prohibition Act, originating in the Senate, was passed by that body with the over vote of 65 to 18, and subsequently passed by the House by 283 to 90, in spite of bitter opposition from the more aggressive Wets. It raised the maximum penalty for serious violations of the Prohibition law to \$10,000 fine and five years of prison, for first violators. Power of discretion remained with sentencing judges to discriminate between major and minor violators and to treat the latter more leniently. The law raised certain violations to the rank of felony, and thus provoked discussion as to whether it would render possible a wide resort to entrance of homes by enforcers without court warrant, under exercise of police power.

Another measure, sponsored by Senator Glass of Virginia, was passed by both Houses; it provided for a commission to be named by the President, to investigate the problem of law enforcement, including Prohibition. \$250,000 was appropriated for the investigation. Cognate with legislation on Prohibition was a series of measures creating additional Federal judges in districts where the pressure of work on the existing bench was heavy, owing largely to Prohibition prosecutions. The matter of Prohibition entered into the course of the Second Deficiency Bill when the Senate, receiving this bill from the House, voted an amendment by Harris of Georgia, adding \$24,000,000 to the appropriation for Prohibition enforcement. Secretary Mellon expressed himself against the \$24,000,000 increase. The House rejected it and eventually a compromise by conference committee increased the Enforcement appropriation by only \$2,977,914.

**Other Enactments.** A survey of the possible routes for a new interoceanic canal, both in Nicaragua and in Panama, was provided by the passage of a resolution offered by Senator Edge.

By the Hawes-Capper Act, the shipment in interstate commerce of prison-made goods was subjected to Federal regulation. The Norbeck-Andersen Act was passed, providing that the Government should establish preserves for the conservation of migratory birds in the several States, in cases where States cooperated. By the White-Watson Act, the powers of the Radio Commission were extended to December 31. A chief proposals that failed were that of McKellar to require public hearings of demands for tax refunds, efforts to force the withdrawal of U S Marines from Nicaragua, and legislation as to the census and reapportionment. Appropriations for the ensuing fiscal year totaled \$4,003,554,342 over the course of the entire session. Adjournment was on March 4.

**SEVENTY-FIRST CONGRESS, SPECIAL SESSION.** A very brief special session of the Senate was held on March 4, lasting an hour and a half, to the purpose of confirming appointments. This was distinct from the special session of Congress, which convened on April 15 at the call of President Hoover's proclamation of March 7. The composition of the new Congress that assembled differed considerably from that of its predecessor. In the Senate, the Republican strength had risen to 54, a gain of 4, and the number of Democrats had fallen by 5, to 39. The seat of Curtis of Kansas, who had become Vice President, was temporarily vacant, but immediately filled by a Republican. That of Ware of Pennsylvania remained vacant through the deferment of the proceedings as to his qualification.

In the House of Representatives, the Republican strength had risen to 268, from 237, and that of the Democrats had conformably fallen to 185. Each House contained one Farmer-Labor member. Henry J. Allen entered the Senate April 15, by appointment from Kansas. The Republican predominance promoted fairly rapid disposal of business in the House throughout the session, but not so in the Senate, where the majority was itself divided on questions of foremost importance. The Democratic group repeatedly joined forces with Republican Senators of Progressive stripe to oppose with success the plans of the regular Republican wing.

**Farm Relief Legislation.** For the assistance of agriculture took first place in the program of Congress. Chairman Haugen of the House Committee on Agriculture reported on April 18 a bill to create the Federal Farm Board disposing of a revolving fund to be loaned to associations of farmers for certain purposes, including the carrying of crops so that they might be held for favorable marketing. His bill eliminated the equalization fee that had prevented the enactment of previous measures for farm relief. It made no provision for restoring to farmers in any other way what they might lose below prevailing domestic prices on export sales. In the Senate, on the other hand, Chairman McNary introduced on April 18 a bill that, while similar to the House bill in other respects, provided for a system of virtual rebates to farmers upon exports, known as the plan of export debentures.

The principle of this plan was that those exporting certain farm products were to receive, in proportion of one-half of the import tariff duty on such exports, evidences of government indebtedness known as debentures, and that those debentures might be employed for certain limited purposes, essentially for tender in payment of

tariff dues. The expected working of the plan was that grain could be exported at more nearly the same return as it could be sold at home, and that the Treasury would meet part of the differential in the two prices out of its customs, while the benefit of this virtual subvention would come back, eventually, to the farmer as the domestic price for his products would be thus sustained.

The Administration Senators condemned the proposal as directly at variance with the recommendations of the President in his message (see *Administration*, above). President Hoover wrote McNary an open letter on April 20, setting forth 10 reasons why he regarded the debenture plan as unsuitable. He characterized it as a direct subsidy from the Treasury, which so far as it brought any actual gain to the farmer must stimulate overproduction and must at the same time upset the basis of farm diversification and that of import tariff rates. The House acted promptly, passing the Haugen bill on April 25, barely more than a week after its introduction, by 307 to 34. The House measure as passed called for the creation of a Farm Board of six members, to have at its disposal a lending fund of \$500,000,000 for loans to agricultural organizations and for assistance to stabilization corporations and farm marketing agencies.

NOTES of Nebraska proposed in the Senate an amendment to the McNary bill, designed to meet the President's objection on the point of overproduction through the action of the sliding plan, he proposed setting a sliding scale, under which debentures should become less in value as the quantity of farm exports rose. The Senate accepted this amendment April 30. After much further debate, it passed its own bill, with the Norris amendment, on May 14, by a vote of 54 to 33. All but two of the nays were Administration Republicans, while 33 of the ayes were Democrats. Instead of taking up the Senate bill or sending its own measure to the Senate, the House by special rule provided that both bills should go to conference committee. This committee of the two Houses held a protracted conference and finally on June 4 eliminated the debenture plan. The Senate, however, held to the plan and, on June 11, rejected the conference report. The President thereupon issued a vigorous public statement that such action put the whole scheme of farm legislation in peril. This statement put an end to the debenture's course in the Senate, which passed the conference report three days later. The report had naturally met with the favor of the House. The Farm Relief Act, as signed on June 15, provided a Farm Board of 10 members to be appointed by the President and authorized their use of a fund of \$500,000,000, of which \$151,500,000 was shortly afterward appropriated by separate act.

**Census and Reapportionment** The previous regular session had failed to pass the necessary legislation to provide for the census that the constitution required to be taken decennially and that must be taken, according to custom, in 1930. Under the Penn bill, which had made its appearance in that session, the census was linked with the cognate matter of reapportionment of representation among the States. Disposal of the bill had been postponed in the expectation that the special session would deal with it. The Senate, in the special session, took the lead in handling the subject; its commerce committee re-

ported late in April a bill making the required provision for the census and at the same time setting up a new system of reapportionment, which was to take place in the future, in default of special enactment, by administrative procedure. Wagner of New York submitted an amendment to place all census employees under the Civil Service system, a measure that struck at a treasured source of political patronage. Nevertheless, and in spite of some opposition on the part of Senators whose States stood to suffer in representation by a new apportionment, the Senate passed the bill on May 29, by 57 to 26. The House in taking it up incorporated an amendment to exclude aliens from the apportionment count and a second, to exclude disfranchised Negroes. It passed the bill, however, with both these amendments discarded. It rejected the Senate's Wagner amendment, and provided a date different from the Senate's for the beginning of the census enumeration.

In conference committee, it was agreed that enumeration should start on April 1 and that some 500 special agents of the census should alone be subject to Civil Service certification. The act was signed on June 18. In its final form, it authorized expenditure of nearly \$40,000,000 on the census, authorized a census of unemployment, as well as one of agriculture and one of irrigation, and required the President to submit to Congress in December two computations, showing respectively the number of Representatives to which each State was entitled under the system of equal proportions and under that of major fractions. If Congress should fail to reapportion by enactment at the session then current, the President's computation by the system of major fractions was to become effective.

The new enactment thus passed left it within the power of Congress to pass such a measure of reapportionment as it might choose, in 1930, including a change in the number of Representatives constituting the House, but in case the Congress should fail to pass any measure, the enactment provided that the number of the House remain fixed, under an executive reapportionment, at the existing strength of 435 members. See *CENSUS*.

**Failure of Tariff Bill** The effort to enact a revision of the Tariff Act of 1922, in conformity with the recommendations of President Hoover's message, failed by reason of the inability of the predominant wing of the Republican portion of the Senate to gain a majority in support of a measure regarded by its opponents, Republican and Democratic alike, as more beneficial to favored manufacturing interests than to the farmer, for whose requirements the President had specifically pleaded. As required by the constitution, the House took the initiative in framing a tariff bill. Its committee on ways and means had been occupied for months in preliminary work upon the subject. By general accord the House deferred the matter of the tariff until it had passed a measure for farm relief.

The Hawley Tariff bill, introduced by Chairman Hawley of the Committee on Ways and Means, was presented to the House on May 7. Instead of proposing a revision of the schedule of farm products and isolated increases in tariff rates in exceptional industries that had lately suffered demonstrably from importations of competing foreign goods in increasing volume, as the President's recommendations had led many to

expect, the bill provided very extensive increase in tariff duties. It was a document of 83,000 words, of which some part was given up to the provisions for changes in the administration of the tariff system, but of which the bulk related to changes in the schedules themselves. Changes in the tariff rates affected several hundred items, and the changes were prevailingly, although not universally, upward. The title of the bill mentioned specifically among its purposes that of protecting American labor, a new departure in tariff legislation and a matter outside the recommendations of the President.

The schedule on sugar and kindred products, affecting one of the greatest components of the country's total of imports, contained a provision for the increase of the rate on Cuban raw sugar to 240 cents a pound, from 176 cents a pound. This was in deference to the wishes of the domestic growers of sugar beets, and was therefore defended as in line with the recommendation for higher rates on farm products. It was opposed by Cuban sugar interests as ruinous to the sugar growers of the island, who were at the time in some difficulty owing to inability to make profits under the existing rate.

Wool, fresh beef and veal, corn, rice, cream, fresh milk, and fresh pork rates were all increased. Philippine sugar remained free of duty, owing partly to the action of Secretary Stimson, who on his return from the islands had appeared before the committee to oppose the placing of a duty upon it. Duties were increased on such manufactures as numerous cotton products, clothing, woolen textiles and some 33 chemical items. Lumber generally remained on the free list, but cedar logs and shingles, some other lumber, and common brick were made dutiable. Among the proposed administrative changes was a provision denoting the Customs Court to its original status of the Board of General Appraisers and depriving it of jurisdiction in questions of valuation of imported goods, as between the foreign-value and the domestic-value basis.

A caucus of the House Republicans united them in favor of a special rule, adopted May 24, by which no amendments save those emanating from the Committee on Ways and Means itself should be entitled to debate. This rule led to the rapid disposal of all opposition amendments. The House proceeded to consider the schedules in turn. Adopting numerous alterations of detail, it passed the measure on May 28, by a vote of 264 to 147. Only 12 Republican votes were cast against the bill, while 20 Democrats voted in its favor.

The measure then went to the Senate, where the effort was made at the outset to commit the Upper House to a measure for revision of tariffs applying to farm products and related schedules alone. Senator Borah offered a resolution to this effect. It came to a vote on June 17 and was defeated, but by an unexpectedly close vote of 39 against, to 38 in favor. The Senate Finance Committee received the House bill and embarked on a process of extensive alterations. On June 18, in order to give the committee time for its work, the Senate took recess until August 19 and the House voted a recess until September 23.

The committee's bill, as reported by Chairman Smoot after the reassembling of the Senate, made 431 changes in the tariff rates of the House bill, by the chairman's own reckoning; and of these, 177 were increases and 254 were de-

creases. Many of the increases were in the agricultural schedule and cedar lumber and shingles had been replaced on the free list. New administrative provisions were made for dealing with cases where valuations could not be made satisfactorily on the basis of the foreign value of the goods, the so-called United States value, i. e., the value of the goods in the United States as based on their wholesale selling price, was to be applied instead of the so-called American value, or the value of competing domestic products. Right of appeal to the Customs Court on matters of valuation was restored. The provisions of the House bill to maintain and strengthen the flexible tariff clause, giving the President greater latitude in appointing members to the Tariff Commission, was retained.

The bill was reported on September 4. Simons of North Carolina straightway offered an opposition resolution calling for the publication of data on the income-tax returns of interests in tariff increases, a move denounced by

as an attempt to filibuster against the bill. The resolution none the less was passed on September 10, by 51 to 27. A number of insurgent Republicans from agricultural States united to join the Democratic opposition, on the ground that the tariff measure would harm the farming interest more, by reason of tariff increases on goods that farmers must buy, than it would help by reason of tariff increases to the farmers on their own products.

The opposition thus formed centred its attention on the administrative features of the bill, unpopular with the Democratic senators, which came up first for debate. Smoot announced on September 20 the decision to drop the provisions as to the flexible tariff from the bill. President Hoover, alarmed by the possibility that the Executive might lose its power under the existing law to alter tariff rates by proclamation, issued a statement on September 24, on behalf of maintaining the means for revising individual tariff rates by Executive action on recommendation of the Tariff Commission. His statement had particular bearing on an amendment that had been offered by King of Utah, a Democrat, to require the commission to refer its findings on required tariff changes to Congress instead of submitting them to the President.

From the end of September on, it became increasingly evident that the supporters of the tariff lacked the votes to carry it through the Senate in the face of the opposition of the insurgent Republicans. The occurrence of a violent collapse in the stock market in late October and early November led to some renewal of the attempt to put through a tariff bill in the closing period of the special session, on the plea of the necessity of such a move for the prevention of economic depression. The block of the opponents of the bill stood firm, however, and nothing was accomplished.

*Investigation of Lobbies.* A movement in the Senate to investigate the operations of lobbies and kindred activities made some progress into a subject in which there had been no previous Federal inquiry of a general character. W. B. Shearer, a former agent of shipbuilding interests, who had ostensibly done publicity work for them, brought suit late in August against the Bethlehem Shipbuilding Corporation, the Newport News Shipbuilding Drydock Co., and the American Brown Boveri Electric Corporation for a sum

of money alleged to be owed him for services as representative of shipping interests both in the United States and in Europe. It was made to appear in the course of this suit that Shearer had played a part unfavorable to the success of the plans of the Administration in the tripartite naval conference of Geneva in 1927, and it was further intimated that he had worked in Washington for the success of measures to authorize a programme of intensified naval construction.

Senator Borah offered a resolution for the investigation of Shearer's activities. The Senate passed this resolution on September 12, and accordingly a subcommittee of the committee on naval affairs examined Shearer, Charles M. Schwab, and others connected with the proceedings. Much publicity was given to conduct on the part of Shearer which was apparently of a character to frustrate the purpose of the Geneva Conference. At about the same time with this investigation came to light the course taken by Senator Bingham in employing C. L. Ryanson, a worker for tariff-seeking manufacturers, as an aid in his own duties on the finance committee in its revision of the tariff bill. Bingham received a vote of censure from the Senate.

The occurrence provoked sentiment among Senators, and more particularly among the public, in favor of a general investigation of lobbying. Black of Alabama moved an inquiry of this sort on September 25. The Senate passed a resolution for an inquiry, and a committee for the purpose was named, with Cawaway of Arkansas for chairman. The committee mapped out an extended examination, not only of tariff lobbying but of the alleged activities of lobbyists for disarmament, for power interests, for Cuban sugar interests and for other purposes. Joseph R. Grundy, president of the Pennsylvania Manufacturers' Association, later Senator from Pennsylvania by appointment, was among those examined, as were also Herbert C. Lakin of the Cuba Company, sugar producers, and Edwin P. Shattuck, represented as having been engaged to represent that company's tariff interests and as being a personal friend of the President. The committee continued its work to the end of the year.

*Adjournment.* Congress adjourned its special session on November 22, as the Senate had no hope of agreeing on a tariff measure in advance of the date for the regular session and as the House had before it no major business pending and had for two months occupied its time chiefly in waiting for the Senate.

*SEVENTY-EIGHTH CONGRESS, REGULAR SESSION.* Congress convened on December 2 in regular session. In the brief previous interim, the eldest member of the Senate, Francis E. Warren of Wyoming, had died, leaving a vacancy in the Republican ranks. Patrick J. Sullivan, a Republican, was appointed Senator *ad interim* by the Governor of Wyoming. Objection was made that a law of the State, passed in the time when Nellie Taylor Ross, a Democrat, was governor, had removed from the governor the power to appoint Senators to fill vacancies that might occur between sessions of Congress, but the point was not pressed and Sullivan was duly seated.

The President submitted to Congress a message of moderate length, in which he urged quick action with regard to tariff rates, in the interest of business stability, but at the same time insisted again on the necessity of preserving the flexible features of the administrative system, as

a safeguard against changing conditions. He represented the credit system of the country as unshaken by the ordeal of the recent collapse of the stock market and reported agriculture as making steady improvement. Without representing it as an emergency measure for the aid of business, he recommended a reduction of the income taxes for the ensuing year by the total of an estimated \$160,000,000, which he judged the Treasury could afford to forego. He recommended additions to the construction programme for the District of Columbia and to outlay for development of waterways in the Mississippi River area. Other topics treated were the development of highways, the need of conserving petroleum resources and better organization for the enforcement of Prohibition.

*Tax Reduction.* Though not particularly so stressed in the message, the reduction of income taxes was hastened as a measure for the safeguarding of business from the possible sequels of the depression in the market for securities. The measure favored by the Administration was introduced in the House, from the committee on ways and means, within a few minutes after the opening of the session. It was passed, virtually without debate, on December 6, by a vote of 282 to 17, although a sprinkling of opposition members questioned the certainty of taxable incomes holding up on account of the heavy losses that had been sustained in securities. The Senate after brief consideration voted the measure *unanimously* on December 14, by 63 to 14 votes. It was then sent directly to the President for signature. It provided that the normal income tax rates on personal incomes should be reduced from  $1\frac{1}{2}$  to  $\frac{1}{2}$  per cent, for incomes under \$4000, from 3 to 2 per cent, for those from \$4000 to \$8000, and from 5 to 4 per cent, for incomes over \$8000, also, that the tax on the income of corporations should be reduced from 12 to 11 per cent. See *TAXATION*.

*Close of the Tare Case.* The close division of the Senate on tariff matters having rendered the vacancy of Senator-elect William S. Vare of Pennsylvania, excluded since 1927, a handicap to the regular Republican group, the cause was adopted of bringing his case to a termination. By a vote of 43 to 31, the Senate refused on December 3 to postpone further its consideration of the Norris resolution to deny Vare his seat. Vare appeared on his own behalf and, although paralyzed in the left side, delivered before the Senate a vigorous defense of his Senatorial campaign of 1926. On December 6, the Senate passed the Norris resolution, finding Vare's election void by reason of fraud and corruption. The vote was 53 to 22, all the recorded votes except those of 22 regular Republicans being against Vare. By 60 to 15, the Senate next voted a resolution that Vare's Democratic opponent, William B. Wilson, had not been elected. The vote against Wilson included 22 Democrats. A vacancy in the Senate delegation of Pennsylvania was thus created. Governor Harris immediately filled it by the appointment of Joseph R. Grundy, manufacturer and high-tariff advocate, who was duly seated December 11.

*UNITED STATES MILITARY ACADEMY.* A government institution at West Point, N. Y., for the theoretical and practical training of cadets for the military service of the United States, opened in 1802. On Sept. 1, 1929, the total number of cadets was 1278, distributed as follows: First class, 247, second class, 303, third

class, 300; and fourth class, 428. There were 215 members on the faculty. Appropriations in 1929 amounted to \$2,307,051 for salaries and maintenance of public works. The library contained 108,000 volumes. Superintendent, Wm R. Smith, Major-General, U. S. Army.

#### UNITED STATES NAVAL ACADEMY.

A school for the education and training of midshipmen in Annapolis, Md., founded in 1845. The total number of midshipmen at the beginning of the academic year 1929-30 was 2010, distributed as follows: First class, 412; second class, 407; third class, 515; and fourth class, 616. The faculty numbered 254. The library contained 70,000 volumes. Superintendent, Rear Admiral S. S. Robinson, U. S. N.

#### UNITED STATES OF EUROPE. See LEAGUE OF NATIONS.

**UNIVERSALISTS.** A religious denomination, existing chiefly in the United States, Canada, Japan, and Korea, which holds as parts of its doctrine the universal fatherhood of God and the final harmony of all souls with God, established in the United States in 1770 by the Rev. John Murray in Good Luck, N. J. The ecclesiastical organization of the church is under the jurisdiction of the general convention, which meets biennially.

The general convention met in Washington from Oct. 23 to 27, 1929, at which time the tower of the new National Memorial Church was dedicated.

The number of churches in 1929 was 609, ministers in fellowship, including lay licenses, 546; church members, 50,078; and Sunday schools, 405. The denominational periodical, the *Christian Leader*, is published weekly. The Rev. Frank D. Adams, D.D., of Detroit was president of the general convention in 1929. Headquarters of the denomination are at 176 Newbury Street, Boston.

#### UNIVERSES. See ASTRONOMY.

**UNIVERSITIES AND COLLEGES. STATISTICS.** Dean Raymond Walters of Swarthmore College prepared statistics of American universities and colleges which was published in *School and Society* for Dec. 14, 1929. He reported an increase of 1 1/2 per cent in the total of full-time students and of 2 per cent in the grand total enrollment among the 226 universities and colleges from which he received statistics. This was slightly less than the increase in previous years.

The institutions included in the report have 442,493 full-time students and 697,584 full-time regular students, part-time students, and summer-school students. Some institutions had astounding enrollments. Columbia University, for example, had 14,852 full-time students or a total of 33,367 full-time, part-time, and summer-session students. To this number it is necessary to add approximately 2850 extra-mural and special and about 10,500 home-study students. This makes the total of those who receive instruction from this institution 46,717.

The University of California with an enrollment of 9758 was the largest liberal arts college. New York University comes next with 5542, then Wisconsin with 5500. Hunter College with an enrollment of 5512 was the largest women's college. Smith had 2051, Florida State College for Women, 1574, Wellesley, 1556, Vassar, 1158, and Mount Holyoke, 1014.

The largest two engineering enrollments were Massachusetts Institute of Technology, 2405, and

Purdue, 2355. Harvard with an enrollment of 1640 was the largest law school. New York University enrolled 1574, and Fordham 1318 in their law schools. The largest medical schools were Michigan, 642, Pennsylvania, 626, Illinois, 548, Minnesota, 530, and Chicago, 517. The largest number of students in commerce and finance were at Pennsylvania, 2207, and New York University, 2205.

Columbia University with an enrollment of 5387 had the largest school of education. Fordham reported 2320 who were preparing to teach. The largest summer schools for 1929 were Columbia, 13,817, and California, 9595. Chicago had the largest divinity school with 251 students. Syracuse had the largest school of forestry with 379 students. The largest school of journalism was at the University of Missouri with 296 students.

**JUNIOR COLLEGES.** There were in 1929, 395 junior colleges. In these there were more than 51,000 students and the value of the buildings, land, and equipment was more than \$91,000,000. They were found in every State in the Union except Nevada, South Carolina, Rhode Island, Vermont, and Wyoming.

It was reported that cities and towns supported by taxation 115 junior colleges, that States supported 20, that various American churches supported 149, and that the Young Men's Christian Association supported 5. There were also some that were private.

**MEDICAL EDUCATION.** The number of medical schools recognized by the American Medical Association in 1928 was 74. While the number of schools showed a gradual decrease, the number of medical students increased from 18,840 in 1926 to 20,545 in 1928. The number of graduates in 1928 was 4262. A financial report of 63 institutions showed a total income of \$11,983,873. Of this total, \$4,057,304 was derived from students' fees, \$2,784,527 from endowments, \$2,574,973 from State or city, and \$2,567,069 from other sources. The total expenditures were \$11,308,800.

**NEW PRESIDENTS.** During the year, the following new presidents of universities, colleges, and technological schools were announced. Professor A. A. Grusendorf was elected president of Blinn Memorial College. The Rev. Dr. Clarence A. Barbour was elected president of Brown University. Dr. Robert G. Sproul was elected president of the University of California. Dr. William E. Wickenden was elected president of the Case School of Applied Science, Cleveland. Dr. Alexander Guenay was elected president of the University of Chattanooga. Dr. Robert Maynard Hutchins was appointed president of Chicago University. Dr. Albert W. Palmer was elected president of the Chicago Theological Seminary.

The Rev. Dr. Albert W. Beaven was elected president of the Chicago Theological Seminary. Dr. George A. Works was elected president of the Connecticut Agricultural College. Dr. Katherine Blunt was elected president of the Connecticut College for Women. Dr. Walter L. Lingle was made president of Davidson College. Dr. Mervin Grant Fuller was made president of Dickinson College. Dr. Ailo Ayres Brown was elected president of Drew University. The Rev. T. H. Roach was elected president of Epworth Seminary. The Rev. Tannis Herbert Megorden was elected president of Gale College. Dr. Wendell S. Brooks was elected president of Intermountain

Union College Dr Clarence M Dannelly was elected president of Kentucky Wesleyan College.

Raymond A Kent was inaugurated president of the University of Louisville. Dr Alexander G Ruthven was elected president of the University of Michigan. Dr G H Van de Bogart was made president of a new unit of the Greater University of Montana. The Very Rev John J O'Byrne was appointed president of Niagara University. Dr Heiman G James was elected president of the University of South Dakota. Dr E T Franklin was elected president of Southwestern College. The Rev John D Goss was elected president of Union College. Dr James P Knard was elected president of Winthrop College. See articles on separate colleges.

**GIFTS AND BENEFACTIONS** During 1929 there were many gifts for educational purposes and the year was characterized by a very large total of gifts. Some of the individual gifts were very large, while a number of institutions completed drives for endowments.

The University of Chicago announced the following contributions: \$400,000 from the children of the late John P Wilson for the endowment fund of the law school, \$1,000,000 from Max Epstein for the erection of an art building, \$250,000 from the Conrad Hubert Trust Fund, \$1,500,000 from the General Education Board for the further development of education, \$1,000,000 for an International House.

Columbia University received a contribution of \$2,000,000 from Edward S Harkness for the construction of residence halls at the new Medical Center, and \$200,000 from Mrs Charlotte E De Sels for the endowment of a professorship in memory of her father. Cornell University received an anonymous gift of \$200,000 toward the projected pension fund for professors, \$1,500,000 from the General Education Board conditioned upon the university's obtaining a similar amount by June 30, 1930, to be used to develop a graduate center for scientific research in biophysics, more than \$1,000,000 by the will of the late Col H W Sackett for the beautification of the campus.

Harvard University received \$2,000,000 from the International Education Board to be used toward establishing an Institute of Biology and a bequest valued at \$5,000,000 from the late Stuart Welch. New York University received a building valued at \$2,000,000 from Mr and Mrs Frederick Brown, \$1,000,000 from Mr and Mrs Percy S Straus for endowment, \$250,000 from the Conrad Hubert Trust Fund, and \$260,000 from Dr William H Nichols. The University of North Carolina received \$100,000 for a library school from the Carnegie Corporation.

Northwestern University received \$1,000,000 from the family of the late Charles Deering for a new general library building, \$3,000,000 from F C Austin for the Austin Scholarship Foundation for the training of business executives, and more than \$500,000 for the college of liberal arts by the will of the late Milton H Wilson.

Princeton University received \$200,000 from the class of 1887 to endow a chair of astronomy, \$500,000 from the estate of the late James T Walker, \$100,000 by the will of the late Percy R Pine, \$500,000 from Thomas D Jones, and half of the residuary estate amounting to several hundred thousand dollars of the late William B Isham.

Yale University received a gift of \$200,000 from Charles Latinop Pack for the establishment of a

foundation for the advancement of applied forestry, a bequest estimated at \$3,000,000 by the will of Mrs Ray Tompkins, \$2,000,000 for the New Haven Hospital affiliated with the Yale School of Medicine from the General Education Board, \$225,000 as a bequest from the late Thomas F Smallman for the building of a new wing to the medical school, and \$100,000 from Edward S Harkness for the building of a residence college system.

**THE AMERICAN-SCANDINAVIAN FOUNDATION** For the academic year 1928-29, American and Scandinavian students received scholarships from the American-Scandinavian Foundation amounting to \$72,000. The foundation reported 26 university fellows and 33 industrial fellows.

**THE JULIA ROSENWALD FUND** This fund amounting to \$30,000,000 was established by Mr Rosenwald "for the benefit of mankind." He stipulated that both principal and any interest that may accrue must be expended within twenty-five years after his death. During 1929, there was appropriated the sum of \$4,000,000 for various purposes. The president reported that one-tenth of the expenditure was for the establishment of 553 Negro schools, bringing the number of Rosenwald schools to 4729.

**FELLOWSHIPS FOR STUDY ABROAD** Since 1920 there has been a remarkable increase in the number of opportunities for Americans to study in the institutions of foreign countries. The Institute of International Education in its tenth annual report listed many fellowships and scholarships that are open to American students. Some of these carry stipends ranging from a few hundred dollars to two thousand dollars. In the early part of the year, the Institute announced arrangements for student exchange with Austria, Czechoslovakia, France, Germany, Hungary, and Switzerland. In each case corresponding opportunities were offered by American colleges and universities to the nationals of the country concerned. Students who may be interested in applying for these fellowships were advised to communicate with the Institute of International Education, 2 West 45th Street, New York City.

During the college year 1928-29 there was a total of 9685 foreign students in the colleges and universities of the United States. In 1921-22 there were only 6488. In June former Senator and Mrs Guggenheim made a gift of \$1,000,000 to the John Simon Guggenheim Memorial Foundation to establish a system of exchange fellowships between the United States and the Latin-American countries.

**A CHRISTIAN SCIENCE COLLEGE OF LIBERAL ARTS** *The Christian Science Monitor* announced gifts amounting to \$2,166,000 to the new college of liberal arts. The trustees of The Principia announced that the actual work of construction was to begin as soon as \$3,000,000 additional is obtained. The Principia comprised a junior college, an upper school, and a lower school. The enrollment, which was limited to the sons and daughters of Christian Scientists, numbered 670.

**HARVARD SCHOOL OF CITY PLANNING** Harvard University with the aid of the Rockefeller Foundation established the first school of city planning. This was a graduate professional school coordinated with the schools of Architecture and Landscape Architecture. The function of the school was to train men to be professional city planners and also to give sound conceptions of city planning to men who were going to be archi-

fects, landscape architects, engineers, or leaders in various public endeavors

**STUDY OF SOCIAL PROBLEMS AT CHICAGO UNIVERSITY** In November the University of Chicago opened a new social science building which had cost \$650,000, the gift of the Laura Spellman Rockefeller Foundation

**COLLEGE ATHLETICS** In the latter part of 1929 college and university circles were very greatly disturbed over a bulletin entitled *American College Athletics* published by the Carnegie Foundation for the Advancement of Teaching. The authors state that they had made personal visits to 130 American and Canadian universities and had had the cooperation of more than 2000 persons. The report charged that there was commercialism of athletics in many colleges, and that there is a negligent attitude toward the educational opportunity for which the American college exists. It describes commercialism in sport as "the placing of a higher value upon the monetary and material returns either direct or indirect from any athletic activity than is placed upon its returns in recreation, health, and physical and moral well-being." It stated that when tested by this definition, few schools and colleges can be regarded as keeping their sports free from the commercial taint.

In his preface to the bulletin, Dr Henry S. Pritchett, President of the Foundation, asserted that "the responsibility to bring athletics into a sincere relation to the intellectual life of the college rests squarely on the shoulders of the president and faculty." See CARNEGIE FOUNDATION, ROCKEFELLER FOUNDATION

**UPPER SENEGAL AND NIGER.** A colony under the Government-General of French West Africa, officially known since Dec 4, 1920, as French Sudan. See FRENCH SUDAN and FRENCH WEST AFRICA

**UPPER SILESIA.** See POLAND

**UR.** See ARCHAEOLOGY

**URUGUAY.** *Ur-u-gwá* or *Ö'u'dögwi*. A republic on the east coast of South America, bounded by Brazil on the north and Argentina on the west. Capital, Montevideo

**AREA AND POPULATION** Area, 72,153 square miles, population, at the beginning of 1929, 1,808,286. The chief cities and their estimated populations in 1927 were Montevideo, 420,000 (458,633 in 1928), Salto, 35,000, Paysandu, 28,000, Mercedes, 30,000, and Minas, 28,000. In 1928 the birth rate was 25 per thousand inhabitants, the death rate, 10.68, natural increase, 14.32, and the marriage rate, 6.17. Immigrants in 1928 totaled 21,165.

**EDUCATION** The average attendance in the public primary schools in 1928 was 133,588, or 78.6 per cent of the enrollment. In 1927, 10,285 students were enrolled in the University of Uruguay at Montevideo.

**PRODUCTION** About 60 per cent of the total area is devoted to stock raising, about 20 per cent to mixed farms and ranches, and 5 per cent to farms. The predominance of the livestock industry in the country's economy is indicated by the fact that animals and animal products constitute 95 per cent of the exports. Livestock in 1929 was estimated to include 7,523,432 cattle, 1,629,724 calves, 1,629,724 goats, and 19,357,725 sheep. In 1927 the total investment in the cattle industry was estimated at \$1,369,662,700 or more than half of the total national wealth. There is little mining, and meat packing is the leading

industry, followed by flour milling, shoemaking, and tanning.

**COMMERCE.** Uruguayan foreign trade in 1928 totaled \$202,729,933, or \$17,085,709 more than in 1927. Imports increased by 14.54 per cent to \$97,478,662 while exports rose by 4.68 per cent to \$105,251,271. During the first nine months of 1929 imports increased slightly, as compared with the same period in 1928, while the exports declined sharply, resulting in an adverse balance of trade for the first time in five years.

**FINANCE** In the budget for the fiscal year 1929-30 revenues were estimated at 58,041,562 pesos and expenditures at 58,547,252 pesos, leaving a deficit of 505,690 pesos (1 peso equals \$1.0342 at par). For 1928-29, revenues and expenditures were estimated at 54,061,384 and 54,227,928 pesos, respectively, with the revenue total including an anticipated balance of 200,000 pesos from the 1927-28 budget operations. Actual receipts in 1927-28 amounted to 59,986,000 pesos, including 2,136,000 pesos carried over as surplus from the previous fiscal year, and actual expenditures to 55,946,000 pesos, leaving an actual surplus for the year of 1,804,000 pesos and a credit balance, including the carry over, of 4,040,000 pesos. The public debt as of July 31, 1929, was reported at 214,922,761 pesos, of which 74,040,914 represented the internal debt, 136,366,847 the external debt, and 4,205,000 the international debt.

**COMMUNICATION** Most of the 1699 miles of railway line in Uruguay in 1928 were owned by private companies, the principal system being the Central Uruguay Railway, which in 1926-27 carried 4,544,000 passengers and 1,070,000 tons of freight, earning gross receipts of \$10,447,000. A law passed in October, 1928, authorized the construction of five new state railway lines at a total cost of \$23,600,000.

**GOVERNMENT** Under the constitution of Jan 3, 1918, legislative power is vested in the Parliament of two Houses, the Chamber of Representatives, elected by universal suffrage of males over 18 years of age, and the Senate, chosen by an electoral college which is elected by popular vote. Executive power is vested in the President elected by direct popular vote and a national administrative council of nine members. President in 1929, Dr Juan Campataguy, elected for the term Mar 1, 1927-Feb 28, 1931.

**HISTORY** An otherwise uneventful year in Uruguay in 1929 was featured by the emergence of this smallest of South American republics as a recognized leader in Latin-American affairs. The isolationist policy adopted by the Irigoyen administration in Argentina, hitherto the unofficial spokesman for the Spanish-speaking nations of the Western Hemisphere, left the way open for Uruguay's assumption of leadership. The most tangible evidences of Uruguay's growing prestige were the acceptance of its offer of mediation in the Paraguayan-Bolivian dispute over the Chaco boundary and the success achieved by Eduardo Rodríguez Larreta, Uruguayan delegate to the League of Nations, in bringing about the formation of a Latin-American bloc intended to secure a more important voice in the conduct of League affairs for the countries of South America and Central America. Uruguay, whose agricultural exports to the United States were threatened by the attempt at tariff revision by the Congress of the United States, joined with other Latin-American countries in protesting against this

and other policies of the North American republic See BOLIVIA and PARAGUAY, under *History*

**UTAH. POPULATION** According to the Fourteenth Census, the population of the State on Jan 1, 1929, was 440,396 The estimated population on July 1, 1928, was 531,000 The capital is Salt Lake City

**AGRICULTURE** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929

Crop	Year	Acreage	Prod Bu	Value
Hay	1929	657,000	1,626,000 *	\$16,754,000
	1928	647,000	1,700,000 *	17,270,000
Wheat	1929	266,000	6,403,000	6,527,000
	1928	257,000	6,861,000	6,718,000
Sugar beets	1929	46,000	564,000 *	
	1928	51,000	637,000 *	4,478,000
Potatoes	1929	18,000	3,330,000	3,130,000
	1928	21,000	4,112,000	1,490,000
Oats	1929	58,000	2,446,000	1,462,000
	1928	55,000	2,475,000	1,386,000
Barley	1929	39,000	1,560,000	1,217,000
	1928	34,000	1,666,000	1,216,000

\* Tons

**MINERAL PRODUCTION** Utah in 1929 produced gold, silver, copper, lead, and zinc valued at approximately \$90,485,000, an increase of about \$17,226,000 over the output of 1928, according to Federal estimates A large increase was reported in copper and gold on account of active mining and improvements at Bingham, especially during the first half of the year Increases also were reported in the production of silver and zinc, but the output of lead was slightly less than that of 1928 The production of copper in 1929 was the largest that ever had been recorded in the State Utah remained first in the United States in the production of silver, second in copper, after Arizona, and third in lead, coming after Missouri and Idaho

Gold production increased considerably from \$4,394,000 in 1928 to about \$1,803,000 in 1929 As in recent years, virtually all the gold was recovered from ores and concentrates smelted The silver output increased from 17,072,852 ounces in 1928 to about 17,749,000 ounces in 1929, and the production was about 4,499,000 ounces more than that of Montana, which was second in silver production in the United States The value of the Utah silver output decreased from \$9,987,618 to about \$9,478,000, owing to the lower average price obtained

Copper production increased from 293,235,039 pounds in 1928 to about 320,193,000 pounds in 1929, in value, from \$42,225,846 to about \$57,314,000, owing partly to increased prices for copper The lead output decreased from 91,840,621 pounds for 1928 to about 286,817,000 pounds for 1929, but the value increased from 16,926,141 to about \$18,213,000, on account of the higher average price of lead

There were mined in Utah, in 1928, 4,810,000 short tons of coal (estimated), in 1927, 4,781,480 tons, valued at \$11,084,000 The total value of the State's mineral products was \$90,368,455 for 1927, \$98,985,218 for 1928

**FINANCE** State expenditures in the year ended June 30, 1928, as reported by the U S Department of Commerce were for maintaining and operating governmental departments, \$8,625,627 (of which \$3,747,169 was for local education), for interest on debt, \$450,827, for improvements, \$2,031,206, total, \$11,107,660 (of which \$3,174,392 was for highways, \$1,355,399 being for

maintenance and \$1,818,993 for construction) Revenues were \$12,370,991 Of these, property and special taxes formed 45 2 per cent, departmental earnings and compensation to the State for officers' services, 8 5, sale of licenses, 23 3 (including gasoline taxation of \$1,661,068) The funded State debt, as of June 30, 1928, \$9 700,000 outstanding, included \$7,260,000 for highways Its total net of sinking funds was \$6,005,413 On a property valuation of \$701,797,693, State taxes of \$5,217,577 were levied in the year

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan 1, 1929, was 2193 60 In 1929, 5 67 miles of first, and 9 94 of second, track were built

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and dealing with operations of 1927, there were 556 manufacturing establishments in the State in 1927 These employed 13,585 wage earners, whose wages for the year totaled \$16,688,574 Materials and supplies used in production cost \$120,567,348 Manufactured products combined attained the value of \$163,118,376

**EDUCATION** Enrolled in the public schools in 1928-29 were 137,160 pupils Of these, 107,174 were in the elementary, and 29,986 in the high schools The expenditures for public-school education totaled \$12,182,800 Salaries of teachers averaged \$1133 a year in elementary grades and \$1563 in high and junior high schools

**LEGISLATION** The State Legislature held its regular biennial session Apart from routine measures, it passed an act of an unusual type rendering it unlawful to display on billboards advertisements of cigarettes and other forms of tobacco, such as might depict these articles as advantageous to health, or the like The measure was in consonance with one passed by the previous Legislature and later declared unconstitutional, forbidding newspapers to carry advertisements of tobacco products

**POLITICAL AND OTHER EVENTS** The action of the Federal administration in suspending the granting of rights to produce petroleum from the public domain was strongly opposed in the State, as in some of the other commonwealths having within their territory a great extent of Federal lands Utah entered the compact of the Colorado River States to enable the Federal Government to carry out the project for a Colorado River Dam, by legislative act on March 6 A deposit of natural gas said to contain as much as 7 07 per cent of helium was discovered in the Snydler Helium area, on land adjoining the Federal Helium Reserve No 1 It was described as the richest find of gas in helium content yet discovered and as likely to enable producers to furnish helium gas at much less than the cost previously involved

**OFFICERS** Governor, George H Dein, Secretary of State, Milton H Welling, State Auditor, Ivoe Ann, State Treasurer, A E Christensen, Attorney-General, George P Parker, Superintendent of Public Instruction, C N Jensen

**JUDICIARY** Supreme Court Chief Justice, James W Cherry, Associate Justices, Daniel N Straup, Elias Hansen, William H Folland, Ephraim Hansen

**UTAH, UNIVERSITY OF** A State institution of higher education in Salt Lake City, founded in 1850 The total enrollment for the autumn of 1929 was 2995 and for the summer session of the

same year, 677. The faculty, exclusive of 15 members on leave of absence, numbered 177. The productive funds of the university amounted to \$809,142, and the income for 1928-29 was \$875,000. The library contained 98,229 volumes and 28,821 pamphlets. President, George Thomas, Ph D.

**VACCINATION.** See SMALLPOX AND VACCINATION

**VACCINES** See VETERINARY MEDICINE  
**VANDERBILT UNIVERSITY.** A nonsectarian institution of higher learning for men and women in Nashville, Tenn., founded in 1873. The enrollment for the autumn term of 1929 was 1453. Productive funds of the university amounted to \$11,000,000, the annual income was approximately \$1,000,000, and the value of the property was estimated at \$6,300,000. The library contained 144,000 volumes. Chancellor, James H. Kirkland, Ph D., LL D., D. C. L.

**VAN DER STUCKEN, FRANK A.** noted American choral and orchestral conductor, died in Hamburg, Aug. 19, 1929. He was born in Fredericksburg, Tex., Oct. 15, 1858. At the age of eight, he was taken by his parents to Antwerp, where he received his first musical instruction from Peter Benoit. From 1876 to 1878, he attended the Leipzig Conservatory, studying under Langer, Reinecke, and Grieg. In 1884 he was called to New York, as successor to Dr. Leopold Damrosch, as conductor of the Arion Society, which position he filled with signal distinction until 1895, taking the organization on a very successful tour of Germany (1892). During 1885-88 he also conducted in New York series of orchestral concerts, at which he introduced a number of new works by American composers. From 1895-1903, he was director of the Cincinnati Conservatory of Music, and from 1895 to 1907, conductor of the Cincinnati Symphony Orchestra. In 1905 he was chosen to succeed Theodore Thomas as conductor of the biennial Cincinnati May Festival and, although he lived in Germany from 1908 to 1917, he returned every two years to Cincinnati in time for the festivals. This position he resigned in 1912, but accepted invitations to conduct the festivals of 1923, 1925, and 1927.

**VARE, WILLIAM S.** See UNITED STATES, under Congress

**VASSAR COLLEGE.** A nonsectarian institution for the higher education of women in Poughkeepsie, N. Y., founded in 1861. The enrollment for the autumn of 1929 was 1157. The endowment, including fellowships and scholarships, amounted to \$7,195,611, the income from funds was \$389,575 (gifts received during 1928-29 were in excess of \$400,000). There were 161,500 volumes in the library. President, Henry Noble MacCracken, Ph D., LL D., LL D.

**VATICAN.** See ROMAN CATHOLIC CHURCH

**VATICAN CITY.** A sovereign state, officially known as the State of Vatican City, established within the city of Rome as the seat of the Papacy under the terms of the political treaty signed between the Italian government and the Vatican on Feb. 11, 1929, and ratified by the Italian Parliament in May. Vatican City came into existence June 10 with the exchange of ratifications. Ruler, Pope Pius XI (Achille Ratti).

Vatican City has an area of 108.7 acres. It embraces St. Peter's Church and Piazza, the Vatican with its administrative buildings, gardens, and observatory, and adjoining territory mostly

in the rear of these establishments. A census in 1929 showed 518 legal subjects, including 389 Italians, 118 Swiss (100 of whom were members of the Swiss Guard), and 11 Frenchmen. Citizens include all those having permanent residence there and the cardinals residing in Rome.

Under the Lateran Treaty, the State of Vatican City exercises all the prerogatives of a sovereign state, Vatican City high officials and cardinals are granted diplomatic immunity and the inviolability of the Pope is enforced by the Italian government. With the exception of St. Peter's Piazza, Vatican City is policed by the Pontifical Gendarmine Corps of 120 members. The Swiss Guard, of 100, and two volunteer corps, the Noble Guard and the Palatine Guard, bring the total force of the Papal army to 598 men and officers. The acquisition or sale of goods or foodstuffs within Vatican City boundaries is a state monopoly and duties are imposed on goods imported and exported.

FINANCE. Treasury officials estimate that the expenditures of the State of Vatican City slightly exceed those of the Vatican under its former status. With the interest from the indemnity of 750,000,000 lire cash and 1,000,000,000 lire in Italian 5 per cent bonds paid by the Italian government in accordance with the Lateran settlement, surpluses from the Vatican City financial operations were expected to be even greater than before.

In 1928 the Vatican received an income of \$13,500,000 from "Peter's pence," fiscal dues, private offerings, and other sources. Since 1917 the average ordinary expenditures have not exceeded \$1,400,000 (7,000,000 lire) annually, dispensed (in lire) chiefly as follows:

Entertainment of cardinals and diplomats	500,000
Administration of Vatican, Lateran palaces, and Villa Castel Gandolfo	2,500,000
Charities and school subsidies	1,500,000
Present and extraordinary aid	1,500,000
Miscellaneous	1,000,000

The greatest expense is incurred in connection with the maintenance of the Swiss Guard and the gendarmine. There is no public or state debt.

COMMUNICATIONS. The Vatican City has direct telegraphic, telephonic, and wireless communication with the other states of the world and also contains a railway station and a track 600 meters long connecting with the Italian State Railways. Separate coinage and postal systems are maintained.

GOVERNMENT. Under the fundamental law, which became effective June 10, 1928, all executive, legislative, and judicial powers are vested in "the Supreme Pontiff as Sovereign of the State of Vatican City." Some of the Pope's powers are delegated to the Governor of Vatican City, the Papal Secretary of State, and others. An appointive court tries all civil cases in accordance with a legal system based on canon law and pontifical constitutions and rules. Cases may be appealed to the sacred tribunal of the Rota, and, as a final judicial resort, to the Supreme Tribunal Segnatura. The chief officials of Vatican City in 1929 were Commendatore Serafini, the Governor, who was assisted by a treasurer and secretary-general, Prof. Francesco Pacelli, General Councillor, Monsignor Pizzardi, Secretary of the Congregation of Extraordinary Ecclesiastical Affairs, and Monsignor Antonio Sabatucci, Auditor General of Apostolic Rev-

enues Other officials of the Roman Curia previous to the Lateran settlement, including Cardinal Gasparri, Secretary of State, retained their posts under the new government at the end of the year

**HISTORY** The State of Vatican City concluded with Prussia on June 14, 1929, its first treaty with a foreign state other than Italy On June 25, 1929, the Pope as sovereign of Vatican City, received the credentials of the Italian Ambassador, Senator Cesare Maria de Vecchi, the first diplomat accredited to the new state The first arrest was that of a Norwegian woman, who was charged with attempting to shoot one of the canons of St Peter's, Archbishop John Smit, on Nov 25, 1929 The papal court declared her to be the victim of a mental infirmity and released her without trial for deportation by the Vatican civil authorities On December 20, Pope Pius entered Italian territory for the first time as pontiff, making an unannounced pilgrimage to the basilica of St John Lateran, the cathedral church of the Diocese of Rome, where he celebrated Mass

One of the first controversies involving the new state arose when the authorities of the British Crown Colony of Malta refused to issue a passport to a monk ordered to Sicily by the Italian superior of his monastery, on the ground that he was a British subject who was being sent away against his wishes and for political reasons

The *Osservatore Romano*, official organ of the Vatican, transferred its offices to quarters within the Vatican City on November 4, thus eliminating the possibility of censorship by the Italian government Extensive alterations and improvements on Vatican City property were inaugurated during the year See ITALY and MALTA, under *History*, and ROMAN CATHOLIC CHURCH

**VAUGHAN, VICTOR CLARENCE** An American physician and educator, died Nov 21, 1929, in Richmond, Va He was born in Mt Airy, Mo, Oct 27, 1871, and was graduated from Mount Pleasant College in 1872, receiving the Ph D degree from the University of Michigan in 1876 and that of M D in 1878 From 1875 to 1883, he was chemistry laboratory assistant at the University of Michigan, lecturer in medical chemistry in 1879-80, assistant professor, 1880-83, professor of physiological and pathological chemistry and associate professor of therapeutics and materia medica during 1883-87, professor of hygiene and physiological chemistry and director of the hygienic laboratory from 1887 to 1909, and dean of the department of medicine and surgery from 1901 to 1921 He became chairman of the division of medical sciences of the National Research Council and a member of the Typhoid Commission From 1915 to 1923, Dr Vaughan was managing editor of the *Journal of Laboratory and Clinical Medicine*

**VEBLÉN, veb'lén, THORSTEIN BUNDE** An American economist, died Aug 3, 1929, in Palo Alto, Calif Born in 1857, he was graduated in 1880 from Carleton College, receiving the Ph D degree from Yale University in 1884 In 1891-92 he was a fellow in economics and finance at Cornell University and at the University of Chicago in 1892-93 He became a reader in political economy at the University of Chicago in 1893, an associate in 1894, an instructor in 1896, and assistant professor in 1900 During 1906-09 he was associate professor of economy at Leland Stanford University and, from 1911 to 1918,

lectured in economics at the University of Missouri In 1918 Dr Veblen became a teacher in the New School of Social Research in New York, from which he retired in 1927 to devote his entire time to writing From 1896 to 1905, he was managing editor of the *Journal of Political Economy* He was the author of *The Theory of the Leisure Class* (1899, new ed, 1912), *The Theory of Business Enterprise* (1904), *The Instinct of Workmanship* (1914), *Imperial Germany and the Industrial Revolution* (1915), *An Inquiry into the Nature of Peace and the Terms of Its Perpetuation* (1917), *The Higher Learning in America* (1918), *The Vested Interests* (1919), *The Place of Science in Modern Civilization and Other Papers* (1920), *The Engineer and the Price System* (1921), *Absentee Ownership and Business Enterprise in Recent Times* (1923) He translated *The Lazzarini Saga* (1925)

**VEGETABLES** See HORTICULTURE

**VEHICLES, VEHICLE CODES** See AUTOMOBILES

**VENEZUELA, ven'e-zwá'la, Sp pron, va' nã-thwá'la or im'e-Sp pron, ven'ã-wá'la** A republic on the northern coast of South America, bordering on the Caribbean Sea and lying between Colombia on the west, Brazil on the south, and British Guiana on the east Capital, Caracas

**AREA and POPULATION** Venezuela has an area of 393,874 square miles, population, according to the census of December, 1926, 3,026,878, as compared with 2,411,952 in 1920, estimated in 1928, 3,116,000 The population of Caracas in 1926 was 135,253, and of other large cities Maracaibo, 74,767, Valencia, 36,804, Barquisimeto, 23,109, and San Cristobal, 15,295

**EDUCATION** School registration in the various types of schools in 1928 was as follows: Government primary, 76,639, private, 14,827, state, 9938, municipal, 9098, secondary, 419, special, 1415, higher education institutions, 837

**PRODUCTION** Venezuela is primarily an agricultural country, despite its development in recent years to second rank in the list of petroleum producers Coffee and cacao are the chief crops in the agricultural zone, and sugar cane, tobacco, corn, beans, and chicle are other leading products

Petroleum production in 1929 was reported at 124,000,000 barrels, or 15,000,000 barrels more than in 1928 Venezuela rose to second place in the ranks of petroleum-producing countries in 1928, when the output increased 68 per cent over 1927 Exports in 1928 totaled 97,000,000 barrels, as compared with 61,900,000 in the previous year, the bulk of the exports going to Curaçao and Aruba for refining Gold, asphalt, and copper also are produced, the gold output in 1928 totaling 48,245 troy ounces and asphalt, 48,749 metric tons Petroleum refining is the only large-scale factory industry

**COMMERCE** The volume of foreign trade in 1928 increased to \$198,050,323, or 27 per cent more than the previous year's total of \$155,880,839 The 1928 imports, totaling \$80,406,215, represented a 14.58 per cent increase, and the exports (\$117,644,108), a 37.25 per cent increase over 1927 The principal sources of Venezuelan imports in 1928 were the United States, \$46,188,316, the United Kingdom, \$9,349,397, Germany, \$6,530,482, and France, \$1,370,081 Venezuelan exports went chiefly to the United States, \$32,703,320, Germany, \$4,449,571, France, \$2,403,085; and the United Kingdom, \$2,159,530 Im-

ports from the United States showed a further increase in 1920, while exports to that country were also higher, due principally to an increase of \$10,000,000 in petroleum shipments over 1928.

**FINANCE** The budget for the fiscal year ending June 30, 1930, estimated revenues at 193,189,750 bolivars (\$37,280,000) and expenditures at 192,450,000 bolivars (\$37,143,000). The budget estimates for the previous year balanced at 195,450,000 bolivars, but actual revenues considerably exceeded the estimate, totaling 219,920,087. Expenditures for the fiscal year 1928-29 were not available, but for the calendar year 1928 expenditures amounted to 224,867,000 bolivars, as against receipts of 204,348,000. The receipts were 29,322,000 bolivars greater than in 1927. The increased expenditures in 1928-29 were due to the inclusion in the budget of 30,000,000 bolivars for financing two governmental banks, and to considerably increased debt retirement and public works appropriations. The Treasury balance was consequently reduced from 91,485,000 bolivars on Jan. 1, 1928, to 70,904,000 on the same date in the following year. The public debt on July 23, 1929, totaled 64,482,005 bolivars, of which 28,733,884 represented the domestic and 64,482,720 the foreign debt. The cancellation made in London in June, 1929, on the 3 per cent diplomatic debt of Venezuela, 1905 issue, is not calculated in the above figure for the foreign debt. The bolivar has a par value of \$0.1930.

**COMMUNICATIONS** In 1928 there were 660 miles of railway line, for the most part privately owned, which carried 2,285,000 passengers and 451,000 tons of freight. Gross receipts totaled 19,507,255 bolivars (\$3,762,000) and expenditures 14,424,320 bolivars. About \$4,800,000 was spent on highway construction during 1928-29. There are 11,160 miles of navigable rivers and waterways. In 1927, 1009 vessels of 2,742,000 net registered tons entered Venezuelan ports and 5562 vessels of 6,574,000 tons cleared. Outward shipments of petroleum accounted for the large excess of clearances.

**GOVERNMENT** According to the constitution of July 1, 1925, the executive power is vested in the President, who acts through a responsible ministry, and who is elected by Congress for seven years and the legislative power is vested in the Congress, consisting of the Senate and the Chamber of Deputies. President at the beginning of 1929, General Juan Vicente Gómez (elected May 3, 1922, for the period 1922-1929).

**HISTORY** The history of Venezuela in 1929 was marked by the termination by Gen. Juan Vicente Gómez of his twenty-year rule as President of the Republic. General Gómez declared himself President on Dec. 19, 1908, after he had been left in control of the country as provisional President by Cipriano Castro, who had gone to Europe to undergo an operation. Consolidating his position as virtual dictator, he was successively reelected to the Presidency, the last time in 1922 for the term ending June 25, 1929. Reelected by Congress in April, he refused the post and on May 30 Congress elected Dr. Juan Bautista Pérez, Chief Justice of the High Court of Cassation, to succeed him. Dr. Pérez had been named provisional President by Gómez on April 18 and his election was assured by the retiring President's support of his candidacy. Gómez retained his power, however, by accepting the post of commander-in-chief of the army. The constitution was amended to make the office of

commander-in-chief a constitutional one to be filled by Congress at the same time and for the same term as the Presidency. The office was invested with drastic powers. The incumbent was made head of all armed forces, with authority to fix the strength of each branch, and he was given joint authority with the President to appoint and remove cabinet ministers, declare war, convolve Congress in special session, suspend civil rights, and exercise powers in war or rebellion.

Despite these developments, there was no discontinuance of revolutionary activities directed against the Gómez régime. A number of revolutionary leaders made determined efforts to bring about a general uprising, but the populace appeared indifferent or hostile to such efforts, and each attack was repulsed by government troops, the leaders being either killed, captured, or put to flight.

Student demonstrations in Caracas against the Gómez régime resulted in the incarceration of a number estimated at from 100 to 500 in Puerto Cabello prison. After spending several months in prison, they were released on November 19 under peace bonds signed by their parents. Revolutionists under Gen. Rafael Urbina engaged in an adventure reminiscent of the filibusterers of an earlier day when on June 8 they seized Willemstad, capital of the Dutch island of Curaçao, off the coast of Venezuela, captured the governor and other Dutch officials, seized the American vessel *Maracabo*, and compelled the captain to land them at La Vela on the Venezuelan coast. They then attacked Coro, capital of the Province of Falcón, but were repulsed. Gen. José Rafael Galimdon, who led another insurrection in south-west Venezuela, was captured on June 24. In August a group of revolutionists under General Delgado Chabaud and Rafael María Carabano landed from the German steamer *Falk*, which they were said to have chartered, and attacked Cumana. They were defeated by forces under Gen. Emilio Fernández, Governor of Sucre, who was killed in the battle. With his control unshaken by these various efforts, Gómez on December 19 witnessed the celebration of the twenty-first anniversary of his ascendancy to power. Shortly afterward the 70-year-old dictator was reported to be seriously ill and some uneasiness was evidenced by the business element and foreigners with investments in the country, who feared that Venezuela might again plunge into the anarchy and disorder from which Gómez rescued it, once his control came to an end. The 100th anniversary of independence from Colombia was celebrated December 17. See EARTHQUAKES and CURAÇAO.

**VERMONT. POPULATION** According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 352,428. No later estimate had been prepared. The capital is Montpelier.

**AGRICULTURE** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod. Bu.	Value
Hay	1929	927,000	1,542,000 *	\$16,919,000
	1928	927,000	1,487,000 *	17,304,000
Potatoes	1929	19,000	2,850,000	4,275,000
	1928	21,000	2,982,000	2,535,000
Corn	1929	88,000	3,608,000	1,788,000
	1928	80,000	3,520,000	3,872,000
Oats	1929	74,000	2,738,000	1,780,000
	1928	79,000	2,686,000	1,880,000

\* Tons.

**MINERAL PRODUCTION** The total value of the mineral products of the State fell slightly to \$14,702,891 for 1927, from \$14,955,181 for 1926. The production of stone was 321,970 short tons, valued at \$9,216,116 for 1927, as against 330,230 tons, valued at \$9,244,465 for 1926. The value of the slate produced was \$4,108,911 for 1927 and \$4,267,041 for 1926, it fell farther to \$3,981,928 for 1928.

**FINANCE** State expenditures in the year ended June 30, 1928, as reported by the United States Department of Commerce, were for maintaining and operating governmental departments, \$6,365,784 (of which \$527,479 was for local education), for interest on debt, \$63,277, for improvements, \$2,998,807, total, \$9,427,868 (of which \$5,345,505 was for highways, \$2,710,534 being for maintenance and \$2,628,971 for construction). Revenues were \$9,085,727. Of these, property and special taxes furnished 36.4 per cent, departmental earnings and compensation to the State for officers' services, 5.2, sale of licenses, 43.6 (including gasoline taxation of \$971,983). The funded State debt, \$6,701,532 outstanding and net, included \$5,000,000 of flood bonds issued subsequent to the disastrous floods of November, 1927. On a property valuation of \$321,485,115, State taxes of \$1,174,203 were levied in the fiscal year.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 1034.15. There was no reported construction of additional line in 1929.

**MANUFACTURES** According to the biennial Census of Manufactures published by the U. S. Department of Commerce in 1929, there were in the State, in 1927, 880 manufacturing establishments. These employed 26,241 wage earners, whose wages for the year totaled \$32,303,433. Materials and supplies used in manufacture were of the total cost of \$69,977,432. The manufactured products combined attained the total value of \$134,029,978.

**EDUCATION** Authorities of the State estimated the number of persons of school age, i. e. between the ages of 6 and 18 years, inclusive, in the State in the academic year 1928-29, was 77,000. There were enrolled in the public schools in that year 65,464 pupils, of these, 54,192 were in the elementary, and 11,272 in the high-school, grades. The expenditures of the year ending June 30, 1929, for public-school education amounted to the sum of \$5,158,434.

**CHARITIES AND CORRECTIONS** The direct supervision of the State institutions for the care or custody of persons is one of the functions of the Department of Public Welfare.

**LEGISLATION** The regular biennial session of the State Legislature met in January and adjourned on March 15. Its chief matters of consideration were the extension of State appropriations for road construction and the meeting of charges on the bonds issued to pay the cost of repairing damage done by the flood of 1927. Appropriations for highway construction were increased by about \$1,000,000 a year. The appropriations were to include not only road maintenance expenses and cooperation in the towns' road improvements but also the construction of hard-surfaced roads at the rate of not over 65 miles a year. In order to provide for the payment of principal and interest on the flood bonds, an increase from 4 to 5 cents a gallon was made in the State sales tax on gasoline, as well as an

increase in the direct tax, and a poll tax of \$2.50 was laid.

A bill to place an income tax was defeated. Authority was granted to municipalities to own and operate airports, and a code to govern air traffic was enacted. The "blue-sky" law regulating the sale of investment securities was extensively revised. It was made possible for power interests to erect dams with the cooperation of the State Public Service Commission where these might serve a purpose of flood control.

**POLITICAL AND OTHER EVENTS** The Central Vermont Railway, one of the chief railroad lines of the State, was auctioned at a receiver's sale on July 29. It was purchased through representatives by the Canadian National Railway for \$22,000,000. The auctioned railroad had been in receiver's hands since Dec. 12, 1927, immediately after the disastrous Vermont floods. The Champlain Bridge, connecting Vermont and New York State by a highway communication across Lake Champlain, was opened on August 26. It extends from Crown Point, N. Y., to Chimney Point, Vt., cost about \$1,000,000, and was built by a commission of the two States. It was to be operated as a toll bridge until its cost had been met from the proceeds, and was then to be opened for the free use of the public.

**OFFICERS** Governor, John E. Weeks, Lieutenant-Governor, Stanley C. Wilson, Secretary of State, Lawson C. Myrick, Treasurer, Thomas H. Cave, Auditor, Benjamin Gates, Attorney-General, J. Ward Carver, Commissioner of Education, C. H. Dempsey.

**JUDICIARY** Supreme Court Chief Justice, George M. Powers, Associate Justices, Leighton P. Slack, Sherman R. Moulton, Harrie B. Chase, Frank D. Thompson.

**VERMONT, UNIVERSITY OF** An endowed institution of higher education in Burlington, Vt., receiving some State aid, founded by Ira Allen in 1791. The 1929 autumn enrollment was 1210, of whom 695 were men and 515, women. The faculty numbered 195. The endowment amounted to \$2,000,000 and the income for the year was \$650,000. The library contained 135,000 volumes. President, Guy W. Bailey, LL.D.

**VESSELS, NAVAL** Since the earliest days of fighting ships, the general tendency in the design of naval vessels has been toward an increase in size and speed and recent developments are following the same lines except as regards capital ships (battleships and battle cruisers) and aircraft carriers of which the tonnage was limited by the terms of the Washington Naval Conference. Increase in size has been a persistent tendency because it permits an increase in offensive power, defensive power, and speed. But there are arising, from time to time, limiting factors aside from naval conferences. The apparent trends of naval thought as regards new designs is evinced in the following notes concerning existing and proposed types of war vessels.

**AIRCRAFT CARRIER** The largest ships of this type in 1929 were the U. S. naval carriers *Saratoga* and *Lexington*. They are regarded as suitable for accompanying the battle fleet but smaller carriers are also needed for this and other services. The smaller ships are, moreover, much less expensive to operate either in peace or war.

**BATTLESHIPS** No new battleships were under construction, but if the naval Conference for the Limitation of Armaments, which was to meet in January, 1930, did not extend the limitations

imposed in the Washington Conference, the laying down of new battleships would commence in 1931.

**CRUISERS, ARMORED** The old type of armored cruiser has disappeared, but new types were under consideration. The advent of the German armored ship *Admiral Scheer* (see following note) caused some changes in naval thought.

**CRUISERS, BATTLE** Cruisers of this type were subject to the same treaty limitations as battleships. But vessels of 10,000 tons or less were not battle cruisers under the definition given in the Washington Pact. The German ship *Admiral Scheer* (which is fully described in the article on *NAVAL PROGRESS Germany*), though of 10,000 tons only, was otherwise of the battle cruiser type because she carries very heavy guns, has more than ordinary battleship speed, and has much more armor than a light cruiser.

**CRUISERS, LIGHT** The various designs of 10,000-ton cruisers that had appeared since 1922, when cruiser tonnage was thus limited and cruiser guns restricted to calibres of 8 inches or less, had not shown any very great differences. The guns are of 8 inches, 8 to 10 in number. The speed has varied from 31.5 to 35 knots, the slower ships being given somewhat more protection. Considerable talk was heard of reducing the speed to about 28 knots for some 10,000-tonners and adding materially to their protection. Nothing in this direction was likely to take place until after the 1930 Naval Conference.

**DESTROYERS** The size of destroyers in the British, French, Italian, and Japanese navies had greatly increased in recent years. The United States had laid down no vessels of this class since the World War and her existing boats were 300 tons smaller than French torpedo boats and less than half the size of French destroyers. This was to some extent a question of nomenclature for the new French torpedo boats (*torpilleurs d'escadre*) were of about the same size (1500 tons) as destroyers (*contre-torpilleurs*—2700 tons), were much larger than the destroyer leaders in any other navy and approached the dimensions of small light cruisers.

**DESTROYER LEADER.** Another name for a flotilla leader, or very large destroyer, which is used as the flag boat of a group of destroyers. As a more definite term than flotilla leader, it is coming into general favor, particularly in the United States Navy. Destroyer leaders of 1929 had a tonnage of 1600 to 2700 depending upon the size of the destroyer of their groups. In the French Navy, the destroyer leaders were called destroyers, but they are 600 to 900 tons larger than the destroyer leaders of other navies.

**FLOTILLA LEADER** See *Destroyer Leader*.

**SUBMARINE** Submarines of recent design are of five general types: (a) coast and harbor defense—300 to 750 tons; (b) cruising—900 to 2500 tons; (c) fleet, designed to accompany the battle fleet—2000 to 3000 tons; (d) submarine cruisers—3000 tons or more; (e) mine-laying—all sizes. The largest submarine built or building at the end of 1929 was the submarine cruiser *Surcouf*, under construction for the French Navy. Its displacement on the surface is 3250 tons; when submerged, considerably over 4000 tons. The next submarine in size was the U. S. mine-laying fleet submarine *V-4* which has displacements of 2680 and 4080 tons (surface and submerged).

**SUBMARINE SALVAGE AND RESCUE VESSELS** Recent accidents to U. S. and other naval sub-

marines caused the alteration of certain vessels to adapt them to the salvage of submarines and the rescue of their crews. One of this type is stationed at a point which is as near as practicable to the centre of each field of submarine activity. See *NAVAL PROGRESS*, under *United States and Japan*.

**VESTRIS, WRECK OF** See *SAFETY AT SEA*.

**VETERANS BUREAU.** See *UNITED STATES VETERINARY MEDICINE*. The year saw continued progress in the control and eradication of several of the more important diseases and parasites of livestock. It was marked by the early detection of an outbreak of foot and mouth disease and its eradication and the release of the affected area from quarantine in 60 days. An outbreak of European fowl pest on farms in Morris Co., N. J., discovered in June was eradicated within a period of two weeks through destruction of all diseased and exposed birds on the infected farms.

Several leaders in the profession passed from the stage, including Maj.-Gen. Sir Frederick Smith, London, best known for his textbooks on veterinary physiology and veterinary hygiene, on July 27, 1929, at the age of 72; Dr. M. H. Reynolds, of the Minnesota Experiment Station, on Jan. 15, 1928, at the age of 63; and Dr. R. R. Dinwiddie, of the Arkansas Experiment Station, on Aug. 3, 1929, at the age of 60, both of whom were authors of numerous publications.

There was some progress in the field of education, the entering class in veterinary schools of 352 representing an increase of 30 over that of the preceding year. The number of accredited veterinary colleges continued at 12 and the foreign recognized veterinary institutions were 10 in number. The sixty-sixth annual meeting of the American Veterinary Medical Association was held at Detroit August 13 to 16, at which Dr. T. H. Ferguson of Wisconsin was elected president and Dr. M. Jacobs of Tennessee, treasurer. At the annual meeting of the United States Live Stock Sanitary Association, held at Chicago December 4 to 6, Dr. A. E. Wight of Washington, D. C., was elected president.

**FOOT AND MOUTH DISEASE.** An outbreak of foot and mouth disease, the ninth to occur in the United States, was discovered on January 16 in a herd of 3500 hogs on a garbage feeding ranch near Whittier in Los Angeles Co., Calif. The disease was definitely diagnosed on January 17 and the entire herd was slaughtered on January 19. The infection appeared to have been introduced in garbage from a ship that had been provisioned at a foreign port. It appeared later in the month among cattle near Downey about 8 miles from Whittier. The animals affected or exposed included 3291 head of swine, 277 head of cattle, and 23 goats with an appraised value of \$107,539. The quarantine was removed from the limited affected area on March 18.

The outbreak was of the shortest duration and involved the smallest number of premises and animals of any of the outbreaks that had occurred in the United States. It was the third to be traced to infected meat from countries where the disease existed.

**INFECTIOUS ABORTION AND UNDULANT FEVER.** With the increased suppression of tuberculosis in livestock, infectious abortion had become the greatest plague affecting the American cattle industry. As pointed out by the Secretary of Agriculture in his annual report for 1929, it was

taking an annual toll from both beef and dairy herds estimated at fully \$50,000,000 and also affected swine. The disease had been successfully combated in a number of States by a system of isolation. The Delaware Experiment Station reported the successful outcome in herds in which a system of segregation of the positive and negative reactors at calving time only was practiced, as well as the system of complete segregation.

The number of reported cases of undulant fever in man continued to increase with the more general recognition of the disease through serological surveys made by applying the agglutination test for *Brucella abortus*, the causative organism, to all typhoid and lues serums received by many State and city health departments. It was pointed out by the U. S. Public Health Service that the disease may be confused with many others including typhoid and paratyphoid fevers, tuberculosis, rheumatism, malaria, influenza, focal infections, sinusitis, appendicitis, and tularemia. The three strains of the causative organism were differentiated by their behavior toward dyes and raised by Huddleson to the rank of species, the name *Brucella melitensis* being applied to the goat type, *Br. bovis* to the cow type, and *Br. suis* to the pig type. The use of these names will avoid some confusion although they do not necessarily denote the source of the organisms.

It appears that cattle may be infected with all three types, but there was no record of swine being infected naturally with the bovine or caprine type. The more recent work suggests that the porcine type is much more virulent for man than is the bovine. Huddleson has found that, in monkeys, the porcine type is the most highly pathogenic, the caprine type is next, and the bovine type the least pathogenic of the three. It was not easy to infect monkeys with the bovine type, but when so infected and subsequently recovered, the animals were immune to all three types.

The disease may be contracted by contact with infected animals, as well as through the consumption of infected milk, the former probably is a greater source of infection. This is indicated by the fact that the prevalence of undulant fever among packing-house employees is 25 to 30 times as great as that among raw-milk consumers. Even in the rural population, largely consumers of raw milk, it appears to be an occupational disease, since nine times as many men as women in rural sections have contracted the disease.

**LIVERPOOL TUBERCULOSIS ERADICATION.** Substantial progress was made in the work of eradicating tuberculosis of livestock, which had been under way since 1916. More cattle—nearly a million a month—were tested during the fiscal year ended June 30, with a grand total of 11,665,000 head. The degree of infection found had been reduced in eight years from 3.9 per cent to 1.8 per cent, or more than 50 per cent since the systematic eradication began. The States of North Carolina and Maine were designated as modified accredited areas or areas in which tuberculosis infection in cattle had been reduced to less than one-half of 1 per cent. Some 740 counties had attained the designation of modified accredited areas and the work progressed in about 460 other counties in all of the United States.

The Federal indemnity was increased to permit a maximum of \$70 instead of \$50 for pure-

bred cattle and a maximum of \$35, instead of \$25, for grade cattle, as heretofore. At the close of the calendar year, 178,368 herds containing 2,409,049 heads were listed as fully accredited. Twenty States reported more than 50 per cent of their cattle population as under supervision.

**TEXAS FEVER AND CATTLE-TICK ERADICATION.** The work of the fiscal year ended June 30 led to the release from Federal quarantine of three counties in Alabama, one and the remainder of a second county in Arkansas, eight counties in Florida adjacent to the Georgia State line, two parishes and part of a third in Louisiana, one county and the remainder of three counties in Oklahoma, and eight counties in Texas. On December 1, additional territory representing 15 counties in the four States of Florida, Alabama, Mississippi, and Texas, amounting to 10,358 square miles, were released from the Federal quarantine on account of the cattle tick and one parish in Louisiana was quarantined at the same time. The release of the territory in Oklahoma and Alabama resulted in the removal of the quarantine from all of the restricted areas in these States. Of the 985 counties and parishes quarantined for the cattle tick on July 1, 1906, 787 had been released and but 198 remained under supervision on June 30, 1929.

**DOUBINE ERADICATION.** The eradication work with dourine in the horse was continued in a section of western Montana, where eleven head were found infected, and on the Indian reservations in Arizona and Nevada, the only areas where it was known to exist in the United States. The blood of 9781 animals was tested of which 156, or 1.06 per cent, reacted positively. It was thought that the work on the Indian reservations had resulted in the eradication of the disease there.

**SCABIES ERADICATION.** There was an increase of 8 per cent over the preceding year in the number of sheep found infected with scabies, or 732,937 head. The increase was considerable on the Indian reservations in Arizona, where the climatic and range conditions were unfavorable for eradication work. There was a decrease of approximately 34 per cent from the preceding year in the number of cattle found to be infected with cattle scabies, or a total of 99,003.

**HOG CHOLERA CONTROL.** The occurrence of hog cholera up to June was about the same as in 1928, when the year's losses were comparatively small. The control work conducted under the Federal appropriation included demonstrations of the proper use of anti-hog-cholera serum and hog-cholera virus in protecting herds against the disease and meetings for the giving of instruction. The number of outbreaks reported during the year was 7029.

**ANAPLASMOSIS.** It was found in California that calves born of dams that had apparently recovered from anaplasmosis did not carry the causative organism. Their blood animals recovered from anaplasmosis proved to be carriers of the organism in their blood for as long as two years and two months. Brumpt found the causative organism of this origin in the blood of a cow six years and eight months after the animal had been inoculated.

**FOWL POX.** The loss suffered by the poultry industry due to fowl pox led to an increased activity aimed at protection through vaccination. It was found, as the result of work in several States, that cutaneous vaccination through scarification of the skin or by plucking several

feathers would give a strong immunity in healthy pullets when applied while they were still on the range and before coming into production and with their combs still undeveloped. In Oregon, 80,000 birds had been successfully vaccinated by the State Experiment Station at the close of the three years ended in 1928.

**B W D. OR PULLORUM DISEASE OF THE FOWL.** The active and careful work with this important disease . . . continued unabated, particular attention being given to means of detection. A rapid method for testing for infection in the field was reported by Bunyea, Hall, and Dorset. The slide and tube tests for the infection were found by two State experiment stations to be in agreement in a high percentage of the tests conducted. It was found that much so-called brooder pneumonia was due to the development of *Salmonella pullorum* in the lung tissue and that, when it is present, chicks may die without any symptom of diarrhea. Respiration appears to be a more common means of infection in the hatchery than previously suspected.

**INFECTIOUS BRONCHITIS OF THE FOWL.** This disease, which first appeared in Canada and is also known as Canada fowl flu, has rapidly increased in importance and become the source of serious losses from coast to coast. Heavy losses resulted from its outbreak in Washington State, in California, in New Jersey, and elsewhere, particularly in chicks ranging from one to two months of age.

**VACCINES.** It was found that a hemorrhagic septicemia aggression, a germ-free sterile product that has been prepared, protects against shipping fever. This was being manufactured under commercial conditions and was proving to be efficacious in practice.

**PARASITES AND PARASITICIDES.** The microscopic tapeworm of the fowl had increased in abundance in Washington and threatened to become a serious pest of poultry in the western part of the State. Tetrachlorethylene was found effective against most of the common internal nematode parasites of sheep. Used in single doses of 5 cc it was approximately 100 per cent effective against the stomach worm. It was found by the Kansas Experiment Station that carbon tetrachloride administered to chickens would remove all roundworms (*Ascaridia lineata*), with scarcely any ill effect upon the chickens. See TURKEYS.

**VICTORIA.** A state of the Australian Commonwealth, situated in the southeastern part of the island continent. Area, 87,884 square miles, population, according to the census of 1921, 1,531,280, estimated June 30, 1929, 1,767,539. Capital, Melbourne, with an estimated population, including suburbs, on Dec. 31, 1928, of 1,000,000. Other cities were Ballarat, Geelong, and Bendigo.

The wheat crop in 1928-29 totaled 46,818,833 bushels from 3,718,904 acres, as compared with 26,160,814 bushels from 3,064,172 acres in 1927-28. The production of wool (as in the grease) in 1928 was 148,603,795 pounds. The value of all minerals produced in 1928 was £1,008,691, including coal (£933,408) and gold (£144,068). In 1927-28, 8245 factories employed 160,357 workers.

Preliminary figures for 1928-29 placed the value of direct overseas imports at £40,000,880 and of direct overseas exports at £39,437,225, as compared with imports of £47,911,131 and exports of £31,728,558 in 1927-28. For the fiscal year ending June 30, 1928, revenues totaled £27,357,917 and expenditures £27,521,270. The net

public debt on June 30, 1928, amounted to £151,213,453.

The executive power is vested in a governor, acting through a responsible ministry, and the legislative power in a Parliament of two Houses. The Governor in 1929 was Lieut.-Col. Lord Arthur H. T. Somers, Premier and Treasurer, Sir W. W. McPherson. The Nationalist ministry headed by Premier McPherson fell on Dec. 11, 1929, when the small Country Progressive party, which held the balance of power following elections earlier in the month, threw its support to the Labor party. A Labor cabinet was then formed under Edmund Hogan, former Labor Premier.

**VILJOEN,** Viljoen, W. J. A South African educator, died July 20, 1929, in Cape Town, South Africa, where he was born Oct. 5, 1869. He was educated at the Normal School and the South African College in Cape Town and at Victoria College in Stellenbosch. He also studied at the universities of Amsterdam, Leiden, and Strasbourg, and received from Oxford University the degree of D.C.L. In 1894 he became professor of modern languages at Victoria College and in 1897 a member of the Council at Cape University. After 1918 he was Superintendent-General of Education in the Province of the Cape of Good Hope.

**VIOLINISTS.** See MUSIC.

**VIRGINIA.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,309,187. The estimated population on July 1, 1928, was 2,575,000. The capital is Richmond.

**AGRICULTURE.** The following table gives the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Corn	1929	1,522,000	44,118,000	\$44,138,000
	1928	1,626,000	44,715,000	44,715,000
Hay	1929	1,058,000	1,400,000	21,628,000
	1928	1,084,000	1,479,000	22,722,000
Tobacco	1929	170,000	118,120,000	20,706,000
	1928	180,800	104,864,000	16,778,000
Potatoes	1929	132,000	17,461,000	21,826,000
	1928	151,000	21,618,000	10,809,000
Sweet potatoes	1929	45,000	6,703,000	6,011,000
	1928	44,000	6,136,000	4,435,000
Wheat	1929	700,000	8,960,000	11,200,000
	1928	671,000	9,758,000	11,173,000
Apples	1929		13,000,000	14,300,000
	1928		16,100,000	11,685,000
Peanuts	1929	160,000	149,732,000	5,840,000
	1928	152,000	144,768,000	6,804,000
Cotton	1929	88,000	40,000	3,910,000
	1928	79,000	44,000	4,004,000
Oats	1929	167,000	3,841,000	2,571,000
	1928	182,000	4,641,000	2,970,000

\* Tons    † Pounds    ‡ Bales

**MINERAL PRODUCTION.** The coal production of the State again fell, to the quantity of 11,900,933 short tons for 1928, from the total, itself much reduced, of 12,910,042 tons for 1927, the yield had a value of \$20,375,000 for 1928 and \$23,203,000 for 1927.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 4508.62. There was no reported construction of additional line in 1929.

**MANUFACTURES.** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and relating to operations of 1927, there were in the State in 1927, 2432 manufacturing establishments. These

employed 114,918 wage earners, whose wages for the year totaled \$110,377,945. Materials and supplies used in production cost \$346,165,760. Manufactured products combined attained the value of \$671,346,808.

**EDUCATION** Both in the administrative branch and in the handling of finances, the public-school system of the State made progress in passing from district to county control. There were enrolled in the public schools, in the academic year 1928-29, 558,930 pupils. Of these, 484,576 were in elementary, and 74,354 in high-school, grades. Expenditures of the year for public-school education totaled \$25,125,401. The annual salaries of teachers averaged \$858.

**POLITICAL AND OTHER EVENTS** Dr. John Garland Pollard, the regular Democratic candidate, was elected governor on November 5. He defeated Dr. William Mosely Brown, candidate of the Republicans and of the anti-Smith wing of the Democratic party in the State, by a decisive majority of approximately 70,000. The campaign leading to this election was one of the most lively that the State had experienced in many years. The opposition to Pollard sought to hold the gains made against the regular State Democracy in 1928, when the Nativist, Fundamentalist, and Prohibitionist sentiments had defeated the Democratic candidate for President, Bishop James Cannon, Jr., leader of the Prohibition forces in the State, was active in reviving the anti-Smith sentiment, and raised the cry of "Haskinsism" against Pollard. To this, the regular Democratic organization responded in August by announcing that it would accept no campaign contributions from outside the State. Pollard had the support of the Byrd administration, and was helped by the voters' wish to register approval of the administration's record. This sentiment was enhanced by the fact that Brown in the latter part of his campaign directed his attack against administration policies, including the cost of the State's donation for the Blue Ridge National Park and the amount and cost of highway construction and maintenance. Under the short-ballot amendment adopted in June, 1928, no popular vote was cast for Commissioner of Agriculture, Superintendent of Public Instruction, or State Treasurer.

Early in the year, one of the oyster wars not infrequent in the Chesapeake estuaries occurred on the waters of the York River.

A Negro voter who had been excluded from a Democratic State primary obtained in a Federal Court on June 5 at Richmond a decision tending to invalidate the provision of the State primary law enabling the party to exclude Negroes. An ordinance of Richmond for the residential segregation of races was likewise the subject of an adverse ruling in a Federal District Court. Delay in raising some \$5,000,000 needed to complete the purchase of land for the Shenandoah National Park gave owners opportunity to strip much timber from lands intended for inclusion in the park.

**OFFICERS** Governor, Harry F. Byrd, Lieutenant-Governor, James E. West, Secretary of the Commonwealth, M. A. Hutchinson, State Treasurer, John M. Purcell, Auditor of Public Accounts, C. Lee Moore, Attorney-General, John R. Saunders, Superintendent of Public Instruction, Harris Hart, Commissioner of Agriculture, George W. Komer.

Judiciary: Supreme Court of Appeals: Presi-

dent, Robert R. Prentiss, Associate Justices, Louis E. Epps, Preston W. Campbell, R. H. L. Chichester, H. W. Holt.

**VIRGINIA**, UNIVERSITY OF. A nonsectarian institution of higher education in Charlottesville, Va., founded in 1819. The enrollment for the autumn term of 1929 was 2525. The faculty numbered 312. The productive endowment of the university amounted to \$10,000,000, the annual State appropriation was \$400,000, and the total annual income was \$1,741,352. There were 163,162 volumes in the library. President, Edwin Anderson Alderman, D.C.L., LL.D. See PUBLIC AFFAIRS, INSTITUTE OF.

**VIRGIN ISLANDS.** The name given by the United States Government to the former Danish West Indies, purchased by the American Government from Denmark by the treaty proclaimed Jan. 25, 1917, also a group of islands belonging to the British colony of the Leeward Islands. See LEeward ISLANDS. The Virgin Islands of the United States consist chiefly of the Islands of St. Thomas, St. Croix, and St. John, and have a total area of about 132 square miles, with a population at the census of Nov. 1, 1917, of 26,651, of which 80 per cent were Negroes, 13 per cent of mixed races, and 7 per cent whites. The estimated population in 1927 was 20,728. In 1926, St. Thomas, with an area of 28 square miles had 8826 inhabitants, St. Croix, 84 square miles, 11,118 inhabitants, and St. John, 20 square miles, 784 inhabitants. The government is under a governor appointed by the President of the United States. In 1927 American citizenship was granted to the natives. Governor in 1929, Captain Waldo Evans, U. S. N. (Ret.).

**VITACOLOR.** See PHOTOGRAPHY.

**VITAL STATISTICS.** The U. S. Bureau of the Census, in a bulletin dealing with births and deaths in 1928, gave a total of 1,378,675 deaths in the registration area in continental United States, corresponding to a death rate of 12.0 per 1000 population as compared with 11.4 in 1927. The death-registration area for the fiscal year ending June 30, 1929, comprised 45 States and 10 cities in nonregistration States with a total estimated population of 111,572,000, or 95.5 per cent of the population of continental United States. The birth-registration area, on the other hand, included 45 States with a total estimated population of 113,426,000, or 94.5 per cent of the population of continental United States. The number of births during 1928 totaled 2,062,760, the birth rate being 19.7 per 1000 population as compared with 20.6 for 1927. During the year Texas and New Mexico enacted satisfactory laws pertaining to birth and death registration, and Colorado and Nevada were added to the birth-registration area.

Increases in 1928 death rates (per 100,000 population) from those of the preceding year were from the following principal causes: Diseases of the heart (195.7 to 207.7), cerebral hemorrhage and softening (84.0 to 87.0), nephritis (92.5 to 95.0), diabetes mellitus (17.5 to 19.0), cancer (95.6 to 95.9), influenza (22.6 to 45.2), and pneumonia, all forms (80.5 to 98.0). The deaths from these causes numbered 741,739, which was considerably more than half the total number of deaths from all causes. Other increases in rates were for measles (4.1 to 5.4) and pellagra (5.0 to 6.1). The death rate from all accidental causes increased from 78.4 to 79.2, the individual types of accidents showing the greatest

increases being accidental drowning (6.7 to 7.1), and automobile accidents, excluding collisions with railroad trains and street cars (19.5 to 20.8); if deaths from these collisions were included, the total number of automobile accidents in 1928 would be 26,348 as compared with 23,312 in 1927. The death rates (per 100,000 population) for 1927 and 1928 were 23 and 24.

Among the decreases in rates from 1927 to 1928 were those from tuberculosis, all forms (80.8 to 79.2), congenital malformations and diseases of early infancy (67.7 to 65.6), whooping cough (6.9 to 5.4), diarrhea and enteritis, under 2 years (21.6 to 20.7), acute an-

terior poliomyelitis (1.9 to 1.2), typhoid and paratyphoid fever (5.5 to 4.9), and scarlet fever (3.3 to 1.9). The death rate from railroad accidents decreased from 6.4 to 5.9 and from mine accidents, from 3.5 to 2.3.

There also was a decrease in infant mortality, 10 States and the District of Columbia achieving a lower death rate in 1928 than in any year since admission to the birth-registration area. Oregon, which reported the lowest rate in 1927, broke its own record and again led the United States in 1928, with a rate of 47 deaths per 1000 live births. This was the lowest rate ever reported by any State in the birth-registration area. The rate for the birth-registration area as

DEATHS AND DEATH RATES IN THE UNITED STATES

\* Exclusive of Colorado, Georgia, Oklahoma, South Carolina, Massachusetts, and Utah for both years. The first four of these States were not in the registration area in 1927. The 1928 data for Massachusetts and Utah are incomplete.

(\*) Not in the registration area in 1927.

a whole in 1928, according to the analysis of the Children's Bureau of the U. S. Department of Labor, was 69 deaths of infants under 1 year of age per 1000 live births. Washington ran Oregon a close second, with a rate of 48. These were the only two States with rates under 50. The other States, reporting their lowest infant death rates since they had been in the birth-registration area, were Iowa, 53, North Dakota, 59, Montana, 61, Massachusetts, 64, Vermont, 65, District of Columbia, 65, West Virginia, 70, Maine, 73, and Maryland, 80. Six States which achieved their lowest infant death rate in 1927 maintained the same rate in 1928. They were California, 62, Illinois, 64, Connecticut, 59, New Hampshire, 69, Florida and Rhode Island, 67.

Twenty-five States and the District of Columbia had lower infant mortality rates in 1928 than the rate of the birth-registration area as a whole.

No American State, however, had yet equalled the rate of New Zealand, which was 36.18 per 1000 live births in 1928, as compared with a rate of 38.74 in 1927. The maternal mortality rate in New Zealand was 4.9 in both 1927 and 1928.

According to the figures of the Metropolitan Life Insurance Company as given in its *Statistical Bulletin* for January, 1930, the year 1929 established a new low-mortality rate. The tuber-

culosis death rate in the United States and Canada reached a new minimum of 85.6 per 100,000 policy holders, as compared with a previous minimum of 90.6 in 1928. The death rate for the four principal communicable diseases of childhood (measles, scarlet fever, whooping cough, and diphtheria) was 18.3 per 100,000, which also established a new minimum, the previous minimum being 19 in 1928. The outstanding item in the group was diphtheria, with a 1929 death rate of only 8.5 per 100,000, as compared with 9.5 (the previous minimum) in 1928, this meant a decline of 69 per cent since 1911, when the rate was 27.3. A new minimum rate for diseases and conditions incident to pregnancy and childbirth also was recorded for 1929, the rate being 13.5 per 100,000, a figure lower by 4.9 per cent than the previous minimum of 14.2 in 1928. The mortality rate for accidents rose slightly in 1929. Approximately one-third of all accidental deaths among industrial policy holders of the company arose from the use of the automobile, the rate for 1929 being 20.9 per 100,000, an increase of 12 per cent over the rate for 1928. It was estimated that a total of more than 31,400 automobile fatalities occurred in 1929. The general population of continental United States during 1929 and that approximately 1,000,000 persons were injured.

**VITAMINS.** Tardy recognition of the great debt which medicine owes to those who first made clear the existence and significance of the vitamins was shown in the award of the 1929 Nobel Prize for medicine jointly to Dr. Christian Eijkman of Utrecht, the Netherlands, and Sir Frederick Hopkins of Cambridge, England, for their pioneer work on vitamins nearly a quarter-century ago. See NOBEL PRIZES. While the year was marked by no spectacular vitamin discovery, new evidence was obtained of the complexity of the vitamins, of their extraordinary activity, and of their great importance in nutrition.

**VITAMIN A** Drummond and Baker (*Biochem Jour*, vol. 23, p. 274), after unsuccessful attempts to isolate vitamin A by fractional distillation of various liver oils, concluded that direct attempts at isolating the vitamin by ordinary chemical methods were futile and that more progress would be made in the identification of the vitamin by studying the properties of sterols. Moore (*Lancet*, 1929, p. 499) tested the claim of von Euler (*Biochem Z.*, vol. 203, p. 370) that vitamin A is identical with carotin by testing samples of purified carotin for vitamin-A activity. Daily doses of 0.01 mg. proved capable of supporting growth in rats when fed as the sole source of vitamin A. In view of the fact that the absorption spectra of pure carotin and of a very active concentrate of vitamin A, bioestron, were not alike, Moore did not feel that the two substances were identical, but suggested that both carotin and the classical "vitamin A" may independently possess the same physiological action, or that the physiological action may be due to minute amounts of an active impurity present in both materials.

That vitamin A plays such an important rôle in the control of infection that it may well be called the "anti-infective vitamin" received further confirmation during the year. Tyson and Smith, in an elaborate study of tissue changes associated with vitamin A deficiency in the rat (*Am Jour Path.*, vol. 5, p. 57), found that infection was universally present and in some cases dominated the picture. Abscesses at the back of the tongue from which pus could be expressed were found in all of the rats deprived of vitamin A. These appeared sooner and did not heal as rapidly following corrective treatment as did the well-known xerophthalmia. Turner (*Jour Infect Diseases*, vol. 45, p. 208) isolated from the tongues, nasal cavities, and middle ears of rats suffering from a deficiency of vitamin A, but not from normal rats, Gram-negative cocci which produced a fatal septicemia when injected into rabbits. A striking illustration of the application to medicine of the conclusions drawn from animal experimentation was afforded by the report of Mellanby and Green (*Brit Med Jour*, No. 3569, p. 984) of the treatment of puerperal hemolytic streptococcal septicemia with vitamin-A concentrates. The five patients thus treated all made complete, though gradual, recoveries, whereas in the same hospital, during the year before this treatment was instituted, there had been 16 fatal cases of puerperal septicemia.

**VITAMINS B (B<sub>1</sub>) AND G (B<sub>2</sub>).** Following the recommendation of a committee of the American Society of Biological Chemists, the terms B and G came into general use in the United States to designate the antineuritic and antipellagric fractions of what was formerly called vitamin B, while

British scientists continued to use B<sub>1</sub> and B<sub>2</sub> for these factors. In the opinion of Peters (*Nature*, vol. 124, p. 411), at least five B factors have now been described. These include, in addition to (B) B<sub>1</sub> and (G) B<sub>2</sub>, a second heat-labile factor thought by Williams and Waterman (*Jour Biol Chem.*, vol. 78, p. 311) to be essential for growth in pigeons but not for rats, another heat-labile factor thought by Reader (*Biochem Jour*, vol. 23, p. 689) to be essential for growth in rats and a heat-stable factor described by Hunt (*Jour Biol Chem.*, vol. 79, p. 723). "According to the exact conditions of the tests some of these factors must have been included as either B<sub>1</sub> or B<sub>2</sub> in much of the previous work."

Attempts to separate vitamin B (B<sub>1</sub>) from G (B<sub>2</sub>) in yeast were reported by Williams, Waterman, and Gurin (*Jour Biol Chem.*, vol. 83, p. 321), Chick and Roscoe (*Biochem Jour*, vol. 23, p. 504) and Sherman and Sandels (*Proc Soc Expt Biol Med.*, vol. 26, p. 536). Further evidence was obtained by Sherman and Sandels of the similarity to pellagra of the lesions produced in rats by a deficiency of vitamin G (B<sub>2</sub>). Stern and Findlay (*Jour Path Bact.*, vol. 32, p. 63) reported a striking similarity between the nerve lesions of rats on diets lacking only in vitamin G and those reported in the literature for human pellagra. See FOODS AND NUTRITION.

**VITAMIN C** A comparison by Eddy (*Am Jour Pub Health*, vol. 19, p. 1309) of the Hojer method of determining the vitamin C content of food by histological examination of the teeth of guinea pigs after three weeks' subsistence on a diet containing the food in question as the sole source of vitamin C with the Sherman method, in which the prevention of scurvy in guinea pigs during a 90-day test is used as the criterion, showed that with each of the three foods tested—canned string beans, bananas, and oranges—about twice as much was required to prevent tooth decay as to prevent external signs of scurvy. Hauke reported at the International Physiological Congress in Boston that the diets of 40 per cent of 200 subjects from 4 to 60 years of age with all types of dental disorders were markedly deficient in vitamin C. These findings were thought by Eddy to suggest the advisability of a more liberal consumption of foods rich in vitamin C.

**VITAMIN D** Irradiated ergosterol dissolved in oil was accepted by the American Pharmacopoeia of the American Medical Association for admission to New and Nonofficial Remedies under the name "viosterol." This is available in different concentrations of known vitamin D potency. A number of breakfast foods treated commercially with ultra-violet rays also became available during the year. That unguarded use of a concentrated preparation such as viosterol may be harmful was shown by reports from many investigators, but the abnormal symptoms and excessive calcification noted in these reports occurred only when the therapeutic dosage had been multiplied several thousand times.

**VITAMIN E AND OTHER FACTORS** During the course of an investigation of the testicular changes in rats on various vitamin-E-free diets and of the effect of the addition of different growth-promoting supplements to these diets, Mason (*Jour Nutrition*, vol. 1, p. 311) discovered that an amount of dried lettuce which was about one-eighth as rich in vitamin E as its equivalent in fresh lettuce had approximately the same stim-

ulating effect on growth. This suggested that vitamin E, *per se*, was not responsible for the growth stimulation and since all the other known vitamins had been supplied in the diet, possibly another unknown factor was involved.

#### VOCALISTS, see Music

**VOLUNTEERS OF AMERICA.** A nonsectarian evangelistic and philanthropic organization, founded by General and Mrs Ballington Booth in March, 1896, and incorporated on Nov 6, 1896, under the laws of the State of New York. The work of the society for the year is shown in statistical records as follows. In the 135 mission centres 25,884 gospel meetings were held in meeting halls, jails, and other buildings, and in the open air, with a combined attendance of 3,039,098. Employment was found for 53,802 persons, pastoral visits were paid to 70,765 families, 197,654 persons being helped in this way, 309,250 free lodgings were furnished in the society's 80 homes and industrial branches, and 1,417,577 meals were provided for needy families and men out of employment. The officers: "The society is the *Volunteers' Gazette*." In 1929 were President, Gen Ballington Booth, secretary, Col James W Merrill, treasurer, Col Walter J Crafts. National headquarters are at 34 West 28th Street, New York City.

#### WAGES, See STATISTICS

**WALDO, LEONARD** American metallurgical and electrical engineer, died in Plainfield, N. J., Jan 25, 1929. Born in Cincinnati, Ohio, May 4, 1853, he was graduated from the scientific school of Marietta College in 1872. He continued his studies, receiving the A. M. degree from Marietta in 1877 and after attending the school of mines, Columbia University, received the Sc. D. degree from Harvard in 1879. At the same time, he served as assistant in the Harvard Observatory, 1875-80, and from 1879 to 1888, he supervised the geological bureau of the Yale Observatory. He then devoted himself to research and consulting work, being employed by the U. S. Steel Corporation, as well as by other firms. He was a member of the National Research Council.

**WALES** A historical division of the United Kingdom, consisting of 12 counties on the west coast of Great Britain, between the Irish Sea on the north and the Bristol Channel on the south. Area, 7,166 square miles, population, according to the census of 1921, 2,205,680. See GREAT BRITAIN.

**WALKER, HENRY OLIVER** American painter, died in Belmont, Mass., Jan 14, 1929. Born in Boston, Mass., May 14, 1843, he studied art in Paris under Leon Bonnat, 1879-82. Returning to the United States, he established a studio in New York, and was soon recognized for his poetic figure compositions, among the finest being "Eros et Mnna" and "Mnna Regina" in the National Gallery, Washington, D. C., and "Morning Vision" in the Metropolitan Museum, New York. He was best known, however, for his mural decorations, the most important including a series of lunettes in the library of Congress, Washington.

**WALLENSTEIN, ALFRED** See MUSIC, under Artists.

**WALSH, STEPHEN** An English labor leader, died in Wigan, Lancashire, Mar 16, 1929. He was born in 1859 in Liverpool, and attended an industrial school at Kirkdale near there. At the age of 13, he went to work in the Wigan coal

field, and soon gained a reputation among the miners as a leader. In 1906 he was elected to represent the Ince Division, Lancashire, and was reelected periodically until his death. He had an important part in the labor legislation of Parliament and, from 1914 to 1920, served as chairman of the miners' section of the English Conciliation Board. He was parliamentary secretary to the Ministry of National Service in 1917, and to the Local Government Board in 1917-19. In 1921-22 he was vice chairman of the Labor party in the House of Commons, and in 1924, during the first Labor administration of England, he was Secretary of State for War.

**WAR, OUTLAWRY OF, ETC.** See ARBITRATION, INTERNATIONAL, PEACE AND PEACE MOVEMENTS.

**WAR CLAIMS.** See ARBITRATION, INTERNATIONAL.

**WAR DEBTS.** See PUBLIC FINANCE.

**WAR MEMORIALS.** See ARCHITECTURE.

**WARREN, FRANCIS EMBROY** A United States Senator from Wyoming, died Nov 24, 1929, in Washington, D. C. He was born June 20, 1844, in Hinsdale, Mass., and in 1862-63 served in the 49th Massachusetts Volunteers, receiving the Congressional Medal of Honor for gallantry in action at the siege of Port Hudson. In 1868 he moved to Wyoming and was a member of the territorial Senate (1873-74 and 1884-85), Mayor of Cheyenne in 1885, Governor of the Territory of Wyoming in 1887-86 and again in 1889. When Wyoming was admitted to the Union in 1890, he became the first Governor of the new State, but resigned the same year to enter the United States Senate. Except for a short period (1893-94), he served continuously in the Senate as a Republican member from Wyoming, establishing a record for long service.

**WARREN, WILLIAM FAIRFIELD** An American Methodist Episcopal theologian and educator, died in Brookline, Mass., Dec 6, 1929. He was born in Williamsburg, Mass., Mar 13, 1833, and was graduated from Wesleyan University in 1853, studying later at the Andover Theological Seminary (1854-56) and at the universities of Berlin and Halle (1856-58). He was ordained in the Methodist Episcopal ministry in 1855. From 1860 to 1866, he was professor of systematic theology in the Mission Institute of Bremen, Germany. He was acting president of the Boston Theological Seminary (1866-73), which was the nucleus of Boston University. Dr Warren was one of the organizers of the university and served as its president from 1873 to 1903. In 1873 he became also professor of comparative theology and of the philosophy of religion at the theological school of Boston University, during 1903-11 he served as dean, and in 1913 he was made president emeritus of the university.

**WARSHIPS.** See NAVAL PROGRESS.

**WASHBURN COLLEGE.** A coeducational institution in Topeka, Kan., founded in 1865. The enrollment for the summer session of 1929 was 259 and for the autumn term, 789. President, Parley P. Womer, Sc. D.

**WASHINGTON.** POPULATION. According to the Fourteenth Census, the population of the State on Jan 1, 1920, was 1,356,621. The estimated population on July 1, 1928, was 1,587,000. The capital is Olympia.

**AGRICULTURE.** The table on page 838 gives the acreage, production, and value of the principal crops of the State in the years 1928 and 1929.

Crop	Year	Acreage	Prod. Bu.	Value
Wheat	1929	2,480,000	44,910,000	\$47,902,000
	1928	2,271,000	48,644,000	48,620,000
Apples	1929	..	26,656,000	84,658,000
	1928	..	83,500,000	80,150,000
Hay	1929	973,000	1,914,000 *	82,030,000
	1928	987,000	2,186,000 *	28,484,000
Potatoes	1929	56,000	6,680,000	12,586,000
	1928	70,000	9,450,000	4,725,000
Oats	1929	191,000	8,977,000	5,296,000
	1928	201,000	9,447,000	5,196,000
Corn	1929	48,000	1,824,000	1,879,000
	1928	46,000	1,794,000	1,776,000
Barley	1929	63,000	2,142,000	1,671,000
	1928	55,000	1,952,000	1,366,000

\* Tons

**MINERAL PRODUCTION** Coal, which had in recent years contributed nearly one-half of the annual total of the State's mineral products in point of value, was mined in 1928 to approximately 2,184,000 tons, as against 2,635,062 tons mined in 1927.

The metal production of the State is at present secondary. The value of the gold, silver, copper, lead, and zinc produced from ore mined in 1929 was about \$465,438, as compared with \$633,156 in 1928, according to Federal estimates. Production of gold decreased abnormally from \$337,167 for 1928 to about \$74,000 for 1929. The output of silver decreased from 99,738 ounces for 1928 to about 29,600 ounces for 1929. Copper production increased slightly from 1,177,246 pounds for 1928 to about 1,252,000 pounds for 1929, in value, from \$169,523 to about \$224,100. The output of lead decreased from 1,084,739 pounds, valued at \$62,915, for 1928, to about 813,000 pounds, valued at \$51,600, for 1929. Production of zinc increased from 85,318 pounds in 1928 to about 1,493,000 in 1929.

**TRANSPORTATION** The total number of miles of railroad line under operation on Jan. 1, 1929, was 5564.43. In 1929, 0.49 mile of additional second track was built.

**MANUFACTURES** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and dealing with operations of 1927, there were in the State, in 1927, 3344 manufacturing establishments. These employed 104,408 wage earners, whose wages for the year totaled \$145,930,930. Materials and supplies used in production cost \$389,884,598. Manufactured products combined attained the value of \$677,913,579.

**EDUCATION** The State board of education raised the standard of qualification for teachers' certificates to three years of higher education for teachers in the elementary grades and five years for high-school grades. There were enrolled in public day schools 343,377 pupils and in public evening schools 13,969. Of the day school pupils, 2926 were in kindergartens, 257,991 were in elementary, and 82,460 were in secondary grades. Expenditures for public-school education were current, \$27,289,742; interest, \$1,606,384; outlay, \$4,430,707. Salaries of teachers averaged, for the year men, \$1928, women, \$1453.

**LEGISLATION** The State Legislature held its regular biennial session, adjourning March 15. It provided appropriations of some \$26,000,000 for highways and removed the control of highway expenditure from the Highway Department, vesting it in the governor. The State tax on gasoline was increased from 3 to 4½ cents.

No action was taken with regard to the several millions of special taxes levied against the railroads and up to then unpaid. With regard to bank

taxation, however, a new act replaced the invalid existing tax on the capital stock of banks with a tax of 5 per cent on banks' dividends. The duty of enforcing the act governing the sale of securities was transferred from the Secretary of State, who had been charged with too rigorous action, to an official to be appointed by the governor.

A measure providing county units for the treatment of the power problem was passed, subject to a referendum at the next general election.

**POLITICAL AND OTHER EVENTS** Operation through the recently completed Cascade Mountain Tunnel was begun by the Great Northern Railway on January 12. The route through this 8-mile tunnel, constructed at a cost of \$14,000,000 with the expenditure of another \$9,000,000 for electrification and other accessory work, shortened the running time between Spokane and the Puget Sound terminal at Seattle, for the former 12-hour passenger trains, by about 2 hours. Scant rainfall in the summer and autumn had two adverse effects in the State. It rendered easy the spread of forest fires, which in the Chelan and Colville National forests alone overran an area of about 186,000 acres.

The shrinkage of streams on which the State depended for hydro-electric power brought on a power famine. At Seattle, the four transcontinental railroad lines entering the city agreed on July 15 to accept from the city new franchises permitting for the simplification of their trackage in the city limits and for bridges to eliminate dangerous track crossings. See WATER POWER.

**OFFICERS** Governor, Roland H. Hartley, Lieutenant-Governor, John A. Gellatly, Secretary of State, J. Grant Hinkle, State Auditor, C. W. Clansen, State Treasurer, Charles W. Hinton, Attorney-General, John H. Dunbar, Superintendent of Public Instruction, N. D. Showalter.

**JUDICIARY** Supreme Court Chief Justice, John R. Mitchell, Associate Justices, Warren W. Tolman, John F. Main, Emmett N. Parker, Mark A. Fullerton, Walter M. French, O. R. Holcomb, Walter B. Beals, W. J. Millard.

**WASHINGTON, STATE COLLEGE** of A co-educational institution for higher learning in Pullman, Wash., founded in 1890 by an act of the State Legislature. The enrollment for the autumn of 1929 was 3035, 546 students attended the summer session. There were 311 faculty members. The amount of income for the year was \$1,834,495. The library consisted of 170,000 volumes. President, Ernest O. Holland, Ph D.

**WASHINGTON, UNIVERSITY** of A State institution of higher education in Seattle, Wash., founded in 1861. The enrollment for the autumn term of 1929 was 7258. The faculty on November 1 consisted of 475 members. The income from all sources for the scholastic year 1928-29 was \$2,909,764. The library contained 250,712 volumes. President, M. Lyle Spencer, Ph D.

**WASHINGTON, D. C., IMPROVEMENT** See CITY AND REGIONAL PLANNING, under City Planning.

**WASHINGTON AND JEFFERSON COLLEGE.** A nonsectarian institution for the higher education of men in Washington, Pa., which had its origin in the Washington Academy, founded in 1787 and chartered as Washington College in 1802. The enrollment for 1929-30 totaled 420. The faculty numbered 41. The productive funds of the college amounted to \$1,134,500, and the income from all sources was approximately \$208,-

402 The library contained 41,700 volumes. President, S. S. Baker, M.S., LL.D.

#### WASHINGTON AND LEE UNIVERSITY.

A nonsectarian institution for the higher education of men in Lexington, Va., founded in 1749. The enrollment for the autumn of 1929 was 900. There were 57 members on the faculty. The income for the year was \$347,836. The library contained 65,000 volumes. President, Henry Louis Smith, Ph.D.

#### WASHINGTON BICENTENNIAL COMMISSION

See CELEBRATIONS

#### WASHINGTON UNIVERSITY.

A nonsectarian institution of higher learning for men and women in St. Louis, Mo., founded in 1853. The enrollment on Nov. 1, 1929, was 6952. The endowment amounted to \$17,180,843, while the income for the year was \$2,369,309. Gifts received in 1928-29 amounted to \$3,726,037. The library contained 235,532 volumes and 84,256 pamphlets. Chancellor, George R. Throop, Ph.D., LL.D.

**WATERBURY, JOHN ISAAC** American banker, died in Morristown, N. J., Mar. 4, 1929. Born in Stamford, Conn., in 1850, he was graduated from the College of the City of New York in 1870 and was one of the first to develop wireless communication on the commercial side.

**WATER POWER** While the total output of central-station hydro plants in 1929 was about 35 billion kilowatt-hours, close to that of 1928, it represented a smaller percentage of the total central-station output (36 per cent, as compared with 40 per cent in 1928). This was due to the large increase in steam-generating capacity and to the fact that, although there was a sharp rise in hydro output during the first half of the year, droughts in certain sections materially reduced the output during the latter half of the year. For instance, during August the water-power plants in Maryland operated at less than 12 per cent of capacity, or about one-fourth of the output of August, 1928, and in Massachusetts the August output for 1929 was only about one-half that of 1928. May was a month of high output.

Of the 3,000,000 kilowatts additional capacity installed in central stations of the United States during the year about 25 per cent was in water-power plants. About five million kilowatts capacity was reported to be under construction, one-third of which was water power. There was a marked slowing up in hydro construction in California due to an abundance of cheap oil and natural gas, which makes it possible for the steam plants, with their lower first cost, to compete successfully with water power.

In the Northwest the droughts during the fall and winter of 1929 dealt water power a severe blow and resulted in a decided power shortage in that section. The city of Tacoma, which depends largely upon a hydro municipal plant, was forced to seek the assistance of the Navy Department, which strung cables from the airplane carrier *Lexington*, moored to a wharf, and thus augmented the capacity of the city's system by 20,000 kilowatts a day for over a month.

Among the more important hydro projects under construction at the end of the year were: Fifteen Miles Falls development of the Connecticut Light and Power Company, the Wyman Plant of the Central Main Power Company with 68,000-horse-power initial capacity, the Connecticut River Development of 185,000, an initial installation of 50,000 horse power as part of a 225,000-

horse-power project of the Carolina Power and Light Company, 175,000 horse power by the Lexington Water Power Company, near Columbia, S. C.; the Boydton Station of the Virginia Electric & Power Company, which will contain 50,000 horse power initially and 130,000 horse power when completed, the 40,000-horse-power Oxbow plant of the Consumer's Power Company in Michigan, a 50,000-horse-power initial installation by the Alabama Power Company in its Tallapoosa River project, the 112,000-horse-power Calderwood plant of the Knoxville Power Company, a 160,000-horse-power development of the Union Electric Light & Power Company on the Osage River, near Bagnell, Mo., and a 74,000-horse-power plant of the Arkansas Power & Light Company in the Diablo Canyon of the city of Seattle. In the Diablo Canyon the city of Seattle was installing 125,000 horse power in a development which was estimated to have an ultimate capacity of over 400,000 horse power.

The situation with regard to Boulder Dam on the Colorado River at the end of the year was little changed.

In so far as development on the American side of the St. Lawrence is concerned, this had remained for some years in political deadlock. Governor Roosevelt of New York, like his predecessor, ex-Governor Smith, insisted that development be by the State or a State-constitutional body, while the legislative majority held out for private development.

On the Canadian side of the St. Lawrence work was progressing with the Beauharnois development, which, when completed, would have a capacity of 2,000,000 horse power. The initial plans call for 500,000 horse power in ten 50,000-horse-power units operating under an 80-foot head.

In other sections of Canada water-power development was progressing at a rapid rate. On the Saguenay River in Quebec the Alcan Power Company was installing four 65,000-horse-power units in what ultimately would be a 1,000,000-horse-power project. The Montreal Power Company put six 12,000-horse-power units into its Black River plant and at Seven Sisters Falls on the Winnipeg River the Northwestern Power Company commenced work on a 225,000-horse-power plant which was to employ units of the propeller type operating on a 66-foot head.

**WATER SUPPLY.** Although the tendency toward the gravity type of construction continued and aqueducts and dams were the outstanding features of construction, many other important problems and forms of construction are to be noted in this wide and important field.

**CONSUMPTION.** A basic and fundamental figure in design is the consumption of water, usually expressed in gallons per capita per day. When the first important American supply was built, the Croton system in New York, completed in 1842, a base figure of 22 gallons per capita per day, taken from British experience, was used in design. This soon proved to be totally inadequate. Consumption has grown by leaps and bounds in the United States and even in recent years has shown a steady growth averaging as much as 5 gallons per capita

During the year the *Engineering News-Record* (New York) published the results of a study of the water consumption in 44 American and European cities. This shows that the use of water tends to rise with industrial prosperity and fall with depression, and that the per-capita domestic use in the United States is 2 or 3 times that in Europe, due largely, if not wholly, to a higher standard of

living See WATERWORKS below, also AQUEDUCTS; DAMS

**WATER WHEELS.** See WATER POWER

**WATERWORKS AND WATER PURIFICATION.** The exact number of waterworks in the United States is unknown, but records compiled by the engineers of State health departments of 43 States, supplemented by estimates for the five other States, indicate some 11,000 to 12,000 plants at the close of 1929. The number is indefinite because some of the records go back to 1928 and 1927 and there is no agreement as to what constitutes a works.

Among notable construction projects under way were a new long tunnel to tap an additional water supply, further west, for the Massachusetts Metropolitan District, a second deep tunnel to convey Catskill Aqueduct water from the terminal reservoir to the various boroughs of New York City, with intake shafts connecting with trunk distributing mains, and the Hetch Hetchy Aqueduct of San Francisco. The Mokelumne Aqueduct for the supply of the East Bay Utility District (Oakland and near-by California communities) was put in use during the year as also was an important addition to the waterworks of St. Louis, including pumps and filters. Studies were continued by the Metropolitan Water District of Southern California for an aqueduct from the Colorado River. Eleven cities were included in the district thus far, including Los Angeles, Pasadena, and San Bernardino. See AQUEDUCTS, DAMS, MUNICIPAL OWNERSHIP.

**WEEVILS.** See ENTOMOLOGY, ECONOMIC

**WEINMANN, KARL A.** (Weinmann, Karl), German, died in Pienhoten, Bavaria, Sept. 26, 1929. He was born in Volkenstaus, Upper Palatinate, Dec. 22, 1873. He studied under Haberl and Haller at the Kirchenmusikschule in Ratisbon, and then in Freiburg under Peter Wagner. After his ordination to the priesthood he was called to Ratisbon as chor-master of the Kollegiaten, and professor of the history of music at the Kirchenmusikschule, where, in 1910, he succeeded Haberl as director. Besides, he was librarian of the Episcopal Library from 1909 and editor of *Musica Sacra* from 1911.

**WELFARE WORK.** The fifty-sixth annual meeting of the National Conference of Social Work was held in San Francisco, June 26-July 4.

The conference discussed, among other things, the juvenile court, venereal diseases, high cost of medical care, tuberculosis in the States of the Southwest, child behavior, unemployment, migratory labor, Mexican labor, the Indian, the influence of the press on social relations, and the social worker and politics. There were 29 kindred group programmes and nine special group meetings at which 300 speakers addressed 3000 social workers. Miriam Van Waters was chosen president of the fifty-seventh conference, Boston was designated as the meeting place.

**NATIONAL CONFERENCE OF JEWISH SOCIAL SERVICE.** This conference was held in Atlantic City, June 4-7. The presidential address of Samuel A. Goldsmith called for greater co-operation with non-Jewish agencies. Other addresses were in the fields of family welfare, child care, and medical social service. The conference attempted to discuss the basis of Jewish group life, without getting very far, however. The conference of the Community Centre Secretaries, held

at the same time, was much more successful in this particular. This was due to the lead taken by Dr. Horace Kallen. Dr. Boris D. Bogen was elected president for 1930. His death shortly after the conference led to the appointment of Mr. Goldsmith as acting president.

**WELLAND SHIP CANAL.** At the end of the year the new Welland Ship Canal, which had been under construction by the Canadian government since 1913, was nearing completion, and it was estimated that the entire canal would be opened for navigation by the summer of 1930. During the year the more notable work included the removal of the damaged gates of Lock No. 6 which were wrecked in August, 1928, and their replacement by a pontoon gate fitted with a capacity of 500 tons. On September 12 Guard Lock No. 8, which is 1380 feet long 40 feet wide, and 30 feet deep, was opened at Hamilton, its purpose being to keep the summit level from Port Colborne to Thorold at a regulated level of 569.0. The difference in levels between Lakes Erie and Ontario was overcome by seven locks of uniform lift, namely 46.5 feet, with a usable length of 820 feet as compared with 255 feet of the older canal. The width of these locks is 80 feet, as compared with 45 feet for the old locks.

**WELLESLEY COLLEGE.** A nonsectarian institution for the higher education of women in Wellesley, Mass., chartered in 1870 and opened in 1875. The enrollment for the autumn term of 1929 was 1563. The officers of instruction and government numbered 243. The trust funds as of June 30, 1929, amounted to \$9,159,110 and the income for the year 1928-29 was \$1,136,500 (including dormitories' net). The library contained approximately 125,000 volumes. President, Ellen Fitz Pendleton, Tatt. D., LL.D.

**WELLS, JOSEPH.** An English educator, died Feb. 28, 1929, in Oxford. He was born in Reading, Dec. 30, 1855, and was educated at Reading School and at Queen's College, Oxford. In 1882 he was elected a fellow of Wadham College, Oxford University, and from 1883 to 1913 was a tutor there. He was elected warden of Wadham College in 1913 and held the position until 1927, when he resigned. From 1923 to 1926, he was vice-chancellor of Oxford University.

**WELLS, PHILIP PATTERSON.** American lawyer and educator, died in San Francisco, Calif., Mar. 13, 1929. Born in Grand Rapids, Mich., Feb. 5, 1864, he was graduated from Yale in 1889, doing graduate work in history and economics, 1889-91, he then entered the law school at Yale, transferring to the Columbian (later George Washington) University in 1892. Becoming librarian at the Yale Law School in 1896, he was also an instructor in evidence, 1898-99, and a university history lecturer, 1902-06. He received the Ph.D. degree from Yale in 1900. Leaving Yale and working for a year as law expert for the U. S. Forest Service, he became chief law officer, 1907-10. He next held a similar position with the U. S. Reclamation Service, from 1911 to 1913. Dr. Wells was appointed Deputy Attorney-General of Pennsylvania in 1923, and, serving until 1927, was also on the grant power survey board, 1923-25, and on the Pennsylvania commission to negotiate the tri-State compact for control of the Delaware River, 1923-27.

**WELLS COLLEGE.** An institution of higher learning for women in Aurora, N. Y., founded in 1868. The enrollment for the autumn of 1929 was 200. The faculty numbered 43 members. The en-

dowment amounted to \$1,500,000 and the income for the year from invested funds, tuition, etc., was \$358,182. There were approximately 60,000 volumes in the library. President, Kerr Duncan Macmillan, S.T.D.

**WELSBACH, FRIEDRICH VON.** See AUER, KARL. **WELSH LANGUAGE AND LITERATURE.** See PHILOLOGY, MODERN.

**WENLEY, ROBERT MARK.** An American educator and philosopher, died Mar. 29, 1929, in Ann Arbor, Mich. He was born in Edinburgh, Scotland, July 19, 1861, and was graduated from the University of Glasgow in 1884, studying also in France, Italy, and Germany. From 1886 to 1894, he was assistant professor of logic at the University of Glasgow, and from 1888 to 1895, was in charge of the department of philosophy of Queen Margaret College, University of Glasgow. From 1896 he was professor of philosophy and head of the department at the University of Michigan. Professor Wenley was associate editor of the *Dictionary of Philosophy* and of the *Encyclopedia of Religion and Ethics*.

**WESLEYAN METHODIST CHURCH.** See METHODISTS.

**WESLEYAN REFORM UNION.** See METHODISTS.

**WESLEYAN UNIVERSITY.** An institution for the higher education of men in Middletown, Conn., founded in 1831. The 1929 autumn enrollment was 607. The productive funds of the university amounted to \$4,987,003 and the income for the year was \$598,469. President, James Lukens McCounoughy, Ph.D.

**WESTERN AUSTRALIA.** A state of the Commonwealth of Australia, comprising the western third of the continent. Area, estimated at 975,920 square miles; population, according to the census of 1921, 332,712; the full-blooded aborigines were estimated at 22,222 in 1925-26; estimated population of the state on June 30, 1929, 411,734. Capital, Perth, with an estimated population at the end of 1928, including suburbs, of 196,251.

The estimated area sown to cereals for the crop year 1928-29 was 3,554,399 acres, and to hay, 16,126 acres. In the same year the wheat crop totaled 33,700,000 bushels, from 3,343,530 acres. Wool production in 1929 was estimated at 63,718,824 pounds, as against 67,549,734 pounds in 1928. The timbered country included 20,400,000 acres and the total forest area 6,707,000 acres. Mining is important, the value of all minerals produced in 1928 amounting to \$2,128,179, of which gold accounted for \$1,671,093. In 1927-28 there were 1398 factories with 21,308 workers.

Preliminary figures placed the value of direct overseas imports in 1928-29 at £9,422,104 and of direct overseas exports at £15,310,282. Revenue in 1928 totaled £9,807,949 and expenditure, £9,831,415. The public debt stood at \$354,250,000 on June 30, 1929, as compared with \$386,875,000 on the same date in 1928. A deficit of \$1,380,000 in financial operations in 1928-29 was reported by the Treasurer. State railways in operation during the fiscal year ended June 30, 1929, included 3977 miles of line. Total receipts were £3,858,000 and expenditures £2,911,000.

Executive power is vested in a governor who acts through a responsible ministry, and legislative power in the Parliament of two Houses, a Council of 30 members elected for six years and an Assembly of 50 members elected for three years. Governor in 1929, Col. Sir William Robert Cam-

eron; Premier, Treasurer, and Minister for Forests, Philip Collier.

**WESTERN RESERVE UNIVERSITY.** A nonsectarian institution for the higher education of men and women in Cleveland, O., chartered in 1826. The enrollment for the autumn of 1929 in the regular day curricula was 4044. The endowment of the university amounted to \$9,777,808 and the income for the year was \$1,994,390. During 1929 a campaign was conducted to raise \$1,000,000 as additional endowment for the college of women, the new building of the Institute of Pathology was dedicated; and the Cleveland School of Architecture became an affiliated college of the university. President, Robert E. Vinson, D.D., LL.D., LL.D.

**WESTERN SAMOA.** See SAMOA.

**WESTON, EDWARD PATYON.** An American pedestrian, died May 13, 1929, in Brooklyn, N. Y. He was born in Providence, R. I., in 1839, and was educated in Boston. In 1861 he made his first long trip, walking from Boston to Washington a distance of 143 miles, in 208 hours. He walked from Portland, Me., to Chicago (1326 miles) in 26 days in 1867, and 40 years later bettered his record by 29 hours. In 1909, at the age of 70, he crossed the continent on foot (3895 miles) in 104 days and 7 hours, and returned in 1910, walking 3500 miles in 76 days and 23 hours.

**WEST POINT.** See UNITED STATES MILITARY ACADEMY.

**WEST SPITZBERGEN.** The largest and most important of the islands of the Svalbard Archipelago (qv), which passed under the sovereignty of Norway in 1925. There are coal deposits of fair quality estimated at 8,000,000,000 tons. Shipments of coal totaled 267,000 tons in 1928 and were estimated at 200,000 tons in 1929. The population averages 2000 in winter and 1500 in summer. The largest settlement is at Longyearbyen on Advent Bay, with 529 inhabitants.

**WEST VIRGINIA.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 1,463,701. The estimated population on July 1, 1928, was 1,724,000. The capital is Charleston.

**AGRICULTURE.** The following table presents the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu.	Value
Hay	1929	817,000	1,163,000 *	\$17,529,000
	1928	826,000	1,199,000 *	17,559,000
Corn	1929	441,000	13,892,000	14,726,000
	1928	459,000	16,624,000	17,020,000
Potatoes	1929	57,000	6,555,000	9,177,000
	1928	60,000	7,500,000	6,000,000
Apples	1929		5,600,000	7,280,000
	1928		7,750,000	7,875,000
Oats	1929	216,000	5,816,000	3,594,000
	1928	204,000	5,719,000	3,599,000
Wheat	1929	134,000	1,782,000	2,170,000
	1928	122,000	1,586,000	2,173,000
Tobacco	1929	8,500	6,588,000 *	1,647,000
	1928	6,800	5,100,000 *	1,367,000

\* Tons    ♪ Pounds

**MINERAL PRODUCTION.** Again in 1928, as in 1927, the bituminous-coal production of the State exceeded that of Pennsylvania and indeed of any other member of the Union in point of quantity. The production nevertheless fell to 132,952,159 short tons for 1928, from 145,122,447 tons for 1927. The coal produced in 1928 had a value of \$211,480,000, that of 1927 was valued at \$249,730,000. West Virginia was one of a small group

of States in which the coking of coal by the beehive method made some recovery in 1928.

The blast furnaces of the State increased their output of pig iron to 645,038 long tons for 1928, from 504,816 long tons for 1927. The value of the pig-iron total of 1928 approximated \$12,000,000. Outside of the coal and iron group, the leading mineral activity has been the production of natural gas, of which the yield fell slightly to 162,375,000 M cubic feet for 1927, the most recent year recorded, from 180,223,000 M for 1926, in value, it fell to \$87,994,000 for 1927, from \$70,396,000 for 1926.

Natural gas went increasingly into the production of gasoline, of which 68,700,000 gallons were thus made, to the value of \$6,128,000 (estimated) in 1928, as against 64,192,000 gallons, valued at \$5,421,000 in 1927. Petroleum production declined to 5,704,000 barrels, estimated at \$17,000,000 for 1928, from 6,023,000 barrels, valued at \$17,410,000, for 1927. The total value of the mineral product of the State, duplications eliminated, was \$366,643,205 for 1927, \$395,941,940 for 1926.

FINANCE State expenditures in the year ended June 30, 1928, as reported by the United States Department of Commerce, were for maintaining and operating governmental departments, \$14,263,251 (of which \$2,165,068 was for local education), for interest on debt, \$2,461,007, for improvements, \$14,181,378, total, \$30,905,636 (of which \$15,970,558 was for highways, \$3,051,008 being for maintenance and \$12,919,550 for construction). Revenues were \$22,627,456, of which property and special taxes formed 19.6 per cent, departmental earnings and compensation to the State for officers' services, 8.8, sale of licenses, 62.0 (including gasoline taxation of \$1,029,235). The funded State debt was \$55,908,000 outstanding, or \$55,251,500 net of sinking funds, \$49,250,000 of it was for highways. On a property valuation of \$2,095,430,997, State taxes of \$2,933,603 were levied in the fiscal year.

TRANSPORTATION The total number of miles of railroad line under operation on Jan. 1, 1929, was 4049.45. In 1929, 21.48 miles of first, and 11.55 of third, track were built.

MANUFACTURES According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and relating to the operations of 1927, there were in the State, in 1927, 1313 establishments. These employed 77,950 wage earners, whose wages for the year totaled \$103,431,224. Materials and supplies used in manufacture cost \$252,884,424. Manufactured products combined attained the value of \$455,216,551.

EDUCATION The population of school age in the State was estimated at 521,571. There were enrolled in the public schools of the State, in the academic year 1928-29, 416,775 pupils. Of these, 348,278 were in elementary, 27,545 in junior high-school, and 40,952 in high-school grades. The salaries of teachers averaged \$939 a year in the elementary schools and \$1040 in the high schools.

LEGISLATION The State Legislature met in regular biennial session in January. Its most notable action was to recast the law of 1913 governing the development of hydro-electric power. The new act permitted the exportation of electric current derived from water power beyond the bounds of the State but reserved preference for the domestic users. It maintained control over the power corporations by a license system. The

licenses were to run for 50 years. At their expiration, the State Public Service Commission might renew licenses for another 50 years. At the expiry of any 50-year term, unless renewed, the licenses were to continue on the indeterminate plan. The Public Service Commission held under the new act the power to regulate the rates charged to consumers of electric current. Right of condemnation was allowed for the development of power projects. The Legislature authorized an issue of \$20,000,000 of highway bonds, with the proviso that 80 per cent of the proceeds should be distributed as aid to the roadwork of the counties and 20 per cent turned into the reserve fund of the State Road Commission. Provision was made for a State system of toll bridges to be created with proceeds of bonds of a State Bridge Commission, the debt charges to be met from tolls. A bill to create the office of Lieutenant-Governor was passed by the Senate. In the autumn, Governor Conley called a special session of the Legislature to deal with the report of a codification commission. The Legislature replaced the provisions in the report, as to the primary, marriage, and Prohibition laws, with the existing laws. It then adjourned to Mar. 12, 1930.

OFFICERS Governor, William G. Conley, Secretary of State, George W. Sharp, Treasurer, W. S. Johnson, Auditor, Sam T. Mallory, Attorney-General, Howard B. Lee, State Superintendent of Free Schools, William C. Cook, Commissioner of Agriculture, John W. Smith.

JUDICIARY Supreme Court President, John H. Hatcher, Associate Judges, Frank Lively, Homer B. Woods, Raymond Maxwell.

WEST VIRGINIA UNIVERSITY. An institution for the higher education of men and women in Morgantown, W. Va., founded in 1867. In the autumn of 1929 the enrollment was 2150. There were 1383 registered in the summer school of the same year. The faculty numbered more than 300. The libraries contained 92,000 volumes. The first unit of a new main library was under construction. President, John Roscoe Turner, Ph.D.

WHEAT. A report of the U. S. Department of Agriculture placed the world wheat crop in 1929, exclusive of Russia and China, at about 3,415,000,000 bushels and forecast the disappearance for the commercial year at about 3,650,000,000 bushels, indicating a reduction in the world's carryover at the end of the season of about 200,000,000 bushels. Surplus production in the principal exporting countries was given as about 460,000,000 bushels against 1,035,000,000 bushels the year before.

As reported by the International Institute of Agriculture, Rome, the estimates of production for the leading countries outside of the United States were as follows: France, 319,861,000 bushels, India, 317,595,000 bushels, Canada, 293,899,000 bushels; Italy, 259,643,000 bushels, Spain, 149,286,000 bushels, and Germany, 115,581,000 bushels. The estimated production of Canada was only 51.9 per cent of the yield in 1928 and 72.8 per cent of the average production for the 5 years 1923-27. The production of Argentina for the crop year 1929-30 was forecast at 175,000,000 bushels compared with 340,000,000 bushels the preceding year and an average of 230,000,000 bushels for the past 5 years. The Australian crop of 1929-30 was forecast at 112,000,000 bushels or about 70 per cent of the production of the year before and 82 per cent of the average for the five years 1923-24 to 1927-28. The Soviet Republics reported a production in 1928 of about 860,000,000 bushels.

The production of wheat in the United States in 1929 was estimated by the Department of Agriculture at 806,508,000 bushels compared with 914,876,000 bushels in 1928 and an average of 809,668,000 bushels during the preceding five years. The area harvested was 61,147,000 acres, or 4.9 per cent greater than the 58,272,000 acres harvested in 1928 but the yields per acre averaged 16 per cent lower than the year before. The farm price averaged \$1.043 per bushel on December 1, 1929, against 97 cents on Dec. 1, 1928. On this basis the total farm value was \$840,921,000 in 1929 and \$887,184,000 in the preceding season. The production of winter wheat was placed at 578,336,000 bushels, practically the same as the 578,673,000 bushels produced in 1928. The preceding 5-year average was 549,257,000 bushels. The 1929 area of winter wheat was 40,162,000 acres which was 10.9 per cent greater than the 36,213,000 acres harvested in 1928, but this large increase in acreage was more than offset by a decrease in yield per acre from 16 bushels in 1928 to 14.4 bushels in 1929. Farm prices for winter wheat averaged \$1.07 per bushel on Dec. 1, 1929, and \$1.035 on Dec. 1, 1928, indicating a total value of \$616,128,000 for the 1929 crop and \$599,207,000 for the 1928 crop.

The production of spring wheat other than durum wheat for 1929 was estimated at 175,792,000 bushels compared with 238,912,000 bushels the year before and 141,163,000 bushels as the average for the preceding five years.

The total production for all types of wheat in the leading States was as follows: Kansas, 138,060,000 bushels; North Dakota, 93,396,000 bushels; Nebraska, 56,555,000 bushels; Washington, 44,910,000 bushels; Oklahoma, 44,478,000 bushels; and Montana, 40,098,000 bushels. The area sown to winter wheat in the fall of 1929 was reported as 43,690,000 acres, an increase of 2 per cent over the area sown the year before. During the fiscal year ended June 30, 1929, the United States exported 103,114,000 bushels of wheat, or nearly 43,000,000 bushels less than in the preceding year. The exports of wheat flour for the same period amounted to 12,888,000 barrels, an increase of 67,000 barrels over the year before. The imports during this fiscal year included 21,430,000 bushels of grain, 510,000 pounds of wheat flour, 3,024,000 pounds of macaroni and other pastes, and 354,000 tons of bran, shorts, and other by-products and feeds of wheat. The average cost of producing wheat in the United States in 1928, as deducted by the Department of Agriculture from 2400 reports, was \$21.01 per acre and \$1.24 per bushel.

**WHITEHEAD, ALBERT NORTH** See PHILOPOHY.

**WHITNEY, CASPAR**, American editor and author, died in New York, Jan. 18, 1929. Born in Boston, Sept. 2, 1864, he was graduated from St. Matthew's College, Calif., and for 10 years hunted and explored in various parts of the world. Returning to the United States in 1888, he became sports writer for *Harper's Weekly*, doing much to popularize amateur athletics. At the outbreak of the Spanish-American War, 1898, *Harper's* sent Mr. Whitney to Cuba as war correspondent. On his return, he edited the *Outing Magazine*, 1900-09, *Collier's Outdoor America*, 1909, and *Recreation*, 1913. He accompanied the United States marines to Mexico as war correspondent in 1914. The following year, he and Mrs. Whitney

joined the Commission for Relief in Belgium. When the United States entered the World War, 1917, Mr. Whitney remained in Europe as correspondent for the *New York Tribune*, until after the peace. . . . 1919.

**WIDAL, FERNAND ISIDORE**, A French bacteriologist and clinician, died in Paris, Jan. 1, 1929. He was born in Dellys, Algeria, Mar. 9, 1862, and studied medicine in Paris, where he became hospital physician in 1893. In 1895 he became professor *agrégé* in the Faculté de Médecine de Paris. He was known for his work on bacterial agglutination and its application to the diagnosis of typhoid fever and, with André Chantemesse, was the first in France to advocate vaccination against typhoid fever.

**WIDIA** See CHEMISTRY, INDUSTRIAL.  
**WILHELMINA**, QUEEN OF THE NETHERLANDS. See NETHERLANDS THE and CELEBRATIONS.  
**WILKINS'S POLAR EXPEDITION** See POLAR RESEARCH.

**WILLEBRANDT, MABEL WALKER** See PROHIBITION.

**WILLIAM AND MARY**, COLLEGE OF. An institution for the higher education of men and women in Williamsburg, Va., founded in 1693. The enrollment for the autumn of 1929 was 1418. The productive funds amounted to \$332,557, and the income for the year was \$1,058,000. The library contained 65,000 volumes. President, Julian A. C. Chandler, Ph.D.

**WILLIAMS, JESSE LYNCH**, An American author, died in Meikim, N. Y., Sept. 14, 1929. He was born Aug. 17, 1871, in Sterling, Ill., and was graduated from Princeton University in 1892. His writings include *Princeton Stories* (1895), *The Staten Story*, a comedy (1900), *My Lost Duchess* (1908), *The Girl and the Game*, and *Other College Stories* (1908), *Mr. Cleveland, a Personal Impression* (1909), *The Married Life of the Frederic Carrolls* (1910), *Remating Time*, plays (1916), and *And So They Were Married*, a comedy (1915), a new edition of which in 1917, under the title, *Why Marry?*, won the Pulitzer Prize. His *Why Not?*, a satiric comedy, was produced in New York in 1922, and *Lovely Lady*, a comedy, in Washington in 1925.

**WILLIAMS COLLEGE** A non-sectarian college for men in Williamstown, Mass., founded in 1793. The enrollment for the autumn of 1929 totaled 820. There were 80 members on the faculty, of whom 14 were new appointees. The productive funds of the college amounted to \$6,163,725, and the income for the year ending June 30, 1929, was \$759,718. The library contained 129,639 volumes. President, Harry Augustus Garfield, LL.D. See POLITICS, INSTITUTE OF.

**WILLIS, BAILEY**, ADDRESS OF. See GEOLOGY.  
**WILSON, JOSEPH HAYFLOCK**, An English labor leader, died in London, Apr. 16, 1929. He was born Aug. 16, 1859, in Sunderland, Durham, and attended the Boys' British School there. At the age of 12, he ran away to sea. He was one of the organizers of the Seamen's Union in 1888 and until his death served as president of the National Sailors' and Firemen's Union. In 1892 he was elected to Parliament as a Labor member for Middlesbrough, was reelected in 1895, and served again from 1906 to 1910, he was elected for South Shields, serving in 1918-22.

**WILSON AWARD** See WOODROW WILSON AWARD.

**WINDLE, SIR BERTRAM COGHILL ALAN**, English anthropologist and educator, died in Toronto,

Canada, Feb 14, 1929 Born in England, May 8, 1858, he attended the University of Dublin, winning, with high scholastic honors, the M. A., M. D. B. Ch. and D. Sc. degrees. Having been dean of the medical faculty and professor of anatomy and anthropology at the University of Birmingham, he was appointed professor of archaeology at University College, Cork, later becoming president of that institution. He resigned to become professor of cosmology and anthropology at St. Michael's College, and special lecturer on ethnology at the University of Toronto, Canada, where he remained until his death. In addition to his scientific articles, Sir Beitram wrote several medical books and a number on other subjects.

**WINDWARD ISLANDS.** The name applied to a group of islands in the West Indies, comprising Grenada, St. Vincent, and St. Lucia, together with the Grenadines (which are one-half under Grenada and one-half under St. Vincent), forming the eastern limit of the Caribbean Sea between Martinique and Trinidad, a British possession. (See articles on the islands mentioned above.) Each of the islands is under its own government, but they are united for certain common purposes and have a court of appeals. Governor and commander-in-chief in 1929, Sir Frederick Seton James.

#### WIRELESS TELEGRAPHY AND TELEPHONY. See RADIO COMMUNICATION.

**WISCONSIN.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 2,632,007. The estimated population on July 1, 1928, was 2,953,000. The capital is Madison.

**AGRICULTURE.** The following table presents the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Hay	1929	3,653,000	7,685,000	\$79,631,000
	1928	3,486,000	5,236,000	73,892,000
Corn	1929	2,936,000	81,440,000	67,595,000
	1928	2,121,000	89,032,000	69,484,000
Oats	1929	2,476,000	85,215,000	37,495,000
	1928	2,495,000	108,532,000	46,669,000
Potatoes	1929	220,000	20,240,000	24,288,000
	1928	278,000	31,970,000	12,788,000
Barley	1929	704,000	22,848,000	14,851,000
	1928	725,000	26,998,000	17,484,000
Tobacco	1929	37,000	45,140,000	7,223,000
	1928	37,000	46,100,000	7,023,000
Rye	1929	185,000	2,960,000	2,634,000
	1928	167,000	2,171,000	1,954,000
Wheat	1929	105,000	2,190,000	2,409,000
	1928	104,000	2,141,000	2,262,000

\* Tons    \* Pounds

**MINERAL PRODUCTION.** The production of stone was the foremost of the reported mineral industries of 1927. It attained 3,104,240 short tons, valued at \$5,181,631, for 1927, thus surpassing the 2,852,070 tons, valued at \$4,837,661, for 1926. In 1928, 18,417 short tons of zinc, valued at \$2,246,874 were mined, as against 32,841 tons, valued at \$4,203,648, mined in 1927. Although totals had not for some years been officially reported, the production of pig iron remained an important industry. The iron mines of the State in 1928 shipped 1,394,371 long tons of iron ore valued at \$3,700,797, as against 937,935 tons, valued at \$2,567,078, in 1927. The total value of the mineral products of the State, with allowance made for duplications and the like, was \$21,766,847 for 1927; \$20,711,736 for 1926.

**FINANCE.** State expenditures for the year ending June 30, 1928, as reported by the Federal

Department of Commerce, were, for departmental maintenance and operation, \$30,274,881 (of which \$4,214,385 was for local education); for interest on debt, \$116,459, for permanent improvements, \$15,681,146; total, \$46,072,286 (of which \$17,814,662 was for highways, \$4,391,626 being for maintenance and \$13,423,036 for construction). Revenues were \$45,791,517. The funded or fixed debt of the State totaled \$1,563,700, gross and net.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 7353 1/2.

**MANUFACTURES.** According to the biennial Census of Manufactures published by the United States Department of Commerce in 1929, there were in the State in 1927, 7473 manufacturing establishments. These employed 247,722 wage earners, whose wages for 1927 totaled \$322,697,105. Materials and supplies used in manufacture cost \$1,153,327,898. The manufactured products combined attained the value of \$1,973,653,261.

**EDUCATION.** There were enrolled in the public schools of the State, in the academic year 1928-29, 518,035 pupils. Of these, 424,979 were in elementary, and 93,056 in high-school, grades. Expenditures for public-school education in 1928 totaled \$54,432,522. Salaries of teachers averaged, by the year, \$1455.

**LEGISLATION.** The State Legislature met in regular biennial session on January 9. Early in its session it dealt with the popular demand for action against Prohibition, by passing a resolution submitting to the popular vote at a referendum on April 2 the repeal of the Sevelson State Prohibition Law and the alternative of amending the law so as to permit the manufacture and sale of beer of 2.75 per cent alcoholic content. The casting of a heavy popular vote in favor of repeal was taken by the Legislature as a mandate. It accordingly passed a repeal measure, which was duly signed by Governor Kohler after some hesitation. A statutory State Highway Commission was created, to consist of three members.

A children's code was enacted, with a view to enabling needy mothers to keep with them children that otherwise would be sent to institutions. The State, acting through the juvenile courts, was to settle the budgets of needy families and to contribute to them. A revision of the State income-tax law, to lower taxes on incomes below \$4000 and increase them on those above that figure, was passed, but Governor Kohler vetoed it. An appropriation of \$10,000,000 for the needs of the University of Wisconsin was made.

**POLITICAL AND OTHER EVENTS.** The issue of State Prohibition was carried to the polls by a resolution of the Legislature. On April 2 the popular vote was cast both on a proposal to repeal the State Prohibition Enforcement Act and on a second proposition to repeal the State penalty for the manufacture or sale of beer containing 2.75 per cent or more of alcohol. Both proposals were carried by large majorities and the vote led to the repeal of the Prohibition Enforcement Act (see *Legislation*). A movement, based on the view that the Federal Prohibition amendment did not apply to States as direct agents, was started to have Wisconsin engage in the manufacture and distribution of alcoholic beverages as a State enterprise.

Governor Kohler, entering office at the beginning of the year, endeavored to make his mark as

a business administrator. He hired at his own expense an assistant to carry on research work in State affairs and followed a cautious course in financial matters, halting the disposal of moneys appropriated for certain State buildings in October, until he had satisfied himself that revenues would justify the expenditure. An effort was made in February to invalidate his election on the ground that his campaign fund had exceeded the legal limit, but the attempt failed.

The State Board of Health entered an agreement with authorities of Minnesota and Iowa for action in preventing the pollution of streams by discharge from manufacturing of dairy products. The State Railroad Commission exercised jurisdiction over motor trucks by issuing an order on November 30 to establish uniform rates for the carrying of freight by such vehicles.

**OFFICERS.** Governor, Walter J. Kohler, Lieutenant-Governor, Henry A. Huber, Secretary of State, Theodore Daumann, State Treasurer, Scott Levitan, Attorney-General, John W. Reynolds, State Superintendent of Schools, John Callaghan.

**JUDICIARY.** Supreme Court Justices, Marvin B. Rosenberry, Walter C. Owen, Charles Crownhart, E. Ray Stevens, Chester A. Fowler, Oscar M. Fritz. One vacancy, occasioned by the death during the year of Justice Franz C. Eschweiler, remained unfilled in December.

**WISCONSIN, UNIVERSITY OF.** A State institution of higher education in Madison, Wis., founded in 1848. The enrollment for the autumn of 1929 was 9468. The faculty numbered 1332, including 329 new members. The endowment as of June 30, 1929, was \$1,064,984, while the income for 1928-29, exclusive of gifts, amounted to \$8,561,127. The library contained 800,000 volumes and 390,000 pamphlets. The requirements for admission to the law school also were changed from two to three years of preparatory college work. President, Glenn Frank, Litt D., LL.D., LL.D.

**WITHERSPOON, WITHERSPOON, JOHN A.** An American physician, died Apr. 25, 1929, in Nashville, Tenn. He was born in Columbia, Tenn., Sept. 13, 1864, was graduated in medicine from the University of Pennsylvania in 1887, and began the practice of medicine at Nashville, in 1889. During 1889-94 he was a member of the medical faculty of the University of Tennessee. He was one of the founders of the medical department of Vanderbilt University and after 1894 was professor of medicine and clinical medicine there. In 1913-14 Dr. Witherspoon was president of the American Medical Association.

**WOESTIJNE, KAREL VAN DE.** A Belgian poet, novelist, and journalist, died in Zwijnaarde, near Ghent, Aug. 24, 1929. He was born in Ghent, Mar. 10, 1878. Besides verse, he wrote several books of essays and criticism, a study of primitive Flemish painters, and several novels. At the time of his death, he was professor of the Flemish language at the University of Ghent. He was a member of the Royal Flemish Academy.

**WOMAN'S CHRISTIAN TEMPERANCE UNION, NATIONAL.** An all-partisan and all-sectarian movement which has as its purpose the protection of the home by the abolition of the liquor traffic. It is comprised of 10,000 local unions, with a membership of approximately 600,000, and is organized in every State, Territory, and dependency of the United States. The Young People's Branch for both young men and women, who are united for temperance and pro-

hibition, and the Loyal Temperance Legion for children are under its supervision. The organization carries 21 distinct departments of work. The officers for 1929-30 were: President, Mrs. Ella A. Boole, corresponding secretary, Mrs. Anna Marden DeLo, recording secretary, Mrs. Sara H. Hoge. National headquarters are in Evanston, Ill., a legislative headquarters is maintained at the Hotel Driscoll in Washington, with Mrs. Lenna Lowe Yost in charge.

**WOMEN IN INDUSTRY, WAGE EARNINGS IN THE COTTON INDUSTRY.** In view of the public attention that was accorded during the year to the position of labor in the Southern States, it is interesting at this point to summarize the results of the various surveys made by the Women's Bureau of the U. S. Department of Labor into the extent of women's earnings in the cotton-textile industries of the South. In Alabama, the wage range for women was from \$11.37 in 1924 to \$11.88 in 1928. In Georgia, the range was from \$12.82 in 1924 to \$12.77 in 1928. In North Carolina, the range was from \$15.64 in 1924 to \$14.62 in 1928. In South Carolina, the range was from \$12.87 in 1924 to \$12.32 in 1928. In Virginia, the range was from \$17.98 in 1924 to \$14.99 in 1928. On the other hand, the wage ranges in the Northern States for the same periods were considerably higher. In Connecticut, the range was from \$20.50 in 1924 to \$17.85 in 1928. In Massachusetts, the range was from \$20.68 in 1924 to \$16.91 in 1928. In New Hampshire, it was from \$23.72 in 1924 to \$20.31 in 1928. In New York, it was from \$21.06 in 1924 to \$18.15 in 1928. In Rhode Island, it was from \$21.64 in 1924 to \$19.47 in 1928.

**LABOR LEGISLATION.** The legislative sessions of 1928-29 saw the passage of few laws affecting the position of women in industry. In only California and Texas were laws passed amending existing hour laws. In California, the coverage of the eight-hour law was extended and in Texas new exemptions were added to the hour law. Minimum wage measures were introduced in New York and Utah. An amendment to the Minnesota minimum wage law also was introduced. All three failed of passage. Other significant bills to fail were a proposal in Massachusetts for the placing of all manufacturing plants on a par with textile mills by the prohibition of night work for women after six o'clock (instead of after 10 o'clock), as well as bills prohibiting the employment of women at night in New Hampshire and Rhode Island. In Massachusetts, a law was passed creating an industrial commission which was directed to investigate conditions in the textile manufacturing industry and to examine the state of unemployment in textile and other industries. New York State abolished its Industrial Survey Commission, and New Jersey created a new Bureau of Women and Children, the director to be a woman appointed by the Commissioner of Labor. See LABOR LEGISLATION.

**WOMEN IN CHAIN DEPARTMENT STORES.** During the year, the Women's Bureau staff completed a survey of the status of women working in the limited-price chain department stores. Facts were assembled for 5000 women in 233 stores located in 18 States. Most of these stores were in the five and ten cent or five, ten, and twenty-five cent group. The majority of the stores belonged to five important chains. It was discovered that most of the women thus employed were very young, nearly 60 per cent being under 20 years of age and more than 25 per cent under 18. Only about

one in six was 25 years of age or more. Of those reporting marital status, 82 per cent were single, though in one State more than one-third were or had been married. Of those reporting living conditions, 92 per cent lived at home or with relatives. It was found, too, that length of stay in employment was comparatively brief, more than 40 per cent of the girls declaring that they had been in the industry for less than a year. Less than 10 per cent had worked 10 years or longer. The study of hour schedules revealed that nearly 40 per cent of the women had a working day of 8 hours or less. In 6 States, from 00 per cent to 100 per cent of the women had a day of 9 hours, but, in the 18 States, 30.6 per cent of the women had a 9-hour day. The earnings during a week in the last quarter of 1928, taken for 6061 women, showed that 7 per cent earned \$18 or more. On the other hand, 70 per cent received less than \$15; over 40 per cent received less than \$12, and over 25 per cent received less than \$10.

For all the women studied, the median wage was \$12, though the medians differed in the different States. In California, it was \$18, in Michigan, it was \$15, in Kentucky, it was \$14, while in the Southern States of Alabama, Georgia, Mississippi, South Carolina, and Tennessee, it was as low as \$9.

**AGRICULTURE** The International Cooperative Women's Guild, as a result of an international survey which reached 38 cooperative organizations in 25 countries found that women the world over were assuming important roles in the activities of the agricultural cooperative movement.

**NEGRO WOMEN** Over a period of years, the Women's Bureau has been making surveys of the status of Negro women in industry. Its examinations covered 17,134 Negro women employed in 682 establishments. The report showed that industrial employment was a comparatively new thing for Negro women and evidently was on a decided increase. It would appear from these studies that the largest group (52.2 per cent) were working in tobacco and tobacco products, that food products engaged 19.5 per cent, textile industries employed 9.6 per cent, wood products employed 8 per cent; and the rest were distributed among a variety of industries including housefurnishings, glass, paper and paper products, and metal.

**HOME WORK IN NEW YORK CITY.** The New York State Department of Labor has kept an interesting series of figures recording trends in home work for women in New York City. Its records show that in 1924, 1277 firms were giving out home work and that in 1928 this roll had increased to 1527 (19.6 per cent). The peak year was 1926, when the number of firms totaled 1747. Similarly, the total number of workers employed was 10,760 in 1924, 14,046 in 1926, and 12,887 in 1928. The industries largely affected in 1928 were men's clothing, with 4175 workers, embroideries, with 2590 workers, and flowers and feathers, with 1118 employees.

**ILLINOIS** The Illinois Labor Department published the results of a study made by it of payrolls for November, 1928, affecting 402 factories employing 24,261 women. This survey showed that, while the Illinois law permits a 10-hour working day for women, the actual number of hours was considerably lower than those in most instances. Thus, 29.6 per cent of the working women worked 8 hours or less, 27 per cent worked between 8 and 9 hours, 31.8 per cent

worked 9 hours; 3 per cent worked between 9 and 10 hours; and 8.6 per cent worked 10 hours. The same study showed that more than 80 per cent of the women had the same working hours as the men employed in the factories and that 15.9 per cent had shorter hours.

**WOMEN IN SPORTS.** See Articles on ATHLETICS.

**WOMEN'S CLUBS, GENERAL FEDERATION OF.** An organization founded in 1880 and chartered by Act of Congress Mar. 3, 1901, for "the promotion of movements looking toward the betterment of life." In 1929 the General Federation was composed of approximately 14,000 local clubs in the United States, in addition there were affiliated with it 13 national organizations and 66 clubs outside of the United States. It is governed by a board of directors, consisting of the duly elected officers, a director from each State and the District of Columbia, the chairman of the departments, and members of the board of trustees. The official publication is the *General Federation News*. The last biennial convention was held in San Antonio, Texas, in 1928. The president in 1929 was Mrs. John F. Sippel, and Miss Josephine Junkin was manager of the research and club service. Headquarters are at 1734 N. Street, N. W., Washington.

**WOMEN'S TRADE UNION LEAGUE.** See TRADE UNIONS.

**"WOODBINE WILLIE."** See KENNEDY, THE REV. (JEFFREY ANKETELL STUDDFUT).

**WOOD PULP.** See FORESTRY, PAPER.

**WOODBOW WILSON AWARD.** The Woodrow Wilson Foundation announced on December 27 that the 1929 award of \$25,000 had been voted unanimously to the League of Nations for ten years' service in the cause of world peace. Previous prizes have gone to Viscount Robert Cecil, Elhu Root, and Colonel Imdad Ali.

**WOOL-TICK FEVER.** See LULAKEMIA.

**WOOL.** Domestic wool production in 1929 was more than 80,000,000 pounds greater than in 1922, since which year there had been a gradual increase in the annual wool clip. The 1929 production was 8,000,000 pounds greater than the production of the preceding year, on account of the increased number of sheep sheared, notwithstanding a small decrease in the average fleece weight. Wool prices were high in 1928, though Delaine wools began to decline early in the year and continued the drop through 1929. Quarter-blood combing wool maintained a price above 50 cents a pound on the grease basis through 1928, but early in 1929 it dropped to 42 cents a pound. There was a small recovery in price in the summer, but the recovery was only temporary as the predicted production was heavy. Supplies at the end of the year, including carry over in primary markets, were estimated as about 1.5 per cent greater in 1929 than in 1928.

The wool situation in the United States is closely related to the world wool situation. It was estimated by the Bureau of Agricultural Economics of the U. S. Department of Agriculture that wool production in 19 countries which usually produce four-fifths of the world's clip, exclusive of Russia and China, was 2,687,000,000 pounds in 1929, which was about the same as the large clip of 1928.

The United States exports practically no raw wool, but large amounts are imported, notwithstanding a relatively high tariff. This is especially true of carpet and combing wools. In 1929

the imports of carpet wools amounted to 175,006, 973 pounds, an increase of nearly 20 per cent over the 1928 imports. The imports of combing wools were 83,709,708 pounds in 1929 an increase of 11,000,000 pounds over the 1928 imports. There were 18,187,782 pounds of clothing wool imported in 1929 as against 18,407,589 pounds in 1928. The countries from which the United States received its principal importations of unmanufactured wool were China, United Kingdom, Argentina, Uruguay, and Australia. See TEXTILE MANUFACTURING.

**WOOL MARKETING ASSOCIATION**, NATIONAL. See COOPERATION.

**WOOLSEY**, THEODORE SALISBURY. An American professor of international law, died April 24, 1929, in New Haven, Conn., where he was born Oct. 22, 1852. He was graduated from Yale University in 1872 and from the Yale Law School in 1876. Returning to Yale University as instructor in public law in 1877, he became professor of international law in 1878 and emeritus professor after 1911. After 1914 he was president of the New Haven Park Board. Professor Woolsey edited *Woolsey's International Law*, *Pomeroy's International Law*, and wrote articles on international law for reference works. He also wrote *America's Foreign Policy* (1898).

**WORCESTER FESTIVAL**. See MUSIC.

**WORCESTER POLYTECHNIC INSTITUTE**. A nonsectarian institution for the technical education of men in Worcester, Mass., founded in 1865. The enrollment for the autumn of 1929 totaled 633. The faculty numbered 70. The productive funds of the institute amounted to \$2,897,175 and the income for the year was \$294,827. There were 23,500 volumes in the library. President, Ralph Earle, D.Sc., D.Eng., LL.D., captain, U.S.N., retired.

**WORKMEN'S COMPENSATION**. In view of the increased acceptance generally in the United States of the workmen's-compensation system as a legal-economic entity, one may at this point summarize the general status of the legislation. In 1903 the first commission for the purpose of investigation was created, in 1908 the first workmen's-compensation law was written on the statute books of an American State. By the end of 1929, laws were to be found on the statute books of 44 States, the Territories of Alaska, Hawaii, the Philippine Islands, and Porto Rico, and by enactment of Congress, for the District of Columbia, and for longshoremen and harbor workers.

Insurance of the employer's liability to pay compensation is recognized as an essential feature of the workmen's-compensation system in most of the States. Such insurance may be effected through private insurance companies, self-insurance, or by insurance in State funds (either exclusive or competitive). Compensation on insurance is compulsory in all but 17 States. State fund insurance systems exist in 19 of the States and, in these, seven are exclusive, whereas, in 12 States, the State fund competes with private insurance companies.

No law undertakes to cover all types of employment. The most important exceptions are those of agriculture and domestic service. Interstate commerce is exempt because it is subject to the action of Congress. It is to be noted that, in 12 States, coverage applies only to hazardous employments. Also, the laws of 23 States ex-

empt employers whose plants employ less than a stipulated number of workers. The exclusion of agricultural workers is universal in the compensation laws of the United States, except in New Jersey and Hawaii. Domestic service, too, is excluded, except in New Jersey. Exclusion of employees receiving above a certain wage is provided in a few States. What, at the beginning, a few of the laws provided for the compensation of occupational diseases, as a result of progressive amendments, the principle of disability because of disease has become recognized in 17 of the 50 laws. The Federal Civil Employees Compensation Act and the North Dakota law accept in the definition of the term "injury" any "disease promptly caused by the employment."

Most laws require a minimum duration of disability before compensation benefits are payable. In all but two States, the amount of compensation is based upon wages. A few States provide fixed lump sums for certain injuries but apply the percentage system to all others. Fifty per cent of the employee's wages is allowed in compensation in 15 States, 55 per cent in three States; 60 per cent in seven States, 65 per cent in seven States, and 66 2/3 per cent in the District of Columbia and 14 States.

Most laws have established a weekly maximum and minimum compensation grant. The results of the various restrictions have been computed as placing upon the injured worker about 50 per cent of the burden of industrial accidents in the most favorable States and from 65 to 80 per cent in those less favorable.

**ACCIDENTS TO MINORS**. The Illinois Act of 1927 provides an additional compensation of 50 per cent to be paid to minors injured while illegally employed. During the first year of the operation of this section of the law, industrial accidents occurred to 83 children under 16 years of age. Of this number, 76 lost more than a week's time from work or suffered some serious injury, and seven lost less than one week. Of the 76, 46 children were illegally employed. Of the seven children slightly injured, six were illegally employed.

**NORTH CAROLINA**. The 1929 Legislature of North Carolina passed an act establishing a workmen's-compensation law for that State. This made the forty-fourth State of the Union to enact such legislation. The act covers all public and quasi-public corporations and requires that anyone providing employment in which five or more employees are regularly employed insure the workers. It makes exceptions of agriculture, domestic service, railroad employees, Federal employees, convicts, and certain farm-produce merchants. The act provides for compensation for all injuries by accident arising out of and in the course of employment and does not include a disease in any form except where it results unavoidably from the accident.

**OTHER STATES**. For the acts amending existing compensation laws, as passed by 1929 legislatures, see the article LABOR LEGISLATION, where these are reviewed.

**LEGISLATIVE HISTORY, 1929**. In the 44 States whose statute books carried compensation legislation in 1929, sessions of the legislature were held in all but four (Alabama, Kentucky, Louisiana, and Virginia). In these 40 States, legislatures of 35 acted on matters relating to workmen's compensation. Five States in which no action

was taken were Arizona, Nevada, New Hampshire, Tennessee, and Utah. The outstanding achievement of the year was the enactment of a workmen's-compensation law in North Carolina. (See above.) Other important measures taken were a complete revision and reenactment of the Maine law, the complete revision of the New Mexico law, and the authorization of the appointment of a committee by the Oregon Legislature to study the needs of the State's workmen's-compensation law. It was agreed by students of industrial legislation that the actions taken by the 35 legislatures tended to strengthen the existing law. For example, 14 States amended their coverage provisions (Delaware, Idaho, Illinois, Indiana, Maine, Maryland, New Mexico, New York, South Dakota, Texas, Vermont, West Virginia, Wisconsin, and Wyoming). The waiting period was decreased in New Mexico, Connecticut, Illinois, Maine, and Montana.

Benefits were liberalized in 20 States, resulting in the raising of the minimum or maximum weekly demands, by increasing the maximum amount in death cases and the number of weeks for specified injuries. Further liberalization was effected by larger allowances in cases of medical and surgical aid and burial expenses.

**SOCIAL INSURANCE IN RUSSIA.** Probably the most complete system of social insurance in operation today is that to be found in Russia, which extends to all wage earners whether employed by the state or in private concerns. Exemptions are made only in the case of agricultural workers on peasant farms and apprentices if their wages are paid in kind. The system allows the following benefits: (1) Temporary disability, funeral, unemployment, and dependents' benefits, (2) maternity benefits, (3) invalidity and widows' and orphans' pensions, (4) compensation for industrial accidents and occupational diseases, (5) medical treatment. Permanent-disability benefits are paid when a worker is disabled by accident or disease, during his employment or during the year following the termination of his work.

Duration of employment is not considered, except when a worker is over 50 years of age when he must prove employment at least eight years prior to disability. Disabled workers are grouped in six classes, and benefits vary in proportion to the extent of disability. In class one, a totally disabled person receives full earnings. In class two, a person showing a loss of earning ability from 65 to 100 per cent receives three-quarters of his earnings. In class three, affecting a person showing a loss of earning ability from 45 to 65 per cent, one-half of earnings is granted. In class four, a person showing a loss of earning power from 30 to 45 per cent receives one-third of his earnings. In class five, a person showing a loss of earning ability from 15 to 30 per cent receives one-sixth of his earnings. In class six, a person showing a loss of earning ability of not more than 15 per cent receives one-tenth of his earnings. Dependents of a worker whose death resulted from accident or occupational disease are entitled to three-quarters of the worker's earnings for three or more dependents, one-half of the earnings for two, and one-third of the earnings for one dependent. The system employed in Russia is not contributory, i. e., it is based entirely upon employers' donations.

**GREAT BRITAIN.** The English Home Office published comparative figures for the years 1919-27

covering accident and compensation payments in the following seven groups of industries: Mines, quarries, railways, factories, docks, construction work, and shipping. The figures serve to indicate that, despite a decreasing roll of employed persons, the number of accidents has increased. The toll of fatalities, however, is decreasing. In 1919 the total amount paid in compensation for fatal cases was £687,477, in 1927 the amount had risen to £763,271. In the same period, the total amount of compensation for fatal and non-fatal cases rose from £4,616,723 to £6,315,803. The English law governs compensation for the occupational diseases. In 1927 £5278 was paid out for 25 fatal cases and £548,492, for 17,079 cases of disablement. See INSURANCE.

#### WORLD AGRICULTURAL CENSUS See AGRICULTURE

#### WORLD CONFERENCE ON FAITH AND ORDER. See INTERNATIONALISM

**WORLD COURT.** Early in 1929 two notable events focused attention on the question of the adherence of the United States to the Permanent Court of International Justice. On February 16, the Honorable Elihu Root sailed for Europe to attend the meeting of the commission of jurists appointed by the League Council to consider what revision of the court statute was necessary in the light of recent experience. On February 20, Secretary of State Kellogg addressed identic notes to the states signatory to the Court, suggesting that the negotiations in regard to the American adherence be reopened. The communication of February 20 was the first official note from the U. S. State Department since that of February 12, 1926, in which the Secretary transmitted the Senate's resolution voting adherence to the Court with five reservations.

A conference of states signatory to the Court held in Geneva in September, 1926, practically accepted the first four of the Senate's reservations and worked out a formula which was designed to give the United States a position of equality with League members in regard to requests for advisory opinions. This solution did not meet with the approval of President Coolidge and, in his Armistice Day speech at Kansas City in 1926, he stated that he did not feel warranted in asking the Senate to change its position. This conference had suggested that a further exchange of views between the United States and the Court signatories might be useful, but, until Mr. Kellogg's note, the United States had made no move.

Couched in very courteous terms, this note reviewed the history of the problem and stated that the only substantial difference of opinion was in the second part of the fifth reservation.

The note suggested further informal exchanges of views with an end to finding a formula that would fully protect the United States' interests and rights, and added that the expectation of finding such a formula was "strongly supported by the fact that there seems to be but little difference regarding the substance of these rights and interests."

The question of whether a unanimous vote of the Council (or Assembly) and the United States was required to request the Court for an advisory opinion or whether a mere majority would suffice was the root of the difficulty. If the former contention was true, the interests of the United

States were amply protected by the Geneva conference formula. If only a majority vote was necessary, or if the votes of the parties to the dispute were excluded in reckoning unanimity, the United States felt that it must have further protection.

The League held back from making a ruling as to the necessity for a unanimous vote in requesting advisory opinions largely because it was fearful of imposing restrictions which might hamper future developments in its machinery for peaceful settlement of disputes. Advisory opinions rendered by the Court had been found most useful in settling disputes and seemed not to be regarded as endangering the standing of the Court.

A resolution introduced by Switzerland at the September, 1928, League Assembly asked the Council to study the question of the necessity of a unanimous vote . . . in advisory opinion. As originally . . . resolution had asked that the question be referred to the Court for an advisory opinion. The Assembly, on September 20, passed another resolution introduced by France, requesting the Council to examine the Statute of the Court with a view to amending it, in the light of experience, before 1930, when the terms and office of the present judges expire. The amendments envisaged were relatively minor ones. As a result of this action by the Assembly, the Council on December 14, appointed a committee of 12 jurists, including the president and vice president of the Permanent Court, to make a preliminary study of amending the statute. An American member was to be appointed in addition, by the president of the Council and the Rapporteur. Mr. Root was invited and on Feb. 16, 1929—his eighty-fourth birthday—sailed to assist in revising the statute, in the drafting of which he had originally played an important part.

On March 6, the formula, prepared by Mr. Root, of a method of bringing about the adherence of the United States to the World Court was published. Substantially, it redrafted Article IV of The Hague protocol, and got its interpretation from being read in the light of that document, which was prepared by a conference of signatories to the International Court. It will be recalled that the conference rejected the fifth American reservation, which would have given the United States an unrestricted veto privilege on advisory opinions by the Court when the American Republic found itself especially interested in the question propounded.

In lieu of this reservation, the protocol allowed an American objection the same force and effect as would attach to a vote of a League member of either the Assembly or the Council of the League. The new redraft which left the American Government free, so that it could withdraw if it did not wish to submit an issue to the World Tribunal, was considered as affording a good basis for further discussion of the United States' reservation not accepted by the other nations. Subsequently, the Council of the League of Nations accepted the Root Protocol. In essence the Protocol is as follows:

Article I The member states accept the special conditions of the United States' fifth reservation.

Article II The United States shall participate upon equality with the members of the League of Nations in the Council and in the Assembly in matters having to do with the World Court.

Article III No amendment of the statute of the Court may be made without the consent of all the states.

Article IV The Court shall render advisory opinions in public sessions after due notice.

Article V The Court shall not render such an advisory opinion on any matter in which the United States has or claims an interest until full notice shall have been given the United States, and exchange of views shall have taken place between the United States and all other nations interested, and any objection of the United States shall have the same force as would have an objection from any member of the Council of the League.

Articles VI, VII, and VIII state how and when the protocol shall come in force after having been signed by the member states and by the United States.

By authority of President Hoover, the signature of the United States was affixed to the protocols of the World Court in Geneva, December 9. These documents, when and if ratified by the Senate, permit American adhesion to the tribunal upon terms acceptable both to the Senate and to the other nations which hold membership in the court.

Secretary of State Stimson's careful analysis of the powers and policy of the Court made it clear that the advantages of adherence to it were substantial and the alleged disadvantages mythical. The much-discussed peril of advisory opinions did not seem to exist. Mr. Stimson said:

Unless a state has signed the so-called "optional clause," granting to the Court compulsory jurisdiction over it in certain classes of legal disputes (which is not proposed in the present protocol that the United States shall sign) the Court can take jurisdiction only over cases which the parties themselves refer to it, even if that suit is a signatory of the Court, and render judgment in respect to such suit. The Court simply stands ready and available as a carefully chosen and experienced tribunal to which the nations of the world, if they choose, can refer their disputes for settlement, without the ordinary delays and difficulties which accompany the selection of arbitrators.

At the opposite pole of World Court opinions were those "incomprehensibles" who held that in spite of the Root formula and Senate reservations, the World Court was no place for the United States.

The Chicago *Tribune* argued that the World Court was less a judicial institution than 'an instrument of international politics, finding juridical formulas for the imposition of compromise of national interests, the United States cannot join such an international group with any security or to any good purpose.'

Nominations of candidates released by the League Secretariat on August 14 rendered it fairly certain that the vacancies on the bench of the Permanent Court of International Justice (World Court), caused respectively by the deaths of the British member, Viscount Finlay, and the French member, André Weiss, would be filled by Sir Cecil Hurst and Henri Fromageot, respectively. Both of these were legal advisers of Great Britain and France on The Hague bench, and were members of the committee of jurists which functioned in March. Italy offered different nominations. Messrs. Hurst and Fromageot were subsequently elected by the Assembly on September 19, M. Henri Fromageot (France) receiving 37 votes and Sir Cecil Hurst (England) receiving 40 votes, the nearest competitors having only six votes each. In the Council, the same two candidates received an absolute majority and were accordingly elected.

M. A. Hammarskjöld, Swedish Councillor of Legation, was reelected Registrar of the Court. He had served from its establishment.

During the year 1929, the Permanent Court of International Justice held two sessions and

handed down three judgments and three formal orders. The sixteenth (extraordinary) session of the Court began on May 13, 1929, and ended on July 12, 1929, and the seventeenth (ordinary) session began on July 8, 1929, and ended on September 10, 1929. At the sixteenth session, the court gave an order in the "Case Concerning the Denunciation by China of the Treaty of November 2, 1865, between China and Belgium", an order in the "Case Concerning the Factory at Chorzow (Indemnities)" (No. 14) in the "Case Concerning the Payment of Various Serbian Loans Issued in France", and a judgment (No. 15) in the "Case Concerning the Payment in Gold of the Brazilian Federal Loans Issued in France." At the seventeenth session, it gave an order in the "Case of the Free Zones of Upper Savoy and the District of Gex," and a judgment (No. 16) in the "Case Relating to the Territorial Jurisdiction of the International Commission of the River Oder." See UNITED STATES

**WORLD CROPS.** See AGRICULTURE.

**WORLD FAIRS.** See EXPOSITIONS.

**WORLD LEAGUE AGAINST ALCOHOLISM.** An organization originated in a conference of the Anti-Saloon League of America in Columbus, Ohio, in 1916, and launched in a joint conference of the Canadian Temperance Alliance and the Anti-Saloon League in Washington in 1919. The charter members included representatives of 16 national temperance organizations from 12 countries.

The meetings of the league are held triennially, that in 1927 was at Winona Lake, Ind. The official league membership in 1929 comprised 61 national temperance organizations from 34 of the leading countries of the world. The work is carried on by executive, legal, publicity, and service departments, with offices in Westerville, Ohio, the research department in New York City, the Scientific Temperance Federation in Boston, which on behalf of the league carries on studies of the scientific aspects of the alcohol problem and issues reports thereon; and the Intercollegiate Prohibition Association, operating as the students' department of the league, with headquarters in Washington. Branch offices are maintained in London, England, Lausanne, Switzerland, Oslo, Norway, and Tartu, Estonia. In 1929 the four presidents of the league were Miss Anna A. Gordon, Evanston, Ill.; Dr. Robert Herrod, Lausanne, Switzerland; the Rt. Hon. Lef Jones, London, England; and Dr. Howard H. Russell, Westerville, Ohio. The general secretary was Dr. Ernest H. Cherrington. See ANTI-SALOON LEAGUE, PROHIBITION.

**WORLD SERIES.** See BASEBALL.

**WOUNDS.** Howes, Sooy, and Haivey discuss the healing of wounds in the *Journal of the American Medical Association* for January 5. Various important factors which might favor or retard wound healing are considered experimentally. Some of those considered in the past have been diet, increase of temperature, etc. Carrel and Noy some years ago appeared to have shown that wound healing follows certain definite laws and that in time it would be possible from known data to predict the time of cicatrization. In the opinion of the authors, it has been an error to limit these studies to wounds of the

skin and therefore they have investigated muscle, fascia, mucous membranes, etc. Incidentally, the authors measured the tensile strength of the healing wound after removal of the fibrin. It was first learned that there is a negative phase, a latent period, or "lag," of from four to six days while the wound is uniting and that this is succeeded by fibroplasia. The tensile strength of a healing wound is a function of this fibroplastic process. The maximal strength of the wound when tested for tensile strength is attained from the tenth to the fourteenth day.

**LARVÆ OF THE BLOWFLY IN THE TREATMENT OF WOUNDS DURING THE WORLD WAR.** Dr. Wm. S. Baer of Johns Hopkins made the discovery that wounds which had been infested with ordinary maggots did not become subject to ordinary infection. The infestation occurred in those troops which were most neglected. The rationale was simple for the maggots lived on the dead tissue which served for the nutriment of the bacteria of wound infection. After the War, Dr. Baer was influenced to test this remedy in purulent open osteomyelitis, a surgical infection which is very difficult to combat and which is prone to follow surgical operations for the relief of the basic disease. With maggots bred in the laboratory, he introduced them into the operation wounds in the early stages of infection and in this way, by eliminating the bacteria, secured prompt healing.

**WRAGGE, EDMUND.** An English consulting engineer, died in Toronto, Canada, Nov. 26, 1929, at the age of 93. Born in Wiltshire, England, he began the practice of engineering with Sir Charles Fox & Partners of London. In 1858 he went to South Africa to build, between Cape Town and Stellenbosch, the first railway of that country. On his return to England in 1862, he was given supervision of the building of Victoria Bridge over the Thames going to Canada. In 1869, he became chief engineer in charge of the construction of the Toronto, Gray & Bruce and the Toronto & Nipissing railways, and in 1883 he was appointed Toronto manager of the Grand Trunk Railway System.

**WRECKS.** See SAFETY AT SEA.

**WRESTLING.** There were two so-called heavy-weight professional wrestling champions at the end of 1929, Gus Sonnenberg and Richard Shikat, German and Philadelphia grappler Sonnenberg, although triumphant over Stangler Lewis in February in Boston, was not recognized by the New York and Pennsylvania commissions, whereas Shikat was considered the titleholder in 31 States. In amateur ranks the defeat of Oswald Kapp, Olympic welterweight champion, proved the high light of the season. He was eliminated in the A A U catch-as-catch-can middle-weight semi-finals by Al Cornsweet, former Brown football star. The A A U title winners for 1929 at the meet held April 1920 at the New York Athletic Club were 112-pound, George R. Shoemaker, Lehigh, 118-pound, Thomas McChary, Cornell College, Iowa, 126-pound, George Campbell, Sandusky, 136-pound, John Barskeon, 147-pound, Arthur Tomlinson, Oklahoma, A and M College, 160-pound, Ben Sherman, Portland, Oregon, 175-pound, Kaare Knogh, University of Chicago, heavy-weight, Ed George, University of Michigan. Lehigh again won the intercollegiate title on the University of Pennsylvania mats in Philadelphia in April.

**WÜRTTEMBERG**, wurt'tém-bérk. A constituent state of the German Republic since November, 1918; formerly a kingdom of the German Empire. Area, 7530 square miles, population, according to the census of 1925, 2,580,235. Chief city, Stuttgart, with a population in 1925 of 341,461. Supreme power is vested in the Landtag, composed of 80 members elected for four years by universal suffrage. This body appoints the state ministry, whose president is styled State President. State President and Minister of the Interior in 1929, Dr. Eugen Bolz (Centre party).

**WYOMING.** POPULATION. According to the Fourteenth Census, the population of the State on Jan. 1, 1920, was 194,402. Estimates made as of July 1, 1928, indicated a population of 247,000. The largest city was Casper, which increased from 11,447 in 1920 to 23,288 in 1925. The capital is Cheyenne.

**AGRICULTURE.** The following table presents the acreage, production, and value of the principal crops in 1928 and 1929.

Crop	Year	Acreage	Prod Bu	Value
Hay	1929	1,094,000	1,577,000 *	\$19,125,000
	1928	1,082,000	1,845,000 *	16,488,000
Wheat	1929	223,000	3,371,000	2,965,000
	1928	243,000	3,897,000	3,229,000
Oats	1929	177,000	2,832,000	2,407,000
	1928	167,000	2,672,000	2,004,000
Corn	1929	145,000	4,205,000	2,145,000
	1928	132,000	3,828,000	1,723,000
Potatoes	1929	19,000	2,090,000	2,717,000
	1928	21,000	2,352,000	1,529,000
Barley	1929	124,000	3,348,000	2,143,000
	1928	95,000	2,600,000	1,623,000

\* Tons

**MINERAL PRODUCTION.** The quantity of the petroleum production of the State remained little changed for 1928, at 21,415,000 barrels, as against 21,307,000 barrels for 1927, the value of the year's product fell to \$27,900,000 (estimated) for 1928, from \$29,830,000 for 1927. The yield of coal, the second product in point of value, also fell, to 6,571,683 short tons for 1928, from 6,753,656 tons for 1927. The value of coal mined in 1928 was reported at \$17,303,000, that mined in 1927, at \$18,152,000. Natural gas was produced to the quantity of 43,581,600 M cubic feet in 1927, as against 46,567,000 M cubic feet in 1926, the value of the 1927 product was \$3,240,800, and in 1920, \$4,609,000. The total value of the State's mineral product was \$56,166,600 for 1927, \$78,988,066 for 1926.

**TRANSPORTATION.** The total number of miles of railroad line under operation on Jan. 1, 1929, was 2041.60.

**MANUFACTURES.** According to the biennial Federal Census of Manufactures published by the Department of Commerce in 1929 and dealing with operations of 1927, there were in the State, in 1927, 229 manufacturing establishments. These employed 5577 wage earners, whose wages for the year totaled \$9,006,022. Materials and supplies used in production cost \$63,741,234. Manufactured products combined attained the value of \$85,368,300.

**EDUCATION.** There were enrolled in the public schools, in the academic year 1927-28, 53,148 pupils. Of these, 42,498 were in kindergartens, special classes, and elementary grades and 10,644 were in high schools. Expenditures of that year for public-school education totaled \$7,092,430.

**POLITICAL AND OTHER EVENTS.** The death of Senator Francis E. Warren (q. v.) removed from the scene one who had been a political leader from

the earliest days of the State. Governor Emerson appointed to succeed Warren as Senator, Patrick J. Sullivan, a former Representative and a Republican. At the instance of President Hoover, steps were taken in December to rename Fort Russell at Cheyenne Fort Francis E. Warren, in honor of the late Senator. There was reported in October a wholesale slaughter of antelopes in parts of the State, due to the removal for six days of the prohibition, enforced for many years, against shooting these creatures.

**OFFICERS.** Governor, Frank C. Emerson, Secretary of State, A. M. Clark, Treasurer, W. H. Edelman, Auditor, Roscoe Alcorn, Attorney-General, W. O. Wilson, Superintendent of Public Instruction, Katharine A. Morton.

**JUDICIARY.** Supreme Court: Chief Justice, Fred H. Blume, Associate Justices, Ralph Kimball and W. A. Rimer.

**WYOMING, UNIVERSITY OF.** A State institution of higher education in Laramie, founded in 1886. The enrollment for the summer session of 1929 was 788 and for the autumn term, 1083. The faculty numbered 123. The total permanent funds as of June 30, 1929, amounted to \$2,173,702, and the total receipts from all sources for 1928-29 were \$1,259,324. The library contained 72,369 volumes. President, Arthur Griswold Crane, Ph.D.

**X-RAYS.** See PHYSICS.

**YACHTING.** In an international sense American yachting fared badly during 1929, four matches being lost and only two won—the Star Class international championship in which American boats predominated in number of entries, and the Interclub-Bermuda series, at Bermuda. In the Seawanhaka Cup series the American boat lost by the scantiest of margins, winning the first two races from the Scotch eight-meter sloop *Caryl*, and losing the other three by seconds only. The invading boat did better in the staff breezes that prevailed off Oyster Bay at the time. Of the other races that the United States lost to foreign sailors, the thirty-square-meter sloop races at Marblehead went to Sweden, the twenty-two square-meter at Indian Harbor, Connecticut, to another boat representing the same foreign nation, and the seven races on Barnegat Bay and Lake St. Louis to the Canadians.

The season on Long Island Sound was very successful. Over 255 racing yachts started on the two days of the Larchmont Race Week, and the attendance at the twenty-eight regattas on western Long Island Sound were proportionately high. For long distance racing, the 450-mile race from London, Conn., to Gibson Island in the Chesapeake was the feature event of the year. It was won by the schooner *Anna*, owned by Elhin Root, Jr., and Paul Hammond, which had taken the Spanish race and the Fastnet race. R. G. Bigelow's schooner *Teal* was second. Another important long-distance race, the Bayside-Block Island event, was captured by J. H. Ripley's schooner *Kumalong*. The New York Yacht Club cruise, despite poor weather conditions, was interesting and brought to light the superiority of J. V. Santy's schooner *Pleione*. In the sloop division J. Schott's *Sonny*, E. W. Clark's *Resolute*, G. M. Pynchon's *Istaelna*, and Gerard Lambert's *Janette* were the more important winning boats. The *Janette* won the King's Cup by sixteen seconds from the *Istaelna*, while the New York Yacht Club Cup was annexed by Harold Vanderbilt's *Prestige*.

zinc there was an output of about 52,100 tons of redistilled secondary zinc, as compared with 48,666 tons in 1928, making a total supply of distilled and electrolytic zinc in 1929 of about 676,100 tons, composed of 235,700 tons of high-grade and intermediate, 97,500 tons of select and brass special, and 342,900 tons of prime Western zinc. Of the total output of primary zinc in 1929, 157,300 tons was electrolytic zinc.

The total number of refiners at the 21 zinc smelters that operated during all or a part of the year was about 107,500. Of that number, about 62,200 were said to be in operation at the end of the year. At the end of 1928 there were 63,716 in operation at 19 plants.

**ZOOLOGY.** Articles in earlier YEAR BOOKS have noted the fact that research in modern Zoology is experimental rather than descriptive in nature—i. e., rather a study of the forces at work in the animal than the way it is put together. As illustrating this situation, an examination of the titles of papers offered at the meeting of the American Society of Zoologists is interesting. Here, 83 titles were in comparative and general physiology, 23 in cytology, 22 in embryology, 10 in parasitology, 8 in ecology and none at all in anatomy. In addition, 39 papers dealing with genetics were read at a meeting of the genetics section of the society. Prominent in experimental technique are the use of X-rays and ultra-violet rays, grafting and transplantation of surface tissues and of glands of internal secretion, and the study of the chemical effects of the environment on the animal. A comparison of the titles in both American and foreign periodicals shows that about the same proportion of experimental to other work exists elsewhere.

The American Society of Zoologists met at Des Moines, Iowa, in connection with the meeting of the American Association for the Advancement of Science, December 27, the Deutschen Zoologischen Gesellschaft at Marburg, May 21-23, and the Zoological Section of the British Association met with that Association in Cape Town and Pretoria, South Africa, July 22-August 3. The American Society of Naturalists also met at Des Moines, and the Thirteenth International Congress of Physiology met at Boston, August 19-23.

In the YEAR BOOK for 1927 is a reference to a difference of opinion between Gregory and Os-

born as to the relationship of man to the higher apes. The former held to the traditional view of a close relationship, while the latter believed that the two lines separated very early in mammalian evolution. As President of the A. A. S., Osborn in his presidential address developed his theory. According to the first theory, man would be of arboreal origin and about 15,000,000 to 18,000,000 years old, while Osborn would put his origin back at least 40,000,000 or 50,000,000 years into the Tertiary era. At the end of the Tertiary, he declared, man's brain was fully as capacious as that of some living races today and he denied that the human hand shows indications of an aboreal ancestry. *Noscor*, 71, p. 1.

As president of the Zoology section of the British Association meeting in South Africa, Watson asserted (*Nature*, 124, p. 231) that, as concerns evolution, we are in a very unsatisfactory condition in that we accept the theory but are still in the dark as to how it could have been brought about.

In development of any animal, the (apparently) homogeneous egg gives rise to a mass of cells among which eventually there appear differentiations leading to distinct organs. An important problem in this connection is the question as to the forces at work in this differentiation and coordination process. The "genes" of the geneticist certainly determine the ultimate and finer details of the process but have nothing to do with the broader outlines. Lillie (*Bour Archiv*, 118, p. 449) discussed the problem of "embryonic segregation" by which is meant the origin of "diverse specific potencies." In some cases, where cleavage is determinate, separation of cells is the beginning of segregation. In others, where cleavage is indeterminate, the segregation involves a mass of cells acting as a whole. This segregation has been assumed to operate by means of, or in a fashion similar to, hormones, but Lillie's argument is that hormones may stimulate existing segregates but cannot create them. He rejects any hypothesis of organ-forming stuffs and concludes that the "organization as a whole" is the governing agency in the differentiation process.

As the Sedgwick Lecturer at the Marine Biological Laboratory, Conklin (*Am Nat*, 63, p. 51) dealt with the problem of differentiation. He stated that this problem has three phases: (1) When and how do differentiations arise? (2) How are they oriented, and regulation brought about? (3) How can we explain the teleological character of development where the end seems to be in view from the beginning? Genes contained in the nucleus do not themselves change but are most important factors in differentiation. At first, the nucleus is large, as compared with the cytoplasm, because of the presence of dialysable materials which pass through the nuclear membrane into the nucleus. As the cell grows, these mingle with the cytoplasm again, forming new combinations which are non-dialysable and thus the relative size of the cytoplasm, as compared with that of the nucleus, increases and the composition of the cytoplasm changes. Genes, themselves unchanged, produce different results when acting on these diverse materials.

Conklin stated that in some cases (ascidians), there are obvious organ-forming materials which are early localized, while in others they apparently do not occur, simply because localization is later. The answer to the first of the above ques-

tions is that there is an interaction between genes, nucleoplasm, and cytoplasm which leads to specific chemical compounds in the cell which are localized in their appropriate places. Conklin was unable to accept the entelechy of Driesch as the answer to the second question, even though he was unable to suggest any alternative, nor could he explain the difficulty raised in the third question where the end of the embryonic process seems to be in view from the beginning. Far from being discouraged by this failure, he considered that the situation is one that should lead to further research.

Genetics Castle (*Jour of Heredity*, 20, p. 103) described a new variety of rabbit known as "rex" appearing about fifty years previously. The fur has no large guard hairs, such as must be plucked from the fur of the ordinary rabbit and hence will probably be valuable commercially. The gene for rex shows no linkage with any other thus far described. Dählblich (*Genetica*, 14, p. 421) discussed the question of inbreeding in man. From a mathematical study, he developed the conclusion that, from the standpoint of the community, consanguineous marriages are of no importance, but may be of great significance to the individual. Such a marriage may on the one hand increase, and on the other decrease, the probability of having "chromosome bearers" among the descendants. The author thinks that the effects of inbreeding in the general population are so slight as to be entirely negligible.

Human twins are classified in two groups—"fraternal," who may be of the same or of different sexes and often resemble one another no more closely than do any other brothers or sisters, and "identical" always of the same sex and very similar to one another in appearance, the resemblance being so close that sometimes it is difficult to tell them apart. There is embryological evidence that while fraternal twins came from separate eggs, identical ones arose from the division of a single egg. If the genes which determine heredity are located in the chromosomes, they are equally distributed in cleavage divisions, and it follows that the twins receive identical chromosomal material. If now, these twins are separated when very young, reared under different conditions, and given different training, it should be possible to determine from their adult characteristics whether their heredity or their environment played the greater part in establishing adult characters, physical, mental, or moral.

Corroborating earlier work of Galton, most observers have found such striking resemblances between such twins as to indicate that environment and training are of minor importance so far as adult characters are concerned. Newman (*Jour of Heredity*, 20, pp. 49, 97, and 153) discussed at some length three cases of this sort.

Newman's final conclusion was that each case is a problem in itself and that generalizations from the data now at hand are impossible. So far from being conclusive evidence in favor of the theory that inheritance is all important and environment of minor value, these cases show that the question is still open.

In this work Newman agreed with other students of the subject that finger and palm prints offer the best evidence in deciding whether a given set of twins are really identical. Reichle, however (*Biol Bull*, 56, pp. 104 and 313), questions the accuracy of this method. Double-headed

monsters are obviously potentially identical twins, which have failed to entirely separate, and obviously they are the only absolutely certain examples of identical twinning. Reichle examined a series of these monsters taken from a museum collection, and was unable to work out from comparative study of finger and palm prints any definite law of resemblances. Another criterion for identical twins is that the two should be included in the same birth membrane or amnion. Reichle agrees with this conclusion but points out that in many cases even in the best organized hospitals, insufficient attention has been given to this point, and there remains an uncertainty in most cases, whether the twins are identical. This does not affect the value of the study of such twins for information bearing on the above mentioned question, but emphasizes the vital importance of accuracy in the original diagnosis.

**SEX DETERMINATION.** A widely held generalization in biology is that the sex of an individual is determined by the presence of one or of two "X" chromosomes in its cells. Witte (*Jour Exp Zool* 54, p. 157) challenges this conclusion as a universal principle though admitting that in the fruit fly and in some other animals it holds under normal conditions. The situation is however, more complicated in hemaphroditic animals. Witte traced a series from *Sagittia* where there is no sex-determining mechanism, through the frogs where a chromosomal mechanism underlies sex determination but is regularly eclipsed by other factors causing indeterminate hemaphroditism in young males and adult females, up to the nematodes, where the chromosomal mechanism has lost its sex-determining significance which it possessed in earlier times. He concluded that sex determination through chromosomal distribution has been a process of evolution and has progressed in different species to varying grades of perfection.

Christie (*Jour Exp Zool* 54, p. 59), stated that in the nematode *Agamoxis decadata* which lives as a parasite in insects, where infestation is heavy a large majority of the animals are males, while, conversely, if few, the majority are females. A suggested conclusion is that in these animals sex is finally determined by environmental conditions.

**PROTOZOA.** For the past 70 years, the question of the significance of conjugation in protozoa has received a great deal of attention. Jennings (*Genetics of the Protozoa*, *Bibliog Genetica*, 5, p. 105) summarized the literature bearing on this problem, with especial reference to the relation of protozoan reproductive processes to the origin, causation, and persistence of constitutional differences some of which persist and may lead to permanent differences of taxonomic importance, while others are of a more transitory nature. Among the progeny of a single progenitor may be found individuals differing in various respects, these differences being due to age, fatigue, or to pathological conditions. These are certainly not inherited. Other individual differences are due to action of environment, to division into nonequivalent parts, to cyclical changes, or to divergences due to conjugation.

Jennings is inclined to accept the view that while some "environmental" differences persist for only a limited number of generations, others lead to permanent changes in the race. The fact that, according to Jennings, the longer these en-

vironmental forces act, the more durable will be their effects, seems to add force to the argument. Beers (*Am Nat*, 63, p 125) carried *Didinium* to the 1384th generation without loss of vigor. Lloyd and Beattie (*Biol. Bull*, 55, p 404) stated that when the contractile vacuole of *Paramecium* contracts, the liquid is forced back into the radial canals, as well as to the outside. The authors think that the vacuole contains a liquid of relatively high osmotic pressure and while in the radial canals it operates so as to extract water from the surrounding protoplasm.

**PLATYHELMINTHS** The small turbellarian *Microstomum caudatum* sometimes feeds upon hydra and after such feeding thread cells of the hydra are in various tissues of the worm, eventually taking their places at the surface of the body. Kepner asserts that here they function much as they do in the hydra, throwing out threads for protection when touched, here of course, the protection being afforded the worm. According to Kepner, the worm exercises choice in its reactions to hydra, eating this animal only when it needs a new supply of thread cells. Kepner and Nuttycombe (*Biol Bull*, 57, p 69) investigated the question whether this property of gathering thread cells when, and only when, needed, of transferring them to the appropriate place in the body surface of the worm, and discharging them when necessary for protection arises, could be transmitted from generation to generation of asexually produced individuals or whether some hereditary genes for this series of activities is limited to the germ plasma.

They found that after having been kept free from hydras for 22 asexual generations the animals reacted to them in a perfectly normal fashion. The actual use of thread cells for protection was observed in a worm of the 15th asexual generation. Even if all nerve ganglia were removed from worms, the regenerated individuals still reacted normally. The authors conclude that this instinct does not reside in neuropilasm but is transmitted through the soma.

**ANNELIDS** In the *Victoria Naturalist* for July, Barrett described some giant earthworms, *Megascolides australis*. In the locality investigated, they live in burrows in clayey flats, living deep down and coming to near the surface in the autumn and winter. The eggs are tough and horny, 2 to 3 inches in length. The average length of the adult worms is 4 feet, though the largest actually measured were 9 feet. The longest reported ones measured 11 feet.

**INSECTA** A most important economic problem in entomology appeared in Florida in 1929 in the shape of the Mediterranean fruit fly which was discovered in April and \$4,000,000 was at once appropriated for its eradication and stringent quarantine measures were adopted. A bill for a further appropriation of \$15,000,000 was before Congress at the end of 1929. See ENTOMOLOGY, ECONOMIC.

Rau (*Ecology*, 10, p 191) reported on the breeding habits of *Polistes* wasps, calling attention to the fact that the ordinary textbook statement that *Polistes* sp. "builds in sheds, etc.," does not suffice. Near St. Louis, he found four species of wasps each with its characteristic nesting habits. *P. annularis* nests in trees, *P. variatus* close to the earth, *P. pallipes* in buildings and *P. rubiginosus* in hollow trees or dark recesses.

The ecological advantages seem to be that under these conditions, since there is more or less antagonism between the members of these different species, it is better for them to nest separately, thus avoiding conflicts as to nesting sites, as well as in the search for food.

**CHORDATA** Tretzko (*Zett. f. Wiss. Zool*, 134, p 558), derived the Chordata from Ctenophores rather than from Coelenterates. The aboral region became a sensory plate from which eventually the central nervous system developed. Original mouth opening became the anus and the permanent mouth appeared at the other end. The peripheral portions of the paired stomach developed into coelomic spaces, while the ciliated bands sank in and became nephridia.

**ORNITHOLOGY** Friedman in "The Cowbirds, A Study in the Biology of Social Parasitism," recorded observations on several species of the cowbirds made in New York State, Argentina, and on the Texas-Mexican border. The greater part of the book is devoted to descriptions of the nesting habits of the birds and their general ecology. The author presents a suggested explanation for the origin of the parasitic habit in the cowbirds, but is careful to say that this does not necessarily apply to other parasitic birds. He argues that the parasitic habit is not primitive but must have arisen from an earlier, nest-building and brooding condition, such as is the case at present in the bay-winged cowbird, the only non-parasitic member of the group. As has been shown by Howard, the primary instinct in most birds is to select and defend a certain territory, and later to build a nest in it. The bay-winged can and does, build its own nest but usually lays in the deserted nests of other birds. The female after laying, loses most of her protective "territorial" instinct and the nest is protected and the young cared for by the male. If the male should also lose this "territorial" instinct, the parasitic habit would be necessary if the race is to survive, and precisely this has happened in the other cowbirds. The ancestral cowbirds cared more for the nest than for the territory and the loss of the protecting instinct was the definite cause of parasitism.

**ZSIGMONDY**, shig'mon-dé, RICHARD A. German chemist, died in Göttingen Sept. 24, 1929. He was born Apr. 1, 1861, in Vienna, Austria, and was graduated from the University of Munich. His early study of the colors produced by the presence of metals or metallic oxides in glass brought him to the study of colloidal chemistry and he published a book on colloidal gold (1898). With Professor Siedentopf, he constructed in 1904 an ultramicroscope by means of which hitherto invisible colloidal particles could be seen. In 1907 he went to Göttingen as director of the Institute for Inorganic Chemistry, which, under his direction, became a school for the study of colloidal chemistry. In 1913 his work in the field of colloidal chemistry, particularly Zsigmondy was awarded the 1925 Nobel Prize for chemistry.

**ZULULAND**, zool'oo-land. A portion of the Province of Natal in the Union of South Africa, to which it was annexed Dec. 30, 1897. Area, 10,427 square miles, population in 1911, 219,606. There are extensive sugar and tea plantations. See SOUTH AFRICA, UNION OF, for the statistics on Natal.
